Whereas, it has been the experience of the retired military personnel of the Lawton community that the CHAMPUS program, is the same as presently constituted, does not provide an effective and adequate medical coverage due to a shortage of civilian doctors in the Lawton community and the unrealistic requirements which must be met before medical expenses are covered under CHAMPUS; and

Whereas, the City Council of the City of Lawton desires to express its concern to D.O.D. and the United States Congress concerning the plight of military retirees and their dependents residing in the Lawton-Fort Sill community.

Now, therefore be it resolved by the City Council of the City of Lawton that the City of Lawton strongly and urgently requests that the following recommendations be immediately addressed by the Department of Defense and the United States Congress to-wit:

a. That the medical expense and procedures covered under CHAMPUS be increased in order to insure that all normal medical procedures and tests are covered thereby; that the United States Congress immediately restore CHAMPUS coverage to the 90 percentile method of computing medical charges; that procedures be immediately instituted to reduce the service time for claims and payments under CHAMPUS; that instructions and claim forms promulgated under the CHAMPUS program be simplified; that CHAMPUS be extended to include dental care; and

b. That the Department of Defense and

> Under the treaties, Panama will receive payments which more fairly reflect the fact that it is making available its major natural resource, its territory, but the treaties require no new appropriations, nor do they add to the burdens of the American taxpayer.

The payments are to come out of the revenues generated by the operation of the canal. Acceptance of the principle that they should be established on such a basis was a major concession to our point of view by the Panamanian negotiators who had sought, on the other hand, payments far higher than could be supported from canal revenues.

TREATY APPROVAL PROCESS

On September 21, Representative ROBERT J. LAGOMARSINO inserted in the CONGRESSIONAL RECORD an editorial from the Ventura County, Calif., Star-Free Press entitled "Why the Rush?" The editorial asked why President Carter had given conclusion of a Panama Canal Treaty precedence over other items demanding his attention; why the signing ceremony had been held so soon; why approval of the treaties should not be subject to an "election"—presumably, a popular referendum is meant—in the United States; and whether, in the event of a civil war in Panama, the United States would be obliged to send in troops to save General Torrijos "in order to save the canal?"

As the editorial correctly points out, negotiations had been going on for 14 years. It is difficult to see how our interests would have been served by their further prolongation, once mutual agreement was reached on the basic points at issue. Certainly, we would have been accused of bad faith had we attempted to draw them out for an additional period.

Though it is now apparent that the Senate will not vote on the treaties until early next year, at the time the treaties were signed it seemed possible that the Senate would vote in the fall. In any case, there is no necessary relationship between the date of signature of a treaty and the time of the Senate's consideration of it.

It is not the custom in the United States to hold popular referendums in order to approve treaties. Rather, in accordance with our Constitution, the people's will is expressed by their representatives in the Senate.

The United States has primary responsibility for defending the canal during the treaty period but has no interest in intervening in Panamanian affairs. Conceivably, our responsibility for canal defense could result in action by U.S. troops should civil disturbances break out in Panama at some time; however, the objective of the U.S. action would be to protect the security and neutrality of the canal, not to influence the outcome of an internal struggle for power. Moreover, the parallel with Vietnam cited in the editorial is specious, since both treaty opponents and proponents would agree that the continued efficient functioning of the canal is an important U.S. interest that must be protected.

INDIGENOUS COMMUNIST PARTY INFLUENCES

On September 23, Representative DANIEL J. FLOOD of Pennsylvania inserted in the CONGRESSIONAL RECORD an article by the Washington columnist Allan C. Brownfield, entitled "The Canal Treaty and the Growth of Communist Influence in Panama." In this article, Brownfield alleges that Communist influence in the Panamanian Government is widespread; that the Panamanian Communists seek to eliminate U.S. bases in the Canal Zone; that the Soviet Union recently concluded "a potentially major trade and economic agreement with the Panamanian Government"; and that, once the treaties are approved, the Panamanians will bring pressure on the United States to eliminate our military presence altogether.

The Panamanian Communist Party does not function legally in Panama. It is permitted to remain in existence, but this Government toleration depends on the party's maintaining good behavior in the Government's eyes. It consists of only about 500 members and maintains a very modest profile. It does not participate either formally or informally in the Government, nor, to the best of the State Department's knowledge, are any leading government officials members of the party. Its actual influence on the Government of Panama is marginal.

Article IV of the Panama Canal Treaty provides a basis for defense of the canal by the United States and Panama acting in cooperation with each other, while establishing a U.S. right to act unilaterally if necessary to defend the canal. An agreement in implementation of that article describes U.S. rights to station, train, and move military forces. U.S. base rights and the legal status of U.S. defense personnel in Panama are also provided for under this status of forces agreement. Panama has a good record of adhering to its international obligations, even to a treaty which has been objectionable to it virtually from the beginning. There is no reason to believe that its behavior would be any different regarding a treaty which is much more responsive to its major concerns.

The "major trade and economic agreement" between the U.S.S.R. and Panama does not, in fact, exist. A Soviet trade mission visited Panama on July 19, 1977, and held discussions about increased Soviet-Panamanian economic and trade relations. No formal agreement was reached, however, and there has been no further activity of note. A number of Latin American countries have trade agreements with the U.S.S.R., and the recent Soviet initiative toward Panama does not seem to merit any particular attention.

CANAL USE BY BELLIGERENT NATIONS

In his 20th speech on the Panama Canal Treaty, reported in the CONGRESSIONAL RECORD of October 27, Senator ALLEN raised certain questions regarding the United States-Panama Protocol of an Agreement concerning neutrality signed October 10, 1914. He expressed concern that this protocol was being terminated by the new Panama Canal Treaty.

The 1914 Protocol deals with the application to Panama and the Canal Zone of the principles of international law concerning the rights and duties of belligerent nations and neutral nations during wartime. It does not relate to the principle of neutralization of the Panama Canal embodied in the 1901 Hay-Pauncefote Treaty between the United Kingdom and the United States, or to the rights of belligerent vessels to transit the canal.

Under the pre-U.N. Charter law of war, belligerent warships could not renew their supply of fuel in the ports of the same neutral state until a minimum period of 3 months has elapsed from the time of their previous refueling—article 20 of Hague Convention No. XIII (1907). The 1914 United States-Panama Protocol provides that, for these purposes, when Panama and the United States are neutral in a conflict between other nations, the ports of the Canal Zone and the ports of Panama shall be treated as being ports of the same neutral nation. Specifically, the Protocol states:

> That hospitality extended in the waters of the Republic of Panama to a belligerent vessel . . . shall serve to deprive such vessel of like hospitality in the Panama Canal Zone for a period of three months, and vice versa.

The protocol is terminated by the new Panama Canal Treaty because, upon entry into force of that treaty, the Canal Zone will cease to exist as a separate jurisdictional entity. Thus, the 1914 Protocol, which addresses the use of ports in "the Panama Canal Zone" would have no further application.

At the conclusion of my remarks, I will offer further comments on the use of the canal by belligerent nations.

U.S. DEFENSE OF THE CANAL

In his 22d speech on the Panama Canal Treaty, reported in the CONGRESSIONAL RECORD of November 1, Senator ALLEN alleged that General Torrijos interpreted the treaty and the statement of understanding between the United States and Panama of October 14 to mean that he had the sole right to decide when American troops could come in to defend the Canal. General Torrijos himself might be the aggressor, Allen added, and, in those circumstances, would not, of course, summon U.S. troops.

Article IV of the neutrality treaty provides that the United States and Panama "agree to maintain" the canal's neutrality. This general formulation permits each country unilaterally to decide upon and take the steps it considers necessary to insure that the canal remains open and secure. The neutrality treaty does not stipulate that Panama and the United State jointly "agree to maintain" the canal's neutrality. Where joint action is contemplated, the treaty so specifies—and it does not do so in this instance.

It is highly unlikely that Panama would attack the canal. Panama has the paramount interest in keeping the canal open and operating effectively and is committed to the maintenance of the canal's neutrality. If, however, Panama should be unable or unwilling to uphold its commitment to maintain the canal's neutrality, the right of the United States to carry out its commitment would remain and the United States would be free to take whatever measures it con-disabilities as their normal children will later simulate in their classes.

During the semester three additional workshops are held. Nancy Criss, a second-grade teacher at the Hamilton School, said, "Teachers and children will have to adjust to having handicapped children in the class. This program is essential for all of us."

Children in Doris Stedman's second grade were more considerate of others in the classroom and more free to talk about handicapped people. She noted that one child described his retarded cousin. "Because the children experienced this program," she added, "they are not afraid to talk about handicapped brothers, sisters and relatives. For some children, they were proud of the accomplishments of their handicapped relatives, for the very first time."

Teachers have incorporated the program into the instructional flow of their classrooms. Children write stories and read books about handicapped people and some write letters to the handicapped guests who have visited their classrooms. Teachers have arranged an exchange program with the multi-handicapped children at the Meeting Street School, and children who finish their work in regular classes can work with handicapped children in the special classes in the school.

Parents of normal children respond with equal enthusiasm. Mrs. Bookbinder, who expected that the program would be received poorly at the Hamilton School, recalls a phone call from a parent who complained that the program should not be held in the school unless every child could participate.

Although the program was initially supported by a Federal grant, it was not refunded for this school year. "We were not given a second grant because new directives under P.L. 94–142 require that programs provide 'direct service' to handicapped children," Mrs. Bookbinder noted. However, the parents at the Meeting Street School feel that the program does indeed provide "direct service" to their children, especially since relationships between their handicapped children and normal children have been extremely positive as a result. These parents contacted the Rhode Island State Department of Education, and money for this year's program came directly from the state, in conjunction with a $2,000 grant from the State Association for Retarded Citizens.

"At the beginning we had a difficult time getting just one school district to agree to our working in just one of their schools," she said, "Now we are deluged with requests."

With mainstreaming of handicapped children on the rise, said Joyce Perhac, one teacher. "We're going to get involved whether we like it or not. Through this program I and my normal children learned that working with the handicapped child will not be as difficult as everybody thinks it might be."

EVALUATING THE ARGUMENTS AGAINST THE NEW PANAMA CANAL TREATIES—II

Mr. HUMPHREY. Mr. President, in a previous statement to the Senate, designed to correct some misperceptions, I evaluated some of the arguments raised against the Panama Canal Treaties.

Today, I would like to continue this process, by responding to a number of additional concerns which have been expressed in the CONGRESSIONAL RECORD over the past 3 months.

PANAMA AND CUBA

On September 23, Representative ROBERT K. DORNAN of California, in an Extension of Remarks, criticized the State Department for asserting that Gen. Omar Torrijos of Panama is not really closely alined with Cuba's Fidel Castro. The distinguished Representative invited the Department to "explain away" a recent exchange of telegrams between the two Latin leaders.

It is correct that, while returning to Panama from the United States after having signed the treaties, General Torrijos sent Castro, by radio, a message of greeeting and appreciation for Cuba's support for Panama on the canal issue. However, Panama's relations with Cuba at the present time might best be described as "correct," without being particularly cordial or close. The staff of the Cuban Embassy in Panama now totals 25 to 30, a substantial reduction from the 1975–76 figure of 40 to 50. Despite allegations that Cuba has provided arms, training, and assistance to the Panamanian National Guard, there is no evidence that such is the case. When General Torrijos visited Cuba in January 1976, he expressed admiration for Cuba's material accomplishments under Castro but added, "Cuba has found its road to socialism but that road is not Panama's." I might add that numerous groups of American businessmen who have traveled to Cuba have also expressed admiration for a number of social accomplishments of the government of Fidel Castro.

During the canal treaty negotiations, General Torrijos consulted frequently with the Presidents of Venezuela, Colombia, Costa Rica, and Mexico. He met with them together on August 5 and 6, for a final consultation before reaching agreement in principle with the United States on August 10. These countries—not Cuba—are the ones with which General Torrijos has maintained the closest contact on the negotiations in recent years.

SOVIET INFLUENCE

On September 20, Representative LARRY McDONALD of Georgia inserted in the CONGRESSIONAL RECORD a column by Otto S. Scott that had appeared in the San Diego Union. Entitled "The Parallel Between Two Canals," the column referred to the alleged demand by the Soviet Union in 1919 for the internationalization of the Suez and Panama Canals and argued that—

> Transfer of the [Panama] canal will open the gate to Soviet expansion and usher scenes of disorder and intrigue to this hemisphere virtually unknown since it achieved continental solidarity and ended its Civil War.

The neutrality treaty includes a provision which specifies that after Panama assumes responsibility for the canal at the end of the century, no foreign nation will be allowed to operate the canal or to station troops or maintain military bases in Panama. Panama has thus formally committed itself not to invite in another foreign power to "replace" the United States, nor does it have any reason to do so. Panama's goal for decades has been to achieve greater control over its own destiny, not to trade U.S. influence for some other foreign influence. As regards the fear that an unfriendly power might nevertheless push its way into Panama, it should be noted that the United States would be in a position under the neutrality treaty to act to maintain canal neutrality which includes the prohibition against foreign operation or bases. Moreover, the United States and Panama are allies under the Rio Pact, so the impression that Panama would be a defenseless target for foreign intrigue and expansion is wholly unwarranted.

This argument, moreover, is based on unwarranted assumptions regarding the present Panamanian regime headed by General Torrijos. He has made it clear that he wants Panama to develop in accordance with its own needs and traditions and not in accordance with any foreign model. Panama's relations with Cuba and the Communist countries are not close; neither the Soviet Union nor Communist China maintains an embassy in Panama. On the other hand, ever since achieving independence, Panama has had very close political and economic ties with the United States and is an ally of ours under the Rio Pact. United States-Panamanian ties will be even closer under the new treaties, since the two countries will be working in long-term partnership to operate and protect that canal. The danger of Communist or other unfriendly influence in Panama would be far greater if we attempted to maintain the status quo. Moreover, not only in Panama but also in other countries sympathetic to Panamanian aspirations, such an attempt would provide grist for Communist mills and strengthen the position of anti-American forces.

PAYMENTS TO PANAMA

On September 21, Representative ROBERT J. LAGOMARSINO of California inserted in the CONGRESSIONAL RECORD an editorial from the Camarillo, Calif., Daily News entitled "Pay To Be Kicked?" The editiorial argues that the Senate should reject the treaties because "we are being blackmailed by a two-bit dictator" and asks why we should pay $50 to $60 million annually until the year 2000 "for the privilege of being kicked out?"

In negotiating the treaties, the United States did not respond to pressure, but recognized that changing circumstances required basic changes in our treaty relations with Panama. We are acting, instead, to preserve and protect our continued use of the canal. We tried to reconcile the fundamental interests of the two parties: our interest in continued access to the canal, and the strong desire of the Panamanian people to have control over all their country's territory. The alternative—maintenance of the status quo—would be the unilateral assertion of American power, unnecessary for our objective, continued access to the canal, and without regard to the legitimate concerns of the Panamanians. Adopting such an alternative would seriously weaken our moral position in the world and would not be the best measure of assuring our security interest in the canal for the future. Given the vulnerability of the canal to sabotage, adhering to the status quo could well result in the defeat of our primary objective of an open and efficiently functioning canal.

In response to the charge that we are paying the Panamanians to take the canal, Secretary Vance pointed out on September 26:

the 3M board to limit the company's public disclosure of illegal campaign contributions (which were made before he joined the company).

Although Mr. Peterson's name frequently surfaces when Cabinet openings occur (he was mentioned as a possible Secretary of State or Secretary of the Treasury in the formative days of the Carter Administration), he professes to be content on Wall Street.

"I haven't a single thought of doing anything but staying in the [securities] business," he said yesterday.

Adding to his happiness, he said, was his famliy's satisfation with life in New York. His wife has earned a master's degree in clinical psychology at New York University, he said, and is currently studying for her Ph.D.

Two sons are in college, one at Dartmouth and the other at Bucknell. A younger son and daughter attend the Dalton School, and an older son attends a school for the retarded in San Francisco.

"My family did not find Washington at all times a great place to live," said Mr. Peterson, who lives in an apartment on Gracie Square. "But we find New York a great city."

Born in Kearney, Neb., on June 5, 1926, Mr. Peterson attended the Massachusetts Institute of Technology for two years, then earned his Bachelor of Science at Northwestern University, graduating summa cum laude. He earned a masters' degree in business at the University of Chicago.

Last August, he was hospitalized for major surgery because of a cranial tumor that was benign and involved no neurological damage.

Although he says that Wall Street has won his heart, Mr. Peterson retains some ties to Washington. He served as chairman of a blue-ribbon commission that recommended late last year substantial pay raises for top Federal officials, including members of Congress.

He also is active in various international and domestic organizations, and last June was named chairman of the United States Council of the International Chamber of Commerce.

TRIBUTE TO SENATOR JOHN L. McCLELLAN

Mr. RANDOLPH. Mr. President, the passing of John McClellan has left an understandable void in the hearts of his many friends and colleagues. It is with great sadness that we testify to the loss of a comrade, a good man, and an outstanding legislative leader.

He had invested more than a half-century of his life in serving the people, and America is the better for it. John McClellan was without a peer in his broad knowledge of government, and particularly in the processes of budgeting and appropriations.

Throughout his Senate career, he maintained an investigative zeal which won the admiration of all who were privileged to work with him. His firm belief in a strong national defense earned him universal respect. His encyclopedic knowledge of our military establishment and its needs, was both persuasively and eloquently presented.

I feel a personal loss as I join my colleagues in expressing tribute to this gallant American. Our grief is lessened by the fact that John McClellan's achievements over many years have set a standard of excellence and dedication to public service which will be remembered and followed for decades to come.

Mary and I shall continue to trust that his wife Norma, who was a strong helpmate, will be sustained by the faith John exemplified and in which she shared.

HELPING CHILDREN TO LEARN TOGETHER

Mr. PELL. Mr. President, I would like to share with my colleagues today a news story about an interesting and important new educational program designed to assist handicapped children and nonhandicapped children to get more out of the time they spend together in school.

As Federal legislation, principally the Education for All Handicapped Children Act, moves into place throughout the country, more and more handicapped children will be placed in regular classrooms, a concept known as mainstreaming. With that placement will come the challenge and the opportunity for handicapped and nonhandicapped children to learn, work, play, and live together for 6 or 7 hours each day. The task of learning in school is difficult enough for any student without adding complications, and simply to place a handicapped child in an educational situation where the vast majority of his or her peers have no experience with handicapped children poses some difficult problems in terms of understanding, respect, and learning to be friends.

A new project in Rhode Island called "Understanding Children with Special Needs" focuses on helping schoolchildren learn to be better friends and classmates with handicapped children. This project promotes understanding by giving nonhandicapped children firsthand experience of what it feels like to have a handicap, and this sensitivity training seems to be working well.

This program was the brainchild of Alice Cassidy, who is the assistant director of the Meeting Street School, a school for multihandicapped children in Rhode Island. I have had the opportunity to visit the school on many occasions and to meet with Alice, Nancy D'Wolf, and other members of the school's staff and the parents of its students, but each time you step through those doors, you are filled with a sense of optimism and hope because of the very special and fulfilling work that is carried on in the classrooms.

This project helps to extend that work into the community which surrounds the school, indeed into all of Rhode Island. It is a model project and one which I hope other schools will emulate. In order to share its concepts with my colleagues, I ask unanimous consent that the article, "Showing Normal Pupils What It's Like To Be Handicapped," be printed in the Record.

There being no objection, the article was ordered to be printed in the Record, as follows:

Showing Normal Pupils What It's Like To Be Handicapped

(By Barbara Aiello)

East Providence, R.I.—When handicapped children enter classrooms with normal children, the disabled child often feels tense and conspicuous while the nondisabled majority are often anxious about how to treat a child in a wheelchair, or a blind, deaf or retarded classmate.

With the trend toward the "mainstreaming" of handicapped children well established, such problems are on the rise and educators have begun to recognize the need for the careful orchestrating of the quality of life in classrooms where handicapped children are included with their normal peers. One such plan, "Understanding Children With Special Needs," is operating in Rhode Island.

The program is the brainchild of Alice Cassidy, associate director of the Meeting Street School for multihandicapped children, and was developed here in response to requests by parents of the handicapped children who attend.

"These handicapped children must function in typical neighborhoods," said Susan Robin Bookbinder, the project director. "It seems they had a difficult time making friends because so few normal children understood them."

As a result, the program also became part of the curriculum for normal children at the Hamilton Elementary School in North Kingstown. Normal children participated in a one-semester course that consisted of eight two-hour sessions conducted by Mrs. Bookbinder and her staff of trained parents.

For these sessions Mrs. Bookbinder designed a series of simulated activities to introduce children to disabilities, share the variety of materials such as Braille books, hearing aids, artificial limbs, braces, wheelchairs, crutches and canes with the children, and their regular class teachers, and invited disabled people to speak to each class.

The preparation takes many forms. Children spend part of the session with sandbags attached to their wrists to simulate what it is like to wear braces. With a partner, children eat a snack of cupcake and juice while blindfolded, watch a cartoon with the sound turned off, and walk down school halls with their ankles tied together.

"Many retarded children have difficulty walking," said Mrs. Bookbinder, who has taught deaf-blind children and emotionally disturbed as well as normal children. "So we have the children simulate this disability. Later we discuss how it felt to be stared at when doing the very best you can." Sessions also deal with cerebral palsy and other orthopedic handicaps.

It is not uncommon at the two schools involved to see third-grade children maneuvering wheelchairs and walkers or carrying canes down school corridors, or to see second-graders changing batteries in hearing aids while working with Braille writers. "We follow the simulations with experiences with devices and appliances used by handicapped people, and associations serving the handicapped have been extremely generous in lending us all sorts of things," Mrs. Bookbinder said.

After the children experience being blindfolded, they learn some basic Braille, peruse Braille books, and write in Braille with specialized equipment. They use chess and checkers sets and card games designed for the blind. During the sessions on orthopedic handicaps, physical therapists demonstrate therapy procedures and permit the children to use the equipment for an extended period in their classrooms.

After the children have used a variety of appliances, handicapped people visit the classrooms to talk with the children and answer their questions.

During these visits the children want to know the details of specialized equipment and the causes of a visitor's particular disability. Then the children ask about pets, sports and the hobbies and interests of the guest.

The program also includes preparation for the regular class teachers, and prior to classroom sessions, teachers participate in two workshops where they experience the same

Old Glory. The constitution and governmental structure are patterned on the American system, but, after 130 years of independence, it's still largely pattern and not practice.

Physically, Liberia is a hot, harsh and often brutal land, deluged by more than 200 inches of rain a year.

And it is a land where ignorance, poverty and disease are realities. Statistics are imprecise in Africa, but about 90 per cent of the 1.6 million people are illiterate, annual per capita income is around $300 and the most virulent diseases known to man thrive here, cheating the average Liberian of almost 30 years' life expectancy, in comparison to Americans.

During World War II, an airfield was built by the United States, and, in the 1950s, a deep-water port was financed by U.S. funds. Its existence made it practical to mine Liberia's rich iron ore deposits, thus finally allowing the beginning of a modern Liberian economy.

Liberian exports in 1938 were reported at less than $2 million; that rose to $30 million in 1953 and to $405 million two years ago.

DESCENDANTS OF SLAVES

Most Liberians are indigenous Africans, members of the 20 or so tribes which have lived for centuries on the coast and in the interior of this Ohio-sized nation, growing barely enough rice to live on and clustering in villages where they speak native dialects and practice various forms of animism.

In contrast, Monrovia and several other coastal cities are the domain of the descendants of freed American slaves who returned to Africa in the 19th Century.

While the term is no longer fashionable, these people are known as Americo-Liberians and number 50,000 at most. The political and economic base is broadening now, but Americo-Liberians have run Liberia since their descendants bought the right to settle in Monrovia from native chiefs for about $300 in trinkets and beads.

Monrovia now is tattered and worn, its antebellum-looking buildings reminiscent of a coastal town in the South that never recovered from the Depression.

The city's population has doubled to about 250,000 in 10 years. Most of the newcomers are tribal people moving to the city, and, with few skills and little education, are compelled to live in squalor.

The shantytowns are dank, crowded, unsanitary, with rusting zinc-roofed hovels. Water is polluted but people drink it anyway. Trash is strewn at random.

Monrovia's slums have swelled so fast their presence has created pressures on the government to do something about them. Low-cost housing is being built, although not rapidly enough, and the administration of President William S. Tolbert is trying to curb the flow to Monrovia by apportioning half the national budget to development in the interior.

But "things take time," as Liberians are fond of saying, which suggests the conditions are right for a Peace Corps program.

Liberians often say that "Peace Corps [volunteers] don't eat money," which is a high form of praise and expression of trust in a country where the national pastime has been to "eat" money.

Also, the Peace Corps, because of volunteers' high visibility, has helped create a favorable impression among Liberians toward the United States. "I just want [to] go see that place, one time," Liberians will say frequently. Many of them find a way, especially college students.

To its credit, the Peace Corps has responded to the positive climate it has fostered by expanding its programs into areas of health, rural development and agriculture.

But it is shortchanging volunteers, like the practical nurse assigned to Webbo, by inadequately supporting them and thus creating senseless frustration.

BENEFITS OF COLONIZATION

This is particularly disturbing because Liberia looks as if it is finally going to join the 20th Century. Outsiders familiar with this country would be justified in skepticism, but there has been a great change in attitude by Liberians.

My frame of reference is 1966–67, when I was a Peace Corps volunteer here and William V. S. Tubman was president. He ruled from a $26 million executive mansion overlooking the city.

While his spending priorities can be questioned, Tubman had virtues, among them a fine sense of irony. He used to rebut critics from newly independent African nations by suggesting that, unlike them, Liberians never enjoyed the benefits of colonization—and he had a valid point.

When the British and French pulled out of neighboring African countries, they left schools, roads and reasonably well-trained civil servants.

No such infrastructure was developed in Liberia. The American Colonization Society, which sponsored the return-to-Africa movement, did support the settlers with about $2.5 million over a 50-year period, hardly sufficient to build a nation in a jungle from scratch.

Liberia is most noted for its widespread corruption and its parodying of American ways, with an inflated sense of status. For example, a high school in the central part of Monrovia is named the College of West Africa, and, in reality, the Richard M. Nixon Institute is a private elementary school.

But Liberians seem to have their feet more firmly on the ground today than a decade ago. It's a pity, then, when vital problems are crying out for solutions here, that Peace Corps volunteers tend to view the agency which sponsors them as an obstacle to getting the job done.

PETER G. PETERSON

Mr. PERCY. Mr. President, for the benefit of the many friends in Washington of Sally and Pete Peterson who may have missed the Tuesday, November 29 feature article in the New York Times, I ask unanimous consent that the article be printed in the RECORD at the conclusion of my remarks.

The PRESIDING OFFICER. Without objection it is so ordered.

(See exhibit 1.)

Mr. PERCY. I have known Pete Peterson for many years, both in private life and in the years of our public service in Washington. It was his high degree of competence that enabled me to leave Bell & Howell with a clear conscience to run for public office. He joined the company first as executive vice president, became president and later chairman of the board. His friendship has meant a great bit to me and my family over the years and I rejoice in every success achieved by my friend who, in his everlasting credit, refused to click his heels on Pennsylvania Avenue some years ago and who continues to excel in a brilliant career on Wall Street.

[From the New York Times, Nov. 29, 1977]

EXHIBIT 1

ENGINEER OF A WALL ST. MERGER— PETER GEORGE PETERSON

(By Michael C. Jensen)

Barely four years into a new career as an investment banker, Peter G. Peterson yesterday became the prospective chairman and president of the combined securities firms of Lehman Brothers and Kuhn Loeb & Company. Since the Wall Street landscape is littered with securities firms that could not make a go of it in an increasingly competitive environment, Mr. Peterson, who engineered the merger from his seat atop Lehman Brothers, seemed justified in appearing satisfied with his accomplishment.

For the 51-year-old former Secretary of Commerce and ex-chairman of Bell & Howell, it was a landmark in his third major career.

As the chief executive of not one but two of Wall Street's prestigious, old-line houses, the new boy on the block has outmaneuvered and apparently outhustled some of his competitors.

"We're delighted about it," Mr. Peterson said yesterday of his new acquisition. Typically, he was preparing to fly today to Paris and Munich, where he planned to meet with the international staffs of the two firms, and with his European partners and then, it was hoped, to pick up some new business.

"A lot of people predicted that my leaving Washington [in 1973] would result in a serious case of the bends," he said in a telephone interview, "but there hasn't been a bit of decompression."

President of Bell & Howell, Mr. Peterson's star has been rising since the early 1950's. A vice president at the age of 27 of McCann-Erickson, an advertising agency, he was tapped for the presidency of Bell & Howell, the big camera company, only seven years later.

He subsequently moved up to the chairmanship of that company, and then, early in 1971, he was named to President Richard M. Nixon's White House staff in Washington.

In Washington, Peter George Peterson was an exception among the somewhat colorless men who surrounded President Nixon. He was a favorite guest at Georgetown cocktail and dinner parties, and counted among his close friends such liberal enemies of the Administration as Mary McGrory, the newspaper columnist.

Although he was somewhat of a maverick, Mr. Peterson's power and prestige in Washington grew. After serving as the President's expert on foreign trade, he was named Secretary of Commerce in 1972.

However, as his political enemies multiplied, he was eased out of the Cabinet and given an assignment as a roving trade envoy. The problem, insiders said, was that he had run afoul of Nixon's two key advisers, H. R. Haldeman and John D. Ehrlichman.

Mr. Peterson had been a business protege of Senator Charles H. Percy, Republican of Illinois, at Bell & Howell, and was a close friend of Secretary of State Henry A. Kissinger while in Washington.

Joining Lehman Brothers in June 1973 as vice chairman, he left Washington before the Watergate affair had begun to destroy the Nixon Administration.

Lehman Brothers was venerable but financially troubled, and Mr. Peterson set about reorganizing it. Two months after arriving, he was named chairman, with the authority to pare the staff and reorder priorities.

Although Mr. Peterson was new to Wall Street, he was not a stranger to some of its inhabitants. While he was in Washington, for instance, Mr. Peterson's holdings were administered in a blind trust by Felix G. Rohatyn, a partner of Lazard Freres & Company and later chairman of the Municipal Assistance Corporation.

DIRECTOR OF MINNESOTA MINING

As an investment banker, Mr. Peterson began to acrue some of the perquisites of his position and in mid-1973 he became a director of the Minnesota Mining and Manufacturing Company. Subsequenty, he was the only director to vote against a resolution of limited to Peace Corps volunteers; it also involves the dedicated personnel of American voluntary agencies and others who are working closely with rural—and urban—poor people overseas in carrying out development activities in true people-to-people partnerships.

The Post article also provides a provocative insight into the kinds of problems that beset America's volunteer workers in the field overseas when their efforts are viewed as self-contained rather than as part of a larger effort. I am deeply disturbed that a lack of small-scale, low-cost but critically important material support should impair some of our volunteers' efforts. Similarly, I am concerned that within a foreign economic assistance budget of some $6 billion annually we are unable to provide our lowest cost workers overseas an adequate minimum living allowance.

This kind of penuriousness, attempting to obtain a useful and valued human resource at bargain basement cost, completely overlooks the increasing importance of people-to-people efforts within the totality of U.S. development assistance efforts under the new directions, first contained in the Foreign Assistance Act of 1973 and subsequently reaffirmed and strengthened. These people are doing more than carrying out the humanitarian mission of bringing in an immediate, physical dimension, a measure of America's concern to the people of the less developed world. They are also translating into practical terms the development strategies and policies adopted at high levels of government and thus can indeed be a key means for change in traditional societies. They provide the human brains and muscle that can more effectively transform money voted by this Congress into actual accomplishments: Improved practices by small farmers and increased food production; new and better health care and sanitation practices; and more opportunities for off-farm employment, especially for rural women. As a result of these new emphases in foreign assistance, never before in the history of American foreign aid has the people-to-people approach been as significant a part of the mainstream of the development effort.

Mr. President, I am convinced that at this critical juncture Congress and the administration must be concerned with the optimum use of these valuable American human resources, both in the Peace Corps and working through private voluntary agencies. It seems to me that what is needed is a mechanism that will insure that programs are given their rightful emphasis as valuable development efforts and do not fail as the result of nonavailability of critical material support or because a relatively inexpensive project in dollar terms does not attract sufficient attention of program administrators concerned with "the big picture."

Adequate attention must be given to having "people intensive" assistance development activities work effectively and in complement to our more traditionally Government-funded and staffed assistance programs. As the Peace Corps experience to some extent has shown, and as is reinforced by the experience of private voluntary agencies, a better mechanism would probably operate best outside the mainstream of official U.S. Government channels. At the same time, I believe that such a mechanism is a necessary part of making our total development assistance effort more meaningful, effective and directly related to the target groups, and more likely to have a lasting beneficial effect in the countries of the developing world.

Mr. President, I ask unanimous consent that the Washington Post article by Mr. Keller be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE PEACE CORPS IN LIBERIA: FRUSTRATION, LITTLE SUPPORT

(By Mike Keller)

MONROVIA, LIBERIA.—Four months after he made the grueling 17-hour bus trip to the remote village of Webbo, the 26-year-old Peace Corps practical nurse packed his belongings and returned here, frustrated in his attempt as the first outsider to offer health services in that remote part of the world.

The motorcycle which had been promised to the former Army nurse for work in the neighboring villages never showed up.

The medical supplies he had brought with him lasted about a month. He scrounged more in a nearby village, but even a hefty supply of chloraquine doesn't last long in a nation ravaged by malaria.

The greatest frustration, however, was that in the four months he was in Webbo, no one at the Peace Corps office in Monrovia responded to his messages, let alone made provisions to supply him with the essentials to do his job.

Since his return to Monrovia, he has been teaching at the U.S.-built hospital, but he plans to leave Liberia this month, a year before his two-year tour of duty is supposed to be over.

The most disturbing element of these experiences is that they typify the complaints Peace Corps volunteers in Liberia have about programing and placement.

"You're looking for some direction and support when you're here and you're not getting it," the disgruntled volunteer said.

The irony is that the Peace Corps has contributed significantly to Liberia's development, and today, when a first-rate grassroots assistance program probably would flourish, Peace Corps morale is bad and the dropout rate among volunteers is estimated at 30 per cent or higher.

An entire group of 11 rural development volunteers recently went home early. An education group of 67 volunteers which arrived early this year had shrunk to 51 six months later.

Such problems obviously are not entirely new to the Peace Corps, but after 15 years of operation in Liberia, the agency ought to have a better handle on the situation.

FUNDS REDUCED

At bottom, of course, the problems can be traced to money; in eight years, the Peace Corps budget has shrunk by nearly 20 per cent.

In 1969, the budget was $102 million; the current operating budget is $82.9 million, which translates into $15,000 per volunteer.

Of that amount, $1.1 million is spent directly on the 240 or so volunteers in Liberia. That's about $4,600 a year, or less than $400 a month per volunteer for everything—food, housing, clothes, medical support, transportation, furniture, electricity or kerosene, vacation allowance and incidentals.

By contrast, in-country support for a technician with the Agency for International Development costs between $75,000 and $80,000.

Volunteers don't want that level of support by any means; they frown upon those technicians because their inflated lifestyles impede their rapport and effectiveness here.

Volunteers, however, do feel monthly allowances for housing, food and incidentals are too low.

When gripes about this reached the embassy, Ambassador W. Beverly Carter ordered a cost-of-living survey. Allowances then were raised to $198 a month in Monrovia and $188 up-country, a $15 increase, but still $45 under what the survey showed to be the minimum for volunteer support.

The Peace Corps staff has its share of problems, of course, and one of them is the enormous turnover both in Liberia and Washington headquarters.

About a dozen administrative officers have come and gone in Liberia in the last two years. The Peace Corps country director, Dennis M. Lucey, resigned in October, citing frustration with Washington as a major reason.

Washington didn't seem too keen on Lucey either, and several Washington administrators described the Liberia program under Lucey as a "trouble country" for the Peace Corps.

Frequent staff turnover, both overseas and in Washington, has been deliberate. There's a provision in the agency's enabling legislation known as "the five-year flush." The intent is to ensure that the agency doesn't turn into a stodgy bureaucracy, but it also has deprived the Peace Corps of continuity and memory.

In Liberia, the level of staff support to volunteers has eroded so badly, but ever so gradually, that no one today realizes that the Peace Corps used to do things differently.

EDUCATION BUDGET UP

How effective the Peace Corps has been can be seen in the existence of a new breed of Liberian—young, serious-minded and bent upon uplifting their society—many of whom were taught and influenced by Peace Corps teachers.

More than 3,000 of these volunteers have spent two years apiece in Liberia since 1962, most of them as teachers in schools in the interior. When the volunteers first arrived, Liberia's education budget was $2.4 million and 708 schools were in operation. In 1975, the most recent year for which figures are available, there were 6,246 schools in Liberia, 190,799 pupils attending them and a budget of $12.5 million.

In an educational system geared to rote learning, there was no attempt to develop independent and creative thought. The consequences have been disastrous, a waste of potential talent that a developing nation cannot afford.

Despite these obstacles, and often despite their own lack of teaching experience, most Peace Corps volunteers proved themselves ingenious at improvising teaching materials and methods.

An American involved with education in Liberia for 10 years said, "Many very fine students will say that sometime in their past they have had a volunteer teach them. Especially if they're originally from small towns in the interior, because volunteers have been the only ones, by and large, who have gone back there and really enjoyed it."

AMERICAN INFLUENCES

Liberia is not an easy place to comprehend for Americans with little or no previous cross-culural experience. There simply are too many American trappings here, so the uninitiated often judge and relate to this society on American terms.

English is the official language, the American dollar is the official currency, and the Liberian flag could almost be mistaken for staff study analysis intended, presumably, as a long-awaited comprehensive study of the user charge issue.

Obviously, many aspects of such a change in national policy have not been dealt with either by the C.B.O. or other researchers to a satisfactory extent. The inadequacy of available studies is illustrated in the C.B.O. assessment, based on a Department of Transportation study of intermodal impacts of user charges, that imposition would reduce farmers' profits on corn by about 1 to 3 percent per bushel—"if, for example, corn prices are $3 per bushel." At this writing, the price of corn on November 14 was $2.17 per bushel, a significant difference to any farmer.

There have been no thorough studies of the effect of waterway user charges on farm income, on the cost of living, on energy supply and energy security, on regionally differential employment and income levels, on U.S. imports and exports, on coordination of water transportation with land modes, on intermodal competitive equity, or on other pertinent areas of national policy subject to impact. In the absence of those studies, it can only be concluded that Congress would be taking a leap in the dark by embracing the concept of cost-recovery user charges on the Nation's inland waterways as embodied in pending Amendment No. 1460 to H.R. 8309, the Navigation Development Act, now scheduled for Senate consideration in January 1978.

NUCLEAR WASTE MANAGEMENT, S. 2189

Mr. BAKER. Mr. President, I ask unanimous consent to have printed in the Record a statement by the distinguished Senator from Maryland (Mr. Mathias), and the material attached thereto.

The PRESIDING OFFICER. Without objection, it is so ordered.

Statement by Senator Mathias

During the first session of the 95th Congress, I have introduced two bills dealing with the growing nuclear waste management problem facing our country and the world. Those bills, S. 63 and S. 2189, were offered to provide a framework for discussion of this vital issue and some alternative approaches.

Recently, a report was published which demonstrates the need to continue thorough congressional monitoring of governmental programs in this area and, if necessary, to restructure and reorganize them. That report, "An Analysis of the Back End of the Nuclear Fuel Cycle With Emphasis on High-Level Waste Management," was prepared for the Office of Science and Technology Policy (OSTP) by the Jet Propulsion Laboratory of the California Institute of Technology in Pasadena, California.

The report summarizes the results of that research project. In the words of the Project Manager, Dr. Thomas D. English, "we have examined the programs and plans of the U.S. government for the 'back end of the nuclear fuel cycle' to determine significant technological or regulatory gaps and inconsistencies."

This report, published on August 12, 1977, provides additional evidence of the need for our deep concern and vigilance. S. 2189 presents a unique opportunity in the coming session of the 95th Congress to examine some of the findings of this report and look to the near future for solutions. The Governmental Affairs Committee, of which I am a member, now has a greater responsibility than ever to ask the difficult and troubling questions related to nuclear waste management programs. I urge my colleagues to continue their interest in this subject and trust that they will take note of the summary of the report.

The attachment ordered to be printed in the Record is as follows:

Summary

The disposal of radioactive materials produced by nuclear reactors has emerged as a major factor in the public acceptance of nuclear power. The problems of waste disposal cannot be considered in isolation. They are intimately connected with the nature of the fuel cycle as a whole, and in particular with the decision as to whether spent fuel rods are to be reprocessed, stowed-away for possible future reprocessing, or thrown-away irretrievably.

Section I of this report describes the nature of the nuclear spent fuel recycle and waste disposal issues, in addition to the implications of various light water reactor fuel cycle options. Section II describes the complex inter-relationship of Federal, State and private sector decisions on the viability of commercial reprocessing. The economic and resource implications of various decision paths are also discussed. In Section III, the programs of the Federal Government for disposal of high-level waste from commercial reactors are examined in order to determine regulatory and technological gaps and inconsistencies. Section IV discusses the influence of Federal, State and municipal regulatory action on waste management. In addition, the results of an examination of the regulatory requirements for military and commercial high level waste management are presented. Section V brings together our conclusions. The principal function of the appendixes, contained in Volume II, is to describe the present reprocessing and waste management programs of EPA, ERDA and NRC.

To summarize our findings, it appears to us that the following matters are important:

(1) SPENT FUEL RODS

The accumulation of spent fuel rods at reactor sites should be limited, since a continuation of present practices into the indefinite future would constitute a de facto form of nuclear waste disposal. Analysis should be carried out and plans should be formulated for the development of both centralized spent fuel pools and centralized passive spent fuel storage facilities in order to make the "stowaway option" a viable alternative. In addition, methods and schedules for the ultimate disposal of spent fuel rods need to be developed in order to make the "throwaway option" a real alternative.

(2) FEDERAL PROGRAM

The resources devoted to high-level waste management by NRC and EPA have been inadequate in view of the critical roles these agencies play in developing standards, criteria and regulations. The budgets of these two agencies have recently been increased substantially. However, we question whether the resources available to these two agencies are commensurate with their responsibilities. There appears to be a lack of an adequate platform for systematic discussion of the sufficiency of the scientific data base for geologic disposal. An important outcome of such discussion would be the development of decisions as to what parameters should be monitored, and for how long, during the test phase of a specific repository site. In addition, there appears to be a need for improved coordination of the nation's high-level nuclear waste program. One method of providing better coordination would involve formation of a high level interagency committee for nuclear waste management. This committee could provide a mechanism for resolving issues, and could fulfill the function of coordinating the activities of the Federal agencies concerned with nuclear waste processing, packaging, transport, and disposal. Another approach might be to appoint a single individual from, for example, the Executive Office of the President, to serve as a focal point for the nation's high-level nuclear waste management program.

In light of President Carter's decision to defer reprocessing indefinitely, the schedule for operation of a repository for commercial high-level waste by 1985 should be re-examined and revised. In addition, the timing of the promulgation of NRC siting criteria for high-level waste disposal sites, and the site selection activities of ERDA should be revised to make them compatible.

(3) REGULATIONS

NRC is mandated to license both commercial and military high-level waste repositories. NRC has not decided whether to require either site selection review and/or construction licenses for these repositories. We believe that assumptions of these responsibilities by NRC could hasten the ultimate development of these repositories. In the area of pilot plant retrievable repositories for high-level waste, NRC plans to license commercial but not military pilot plants. Extending NRC's licensing authority to include military pilot plant repositories would eliminate this inconsistency.

(4) ALTERNATIVE FUEL CYCLES

Alternative fuel cycles should be systematically studied from the standpoint of reducing the problems associated with waste disposal, proliferation and safeguards.

THE PEACE CORPS AND "PEOPLE INTENSIVE" FOREIGN ASSISTANCE

Mr. HUMPHREY. Mr. President, an article concerning the Peace Corps in Liberia appeared in the Washington Post on Sunday, December 12.

It was written by Mike Keller, an editor with the Honolulu Advertiser, and a former Peace Corps volunteer.

The article raises a number of points that are very significant to consider during the writing of a new Foreign Assistance Act, a task which the Foreign Assistance Subcommittee is now facing. Although principally concerned with the frustrations and disappointments of Peace Corps volunteers, and to some extent of the Peace Corps itself, the article provokes in my mind a number of questions that have relevance to broader aspects of American aid to less developed countries overseas.

First, the article puts into sharp focus the vital significance of the human element in providing foreign assistance, something that is often overlooked when considering development strategies and funding levels. The article underscores the significant impact that the American men and women who are Peace Corps volunteers can and do make on the lives and attitudes of people in all walks of life they come in contact with, and the kind of image of the United States and of us as Americans that is created.

I can think of no better way that the United States can express the natural interest and sympathy of the American people in the problems of poor people trying to improve their lives, than through the efforts of American men and women who have set aside a part, large or small, of their lives to live and work alongside poor people of less developed countries. This is, of course, not vide terminal facilities, which usually necessitates voter-approved local bond issues.

Federal expenditures on the inland waterways navigation system totalling approximately $5 billion from 1824 through 1976 are appropriately noted by the C.B.O. as unimpressive when compared with Federal outlays for rail and highway facets of the national transportation system. However, in an attempt to dramatize expenditures on inland waterways by juxtaposing Federal subsidies as a percentage of annual freight revenues for the various commercial modes, the C.B.O. is particularly misleading. The conclusion drawn is that Federal subsidies are annually equal to about 42 percent of all bargeline revenues compared with 3 percent for railroads. The incongruity in such a "Catch 22" dramatization of Federal subsidies is that it penalizes the inland waterway transportation mode for holding down freight rates in a highly competitive and highly efficient transportation sector, while rewarding the railroad industry for significantly higher rates and notoriously inefficient management.

The C.B.O.'s ranking of subsidies as a percent of expenditures by users in fiscal 1974, 1975 and 1976 (Table 7) is of questionable accuracy and relevance for two other reasons. First, the C.B.O. concedes that "the major portion of the (railroad) freight subsidy in the three years * * * is interim aid to the bankrupt eastern railroads prior to formation of ConRail." Obviously, a plethora of subsidy and subsidy-effect programs—ranging from flood control works along river valley rail lines, to Amtrak payments used to improve trackbeds used by both freight and passenger trains, to any number of special tax advantages—are not included in the C.B.O. formula. Grudgingly, the C.B.O. concedes that if just Federal payments to the railroad retirement fund and loans at below-market interest rates uncertain to be repaid are included in its definition of subsidies, the subsidy portion of railroad user expenditures would be 6 percent—or, in the C.B.O.'s dramatic way of illustration, 100 percent more than the staff paper indicates in Table 7.

Secondly, C.B.O. data for the three fiscal years shows that as a percent of expenditures by inland waterway users subsidies declined by 6 percent from 1974 through 1976 while subsidies as a percent of railroad freight revenue increased 200 percent. Subsidy and subsidy-effect legislation for railroads enacted since ConRail, according to The Wall Street Journal, may foreshadow "a persisting pattern of governmental assistance" to the mode that could exceed $20 billion in the next decade. Conversely, the long-term trend in Federal expenditures for shallow-draft waterways is one of decline. For each $10 of Federal expenditures in 1960, 2¼ cents was expended on shallow-draft waterways, whereas by 1975 only 1¼ cents was so expended.

FINDING NO. 2: THE COMPETITIVE IMPACT OF ENDING THE WATERWAY SUBSIDY

To either defend or question the reliability of the two studies of potential user charges-induced traffic diversion requires acceptance of a number of assumptions that may or may not be correct. Although C.B.O. offers some caution against the superficiality of the highly assumptive reports cited, its acceptance of the widely varying 7.1 to 15 percent diversion estimate argues the inference of a monolithic inland waterway transportation structure. Attempts to predict traffic diversion on individual river segments are handly adequate in assessing the impact on an extremely diverse and competitive transportation mode—not only do 76 percent of the more than 1800 bargeline companies own fewer than nine vessels, as the C.B.O. cited, it should be pointed out that only 9 percent own 30 or more vessels.

So the significance and relevance of traffic diversion may not be so much in the percentage of industry-wide loss but in the individual companies affected. As a basically rural transportation mode, many barge companies are readily identifiable as a sizable local employer and major contributor to small, riverside community economies.

Another omission or oversight that offers compelling evidence of the need for more adequate study of the traffic diversion issue is the absence of consideration of the variability of operation and maintenance cost-recovery taxation levels from year to year. Were a portion of construction costs also recovered at pre-ordained levels annually, the impact during construction periods would be profound—driving away traffic that might normally use the river and thus increasing the tax burden on those who continue to use it. Neither study cited by the C.B.O. addressed these important aspects of cost-recovery user charges. Nor for that matter did they address the rationality of the cost-recovery principle, which applies to no other Federal taxation on transportation modes.

The C.B.O.'s assertion that "the waterway subsidy makes it possible for barge operators to hold down rates at levels low enough to divert 10 to 15 percent of cargo that might otherwise move by rail, truck or pipeline" is salvable due to the C.B.O.'s "might" caveat. Given the massive bulk of so many commodities moved by uniquely suited barge transportation, some commodities might not move at all in the absence of that mode. Studies indicate that no more than half of commodities shipped on the inland waterways are efficiently adaptable to rail movement.

In fact, raw materials transported to manufacturers by inland waterway commonly go to market as higher-priced finished materials by railroad or truck, at premium rates. Both the trucking industry and pipeline interests seem compatible with such an intermodal relationship. As for railroad interests, it should be noted that their anger over water-compelled freight rates reflects not simply competition lost to waterway carriers but rates compelled by the mere availability of an alternative mode—increased rail freight rates would apply to shippers who had no intentions of using the water mode.

On the other hand, it may not be overly cynical, given the history of railroad rate making, for the inland waterway mode, once handicapped by user charges, to anticipate an initial attack of predatory rate competition from the railroads, intended to raise again once the competition is incapacitated.

FINDING NO. 3: ENERGY CONSERVATION AND REGIONAL ECONOMIC DEVELOPMENT

Relative energy use among the transportation modes does vary greatly. Huge tows going downstream on the Lower Mississippi may require only 217 BTUs per ton-mile on vast stretches, for example, while a freight train crossing the Continental Divide with a dwarfish load might require 10 times as much energy per ton mile. Nevertheless, the C.B.O. energy intensity table is misleading in that it relies on innovative and infrequently used unit trains for railroad energy consumption figures; is incomplete in that it excludes authoritative studies such as the Peat Marwick Mitchell report of July 1976, showing inland waterway transportation averages 272 BTUs per ton mile compared with railroad requirements of 687 BTUs per ton mile; and is incorrect in that Table 8's most dramatic figure for barge energy consumption has subsequently been revised downward by the Aerospace Corporation, the source for the Oak Ridge study, to a more realistic 379 BTUs per ton-mile for inland water freight. The C.B.O.'s indication of relative parity among the rail and inland water modes is not borne out by the facts. At the least, it is an oversimplification of even the studies cited.

Energy efficiency of the inland waterway freight mode is pertinent to increased national energy concerns not just because of the mode's peculiar energy use advantage. Adherents of cost-recovery user charges would penalize an energy-efficient transportation mode as a method of promoting traffic diversion to more energy-intensive modes—in other words, any energy conservation on the part of the barge industry encouraged by or resulting from traffic loss would be more than offset by increased energy demands of alternate carriage. Even more importantly, it is of questionable wisdom, in a time of energy instability and seasonal inadequacy, to de-emphasize a transportation mode of which something over 60 percent of its annual freight is energy related. In the C.B.O.'s breakdown by commodities on the Mississippi River System, for example, energy—coal, crude oil, gasoline, residual oil and distillate fuel—accounts for 43.7 percent of the total. Anticipation of large-scale industrial conversion to coal should merit greater attention to, and emphasis on, such an energy-efficient delivery system.

Granted, regional economic development as a national goal may have lost some of its attraction in suburbanized policy-making centers increasingly dominated by service industry and management-oriented academic theorists. Still, the relationship of inland waterway development to regional economic development is undisputedly a correlative and historic relationship. Much of the modern inland navigation system that has evolved since the 1930's is identified with previously disadvantaged river valley regions. Today about 42 percent of all tonnage borne on the rivers and the Great Lakes originates in the Appalachian Region and the South. It may be of no little significance that in a 20-year period corresponding with a massive expansion of the waterway transportation system, Federal expenditures for farm price supports fell from $3.5 billion in 1955 to $.15 billion in 1974.

Regional surveys by the Ohio Valley Improvement Association, the University of Louisville, the Tennessee Valley Authority and the American Waterways Operators over the past 25 years indicate without question that access to inland waterway transportation has been a major component of the industrial site-selection process. While the economic maladies of the community selected may not have weighed heavily on industrial altruism in all cases, it can be said that in many instances development of inland waterway navigation made it feasible to locate in an economically depressed community.

The C.B.O.'s suggestion that business loans and public work grants "are obviously more precise than a nationwide subsidy" for attracting industry and employment represents a philosophy of governmental assistance subject to extraordinary and on-going debate. Federal direct payment programs presumably could be an alternative to economic displacements resulting from dismemberment of the inland waterways system. Those of a bent toward Federal aid as a "bootstrap" principle of government responsibility feel that the amount of money devoted to the waterways is vastly less than what would otherwise have been paid out in regional assistance. Unlike more direct grants, a small expenditure of taxpayer money for waterways generates massive outlays in industrial expansion and enables the affected localities to earn their own living at higher standards, thus creating a healthy tax base.

A LONG-NEEDED STUDY IS STILL AWAITED

The preceding critique of the Congressional Budget Office's three major findings is not intended as a point-by-point rebuttal or confirmation of the numerous estimates and assumptions derived from previously published reports. Neither was the C.B.O.

The job of creating such an academy will not be easy. There will be those who would argue that such an institution would be another academic boondoggle, or too costly to maintain. But it is my opinion that the cost of such a school will be insignificant when compared with the benefits of its future potential for accomplishment, not to mention the comparative cost of some of our strategic weapons.

Today, more than ever before, I believe that rational self-interest, relative cost, and simple logic require us to make intensive efforts to explore and implement new directions in preventing and resolving conflict situations. Economic stability is at stake, as well as personal security and safety, better neighborhoods, and progress in social justice.

Perhaps George Washington did not have these same goals in sight when he spoke of the need for a "proper peace establishment," nor Benjamin Rush in 1792 when he urged the creation of a "Peace Office." Conflict, of course, changes and reflects our social dynamic. It is part of living and dying and is precisely why the thrust toward peaceful solution to conflict is at least as old as the United States.

Woodrow Wilson's campaign for the League of Nations, the Kellog-Briand Pact of 1928 which put the United States on record as opposing war as an instrument of policy, and Franklin Roosevelt's call for cultivating a "science of human relationship—the ability of peoples of all kinds to live together and work together in the same world, at peace," are manifestations of this deep American thrust.

S. 469 was sponsored by Senators JENNINGS RANDOLPH, MARK HATFIELD, and SPARK MATSUNAGA. H.R. 2651, an identical bill, was sponsored by Representative Andrew Young of Georgia—now U.S. Ambassador to the United Nations—and nine cosponsors. The legislation calls for the creation of a commission to be jointly appointed by the Speaker of the House, the President, and the President pro tempore of the Senate, to study the feasibility of a National Academy for Peace and Conflict Resolution and prepare a report detailing its findings and conclusions, including recommendations as to appropriate further legislation.

The creation of the 1-year study Commission at a relatively low cost of $500,000 represents a major step toward the goal of a U.S. Academy for Peace and Conflict Resolution.

The campaign organization whose single goal is the establishment of a federally sponsored institution to train and do research in non-violent methods of conflict resolution, called the National Peace Academy Campaign, or N-PAC, was formed in 1976. Since then it has served to coordinate and mobilize public and private support behind the legislation calling for the creation of a study commission now, and for the actual establishment of a peace academy in the near future.

N-PAC will disband as soon as a U.S. Academy for Peace and Conflict Resolution is properly established, and it will donate any surplus funds to a Peace Academy endowment.

I support this legislation and the work that the National Peace Academy Campaign Organization is doing to further public awareness on these issues. I call upon every American to support this nonpartisan cause which will greatly enhance our abilities to cope with conflict today and in the future.

This is an idea whose benefits will affect us all on a daily basis. It is a small step, and a necessary one. It is realistic, and it is now time that we moved forward with it. As I stated back in 1960, prior to the creation of the Arms Control and Disarmament Agency, "The truth is that we have never seriously, massively, intensively tried to put our scientific and technological capabilities to work to create the technical basis for a world security system, or a force for peace."

Security today is more than arms control. Conflict itself is more than war. Conflict is, moreover, both domestic and international in its origins, effect and solutions. We need to focus our talents and resources and commit ourselves, both practically and symbolically, to causing peace.

I would like to end my remarks here with another excerpt from 17 years ago when I addressed the Senate on the need for an Arms Control and Disarmament Agency:

> The American people are more than willing to pay the billions requested by the President for arms; indeed, we are willing to invest far more than that, and for the present we shall be forced to do so. There is yet no escape from the arms race.
>
> How much more eagerly our people would support an investment in the creation of an alternative to the arms race.
>
> Our people are eager to get on with the creative, humanitarian projects that we have so long dreamed of, eager to plow into the works of peace the dollars we are now pouring into the works of war.
>
> We are not going to find security in the arms race.
>
> We are not going to surrender to totalitarianism.
>
> There is just one way to save ourselves, and in so doing to save the world's people and the generations yet unborn from unimaginable suffering. We must take steps, and giant steps, bold steps, to break through toward genuine world security. No responsibility will rest more fatefully on the next administration than the task of leadership in this great undertaking.

Conflict is inevitable. We must deal with it in a sensible and just way. The National Academy for Peace and Conflict Resolution is a vehicle to begin this movement in the right way. I commend to my colleagues the thoughtful consideration of this proposal, not just as a piece of legislation, but as a serious obligation.

WATERWAY USER FEES

Mr. BARTLETT. Mr. President, the Congress is on the verge of adopting some form of waterway user fees, and the question seems to have evolved at this point to the amount of the fee. For years, there has been a constant debate over the general subject, and the 95th Congress marks the first successful effort by the waterway user fee forces to promote successfully such a program.

During the 5 years which I have been in the Senate, I have participated in a number of floor debates and hearings on the subject, and I have continually opposed the imposition of these fees based, in part, on the fact that there is a severe lack of accurate information.

Numerous organizations, governmental and private, have produced various types of analyses, but no detailed economic study has yet been produced. The subject may, in fact, be so complex that an accurate prognosis may be impossible.

The Congressional Budget Office has released a staff paper entitled "Financing Waterway Development: The User Charge Debate." CBO has not represented this study as a final and complete analysis of the effect of user charges, however, I believe it is a good example of why Congress should withhold a decision on this matter until an attempt to develop accurate information is authorized.

The National Waterways Conference, Inc. has prepared a summary analysis of the major points of the CBO staff paper. Obviously, the conference has a vested interest in the question of waterway user fees, however, the points that they raise about the CBO study are substantial arguments in favor of caution on the part of Congress.

Mr. President, I ask unanimous consent that a copy of the analysis prepared by the National Waterways Conference, Inc. be printed in the RECORD.

I realize that some of my colleagues have cited provisions from the CBO study as support for the user fee, but I hope that they will make an unbiased review of the materials provided by the conference and consider it in light of the inadequacy of information that is available to Congress.

There being no objection, the analysis was ordered to be printed in the RECORD, as follows:

THE CBO'S FINDINGS ON WATERWAY USER CHARGES ILLUSTRATE THE NEED FOR MORE DETAILED RESEARCH

The Congressional Budget Office staff paper, "Financing Waterway Development: The User Charge Debate," utilizes available studies to support three findings relating to what the C.B.O. defines as "major issues" in the user charge controversy. Under analysis, the findings tend to be misleading or obfuscatory and occasionally derived from incorrect data or questionable assumptions.

While the C.B.O. did not recommend enactment of inland waterway user charges per se, its findings indicate an intellectual restraint culminating in a bias toward user charges. The following critical analysis of the staff findings is intended to put this issue in a more proper perspective.

FINDING NO. 1: WATERWAYS AND SPECIAL BENEFITS

In the context of its report, the C.B.O.'s description of inland waterway users as "the only freight carriers who pay no part of building or maintaining their rights of way" implies that the Federal government alone has financed creation of a 15,000 to 25,000-mile inland waterway transportation system Nature is due a great deal of credit. And, not inconsequentially to those involved, the U.S. Water Resources Council determined that non-Federal interests provide 7 percent of construction costs and 8 percent of operation and maintenance costs of in-channel navigation improvements—a figure suggestive of highway matching funds programs. In fact, Federal river and harbor project authorizations commonly require local entities to probe, that kids use a little pot or alcohol, but it's no big deal," said Dr. Mitchell S. Rosenthal, president of the Phoenix House Foundation, drug-rehabilitation organization.

"In the midst of that quiescence, to have a very potent psychoactive drug become suddenly widely available is very dangerous" he said.

WIDE USE SEEN

At Phoenix House, 17 of the last 20 admissions to a program for adolescents said they were PCP users, and Dr. Rosenthal estimated 30 to 40 percent of city high school students use the drug.

A survey undertaken by Phoenix House said that one residential drug treatment center found 22 of its last 50 admissions had used PCP, and that Harlem Hospital was seeing three or four toxic reactions to PCP in its emergency room each week.

Users, called "dust heads" say small doses produce intoxication like alcohol, and sensations of peacefulness, self-confidence and floating. Medical journals say higher levels produces numbness, convulsions, and comas.

"They become really whacked-out," said Capt. John P. Keane, head of the Queens narcotics division of the Police Department. Another symptom is greatly increased irritability.

According to an article in the Journal of the American Medical Association, "unpredictable destructiveness" may result, with stimulated users "running aimlessly, performing bizarre actions, and striking bystanders."

In California, two convicted murderers said they believed PCP-use made them violent. Medical journals record instances of heavy use leading to suicide attempts.

"Sometimes," admitted John, a 16-year-old in the Phoenix House program for drug abusers, "if you take it when you have an attitude, that attitude stays with you until the dust goes away."

Another adolescent in the program, a 13-year-old named Jay, said he had smoked some marijuana with angel dust with friends.

"All of a sudden, we started kicking garbage cans, breaking windows, and bothering people," he said. Jay said he and his friends did not normally behave in this manner.

PCP-poisoning victims, and doctors, have described undesirable symptoms produced by dust as "bad trips" and "bummers," in some ways similar to those produced by LSD.

Overdoses are more common because, as with many illegal drugs, purchasers have no way of knowing the purity or potency of what they are buying. Generally, the PCP is purchased as an ingredient in the marijuana.

"Some of the biggest overdoses are when a kid starts to get caught with a cigarette," said Dr. Rosenthal, who made a gulping motion, "and then he swallows it."

Despite the risks, "dust" is increasingly popular, according to Captain Keane of the narcotics division. More than 100 arrests have been made for sale of PCP in Forest Park in Woodhaven, Queens, alone but "it hasn't even put a dent in the problem," he said.

Last month the police closed three underground laboratories and arrested 58 persons involved in manufacturing the chemical, but Captain Keane says its use is still widespread. Users says that $10 worth of PCP-laced marijuana is enough to give hallucinations to 20 smokers.

THE NEED FOR A NATIONAL PEACE ACADEMY

Mr. **HUMPHREY.** Mr. President, I share with many of my colleagues in both the Senate and House a sense of satisfaction and encouragement over the progress now being made on legislation to establish a study commission on a U.S. Academy for Peace and Conflict Resolution.

It is an idea whose time has come. Such an academy would greatly contribute to national security needs and domestic justice through systematic study, the training of specialists, and providing information to governmental leaders in nonmilitary resolution of domestic and international conflict.

Our country has a long history of establishing new institutions to meet changing national security requirements and the challenges of changing domestic circumstances.

The Federal Mediation and Conciliation Service, which grew out of limited beginnings in 1921, has contributed greatly to labor relations in the United States and the peaceful resolution of labor-management disputes. The Community Relations Service established by the Civil Rights Act of 1964 has contributed to the reduction of racial and community conflict in this country.

During the past 15 years a number of private organizations, such as the American Arbitration Association, have actively entered dispute and conflict situations in communities and institutions such as schools, colleges, and prisons, acting as impartial third party intervenors. These groups have gained substantial experience with the theory and methods of peacemaking and reconciliation in the area of rising demands for social justice.

A U.S. Academy for Peace and Conflict Resolution would gather and focus new knowledge on the theory, process and methods of achieving peace and justice on the international as well as the domestic level. It would provide new alternatives to power confrontations as a means to resolve international conflict. This is in accord with national security requirements in an age of strategic weaponry and global interdependence.

The preliminary judgment of experts in conflict resolution is that new methods and approaches can best be developed independently, but in cooperation with existing structures. Nowhere in the United States are the skills which would be taught and applied by a national center for conflict resolution currently sponsored or conducted by private or public sectors in sufficient magnitude. The need is great, but the mechanisms which are being utilized to partially meet this need are scattered, poorly funded, lacking in sufficient credibility and visibility. The Peace Academy represents a new frontier in the practical social sciences. Just as business management or the computer sciences did not exist as academic or experiential disciplines a few decades ago, the field of peacemaking is a new science brought on by the ever increasing interdependence and shrinking resources which make conflict such an inevitable part of our lives. The fact that nearly 100 existing academic fields now have conflict sections as ongoing professional study groups is indicative of the need for centralized and focused resources for this practical and highly important field.

Since 20 years ago, when I first initiated legislation calling for the creation of what is now the Arms Control and Disarmament Agency, there has been all too little progress toward the limitation of arms or any clear and credible recognition of the many alternatives to the use of arms. The creation of ACDA brought important sanction to an entirely new field.

Between 1935 and 1977, over 140 separate and distinct legislative initiatives have been made to establish a peace office, institute or academy, sponsored by representatives of all sides of the political spectrum. Finally, last June, a major step forward was taken when the Senate passed legislation, S. 469, to create a study commission on a U.S. Academy for Peace and Conflict Resolution.

Former President Dwight D. Eisenhower once characterized the "military-industrial complex," coupled with a lack of organized support from an alert and knowledgeable citizenry, preventing what he believed to be necessary in compelling a proper meshing of the "machinery of defense with our peaceful methods and goals." Now, both of these conditions have changed. Recognition of global interdependence has had a widespread impact in all sectors of our society, and peace has become recognized as everyone's concern.

Just recently, the Washington Post printed on the front page the comment by Egyptian President Anwar Sadat that one of his major motives in going to Israel was to give the peace process a "new momentum and to get rid of the psychological barrier that, in my idea, is 70 percent of the whole conflict." It is important to note that third party mediation and other conciliatory methods were far more successful than diplomatic or enforcement techniques had been in working toward the peace settlement which we all are seeking in the Middle East.

The proliferation of nuclear weapons, mounting terrorism, and a general increase in violence at local community, national and international levels, make the establishment of a national institution devoted to research and training in nonviolent conflict resolution a matter of national and global interest.

The current bill, now before the International Operations and Post Secondary Education Subcommittees of the House, would provide for the creation of a commission to evaluate the various proposals for a National Peace Academy and, after 1 year, to make appropriate recommendations to Congress. Although the appointment of the commission would not guarantee the eventual establishment of a National Peace Academy, it is a necessary first step. Much homework must be done to insure the effectiveness of any future plans for student selection, curriculum development, practical training, physical plant options, intergovernment coordination, and community input. Only a commission can thoroughly evaluate and utilize the value of this necessary input.

Mr. President, because of the dangers this drug poses to unwitting teenagers and the urgency of the situation, I ask unanimous consent that certain relevant and highly informative articles on PCP abuse be printed in the Record at this point. These include a Time magazine article from its publication dated December 19, 1977; a Chicago Tribune article of December 14, 1977, by Mark Starr; and an article appearing in the New York Times of November 10, 1977, by Matthew Wald.

There being no objection, the articles were ordered to be printed in the Record, as follows:

BEHAVIOR

PCP: "A TERROR OF A DRUG"

Angel dust is the most common name. It is also known as goon, busy bee, crystal, hog, elephant tranquilizer and superjoint. By any name, phencyclidine (PCP) is the most dangerous drug to hit the streets since LSD became widely available a decade ago. Its use is growing rapidly; a National Institute on Drug Abuse (NIDA) study found that nearly a third of the young patients reporting to drug-treatment centers have tried PCP and one-fifth used it regularly. Angel dust has been linked to hundreds of murders, suicides and accidental deaths—214 last year in the Detroit area alone. Says a Boston drug hotline worker about new PCP users: "They don't know what they're getting into. They think it's just some easy high. Man, are they surprised!"

A user in California walked into a house that he had picked at random, killed a baby and stabbed a pregnant woman in the stomach. Under influence of the drug, a man in San Jose, Calif., tore out both his eyes with his bare hands. In the Chicago area, more than a dozen cases of drownings have been attributed to PCP use: victims lose a sense of direction and space and cannot fight their way out of the water.

The effects of the drug are so unpredictable that users call it "heaven and hell." Irrational or violent action is typical of chronic users, but even dabblers are not immune to sudden rages. A small dosage of PCP can produce a high that resembles drunkenness and can lead to anything from euphoria and a sense of bouncing to depression and hallucinations. Larger doses can bring convulsions, psychosis, uncontrollable rage, coma and death. "It's a real terror of a drug," says NIDA Director Robert DuPont. "Everything people used to say about marijuana is true about angel dust."

Developed in the 1950s as an anesthetic, PCP was banned for human use after tests showed erratic side effects, and it is now legal only as a tranquilizer for monkeys and apes. It can be snorted as a powder, injected as a fluid or swallowed as a pill. But usually the drug is dusted or sprayed over parsley, mint leaves or marijuana and smoked. Some dealers doctor low-quality marijuana with it. Others simply sell it to naive youngsters as LSD, THC (the active ingredient in marijuana), mescaline or even cocaine.

One reason for the rapid proliferation of PCP is that the drug is cheap and available. For $100, a handy amateur can manufacture PCP worth $100,000 on the street. "It's a terribly easy thing to do," says Hugh Shanahan, a federal Drug Enforcement Agency official in Los Angeles. "It requires no sophisticated equipment. Even someone without a chemistry background can do it." Thus PCP is churned out in hundreds, possibly thousands of makeshift labs around the country, often in remote areas, where there is less chance that its telltale ether odor will be detected.

Though police often track down these producers through tips from shocked and disgruntled PCP users, they have another way of finding the labs. Some solvents used in turning out PCP are so volatile that L.A. police have zeroed in on several labs simply by following up fire-department reports of suspicious explosions.

PCP may require an entirely different enforcement program. Officials who were trained to cope with limited imports of natural drugs are now facing an array of new synthetics that can be easily concocted at home. Some 20 variations of PCP are probably already on the streets, most of them perfectly legal because authorities have not got around to banning them. "We're heading into a new, dangerous era," says Dr. Mitchell Rosenthal, head of Phoenix House, a drug-free program in New York City. "The natural substances—opiates and so forth—are not going to be the problem of the future."

Government planners are belatedly mapping a campaign to educate the public about the dangers of angel dust. But one official is frankly puzzled about how to approach PCP users. Says he: "It's hard to understand why people are taking PCP. They don't take it to get high. They don't take it to make sex better. They take it to zonk themselves out. In a way, it's a disguised death wish."

[From the Chicago Tribune, Dec. 14, 1977]

PCP Makes Drug Scene Here Worse

(By Mark Starr)

On the street, they call it "dust," "hog," "tic," and "tac."

The police have taken to calling it the "white man's heroin."

What it is is PCP, an animal tranquilizer—and a main reason Chicago-area experts dispute federal studies that show drug use among teen-agers has stabilized.

In Chicago, say experts here, the situation is getting worse.

"The youngsters seem to be getting more and more involved, particularly with this PCP," says Harold Thomas, commander of the Chicago Police Department's youth division. "And PCP has properties that make it one of the most dangerous drugs at all."

That's on top of a basic commitment to marijuana use that Frank Folkers, a city-wide drug consultant to the Chicago Board of Education, terms "staggering."

"Marijuana is the youth drug," he said. "You can't even discuss it without risking turning the kids off.

"All they want to know from me is when is it going to be legalized. They're beyond decriminalization already.

The drug problem here is aggravated by several factors:

Teen-agers are far more likely today to use a mixture of drugs and to combine drugs with drinking.

The quality of street drugs appears to be worsening.

PCP, which has become the "in" drug in the last several years, supplanting pills, is easy to manufacture, difficult to police, readily available on the streets, and easy to consume and conceal.

Patterns of drug use have become more sophisticated.

Randy Webber, drug information coordinator for Alternatives, Inc., a North Side center for drug treatment, prevention, and education, says the wholesale mixing of drugs reflects a certain attitude.

"Kids aren't really interested in what they're taking," Webber said. "They gobble stuff haphazardly because all they want is to get high. The object is to get messed up any way you can.

"And the way they use liquor on top of it is like a condiment or extra flavoring. They don't even think of it as a dangerous drug. It's just like putting salt and pepper on a steak."

Current statistics reveal that about 50 per cent of drug overdoses are cases of mixed use of drugs and alcohol.

In addition, Webber says, the quality of street drugs as determined by Alternatives' drug analysis program is deteriorating steadily. He says the "ripoff rate" involving adulterated drugs or substances that are not drugs at all is approaching 70 per cent.

The advent of PCP compounds most of the traditional problems. For example, its components are not federally regulated and thus they are easily purchased and the drug easily manufactured.

In addition, only small quantities of PCP are required for a "high" and it can be consumed in any manner [in a drink or laced into a marijuana cigaret], making detection extremely difficult.

"They can smoke it in a marijuana cigaret, figuring nobody's going to bother with them for one lousy cigaret," said Thomas, "but what they're actually smoking may have the chemical potential of 20 marijuanas."

PCP produces dangerous symptoms, including loss of muscular control, often resulting in recurring episodes, sometimes months later.

Even more frightening, PCP has been linked with episodes of psychotic violence.

Drug experts here are trying not to sound panicky, but they fear that what is already called a PCP "epidemic" in California is beginning to penetrate Chicago in the same proportions.

Those familiar with drug activity in the Chicago area are alarmed at the "anything goes" nature of drug traffic among teenagers. A new hot item called "tees in blue" combines a synthetic narcotic with an antihistamine and is selling briskly on the South and West sides.

"I really don't want to sound alarmist," said Webber, "but it's clearly going to get worse here before it gets any better."

[From the New York Times, Nov. 10, 1977]

Youths' Use Of "Angel Dust" Stirs Concern

(By Matthew L. Wald)

"Angel dust," an inexpensive additive that can induce violence and psychosis, has found its way into the marijuana cigarettes of thousands of adolescents in New York City over the last six to eight months, according to health officials.

Teen-agers in search of strong, cheap highs, are also looking for substitutes for "oust," including deodorants and insecticides, which they spray on marijuana.

A hallucinogen also known as "zombie dust," "elephant tranquilizer" and "busy bee," the drug, phencylidine, or PCP, was developed in the 1950's as a tranquilizer, but rejected for human use after tests caused violent behavior and convulsions in human patients.

The substance is occasionally used to sedate primates and is now widely available in marijuana.

Unlike marijuana itself, about which medical experts are divided, doctors agree that PCP is a very dangerous drug.

"The tragedy is that most people experience angel dust as some unusual form of marijuana, and associate it with the benign patters of marijuana, but it's anything but that—it's a real terror of a drug," said Dr. Robert L. Dupont, director of the National Institute on Drug abuse.

Drug rehabilitation workers, startled by the swift spread of the white-crystalline powder, fear it comes at a time when parents and others have dropped their guard against marijuana.

"We have a population which believes the drug abuse problem is not what it used to

U.S. SUPPLIED FOOD ASSISTANCE

The United States supplied Mozambique with $20 million in food assistance last year. More recently, a Mozambican delegation went to the United States to discuss various projects with bankers.

According to a diplomatic source outside Mozambique, the bankers were impressed by the limits the Mozambicans placed on foreign involvement.

They said here are sectors where we are interested in your technology and in partnership, and here are others where we do not want your technology, where we will exploit our resources on our own," the source said.

There are those who insist that the Government is intent on guarding the national identity of its revolution. When Mr. Machel recently saw off 1,200 secondary school pupils to Cuba, where they would be studying, he thanked Mr. Castro but then pointed out that Mozambican teachers would be going with the students to help them "preserve their Mozambican personality."

Some observers say that Mozambique appears to be developing strong ideological alliances with many of the newer, smaller and non-European Communist states, such as Vietnam and Cuba, whose experiences are closer to those of Mozambique.

"It is 60 years that we have been waiting for the new man to be born in Moscow," said one young Mozambican. "It is a long pregnancy and perhaps a miscarriage, but maybe in Cuba, in Vietnam or here, he will still come."

IMMEDIATE FEDERAL ACTION NEEDED TO HALT PCP ABUSE

Mr. PERCY. Mr. President, I have called on the Carter administration to take immediate action to halt the accelerating abuse of the illicit drug phencyclidine (PCP), commonly known as angel dust.

In letters to Attorney General Griffin Bell and White House Special Assistant for Health Issues, Dr. Peter G Bourne, I have urged the Federal Government to immediately restrict the availability of PCP by reclassifying it among those drugs with the highest potential for abuse.

I am also calling for a White House conference to be promptly convened to focus the Nation's attention on this growing health menace and to give direction to the Federal efforts. National leadership on this problem is long overdue.

The latest statistics from the National Institute on Drug Abuse show new evidence of surging PCP abuse by teenagers in major cities across the country. Enough facts are already in to warrant strong Federal action. We know that the average age of youngsters trying this drug is lower than that associated with any other psychedelic drug. We know that in numerous studies PCP has proven to be more debilitating than LSD or mescaline. We know that the drug's low cost is escalating its use. In short, we know enough about this drug now that not to act would be to ignore a national menace.

PCP has only recently become a drug of choice among junior high school and high school students. Doctors warn that it is the most dangerous drug ever to achieve such widespread acceptance. PCP is known to seriously disrupt behavior, causing unpredictable, violent aggression, paranoia, severe anxiety, and depression. Although 93 deaths related to PCP abuse have been reported since 1974, authorities believe that hundreds more have gone unreported.

PCP is extremely dangerous because there is a thin line between getting "high" and accidental overdoses that may endanger human life. The vast majority of fatalities associated with PCP, however, are due to its behavioral toxicity and result in unexplained murders, drownings, and suicides.

PCP is easy to manufacture because its ingredients are readily obtainable. Hundreds of clandestine labs have appeared around the Nation. The drug's tremendous profit margin—$125 worth of chemicals can produce $100,000 in street sales—has reportedly attracted an increasing involvement by organized crime.

There is a clear pattern of accelerating PCP abuse. Specifically:

The number of juveniles trying PCP virtually doubled from 1976 to 1977, according to the National Institute of Drug Abuse;

An as-yet undisclosed study by the Philadelphia Psychiatric Center completed in August 1977, on 2,750 teenagers in drug centers in 39 States, revealed that 32 percent of them had tried PCP. The average age of first-time use was 14.5 years old. Two hundred children were chronic users taking PCP three or more times a week.

One New York City drug abuse treatment center reports that, over the last several months, 44 percent of its last 50 admissions were PCP related.

While only 13 percent of all hallucinogens mentioned in drug emergencies were PCP related during the summer of 1973, the percentage rose to 43 percent during the last 3 months of 1976.

In the first half of 1977, 22 out of 28 hallucinogen laboratories raided by DEA were manufacturing PCP.

A 5-milligram dosage sells for $1 and can get more than one person high. This low cost, coupled with peer group pressure in schools to be "tough enough" to handle the drug, has led to substantially increased demand. Reports cite children as young as 9 and 10 years of age experimenting with it.

PCP can be inhaled, swallowed, or smoked when sprinkled on marijuana or other substances. It appears as a tablet, capsule, or powder.

The Federal Government currently classifies PCP under schedule III of the Controlled Substances Act of 1970, meaning that it has a recognized medical use and is not highly restricted. The Drug Enforcement Administration (DEA) has proposed to upgrade that classification to schedule II, which would still allow for PCP's medical use but recognize its high potential for abuse.

But, even though the liquefied form of PCP has an accepted medical (veterinary) use, the powdered and tablet forms of PCP have no recognized medical uses. I support the DEA proposal to reclassify the liquefied form in schedule II but have strongly urged that the powdered and tablet forms—most commonly found among teenagers—be classified in schedule I. In this way, the full weight and force of local and Federal Government can be brought to bear to suppress the illicit production and distribution of PCP.

Moreover, the DEA does not cover the more than 30 compounds of the PCP family—such as Pyrrolidine, PCE, and PHP—which are now not even subject to Federal control, even though they are often as dangerous as PCP. These substances are also becoming more readily available.

Once classified under schedule I, law enforcement officials would be required to elevate PCP to a priority comparable to that assigned to heroin.

This step is vital because PCP is in several respects as dangerous as heroin. Lt. John Hinchy, chief of the Chicago Police Department's narcotics division, has warned that "PCP has become the heroin of the suburbs."

The scope of PCP abuse is national. For example:

Chicago: The number of PCP-related hospital emergency room admissions in the metropolitan area increased by 30 percent for the first 4 months of 1977 compared with the same period in 1976.

Metro-Help, a privately operated drug hotline service, reports that in fiscal year 1976, 6.2 percent of its calls involved PCP. By September 1977 the number of calls had risen to 10.2 percent.

Detroit: A $4 million a year ring reputedly financed by organized crime figures was raided by police recently. The ring was making up to 20 pounds of PCP weekly to sell at $4,000 a pound.

San Diego: An official estimates nearly one-third of the city's 126 overdose deaths in 1976 were PCP related.

Baltimore: PCP has been linked to five deaths in 1976. This year there was a 200-percent increase in the number of PCP users admitted to a State-supported drug treatment program.

New York City: In 1977, police in Queens closed three underground labs with an estimated annual production of $12 million and arrested 50 persons. An explosion in one PCP laboratory in a private home killed an operator and injured his assistant. Since September, 17 of the last 20 admissions to the Phoenix House adolescent drug rehabilitation program in New York City have admitted to using PCP regularly.

San Francisco Bay area: Police suspect as many as five San Francisco murders in 1976 were linked to PCP. Some 20 to 30 PCP overdose cases were treated daily in the East Bay area. Local San Jose police seized 70 grams of PCP in the first quarter of 1975, 125 grams during the same period of 1976, and 4,000 grams during the first quarter of 1977.

Washington, D.C.: Since 1974, 1,000 young people have been treated for schizophrenia at St. Elizabeths Hospital. During one 2-year period, PCP was the center's leading cause of admissions. About one-fourth of the PCP patients returned to the hospital 1 year later with schizophrenic psychoses in the absence of drug abuse.

priest; Frelimo leaders say that even this was a mistake since the Constitution prohibits capital punishment.

There were severe dislocations, which in terms of individual dramas were sad. The privileges of the settlers were curbed dramatically. Medicine was nationalized and most of the 130 doctors who had confined their practice almost exclusively to the settler community left. Now white patients must wait their turn with the rest of the population at clinics staffed by foreigners committed to Frelimo.

GENTLE AUTHORITARIANISM

Rental properties were nationalized although all residents were permitted to keep private dwellings and, in a concession to privilige, were also allowed to maintain holiday villas at beaches or in the mountains.

On the other hand, nightclubs were closed and, as a Portuguese who has sent his family away while he cleans up his affairs said: "We cannot live like this. There is no wine, nowhere to go, the life we had has ended." A woman formerly from Goa, also eager to leave, said: "They have done good things, but the schools are now for everybody, and if I stay who will my daughter marry?"

* * * of privileges, but no one complained of outright repression. A Western diplomat commented, "About the worst you can say is that there is gentle authoritarianism."

Recently President Machel made a speech saying that there was no place in Mozambique for neutral journalists, which was explained as meaning that news judgments had to be made in terms of education and consciousness-raising and that journalism was seen as a tool in the mobilizing process. The press is active and there are many publications, all of which seek to inspire rather than criticize.

MOZAMBIQUE IS VIEWED AS AFRICA'S BEST HOPE FOR THE FLOWERING OF SOCIALISM'S "NEW MAN"

(By Michael T. Kaufman)

MAPUTO, MOZAMBIQUE.—The idealistic left, in Africa, Europe and America is now looking to this country as it once looked to Ghana, Algeria and more recently Tanzania as fertile ground for the nurturing of socialism's "new man."

At universities around the continent, African students talk increasingly and admiringly of Mozambique and of the country's leader, Samora Machel, a 44-year-old former hospital orderly who, like the Government he directs, was shaped during a 10-year guerrilla war against Portuguese colonial forces.

At the same time, scores of mostly young, mostly Marxist men and women from the developed world are arriving here as they once did in Accra, Algiers, and Dar es Salaam to participate in the social innovations through which Mozambique's Government is seeking to transform this country of 10 million people into a nonracist, nontribal, nonexploitative and self-reliant society.

SWEDES, AMERICANS, AND CHINESE

There are Swedish doctors, Scottish journalists and American teachers among the hundreds who have come more or less as individuals. There are also, of course, many Cuban, North Korean, Chinese, Russian and Eastern European technicians who have come here under government agreements.

But it is largely the influx of Westerners that serves to underscore Mozambique's particular role in testing the idea that the seeds of scientific socialism can flower in Africa without repression or economic chaos.

The Ghana of Kwame Nkrumah, which once symbolized that hope, foundered as ambitious schemes outpaced meager resources and civilian corruption gave way to military coups. Then Algeria had its unity shattered by political skirmishing and economic production levels fell. More recently in Tanzania, despite the moral exhortations of President Julius K. Nyerere, income-redistribution plans and rural collectives have failed to advance the modest dream of having the nation feed itself.

But if enthusiasm has waned in other places, it is palpable here. The experience of Mozambique is only two years old and any instantaneous readings of revolutionary change are subject to revision. Still, there is evidence that the degree of mobilization and national purpose attained here is great and may be more durable than anything black Africa has known.

"ABSENCE OF REPRESSION"

"I write these letters home," said Barbara Baker, a 34-year-old New Yorker who left her job at Bronx Community College to teach in an adult education program here. "The letters are all about the grass roots organization going on, the process of ongoing education in offices and factories, the lack of any racial hostility, the politeness, the absence of repression and I know that back home it must sound like a fairy tale. Sometimes I think it is a fairy tale, but it is true."

Certainly the cohesion witnessed during a two-week visit to Mozambique was remarkable in terms of black Africa. Although most of the Portuguese have left, the degree to which whites, blacks and Asians live together was striking.

In much of Africa whites and blacks often use the same restaurants but they do not always share the same tables. Here they do. Throughout the continent the sight of black nannies holding white infants is common, but only here has this reporter seen white women holding the black children of their friends.

It is clear that President Machel's Government enjoys popularity and support. Since independence there have been no open splits within the leadership of the country's only party, called Frelimo, which is an acronym for Front for the Liberation of Mozambique.

LESSONS LEARNED IN WAR

The Frelimo leaders are proud of what they feel is Mozambique's singular experience in Africa and they attribute it to lessons learned in the armed struggle against the Portuguese.

Mr. Machel himself has said that the "thing history will remember us for is not defeating colonialism but learning how to use the armed struggle as a mechanism for changing the mentality of the people."

In the course of the war, Frelimo established schools, hospitals and conducted political education in concrete ways to encourage those who have skills to pass them on to those that do not.

They also evolved the concept of the "dynamizing" group which today is the basic structure of social mobilization.

SERVE AS CHEERLEADERS

Each factory, each hospital, each school and each state farm or collective has such groups of workers or students, who are elected and who serve roughly as cheer leaders or counselors.

For example, in Maputo's central hospital, there are weekly meetings of patients and staff at which problems are discussed.

Maria Salghetti, the chief of nursing, explained that patients may, and have, raised complaints about food or cleanliness. The problems are discussed and analyzed. It is then up to the dynamizing groups to encourage their colleagues to work more efficiently to solve them.

The groups are also concerned with the personal problems of their colleagues. If a man is drinking excessively or is often absent from work, the group looks into the problem.

"Most often all that is necessary is for the group to talk with the man or woman but sometimes when attitudes do not change it is necessary for people to go for re-education," said the nurse, a white who served with Frelimo during the war.

Such groups have succeeded in imposing an appearance of movement and orderliness in the country. A second factor that contributes to the so far unusual development of Mozambique stems from the country's geography.

The land is bordered in the south by South Africa, and to the west by Rhodesia. During the later years of Portuguese control the economy was closely tied to those of its white-ruled neighbors.

Mozambique's leaders now express total commitment to the cause of majority rule in Rhodesia.

TRADE TIES TO SOUTH AFRICA

Despite frequent private comments from Mozambicans deploring the inability of the Rhodesian nationalists to settle their differences or to plan for a new society, the Government has provided training camps for Rhodesian guerrillas, which has prompted raids by Rhodesian forces. Mozambique also closed its border with Rhodesia, stopping the rail links between Salisbury, the Rhodesian capital, and the Mozambican ports of Beira and Maputo. This has cost the country almost $200 million a year in transit fees and duties.

However, Mozambique's relationship to South Africa is different, with trade and commercial links very much intact. The Government regularly expresses its indignation at apartheid, but South African technicians help staff its ports and most spare parts come from South Africa.

There is a widespread recognition not only among the leadership but among the population that while the South African Government may be hateful, it is a necessary trading partner and, perhaps more importantly, a powerful technological force with far greater military muscle than Rhodesia.

This contradiction has forced a certain pragmatism both in programs and polemics.

South Africa is real, its power is real, no one here expects us to precipitate suicidal confrontations," said an official in the planning ministry. "On the other hand we are striving to develop a society that, in time, will not be dependent on any foreign sources for either our technology or skills."

REACH COLONIAL PRODUCTION LEVEL

The official said Mozambique's goal was to increase production by the end of the decade to the highest levels reached during the colonial period. He added by the end of the century Mozambique would be manufacturing its own tractors.

This pragmatism extends as well to the country's foreign relations, particularly with Communist countries. During the guerrilla war, Mr. Machel went to Peking and, like many leaders of liberation groups, was offered military assistance if he renounced Soviet support. Alone among African liberation groups, Mozambique's guerrillas were able to obtain Chinese help while retaining Soviet support.

The Soviet Union is supplying and training the army. The East Germans are active in the Information Ministry. The Cubans have the most visible presence with agricultural and technical teams. There are North Koreans as well and the Swedes have given the most aid to the country.

Relations with the United States are cool but improving. President Machel's talk with President Carter at the United Nations was given less press coverage than his meetings with Cuba's Leader, Fidel Castro, and Jamaica's Prime Minister, Michael Manley. Some resentment still remains over United States support for Portugal during the guerrilla conflict and diplomatic ties were slow to be established after independence.

developing African nations have failed: creating a sense of discipline without outwardly turning the country into an armed camp.

No one here contends that a social paradise has been attained or that such a prospect is imminent. Certainly the revolution here has encountered enormous problems involving shortages of skilled manpower, goods and capital. And refugees arriving in Portugal have spoken bitterly of racism, indiscriminate arrest and food shortages.

Bordered by both Rhodesia and South Africa, Mozambique has real enemies close at hand. Still, there is a widespread confidence that rests on national mobilization and self-sacrifice and that is exceptional in the experiences of independent black Africa.

During a 3,000-mile-tour that this correspondent just completed the signs of social transformation and grass-roots involvement in development efforts appeared regularly.

Recently, for example, this large modern capital city was pummeled by a bizarre hailstorm. The early summer torpor of coastal southern Africa suddenly broke and cold, fierce winds whistled while balls of ice the size of lemons and tangerines fell in a barrage that killed four people and hospitalized hundreds.

Half an hour after the storm began it was over, and half an hour after that groups of citizens were in the streets sweeping up the glass and fallen tree limbs and building barricades around downed electric wires. There were teams of neighbors, of high school students, of factory workers. The next day workers in industrial plants and commercial offices began donating a day's wages for a reconstruction fund. Within two days the debris had disappeared.

A young Mozambican, proud of the city's response, was drinking coffee at the luxurious Polana Hotel overlooking the Indian Ocean.

"In two years of independence," he said, "we have had everything—floods, hail, an outbreak of bubonic plague and Rhodesian invasions. All that is missing is rivers of blood and the slaughter of the firstborn. But if these come we can handle them also."

The Government's approach to political dissent and personal freedom is governed by a paramount need for discipline. Members of Frelimo, the only party, which led the 10-year war against Portugal, insist that free debate and discussions are encouraged at party meetings though no criticism is permitted outside.

Despite its difficulties, the Government of Mozambique appears to have united the people and concentrated their energies in a way that is unusual for the third world and singular for Africa. Often the most impressive evidence lies in small details. In the deepest bush men and women salute visitors with the raised arm gesture of Frelimo. Clearly these country people were proclaiming, "I am Mozambican," a show of national identity that is rare on a tribally fragmented continent.

THE MEN WASH CLOTHES TOO

On the banks of rivers, in addition to the usual team of women washing clothes, there were men washing clothes, something this reporter has not seen in 23 other African countries. Such activity seems to stem from Government educational campaigns against polygamy and other cultural forms of male dominance.

At a small communal village a 12-year-old boy with two years of schooling stood before a blackboard teaching 45 elders, men and women, to read. At another new settlement residents showed off the neat four-room adobe and thatch houses they had built cooperatively in neat rows. Proudly they pointed to the outhouses behind each house, saying that the Government had showed them how to build them and why they were needed.

In another region a team of paramedics was inoculating the population against smallpox, tetanus and tuberculosis. They were part of a campaign that began a year ago in which such teams set out at the southern border with Tanzania intending to work their way south, vaccinating everyone. So far, the Ministry of Health reports, more than three million of the population of 10 million have been treated.

Everywhere there were meetings—of peasants on state farms, of women, of schoolchildren, many of them to discuss the elections for village and district assemblies.

As singular as all this was, what was even more striking to a visitor was the absence of men in uniform or men with guns. As in the case of the Maputo cleanup, the efforts in the countryside appeared to stem from pride and not coercion.

A sign painted on many schools and public buildings throughout the country says, "Let us turn our whole nation into a school where we can learn from each other." So far, at least, the sentiment seems more than rhetoric.

In neighboring Rhodesia it has long been an article of faith among many white leaders that any transition to majority or black rule will inevitably lead to a white collapse of the country's complex technological structure. White Rhodesians often paint pictures of plummeting production, vandalism and chaos as black masses take over from whites. In Zaire, for example, when the Belgians left what was known as the Congo and a long period of political turmoil began, roads became overgrown by jungle, inventories were depleted and never replaced, factories ground to a halt. In another former Portuguese territory, Angola, where civil war continues, distribution systems faltered and elevators broke down, with no one to repair them.

Here in Mozambique, despite the departure of 250,000 Portuguese settlers—the people who ran industry, the civil service and the large plantations—nothing so drastic has happened. Phones, railroads and airlines work. Abandoned stores and factories are being run, admittedly at reduced levels of production, but nevertheless by workers' committees with the aid of relatively few foreign experts.

EDUCATION WAS NATIONALIZED

There are many problems of distribution and cars and trucks are sorely needed, but there is no apparent hunger and the periodic shortages of things like beer and canned goods—hardly necessities for most of the rural population—are no worse than in many African states that have been independent for years.

Discussing the more negative side of the ledger, Joaquim Brum, director of the Ministry of Economic Planning, concedes that there are awesome difficulties as the country embarks on a socialist course. With 70 percent of the population under age 18 and with illiteracy estimated at more than 90 percent, there is an overwhelming need for skilled people, not just doctors and engineers but mechanics who can repair motors and people who can drive cars.

The filling of such needs is the first priority of the Government, and its first move was to nationalize education, which under the Portuguese was private and largely reserved for the children of settlers. Even though there are few teachers, primary education is obligatory and a school is often administered by a teenager, with higher-grade pupils teaching lower grades.

Another difficulty is that the Portuguese left behind them a highly capitalized and developed economic structure that is largely irrelevant to the needs of the people. There are factories that produce perfumes, but there are not enough textile plants and many people in the countryside wear rags.

It is an irony that the Portuguese, the first to colonize Africa and the last to leave it, did not really begin investment on a large scale until after World War II, when the sun of colonialism began to wane elsewhere and as a result there are good roads that were built to encourage Portugese immigration, and Maputo shares with Abiidjan, in the Ivory Coast, the distinction of being the most modern and built-up cities in black Africa. But this creates problems.

EVENTUAL USEFULNESS FORESEEN

"We have a building here that was almost completed before independence," said Mr. Brum. "It has 35 stories of luxury flats of 10 rooms each. What are we going to do with it? We thought of turning it into offices, but we found that because the elevators are built for residential needs, a worker who arrived at the building at 6 in the morning would not get to his office until four hours later. Now, if we don't complete the building it will be lost and ruined. If we do it we'll use capital that should go for clinics, schools, housing."

The cost of maintaining such extravagance while also attempting extensive investment in the countryside has burdened official planners. On the other hand, as Mr. Brum noted, some of the inherited investment could become useful eventually and there is an obligation to protect these things simply because they are here.

The answer so far to the problems of maintaining the costly inheritance has rested largely with the discipline that is so evident. The gardens of the rich Portuguese who fled are being trimmed by neighborhood people, but no one has commandeered their pleasure boats from drydock or squatted in their beach villas. There are no taxis in Maputo and hitchhiking is prevalent. Sharing of resources has been made an act of patriotic duty.

"At the basis of all our economic and social plans is discipline," sair Mr. Brum. The development of this unity stems from the singular liberation struggle waged by the Frelimo guerrillas for 11 years against a force of 70,000 Portuguese. Unlike similar movements in Angola and Rhodesia, Frelimo was able to fuse nationalists elements within a single command and evolve an ideology and program that went beyond mere independence.

Starting with 250 men who slipped across into Tanzania to begin training for armed struggle, Frelimo grew to a force of 20,000 that, even before the collapse of Portuguese colonialism, had occupied three northern provinces where schools, hospitals, and agricultural collectives were established.

Through women's groups, youth movements and worker meetings the ideas of Frelimo were implanted. It was not enough to end colonial control. What was necessary was to use armed struggle as a mechanism with which to change the consciousness of the people. The struggle, the leaders repeated, was not against whites, for racism and tribalism are divisive and black racism should not be the answer to white racism.

WAR: "WONDERFUL UNIVERSITY"

Today those northern provinces are regarded as the most progressive in the country, and President Samora Machel, who was a hospital orderly when he became one of the original fighters, often says it is a pity that the coup in Portugal came when it did in 1974, for had the war continued the entire country might have been transformed sooner. "Armed struggle," he said, "is a wonderful university."

When the colonial administration withdrew, in any case, a Frelimo government with a defined program already existed. Though there were nightmares in the settler community, there was no bloodbath. In fact, according to both Frelimo leaders and Western diplomats only two people were executed—two black men sentenced to death by a people's court of 6,000 for murdering a white

School Girls Buried in Common Grave—Heavy Destruction in Rhodesian Raid

(By Ian Christie)

Maputo, Mozambique, November 29.—The pages of a blood-spattered school book fluttered in the breeze at the edge of a mass grave. In the bulldozed hole lay the bodies of 20 young girls, their ages between 10 and 14.

They had been sitting in their classroom when the Rhodesians attacked last week. It was hard to see exactly how they died. On the face of one pretty teen-ager there were the marks of tears that had streamed down her cheeks. On the face of another, the black skin had been burned off, leaving only the white flesh underneath.

They were among at least 100 who died in the largest attack the Rhodesians have launched into Mozambique. At the Chimoio hospital about 14 miles away 600 wounded, more than 200 in a serious condition, were being treated for burns from incendiary bombs, bullets and shrapnel.

The full death toll in this attack—only a few miles south of the scene of last year's Hyazonia massacre in which hundreds of unarmed civilians were slaughtered—is still unknown.

I personally counted 70 bodies, mostly women and children, when I visited the scene over the weekend. A doctor at the Chimoio hospital told me that 10 people had died there, and survivors said that at least 20 were unaccounted for, some of whom may have dragged themselves away into the bush and died there from their wounds.

The Rhodesian government, in its announcement of the raid, claimed 1,200 were killed.

The camp, belonging to guerrilla forces of Robert Mugabe's Zimbabwe National Liberation Army, was completely destroyed. Mugabe and Joshua Nkomo of the Zambia-based Zimbabwe African People's Union, both oppose Rhodesian Prime Minister Ian Smith's attempt to reach a settlement with moderate nationalist leaders inside Rhodesia.

Rhodesian forces used Mirage fighter bombers, Canberras and Hawkers Hunters in the attack, inflicting the main damage by bombs and rockets, according to Mozambique defense experts.

The camp included a hospital; a school; stores for food, clothing and medicines; a repair yard and transport depot. Most had taken direct hits from bombs. One was riddled with machine-gun fire from a helicopter gunship.

Located 40 miles from the Rhodesian border to the north of Chimoio, the camp was used by guerrillas as a transit point. Some of the bodies I saw were those of guerrillas, but the majority were women and children.

In the hospital grounds nearby, the bodies of eight men lay beneath a cashew nut tree. They had been dragged from a mobile clinic and shot in the back of the head. The rear door of the clinic, with a large red cross painted on it, squeaked eerily on its hinges as we walked past.

A further grim testimony to the slaughter was the corpse of a man with his hands tied behind his back. His leg had been shot off just below the knee. He had apparently been tortured in an effort to find out where the senior guerrilla commanders were.

If that was one of the principal objectives of the attack, and observers believe it was, then it misfired. At the time, the guerrillas' political and military leaders were in Mozambique's capital, Maputo, attending a meeting with President Samora Machel.

Washington Post correspondent Caryle Murphy reported the following from Johannesburg:

Apart from reviving the flagging morale of white Rhodesians, the strikes against guerrilla sanctuaries in Mozambique were seen by diplomats here as an effort by Smith to buy time at a point where he is about to enter into negotiations with moderate black leaders on a settlement leading to majority rule.

Perhaps more important, according to diplomatic observers, the strikes seemed designed to demonstrate to various black Rhodesian groups that the Rhodesian government forces could be valuable to them.

None of the three moderate black leaders—Bishop Abel Muzorewa of the United African National Council, Ndabaningi Sithole of the African National Council and Jeremiah Chirau of the Zimbabwe United People's Organization—has an army.

Any settlement with Smith would mean that the black moderates would have to depend on the Rhodesian security forces for protection. The security forces are 60 per cent black.

Muzorewa, however, condemned the Rhodesian strikes and called for a week of mourning for the victims of "these massacres." Some of his aides privately acknowledged, however, that the strikes have demonstrated the weakness of the guerrilla forces.

In Zambia, the government-owned Zambia Daily Mail angrily asserted that "it will be difficult to imagine even under the most forgiving black leader that whites would have any place in Rhodesia after the massacre of Mozambique."

Smith, the editorial said, "had planted such damning seeds of racial hatred which even time will not be able to heal."

Both the United States and Britain have condemned the Rhodesian raids as a major escalation of violence that has complicated efforts for a peace settlement.

Rhodesian Raids Devastate Refugees

(By David B. Ottaway)

Chimoio, Mozambique.—Rhodesian incursions deep into this newly independent "frontline" nation are creating havoc for tens of thousands of civilian refugees from the Rhodesia war living in camps along Mozambique's western border.

Mozambican authorities have just asked the United Nations to step up assistance to cope with an additional 6,000 to 10,000 refugees who have reportedly fled from rearbase and transit camps belonging to the Zimbabwe People's Army, the main nationalist guerrilla force, following the latest Rhodesian incursion. The guerrila force takes its name from the African word for Rhodesia.

The plight of the Zimbabwean refugees is one of the least publicized aspects of the Rhodesian war. This is partly because they live in remote camps that are difficult to reach even in the dry season.

It is also partly due to the Mozambique governments' effort to keep outsiders, even international agencies like the U.N. High Commission for Refugees from visiting the camps. No foreign relief officials, not even doctors, are stationed in the camps, according to Western diplomatic sources. Only in the past couple of weeks has Mozambique allowed reporters to visit the camps.

While the Rhodesians insist they are only hitting camps of the Zimbabwe People's Army, each raid seems to leave death and destruction among the civilian refugees as well.

It is not clear whether this is deliberate Rhodesian policy or an "accident of war." Some international refugee officials say part of the problem lies in the failure of Rhodesia's nationalists to clearly separate the civilian population from the guerrilla camps.

There are already about 35,000 refugees settled in three U.N.-assisted and Mozambican-run camps. The largest is at Doroi, about 20 miles northeast of here, housing nearly 18,000. It is a short distance from the main guerrilla camp the Rhodesians occupied and largely destroyed on Nov. 23-24.

Local authorities told three Western correspondents who were scheduled to visit Doroi last week that it was no use going now. The refugees were all hiding in the bush during the day for fear of more Rhodesian attacks, they said.

"Many have been traumatized by the attacks," explained one local official. "They don't want to talk even to us without their own leaders being present. They think we may be spies for Smith"—Rhodesian Prime Minister Ian Smith.

The refugees still return to Doroi camp at night, he said, but they have given up planting their fields just as the rainy season is getting under way. The result is expected to be a food shortage, as exists in the other official refugee camps.

The white-minority Rhodesian government has termed the November incursion—Rhodesia's biggest—a spectacular success, with as many as 3,000 casualties inflicted on the main nationalist guerrilla force.

The Mozambicans say the main victims were noncombatant women and children living in transit or reception camps.

The death toll is still mounting as more wounded refugees die in the hospital here and in the port city of Beira and in Tete City, 220 miles to the north. The latest official estimates are that about 100 refugees were killed in the Nov. 23–24 attack on the Mecombezi guerrilla camp outside this Portuguese-built colonial town and nearly 250 at another camp at Tembue in Tete Province. The number of wounded is put at 700.

The latest U.N. report on Mozambique says that 1,500 persons had died as the result of Rhodesian raids, two-thirds of them Zimbabwean refugees, as of June. The toll is now fast approaching 2,000.

The difficulties international relief officials can have working here were illustrated just after the latest Rhodesian raids. The U.N. high commissioner for refugees, E. Q. Blavo, was escorted by two government officials to Chimoio only to be barred entrance by local authorities who wanted guerrilla leaders to approve his visit first.

The United Nations is providing about $2 million in assistance to the Zimbabwean refugees this year and budgeting around $3 million for 1978. Sweden and private church groups gave another $1.4 million in aid this year.

No outsider seems to know how many civilians are located in the guerrilla transit and rearbase camps but estimates reach as high as 30,000. U.N. assistance already is being provided to about 35,000 refugees here.

Some outside observers believe the Mozambican government is not altogether happy with the presence of so many civilians in the guerrilla camps. They note that the Front for the Liberation of Mozambique (Frelimo) that now rules this nation carefully separated civilian and guerrilla populations located in Tanzania during its 10-year struggle against the Portuguese. The civilian camps were run by Tanzania and the military ones by Frelimo.

The Zimbabwe African National Union, the nationalist faction based in Mozambique, seems to prefer having the dependents of the guerrillas in camps they can continue to control directly.

Some international relief officials also say the official refugee camps should be moved much farther from the border to protect them from the Rhodesian raids. Others, noting the Rhodesians' ability to penetrate with helicopters and jets more than 100 miles into this country, doubt there is any absolutely safe haven for the refugees anywhere in Mozambique.

Mozambique Seems To Have Gained Discipline Without the Martial Air

(By Michael T. Kaufman)

Maputo, Mozambique.—In slightly more than two years of independence, this Marxist state seems to have succeeded where so many major one into Mozambique to be officially acknowledged by Rhodesia, ended yesterday, a communique said.

SMITH PLANS MEETING

The Rhodesian command said ground and air forces, acting "in the interests of self-defense," smashed the guerrillas' main base camp at Chimoio, 54 miles across the border and a second camp at Tembue, 132 miles inside Mozambique in the northwestern province of Tete. It said Rhodesian casualties in the raids were one killed and eight wounded.

[The Mozambican press agency, accusing the Rhodesians of a "slaughter," said more than 80 people, mostly women and children, were killed in the Rhodesian attacks on a guerrilla transit camp near Chimoio. Reuters reported from the Mozambican capital. The Mozambican account said that the Rhodesian attack against the second camp had been repulsed, with five Rhodesian soldiers killed.]

The raids ended as Prime Minister Smith was making plans to meet with Rhodesian-based black leaders. Nationalist leaders who are conducting a guerrilla war against the white-minority Government from outside Rhodesia denounced the Smith proposals and vowed to continue fighting.

The military command said Rhodesian troops had not clashed with Mozambican troops. "The aims of these combined air and ground actions were successfully achieved," the military said.

"Large quantities of war materiel, including weapons, vehicles, ammunition, fuel, buildings and documents were destroyed," it said.

Intelligence sources said both of the camps were strategic bases for guerrillas of Robert Mugabe's Zimbabwe African National Union, largest of the two guerilla armies fighting to topple the Smith Government.

Officials said they believed Mugabe has about 9,000 men, more than 3,500 in Rhodesia and the rest in Mozambique. If 1,200 guerrillas were killed in the raids, it would mean he has lost more than a fifth of his forces in Mozambique.

The second guerrilla army, the Zimbabwe African Peoples' Union headed by Joshua Nkomo, is estimated to have about 3,000 men, several hundred inside Rhodesia and others in neighboring Zambia.

Mozambique closed its 800-mile border with Rhodesia in March 1976.

In the first raid against Mozambique in August 1976, Rhodesian troops destroyed what they called a terrorist camp 25 miles inside the country, killing 340 persons, including 300 guerrillas. Mozambique claimed it was a refugee camp and said up to 1,000 persons were killed.

In other raids in October 1976 and again early this year, few guerrilla casualties were reported but troops brought back truckloads of arms and ammunition and said they had destroyed tons of other equipment before withdrawing.

AGREEMENT ON TALKS

Mr. Smith said last week that he had agreed to the principle of one-man, one-vote elections, a major demand of the nationalists, in return for guaranteed safeguards for the country's 268,000 whites.

Bishop Abel Muzorewa, the Rev. Ndabaningi Sithole and Chief Jeremiah Chirau, the three nonmilitant, Rhodesia-based nationalist leaders, have given qualified acceptance to the Prime Minister's proposed talks. Initial discussions were expected next week to lay the groundwork for a formal constitutional conference leading to elections.

The white population, which has held political power since the country became a self-governing colony of Britain in 1923, is outnumbered more than 20 to 1 by the largely disenfranchised blacks. In 1965, Rhodesia broke away from Britain on the issue of black majority rule.

The three local black nationalist groups are believed to have the support of more than 80 percent of Rhodesia's 6.4 million blacks, but they do not have direct control over the guerrillas. The Smith Government is said to foresee a settlement that would allow what officials describe as properly supervised elections, producing the country's first black government. Officials say they also hope the present Government security forces will be kept intact to continue operations against guerrillas and to safeguard minority interests.

Eighty percent of Rhodesia's regular forces are black, but they are led by whites.

SCENE OF FIGHTING

The following dispatch, written last week in a Mozambique town that has no communications, reached Nairobi, Kenya, yesterday.

Chimoio, Mozambique (UPI)—For two days, beginning Wednesday morning, bombs could be seen exploding in the area of the guerrilla base camp 18 miles outside town.

The first attack was by Rhodesian jets, followed by helicopter gunships.

According to guerrillas who survived the raid, airborne troops alighted from the helicopters and fired at residents of the camp. The guerrillas said the Rhodesians remained in the camp two days.

A large Mozambican column reportedly attempted to fight its way to the base but was driven off by aerial bombardment.

HOSPITAL TREATS 650

By the evening of the first day, survivors of the attack, most of them wounded but not seriously, had begun streaming into Chimoio, which has a rudimentary hospital. About 650 were being treated at the hospital.

The Mozambican column was said to have reached the camp after the Rhodesians left. Members of the force said they had found 100 bodies there, among them boys and girls in their early teens who had been receiving indoctrination in the camp.

Mozambican officials said the full casualty toll might take weeks to determine. They said the dead are spread out over a wide area of dense forests.

UNITED STATES, BRITAIN CONDEMN RAIDS BY RHODESIANS

WASHINGTON, November 29.—The United States and Britain condemned today the recent Rhodesian military attacks on guerrilla bases in neighboring Mozambique as harmful to peace prospects in that part of the world.

Separate statements expressing concern over the Rhodesian challenge to the "territorial integrity" of Mozambique were made in Washington by the State Department and in London by Foreign Secretary David Owen.

Hodding Carter 3d, the State Department spokesman, said that the raids Rhodesian forces conducted against two guerrilla bases between last Wednesday and Sunday had greatly increased bitterness among black nationalists and complicated British-American peace efforts.

The raids began the day before Prime Minister Ian D. Smith of Rhodesia announced a readiness to open talks with black nationalist leaders living inside the country on an eventual shift to black-majority rule with safeguards for the white minority.

PERIOD OF MOURNING

SALISBURY, Rhodesia, November 29.—Bishop Abel Muzorewa, the black nationalist leader who is widely believed to have the greatest black civilian support inside Rhodesia, issued a statement today condemning the Rhodesian raids into Mozambique as a massacre.

According to his public relations aide, D. C. Mukome, the bishop, who heads the United African National Council, will not attend negotiations with the Smith Government until after Dec. 8, which he has set as the end of a period of mourning for "the people massacred in Mozambique."

Mr. Mukome said, however, that the talks would still take place in the near future.

Bishop Muzorewa said in his statement that the people killed in the Rhodesian raids were "for the most part men, women and children who fled from the land of their birth to seek asylum in Mozambique."

Rhodesian military sources said, meanwhile, that the raids had crippled the black insurgency. The Rhodesian military command announced yesterday that the raids had killed more than 1,200 guerillas, which would be more than 20 percent of the forces the guerrillas are estimated to have in Mozambique.

A RAIDED CAMP IN MOZAMBIQUE BURIES VICTIMS

MAPUTO, MOZAMBIQUE, November 28.—Smoke was still rising from smoldering ruins at a Rhodesian guerrilla transit camp over the weekend when a group of reporters reached it from Maputo.

Most of the buildings of the camp, about 40 miles from the Rhodesian border, had been hit by bombs from Rhodesian Air Force planes, which flew repeated missions over the area beginning last Wednesday morning. One building was riddled with machine-gun fire, apparently from one of the helicopter gunships that had carried Rhodesian troops to the camp.

On the grounds of the camp hospital, the bodies of eight men who had been shot in the back of the head still lay beneath a cashew tree. They were among the 100 people killed during the Rhodesian attacks on the camp, a complex of the Zimbabwe People's Army. However, most of the victims whose bodies could be seen at the camp were women and children.

The Rhodesian military command had said that its forces killed 1,200 guerrillas during raids on two camps in Mozambique between last Wednesday and Sunday.

At the camp the reporters visited, a mass grave had been bulldozed for the bodies of 20 girls apparently between the ages of 10 and 14. They had reportedly been sitting in their classroom when the Rhodesians attacked. At the edge of the grave the pages of a blood-spattered schoolbook fluttered in the breeze last weekend when the reporters arrived.

Near the mobile clinic of the camp, they saw a woman sitting on the ground with an arm curled protectively around a child. Both were dead.

KILLED IN HIDING PLACES

In the camp's administrative center, down the road, the legs of a man and a woman protruded from a large oil drum, which had been riddled with bullets. They had apparently crawled inside to hide.

Reporters counted 70 bodies on the grounds of the camp. A doctor at the hospital at Chimoio, a town 18 miles away, said that 10 people had died there, and survivors said that at least 20 were unaccounted for.

Six hundred people who had been wounded were being treated at the Chimoio hospital. More than 200 were said to be in serious condition.

Mozambican Defense Ministry experts said the air attacks were carried out by Mirage fighter-bombers, Hawker Hunters and Canberras. No building was left intact in the camp, which included a school, stores for food, clothing and medicines, a repair yard and transport depot.

One of the principal objectives of the Rhodesian attack was believed to have been to kill the senior guerrilla commanders. But at the time, they were in Maputo attending a meeting with Mozambique's President, Samora Machel.

the Department of Education Act of 1977. In hearings before that committee, my distinguished colleague from Oklahoma, Senator Henry Bellmon, offered testimony concerning the need for a separate Cabinet-level Department of Education.

Senator Bellmon has been a leader in education in the Senate and as Governor of the State of Oklahoma. As his testimony so ably sets out the issues to be considered, I wish to call his remarks to the attention of the Senate and the administration as this legislative proposal receives further consideration.

Mr. President, I ask unanimous consent to have printed in the Record the testimony by the distinguished Senator from Oklahoma.

There being no objection, the testimony was ordered to be printed in the Record, as follows:

Testimony of Senator Henry Bellmon

Mr. Chairman, I appreciate the opportunity to offer brief remarks concerning S. 991, the bill to establish a separate Department of Education. My view is that this is significant legislation which is necessary in order to reverse the present neglect of educational policy and program matters, to consolidate Federal education activities now scattered among several agencies under one roof, and to revitalize the important relationships between Federal and State education officials. It is a move which President Carter has promised but has not yet taken, and it is fitting that the Senate should undertake its own initiative. The establishment of a separate Department of Education is solidly supported by the educational community in Oklahoma and elsewhere.

I believe that it makes a good deal of sense at this time to draw together in one structure all education functions. We have scattered our efforts unwisely. Within the DHEW organization, we have given priority consideration to problems of welfare and health, thereby allowing education to stagnate. We are presently undergoing a critical re-examination of the role of education in this country, yet we do not have an appropriate vehicle for the development and implementation of new directions. We have serious and deteriorating problems of relationship between State and Federal roles, and we need to halt the pronounced sense of drift which has become apparent in the U.S. Office of Education.

As I understand S. 991, it proposes to bring together in one organization the educational functions administered by U.S.O.E. and by other Federal agencies so that they may be more effectively organized and implemented. There is one caution I wish to offer the Committee as it studies this proposal. The creation of a separate Department of Education must not become an opportunity for bureaucratic self-aggrandizement. There is no reason to expand the bureaucratic work-force in order to demonstrate administrative effectiveness and equal importance with other departments. We have sufficient resources at work in the education function at the Federal level; what we need to do is to consolidate, motivate, and energize these resources to give the education mission greater impact. In the version of this bill which the Committee finally reports, I hope that restraints upon the growth of bureaucracy are clear. Without such safeguards, it would be easy for agencies surrendering functions to retain vacant job slots for subsequent use. If past experience is any guide, the danger of creating new but unessential positions is real. We must avoid duplicating the obstructions to action which the present DHEW superstructure provides.

Establishment of a separate Department of Education would prevent many of the administrative problems which have resulted from the consolidation mandated by P.L. 93-380. This consolidation combined Titles II, III, and V of ESEA, Title III of NDEA, the Nutrition and Health Program, and the Drop-Out Prevention Program into a new Title IV. It became law in August, 1974. Today, more than three years later, U.S.O.E. has not yet re-organized itself fully to deal with that consolidation, even though the States have had to re-structure themselves. Within U.S.O.E. the newly-created Division of State Educational Assistance Programs has yet to be staffed.

Mr. Chairman, I cite this example because it demonstrates how administrative organization at the Federal level can impede legislative intent. It is of particular concern to me because S. 1780, the "Optional Educational Simplification Act", which was introduced by Senator Domenici, myself, and others, would depend upon effective administration at the Federal level for part of its success.

Mr. Chairman, those of us who are concerned about improving the state of education in this country owe the authors of S. 991 and the members of this Committee a vote of thanks for taking the initiative to move the issue of reorganization to a conclusion. Your efforts are appreciated and they promise to yield much that is of benefit to educators and to the general public.

RHODESIAN RAIDS ON MOZAMBIQUE

Mr. HUMPHREY. Mr. President, the U.S. Government has rightly condemned recent Rhodesian military attacks in neighboring Mozambique "as harmful to peace prospects in that part of the world."

Newspaper accounts tell the pathetic story of young girls being bulldozed into mass graves and people being tortured to reveal the location of guerrilla leaders. The Rhodesian Government claims that some 1,200 blacks were killed during the raid.

In September, two members of my Foreign Assistance Subcommittee staff visited a United Nations supervised refugee camp in Mozambique, not far from the camp which was attacked near Chimoio. They found no evidence of guerrilla training at the camp they visited, but found over 17,000 people, mostly young men and women who fled the war zones in Rhodesia. The living conditions in the camp were pitiful, but the many refugees with whom the staff members talked were genuinely grateful to have escaped from Rhodesia to what they felt the security of Mozambique.

In light of the recent incident near Chimoio, I believe it is vital to impress upon the Ian Smith government in Rhodesia the disgust of the civilized world with this action. Perhaps this action makes it easier for us to understand the demands of the Patriotic Front that the present Rhodesian armed forces be dismantled prior to independence. Africans in Rhodesia must be gravely concerned, as evidenced by Bishop Abel Muzorewa's strongest condemnation of the raids, as to whether or not a genuinely fair election on a one-man-one-vote basis can be conducted with the present Rhodesian forces in control. Frankly, these raids call into question Smith's announced plans to hold talks on majority rule with internal African leaders.

It is evident that the pressure from the Patriotic Front has persuaded Smith of the need for a negotiated settlement. The Anglo-American proposals for a settlement in Rhodesia clearly recognize that all parties—internal African leaders and the Patriotic Front—must be involved in the negotiations if there is to be a just and lasting settlement. The proposals also recognize the need for an impartial force to police the transition period, a need underscored by these raids. Without these preconditions, the struggle for genuine independence is most likely to continue.

In light of the tragedy associated with the raids into Mozambique, I would strongly urge the administration to make available emergency food aid and other humanitarian assistance through the United Nations to alleviate the suffering of refugees.

Furthermore, I think this is an appropriate time to reconsider our policy toward Mozambique. We have diplomatic relations with Mozambique, and President Machel has been cooperative with Anglo-American efforts to resolve the Rhodesian situation. I believe we made a mistake when the Congress prohibited direct economic aid to Mozambique, and an even bigger mistake when it was announced that our Government would vote against loans to Mozambique in the international financial institutions.

I think Congress needs to understand that the present prohibitions on aid to Mozambique severely undercut the capability of the United States to respond to the political events and economic needs in that part of the world.

According to the staff of the Foreign Assistance Subcommittee who visited Mozambique in September, the Government is making very strong efforts to develop its rural areas and provide its citizens with basic economic inputs. It has the commitment to meeting the basic human needs of its people, which is consistent with the new directions mandate of our bilateral aid legislation.

Mr. President, I ask unanimous consent that articles from the November 29, November 30, November 12, and November 14 issues of the New York Times, and the November 30 and December 13 issues of the Washington Post, be printed in the Record.

There being no objection, the articles were ordered to be printed in the Record as follows:

Rhodesia Reports Killing 1,200 in Raids

Salisbury, Rhodesia, November 28.—The Rhodesian Government said today that it had carried its fight against black nationalist guerrillas deep inside Mozambique last week, killing at least 1,200 persons, smashing two guerrilla bases and destroying much war materiel.

The raids, supported by air attacks, began last Wednesday, the day before Prime Minister Ian D. Smith announced that he was prepared to concede the principle of full voting rights for Rhodesia's black majority as a basis for negotiating a settlement with black nationalist leaders living inside the country. The military operation, the fourth our population; we denied ourselves the full potential of women and blacks, to the extent we did that, we are a poorer nation.

Therefore, as I address myself today to the economic development of the Third World, and to the fact that the role of women in that development has been largely neglected, I do so with humility.

We haven't done so well ourselves. But we have learned. And I hope that what we have learned can be of use to the less developed nations. Things have changed for North American women. I believe the efforts and example of our women in recent years cannot fail to advance the rights and role of women everywhere.

With that preface, let me give you some facts about women in the developing world today.

Women are responsible for forty to eighty percent of all agricultural production in the less developed countries.

Women are directly responsible for the health and nutrition of their families.

Women are the first, and frequently the only, teachers of the young.

Women are fifty percent of the partnerships that produce children and hence are critical to the planning and implementation of a population program.

These are facts that are basic to the prospects for economic development of less developed countries. Yet they are facts that have been dimly perceived and largely ignored in practice.

Let us explore, for a moment, the issue of women and agricultural development.

We know that if agricultural production in the Third World is not significantly increased there will be malnutrition and starvation on an increasingly massive scale within the next two decades.

We also know that not only are women responsible for a major portion of agricultural production, but their burden is becoming heavier. The lure of the city and cash-producing work is drawing the men away from the farms. The women remain behind to work the land, tend the livestock and raise the children.

It is estimated that some thirty percent of rural families in the Third World are now headed by women. A 1969 census showed that in Kenya alone about 525,000 households had women at the helm.

But what is being done to improve their position or give them the training that would increase agricultural productivity?

Not much.

In nearly all developing countries, agricultural training is given to men only. The result is male instructors who turn their attention to male farmers. The wives, daughters, and hired female laborers are ignored.

Women are additionally handicapped in their efforts to get more from the land they work because of their generally "inferior" social position and the fact that they rarely have legal status, access to credit, or property rights.

The conclusion can be only too clear: If agricultural production and productivity are to increase, development planning in the Third World must give an equal place to the women—particularly rural women.

If rural women have been ignored in agricultural planning, they have fared better—but not much better—in another critical field of Third World development: the planning and implementation of health and nutrition programs.

No country can develop economically if most of its people are undernourished or sick.

Four fifths of all Third World people have debilitating intestinal parasites.

One hundred million children under five there are always hungry.

Fifteen million children there die each year from the combination of infection and malnutrition.

In the United States the caloric requirement of a typical working woman is about 2100 calories per day. Most North American women receive what they need.

A typical woman working in agriculture in the Third World, because she is smaller, requires about 1700 calories per day. She gets about 1500. In many developing countries, women eat what the men leave.

These are sobering statistics. If something is to be done about them it is surely the rural women—those closest to these problems, who will have to do it.

In some cases, because of the depths of their poverty, there is little they can do to improve nutrition and diminish disease.

But in many, many cases malnutrition and disease are the result of ignorance.

The fact is, miracles could be wrought with simple changes of diet and food habits if women only had the knowledge to make these changes.

Nutrition specialists in Africa, for example, have found that there is almost no village where women cannot find the right food for their families, or the right combinations of food, if they know what to look for.

A few greens, frequently found growing wild . . . a few beans . . . an occasional egg. A mixture of these ingredients, prepared so it can be spoon fed, and fed daily, can save a child's life.

Public health workers in Malaysia noticed that Chinese children there were surviving and Malaysian children were dying, despite the fact that the same food was available to both. When the situation was investigated it was discovered that Chinese mothers understood the importance of diet—particularly of protein—and the Malaysian women did not.

In short, a small amount of elementary nutritional education can make the difference between life and death.

Fortunately, some governments in the developing world are beginning to recognize the importance to economic development of nutrition education for rural women.

I recall, for example, a recent trip I made to Ghana and a village I visited up-country.

A village girl had received some training in nutrition from a government extension agent and had persuaded her village friends to plant a kitchen garden outside the local clinic.

They had introduced spinach into that garden and called it "clinic weed."

During the visit, the women sang a song for my benefit. I won't try to sing it for you today, but I can tell you that it extolled the wisdom of planting corn at reasonable intervals, just as it extolled the wisdom of having children at reasonable intervals.

It was a nifty little program and a perfect example of what can be done if you get the information to the people who can do the most with it—the rural women.

If a little information and training can accomplish miracles in nutrition, it can also accomplish miracles in health.

In most of the Third World, women provide whatever health education and care there is. An African proverb says, "Educate a woman and you educate a family." That ought to become a motto for all developing countries and for all of us who are trying to help them.

But if a woman lacks elementary education—if she does not understand how or why disease occurs or how it is transmitted—she has no understanding of the importance of keeping food covered or water clean.

If she has no notion of what viruses or bacteria are, she has little incentive to observe even the most elementary sanitation precautions.

Yet, the single major cause of disease in developing countries is related to the failure to observe elementary household and village sanitation.

But in the Third World, health education for village women has barely begun. Health and nutrition planners are only beginning to recognize and work with a self-evident fact: If a countrys' economic development hinges on the health of its people and if most of the people are rural, women must be brought fully into the mainstream of health plans and programs throughout the third world.

We all know that as long as population growth equals or exceeds economic growth, standards of living cannot improve.

That has begun to happen, for example, in Nigeria and Ghana. Because of its burgeoning birth rate, Nigeria has been forced to become a food importing nation. Fortunately the country has the money from oil to pay for the food. Ghana hasn't been so lucky.

But what these countries are experiencing may well be the wave of the future, if population growth is not better controlled—and soon. If that is to happen, women must play not only their traditional role, but a new one.

We know that fertility rates begin to fall when two things happen:

First, when a women is able to nourish her children properly and keep them healthy, thus assuring that they survive to adulthood, only then are couples in poor countries apt to believe that they dare limit the size of their families.

And second, fertility will decline when the educational level of parents rises. The educational level of the father is important. But that of the women is more so. In Latin America, for example, studies indicate that women who have completed primary school will average about two children fewer than those who have not.

And yet, here again, when it comes to education, women in the developing world get very short shrift.

Most of the literate people in the world today are male. Women comprise nearly two thirds of the world's illiterate population. More than a half billion women cannot read or write. Between 1960 and 1970 the number of illiterate women increased by forty million.

Development planners have emphasized the centrality of education to economic development. But it is long past time that we start finding the ways to educate Third World women to the limit of their great potential. For it may well be that the future of the Third World rests predominantly with them.

I have been pleased to note the emphasis the Partners of the America have placed on the role and importance of women.

Under your aegis home economists from Louisiana have worked with rural women in El Salvador to help increase their income through the fabrication of handicrafts, using local materials such as sisal and coconut fibers.

Nutrition specialists from Oregon, under your sponsorship, are working together with their professional counterparts in Costa Rica in the development of audio visual education to be used in rural areas.

Women on the altiplano of Bolivia now have better opportunities to learn to read as a result of a school construction program conducted by the Utah-Bolivia Partners. With teaching materials developed by Brigham Young University, those who are already literate can teach their neighbors to read.

I commend you for your work on behalf of women.

I commend you for your efforts to build a partnership with the people of the Third World.

I salute you for your efforts to liberate human beings from disease and malnutrition, poverty and ignorance, so that their full potential can be realized in a better world for all of us.

NEED FOR A SEPARATE DEPARTMENT OF EDUCATION

Mr. DOMENICI. Mr. President, the Senate Committee on Governmental Affairs is currently considering S. 991, of 2.9 million, and legislation authorizing funds for the Energy Research and Development Administration's national security programs.

Legislation enacted to benefit our senior citizens includes an elderly tax credit of an additional $35, appropriations of $59 million for employment of older persons, legislation funding home health demonstration and training projects for the elderly, and laws to cut down on fraudulent medicare and medicaid programs which in effect harm our senior citizens.

This Congress has also passed and enacted laws for our small businessmen, including legislation to greatly increase the Small Business Administration's ability to assist small businesses, and legislation cutting taxes by $34 billion over 3 years and giving business tax credits for new empoyees hired in 1978 and 1979. Also passed was legislation exempting small farms from certain OSHA practices which have unfairly burdened small businesses.

This session we also passed significant legislation to stimulate the economy, including legislation to create 600,000 jobs, mostly in the construction industry, under the public works program, a law establishing a Youth Adult Conservation Corps—which creates about 203,000 jobs and training programs—a law extending unemployment compensation, legislation extending the number of public service jobs which will benefit the communities, as well as legislation amending the Fair Labor Standards Act.

Also, during this year we have passed, and the President has signed into law, an omnibus GI Bill Improvement Act, which will benefit millions of veterans.

Mr. President, I believe there are two major reasons for the impressive record logged by the 1st session of the 95th Congress—the activism generated by President Carter throughout the executive branch, and the legislative skill and leadership of Majority Leader ROBERT BYRD.

President Carter lost no time demonstrating that he intends to be an activist and courageous President, and if there is no shortage of problems to attack, he has shown there is also no shortage of solutions to advance. His leadership and courage in making the hard decisions necessary to develop a national energy plan are an indication of his ability to meet problems head on with constructive proposals which serve as a working basis for achieving solutions. For example, President Carter has also proposed extensive and long-needed welfare reform and health care reform, only two of the difficult issues he has committed his administration to grappling with.

President Carter has consistently shown his willingness to work long and hard, in order to assure that his promises are kept. It is this energy and ability which have helped move needed legislation through the Congress. If President Carter's first year in office is any indication of what lies ahead for the remainder of his first term, I believe we are in for one of the most productive and constructive legislative periods in our history.

This prediction is buttressed by the organizational ability and exemplary leadership of Majority Leader ROBERT BYRD, ably assisted by Senator ALAN CRANSTON, the majority whip, who have shown extraordinary skill and diligence in scheduling and moving legislation effectively and efficiently. Senator BYRD has demonstrated that the legislative process need not be haphazard, that it can move expeditiously without hindering full and fair consideration of measures under study.

But perhaps most impressive about Senator BYRD's leadership is his determination that the Congress will be an equal partner in Government with the executive branch. For too long, the story of Congress has been one of power gradually eroded by an encroaching executive branch. As the Presidency has grown in power and influence, the Congress had declined. Coequality existed only in civics books, not in real life.

However, in recent years the Congress has regained some of its powers. This has been accomplished through such enactments as the War Powers Act, the Impoundment Control Act, and the Congressional Budget Act, establishing the new congressional budget process which, for the first time, has given Congress the mechanism to fulfill its Constitutional obligation of controlling the budgetary process.

But strength does not spring merely from laws; it must also spring from respect—respect for the Senate as an institution. As Majority Leader, Senator BYRD has insisted that the executive branch deal with the Senate as a partner, not as a stepchild. In turn, President Carter has shown that he considers the Congress a working equal partner, and that he is willing to deal with the Congress on an even basis.

Senator BYRD's willingness to speak out on behalf of the Senate and the Congress, matched by his ability to be firm when necessary, has earned the respect of the administration and the American people. And President Carter's commitment to macthing solutions with problems, and his commitment to working with Congress in these efforts, has earned respect on Capitol Hill and all across this land. In my judgment, the outstanding record of the first session of the 95th Congress is only the beginning of what the Senate and the administration can accomplish with the leadership and cooperative spirit so vividly demonstrated by President Carter and Majority Leader BYRD over the past year.

ADDRESS OF JOHN GILLIGAN, ADMINISTRATOR OF THE AGENCY FOR INTERNATIONAL DEVELOPMENT

Mr. PERCY. Mr. President, John Gilligan, Administrator of the Agency for International Development, delivered an address last month in Santo Domingo to the Partners of the Americas 1977 International Convention that I believe is worthy of my colleagues' attention. Mr. Gilligan points out some facts that have only recently been given the emphasis they deserve in our development programs. Mr. Gilligan says in his speech that women are responsible for a major portion of the agricultural production in developing countries. He states that some 30 percent of rural families in the Third World are now headed by women. Women are also directly responsible for the health and nutrition of their families and are the first, and frequently the only, teachers of the young. Their involvement is critical in stemming population growth. And Mr. Gilligan acknowledges that despite these facts, the role of women in development has in the past been largely ignored in both bilateral and multilateral development programs. Congress has mandated that AID give particular attention to programs which tend to integrate women into the national economies of the developing countries, thus improving their status and assisting in the total development effort. I am pleased to see Mr. Gilligan take a vital and personal interest in carrying out the mandate and hope to hear of further advances in this area in the future.

I ask unanimous consent that his remarks be printed in the RECORD.

There being no objection, the remarks were ordered to be printed in the RECORD, as follows:

REMARKS BY THE HONORABLE JOHN J. GILLIGAN

I am pleased and honored to address this gathering.

I am not a stranger to the work of the Partners of the Americas. As Governor of Ohio I served as Honorary Chairman of the Ohio Partners and took an active interest in the exchanges between the citizens of Ohio and those of the state of Paraña in Brazil.

As you know, two other governors have been actively involved with the work of the Partners. One is now the President of the United States. Another is governor of the state of Michigan, the Honorable William Milliken, who will address you later in this convention.

Today I would like to discuss with you what I consider to be one of the most important—and neglected—aspects of economic development.

I would like to discuss with you the role of women in the economic life of the Third World.

For I believe that it may well be women, not men, who will be the decisive force in seeing to it that the world's poor have enough to eat, drink clean water, eat nourishing food, live to adulthood and become literate.

I believe that survival and social development in the Third World may well depend more on the women than the men.

Frequently when we speak of economic development we think of such matters as the transfer of technology, the development of trade policies and the exploitation of natural resources—all of which, of course, are essential.

But in doing so, we tend to minimize the fact that the real key to economic development is people. The most important resource within the borders of any nation is its men and women.

From the beginning of our history the United States recognized that our people were the heart of our land. We were the first nation to perceive that education for all our children was a key to our social and economic growth.

Despite that fact, until recently we denied ourselves the full talents of more than half and to make the affidavit of support a legally enforceable financial obligation. Recent discussions with GAO staff currently performing work concerning alien abuse of the SSI program tend to confirm that GAO's previous position and approach to solving this problem remain valid.

SSA

The Social Security Administration believes that H. R. 7200, if enacted, would present certain administrative difficulties. Commissioner Cardwell advises me that present law only requires imputing income in cases where the SSI recipient *lives with* the person from whom income is imputed (usually a spouse or parent). This would not necessarily be the case for an alien and sponsor, who might well live in separate parts of the country. Also, if the sponsor refused to furnish information concerning his income and resources, the alien could be disadvantaged for actions beyond his control. SSA, therefore, finds that making sponsors' affidavits legally binding is the preferable approach.

INS

The Immigration and Naturalization Service also believes legislation is needed making the affidavit of support a legally enforceable contract. It also suggests that aliens who do become public charges within 5 years be deportable regardless of whether benefits have to be repaid.

(Attached please find copies of inquiries I made to INS and SSA and their responses.)

CONCLUSIONS

Because the disadvantages of imputing sponsors' income and resources to aliens far outweigh the advantages, I believe it would be inappropriate to enact this particular provision in H. R. 7200 at this time.

Legislation should be enacted now, however, to protect the financial integrity of the SSI program. In this regard, I urge consideration by the Finance Committee of a residency requirement of 3 to 5 years for SSI eligibility—primarily because of its ease of administration—pending the enactment of more comprehensive legislation that would necessarily involve amending the Immigration and Nationality Act, which would have to be handled by the Judiciary Committee. I intend shortly to introduce separate legislation to rectify deficiencies in the Immigration and Nationality Act, along the lines suggested in alternatives III and IV above. I would certainly welcome your joining with me in that effort.

I have taken the liberty of informing Senator Curtis of my thoughts in this regard. I sincererly hope this information will be helpful to you in considering H. R. 7200. Whatever assistance I or my staff may offer in connection with your Committee deliberations will gladly be provided.

Warmest personal regards,

CHARLES H. PERCY,
U.S. Senator.

EXHIBIT 1

U.S. GENERAL ACCOUNTING OFFICE,
Washington, D.C., November 1, 1977.

Hon. CHARLES H. PERCY,
Committee on Governmental Affairs,
U.S. Senate.

DEAR SENATOR PERCY: Enclosed are statistics we developed in conjunction with your April 20, 1977, request concerning aliens that receive Supplemental Security Income benefits before they have been in the United States 5 years (newly arrived aliens).

A staff member on the Permanent Subcommittee on Investigations, Senate Committee on Governmental Affairs, asked that we provide you this information at this time for assessing H.R. 7200 provisions concerning aliens. Should you have any questions concerning the enclosed material, please call Mr. Michael Zimmerman of my staff on 301-594-4025.

Our report in response to your April 20, 1977, request will be issued in the near future.

Sincerely yours,

GREGORY J. AHART,
Director.

Enclosure.

Estimated number of newly arrived aliens receiving supplemental security income and estimated amount of benefits paid annually

[Dollars in millions]

State [1]	([2])	([3])
California	12, 027	$31. 6
Florida	12, 342	19. 5
Illinois	2, 980	4. 5
New Jersey	3, 718	5. 4
New York	6, 444	11. 3
Total	[4] 37, 511	[4] 72. 3

[1] We estimate that about 4,450 newly arrived aliens were receiving SSI in 20 other States. However, for these States, our sample was not large enough to provide statistically reliable data by State.

[2] Estimated number of newly arrived aliens receiving SSI.

[3] Estimated amount paid annually to newly arrived aliens.

[4] At our request, SSA assisted us in identifying aliens in its SSI quality assurance files for the period July 1 through December 31, 1976. These files represent a statistical sample of about 23,000 SSI recipients selected randomly from about 4.2 million recipients receiving benefits during this period. On the basis of this data and other information obtained, we estimate that our statistics on the total number of newly arrived aliens receiving SSI is accurate within plus or minus 6,787 and that the total amount of benefits paid aliens during this period is accurate within plus or minus $14.9 million at the 95 percent level of confidence. The estimated amount paid annually to newly arrived aliens includes Federal Supplemental Security Income benefits and federally administered State supplementation.

Estimated number of newly arrived aliens receiving SSI according to length of time between entry into the United States and application for SSI [1]

Length of time	([2])	([3])	([4])
Less than 1 month	3, 035	8	8
1 month to 6 months	12, 399	33	41
6 months to 1 year	8, 169	22	63
1 year to 3 years	12, 049	33	96
3 years to 5 years	1, 499	4	100
Total	37, 511	100	---

[1] These estimates are based on aliens receiving SSI benefits in California, Florida, Illinois, New Jersey, and New York. We have not determinet the statistical reliability of these estimates.

[2] Estimated number of newly arrived aliens receiving SSI from July 1 to December 31, 1976.

[3] Percent of total.

[4] Cumulative percent of total.

NOTE.—All figures in this table refer to aliens who applied for SSI within 5 years of arrival.

Comparison of newly arrived aged aliens over 65 when they entered the United States with national estimate of these aliens receiving SSI between July 1 and December 31, 1976

Entry date [1]	([2])	([3])	([4])
July 1, 1972 to June 30, 1973	11, 228	3, 323	29. 6
July 1, 1973 to June 30, 1974	11,042	5, 025	45. 5
July 1, 1974 to June 30, 1975	12, 051	3, 451	28. 6
Total	34, 321	11, 799	----

[1] The information to make this analysis was only available for these periods.

[2] Aged aliens who entered the United States—Based on 1975 Annual Report: Immigration and Naturalization Service, P. 53.

[3] Estimated number receiving SSI—We have not determined the statistical reliability of these estimates.

[4] Percentage receiving SSI.

NATIONAL ENERGY PLAN

Mr. DURKIN. Mr. President, because the tremendously complex national energy plan is still under study in conference committees, there may be a tendency for observers to conclude that the 1st session of the 95th Congress has not been productive. In fact, both Houses of Congress have had extraordinarily productive sessions during the 1st session of the 95th Congress, with a record unmatched since the first year of President Franklin Roosevelt.

The Senate alone, under the skilled leadership of Senator ROBERT BYRD and Senator ALAN CRANSTON, and in conjunction with the legislative initiatives of President Carter, passed 684 measures as of December 1. This impressive record was accomplished during 171 days of session, encompassing 1,131 hours, which included the first all-night sessions in a decade. The Senate also reported 633 measures, and during the session 203 public bills were enacted into law.

A brief review of some of the legislation underscores the achievements. Important environmental legislation enacted includes amendments to strengthen the Clean Air Act, strip mining legislation, funding for the Marine Research and Sanctuaries Act—which includes prohibitions on ocean dumping—a tanker safety law, and a law authorizing funding for marine mammal protection programs.

To assist law enforcement officials, several significant measures have been passed and signed, including a law authorizing funding for the battle against drug dealers over the next 3 years, an appropriation of $647 million for the Law Enforcement Assistance Administration, and legislation authorizing funds for 4 years for Federal juvenile justice programs, and for the Runaway Youth Act for 3 years.

Our national defense was strengthened when the President signed into law during the 1st session of the 95th Congress a $109.8 billion national defense appropriation, authorizations for troops levels then used sophisticated statistical techniques to arrive at overall estimates.

Mr. President, these dollar figures are probably low, because they do not include medicaid payments. Enrolling for SSI generally makes an alien automatically eligible for medicaid.

SSI is a Federal-State welfare program which distributes over $6.4 billion annually. The program provides payments for low-income persons who are aged, blind, or disabled. Individuals are eligible for payments of up to $177.80 monthly. Current law permits aliens legally admitted for permanent residence to begin collecting SSI 30 days after arriving in the United States if they otherwise qualify.

The American taxpayer simply cannot be expected automatically to support persons who have never contributed significantly to the American economy. The abuses by some aliens and their sponsors reflect badly on the overwhelming majority of aliens who add so very much to our society and seek nothing more than the opportunity to become U.S. citizens. By abuses, I mean instances where aliens enter the United States holding affidavits of support from American sponsors, but soon enroll for welfare nevertheless.

Many aliens apparently apply for welfare at the urging of their American sponsors who are often relatives and intend to use welfare payments as part of the family income.

As revealed earlier this year in a CBS-TV "60 Minutes" exposé, sponsors often openly admit to signing an affidavit of support for an alien while intending to enroll the alien for welfare soon after arrival.

In one case, a New York City psychiatrist signed an affidavit promising to support her elderly mother if admitted into the United States. Six months after obtaining permanent resident status, the mother applied for $154 a month in assistance from the New York City Department of Social Services, because she said her daughter could no longer support her.

When H.R. 7200, the Public Assistance Amendments of 1977, reaches the Senate floor for consideration, I will propose changes to correct abuses of the SSI program by aliens. These will include a 3- to 5-year residency requirement for SSI eligibility and a requirement to make sponsors' affidavits of support legally enforceable. It is time to place the responsibility for an alien's support squarely on the shoulders of the person who promises support—the alien's sponsor—not the American taxpayer.

Mr. President, I ask unanmious consent that a letter on this subject which I wrote to my distinguished colleague, Senator LONG, be printed in the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

COMMITTEE ON GOVERNMENTAL AFFAIRS,
Washington, D.C., August 1, 1977.

HON. RUSSELL B. LONG,
Chairman, Committee on Finance,
Washington, D.C.

DEAR RUSSELL: Public and Congressional concern regarding aliens who receive Supplemental Security Income (SSI) has prompted the introduction of several bills to correct this apparent misuse of government funds. One such bill—H.R. 7200—passed the House of Representatives on June 14, 1977, and was referred to your Committee on June 15, 1977. Section 115 of the bill provides that the income and resources of an alien's sponsor would be imputed to the alien for the period for which the sponsor has pledged to be financially responsible for the alien, but not to exceed 3 years. This provision would not be applicable in cases where the alien is eligible by reason of disability or blindness which occurred after entry into the United States, and it would be prospective in that it would apply only to new applicants for SSI benefits.

While I agree that timely action should be taken to restrict aliens' eligibility for SSI and other public assistance programs, I am concerned that Section 115 of H.R. 7200 will cause administrative complications and will not effectively resolve this problem.

As you are aware, other legislative proposals are currently before the House Committee on the Judiciary, the House Committee on Ways and Means, and your Committee that would have some impact on newly arrived aliens on SSI. For the most part, each of these proposals employs one or more of the following approaches:

(1) Impute sponsors' income and resources to aliens in determining SSI eligibility.

(2) Establish residency requirements for SSI eligibility, except where eligibility results from causes arising after entry.

(3) Make the sponsor's affidavit of support a legally enforceable financial obligation.

(4) Redefine the term "public charge" in the Immigration and Nationality Act to include a person who is a recipient of public assistance or welfare payments.

As discussed below, the merits and/or disadvantages of all of these proposals should be carefully weighed before final action is taken:

I. IMPUTING SPONSORS' INCOME AND RESOURCES

ADVANTAGE

Aliens will not receive SSI payments or will have their SSI payment reduced when the sponsor has sufficient income to support the alien.

DISADVANTAGE

1. This alternative only covers the SSI program and does not address Medicaid, AFDC, and State and local public assistance programs.

2. Administrative difficulties may arise in attempting to determine the sponsor's available income and resources.

3. This plan has the potential for leaving some legally admitted aliens with no means of support: they would be ineligible for SSI and yet have no legal recourse for enforcing the sponsor's affidavit of support.

4. The assistance burden may be shifted to States which do not impute a sponsor's income.

5. This alternative enforces immigration law regarding public assistance through the Social Security Act, and therefore may involve a jurisdictional problem with the Judiciary Committee.

II. SSI RESIDENCY REQUIREMENT OF 3 TO 5 YEARS

ADVANTAGES

1. This is the best alternative for ensuring that newly arrived aliens will not receive SSI shortly after arriving.

2. It is also the easiest approach to administer.

DISADVANTAGES

1. This alternative only covers the SSI program. It does not cover AFDC, Medicaid, or State and local public assistance programs.

2. The burden of public assistance for newly arrived aliens might be shifted to the States which are prohibited from establishing residency requirements.

3. Administrative difficulties may arise when determining, for example, if the conditions causing an individual to become eligible occurred after entry into the United States.

III. MAKING THE AFFIDAVIT OF SUPPORT LEGALLY ENFORCEABLE

ADVANTAGES

1. The sponsor would be contractually obligated to support aliens.

2. Sponsors would only agree to support aliens to the extent of their available resources.

3. State and local assistance programs could recover from the sponsor benefits provided to the alien.

DISADVANTAGES

1. The Immigration and Naturalization Service and the State Department will have to more closely verify the affidavit of support when it is prepared to ensure that, if a claim against the sponsor becomes necessary, the sponsor will have sufficient resources to satisfy the claim.

2. Difficulties may arise in determining responsibility and administering penalties for failure to meet obligations pursuant to the affidavit of support. However, these difficulties should not be greater than those of any other civil contract and deportation of the alien is available as the ultimate sanction.

IV. REDEFINING "PUBLIC CHARGE" IN THE IMMIGRATION AND NATIONALITY ACT

ADVANTAGES

1. All assistance programs, State and Federal, will be covered.

2. The burden of assistance will not be shifted to the States and local governments.

3. Immigration policy will be enforced through the Immigration and Nationality Act and not through the Social Security Act.

4. Aliens will be reluctant to abuse the various assistance programs because the Immigration and Nationality Act subjects him to deportation for becoming a public charge.

DISADVANTAGES

1. The financial integrity of the SSI program would not be as well protected as under the residency alternative because newly arrived aliens would receive some assistance before the Immigration and Naturalization Service could take appropriate action under the Immigration and Nationality Act. (Note: A redefinition of "public charge" combined with a residency requirement would eliminate this disadvantage.)

EXECUTIVE DEPARTMENT RECOMMENDATIONS

In April 1977, as the Ranking Republican on the Senate Governmental Affairs Committee charged with overseeing the efficiency and economy of federal government programs, I asked the General Accounting Office, the Social Security Administration, and the Immigration and Naturalization Service to provide their views on legislation which might be enacted to prevent aliens who are aged, blind, or disabled at the time of arrival into the United States from receiving public assistance—particularly SSI benefits. The responses are relevant, to wit:

GAO

Past GAO studies of newly arrived aliens on public assistance recommended that the Congress correct this problem by amending the Immigration and Nationality Act. In an earlier report entitled "Need to Reduce Public Expenditures for Newly Arrived Immigrants and Correct Inequity in Current Immigration Law" (GGD-75-107 dated July 15, 1975), GAO had recommended that the Congress amend the Immigration and Nationality Act to redefine "public charge" as "public expenditures directly supporting immigrants unable to earn an adequate living, irrespective of whether the immigrants are legally liable to repay the public support" ment of expenses of foreign travel by the United States Government.

[6] The outside earned income limitations of Rule 44 currently are being challenged in United States District Court for the District of Columbia in *Laxalt et al* v. *Kimmett et al.*

[7] Note the effective dates: paragraphs 1 through 5, 11 and 12 are in effect now; paragraphs 6 through 10 take effect April 1, 1978.

[8] S. Res. 110 originally provided that the designated employees could not solicit funds. However, S. Res. 188 (agreed to June 13, 1977) amended Rule 49 to allow these employees to solicit funds. For an explanation of the change, see the accompanying report No. 95–241.

[9] Note that existing regulations on the use of the mailing frank predate S. Res. 110. These regulations and the statutory provisions are found in a separate pamphlet available from the Ethics Committee.

[10] This rule reiterates Senate Resolution 534, 94th Congress, September 8, 1976.

[11] As amended by S. Res. 265 (95th Congress, 1st Session, agreed to September 29, 1977).

[12] Old Rule 44 remains in effect through calendar year 1977 (S. Res. 265).

[13] The Select Committee has reported S. Res. 319 which, if agreed to by the Senate would treat acceptance of travel expenses separately.

[14] As amended by S. Res. 188 (95th Cong., 1st session, agreed to ——, 1977).

EXTENDING THE DEADLINE FOR ERA

Mr. BARTLETT. Mr. President, there is a note of irony in the latest strategy of some advocates of the equal rights amendment. Facing near certain failure of the amendment to be ratified within the 7 year period established by Congress, proponents of the amendment have now asked Congress to extend the ratification period for an additional 7 years.

From the outset of their campaign to amend the Constitution, advocates of the ERA have assured us that their sole objective is to secure for women "equality of rights under the law." However, some of these advocates have now made it clear they are unwilling to accept equality of rights under the laws governing constitutional amendments.

The hypocrisy of this appeal for more than equal treatment for the equal rights movement has alienated even many of the original supporters of the ERA, and undermined even further the prospects for ratification of the amendment.

In order to restore a sense of fairness to this important national debate, I believe it is incumbent upon Congress to reject immediately the appeal for a 7 year delay of the ratification deadline. Such a delay would not only be unfair, but unnecessary, and certainly of questionable legality.

The request for a 7-year extension of the ratification period is based solely on the claim that the additional time is necessary for appropriate consideration of the proposal by the States. However, a review of the action of the states since Congress passed the Concurrent Resolution on the Equal Rights Amendment in 1972, clearly demonstrates that every State in the union has had sufficient time to study the amendment. The proposal has been considered and voted upon repeatedly in a number of States. In fact, floor votes have been conducted by both houses of the legislatures in all but three States.

It is also important to note that support for the ERA has declined rather than increased, with the passage of time. For example, 30 of the 35 States which have ratified the amendment did so within a year after its passage by Congress. In the last 4½ years, only five states have ratified the amendment and, during that time, three States have rescinded their ratification.

It is evident then that the States have had ample opportunity to study this issue and to express their will.

If States which have failed to ratify the amendment are given additional time to reconsider their position, then surely those States which have ratified the amendment would be granted the right to reconsider their position as well. In this case, it is quite conceivable that, after an extended period, the amendment might be ratified by even fewer than the present 35 States.

Beyond the matter of whether the States truly require more time to consider the amendment is the overriding question of whether an extension can be legally granted by Congress.

This question is addressed and, I believe, answered clearly by the precedents established in the constitutional amendment process. Article V of the Constitution provides that amendments shall be proposed when they are deemed necessary.

According to the ruling of the U.S. Supremt Court, in Dillon against Gloss (1921), such amendments "should be considered and disposed of presently" so that ratification occurs "within some reasonable time after the proposal." The Supreme Court has further ruled, in Coleman against Miller, (1939), that a "reasonable time" is that period of time in which "ratification reflects the contemporaneous views of the people." With every proposed constitutional amendment of the last 50 years, Congress has provided its own definition of a reasonable time for ratification—a period of 7 years.

It may even be argued that this period of time is more than reasonable, in that no constitutional amendment in history has required as much as 4 years to be ratified. The average period of time required for the ratification of the 26 has been less than 14 months. The 19th amendment, guaranteeing women the right to vote, required only 14½ months to be ratified.

However, advocates of the equal rights amendment now suggest that 14 years is a reasonable period for ratification.

One need only recall the circumstances of the 18th amendment on prohibition to see absurdity of this claim. Only 14 years separated the passage of prohibition and its repeal by the 21st amendment. Far from maintaining a consistent, contemporaneous position over the 14-year period, the States expressed two entirely contradictory positions.

I believe the precedence established by previous amendments clearly demonstrates that the equal rights amendment has been allowed a reasonable time for ratification by the States, and that a 7-year extension of this period would represent a blatant subversion of the intent of article V of the Constitution and the rulings of the U.S. Supreme Court.

Mr. President, our conclusion must be that no justification, legal or otherwise, exists for Congress to grant an additional 7 years for the ratification of the ERA. We must insist that the principles which have applied to previous constitutional amendments apply equally to this proposal—a position which should certainly be appreciated by the advocates of the ERA, whose avowed goal, after all, has been merely equal treatment under the law.

WELFARE AND ALIENS

Mr. PERCY. Mr. President, the U.S. General Accounting Office (GAO) recently supplied me with figures showing that aliens cost the Nation's welfare system $72 million a year in five States alone. Much of this amount is abuses of the system.

I spoke of this report on a previous occasion in this Chamber. Since that time, the GAO has clarified the figures in their report, and I wanted to be sure that my distinguished colleagues have the most up-to-date information available. I ask unanimous consent that the clarified report be printed in the RECORD at the conclusion of my remarks.

The PRESIDING OFFICER. Without objection it is so ordered.

(See exhibit 1.)

Mr. PERCY. Mr. President, highlights of the report include the following:

> An estimated 23,603 aliens currently collect Supplemental Security Income (SSI) who enrolled within 1 year of arrival in the United States.
>
> Of all aliens over 65 entering this country between July 1, 1972, and June 30, 1975, one out of three was collecting welfare payments under the SSI program by the end of 1976.

In a five-State breakdown of the SSI program alone:

> In California, 12,027 aliens collect a total of $31.6 million annually under the program.
>
> In Florida, 12,342 aliens collect $19.5 million annually.
>
> In Illinois, 2,980 aliens collects $4.5 million annually.
>
> In New York, 6,444 aliens receive $11.3 million annually.
>
> In New Jersey, 3,718 aliens receive $5.4 million annually.

In these five States alone, over 37,000 aliens collect SSI welfare payments of $72.3 million annually.

Experts agree that nearly all of these aliens qualify because of age or previous disability, not because of disabilities sustained in this country.

These estimates resulted from a 6-month study of the SSI program which I requested in April. It was conducted by the General Accounting Office with assistance from the Immigration and Naturalization Service in the Department of Justice and the Social Security Administration in the Department of Health, Education, and Welfare. GAO experts analyzed over 23,000 individual cases and

$10,000 or more which he owned at any time during the preceding year;

(e) the identity of each trust or other fiduciary relation in which he held a beneficial interest having a value of $10,000 or more, and the identity if known of each interest of the trust or other fiduciary relation in real or personal property in which the Senator, officer, or employee held a beneficial interest having a value of $10,000 or more, at any time during the preceding year. If he cannot obtain the identity of the fiduciary interests, the Senator, officer, or employee shall request the fiduciary to report that information to the Comptroller General in the same manner that reports are filed under this rule;

(f) the identity of each liability of $5,000 or more owed by him, or by him and his spouse jointly, at any time during the preceding year; and

(g) the source and value of all gifts in the aggregate amount or value of $50 or more from any single source received by him during the preceding year.

2. Except as otherwise provided by this section, all papers filed under section 1 of this rule shall be kept by the Comptroller General for not less than seven years, and while so kept shall remain sealed. Upon receipt of a resolution of the Select Committee on Standards and Conduct, adopted by a recorded majority vote of the full committee, requesting the transmission to the committee of any of the reports filed by any individual under section 1 of this rule, the Comptroller General shall transmit to the committee the envelopes containing such reports. Within a reasonable time after such recorded vote has been taken, the individual concerned shall be informed of the vote to examine and audit, and shall be advised of the nature and scope of such examination. When any sealed envelope containing any such report is received by the committee, such envelope may be opened and the contents thereof may be examined only by members of the committee in executive session. If, upon such examination the committee determines that further consideration by the committee is warranted and is within the jurisdiction of the committee, it may make the contents of any such envelope available for any use by any member of the committee, or any member of the staff of the committee, which is required for the discharge of his official duties. The committee may receive the papers as evidence, after giving to the individual concerned due notice and opportunity for hearing in a closed session. The Comptroller General shall report to the Select Committee on Standards and Conduct not later than the 1st day of June in each year the names of Senators, officers, and employees who have filed a report. Any paper which has been filed with the Comptroller General for longer than seven years, in accordance with the provisions of this section, shall be returned to the individual concerned or his legal representative. In the event of the death or termination of service of a Member of the Senate, an officer or employee, such papers shall be returned unopened to such individual, or to the surviving spouse or legal representative of such individual within one year of such death or termination of service.

3. Each Senator or person who has declared or otherwise made known his intention to seek nomination or election, or who has filed papers or petitions for nomination or election, or on whose behalf a declaration or nominating paper or petition has been made or filed, or who has otherwise, directly or indirectly, manifested his intention to seek nomination or election, pursuant to State law, to the office of United States Senator, and each officer or employee of the Senate who is compensated at a rate in excess of $15,000 a year, shall file with the Secretary of the Senate, before the 15th day of May in each year, the following reports of his personal financial interests:

(a) the accounting required by rule 42 for all contributions received by him during the preceding year, except that contributions in the aggregate amount or value of less than $50 received from any single source during the reporting period may be totaled without further itemization; and

(b) the amount or value and source of each honorarium of $300 or more received by him during the preceding year.

4. All papers filed under section 3 of this rule shall be kept by the Secretary of the Senate for not less than three years and shall be made available promptly for public inspection and copying.

5. This rule shall take effect on July 1, 1968. No reports shall be filed for any period before office or employment was held with the Senate, or during a period of office or employment with the Senate of less than ninety days in a year; except that the Senator, or officer or employee of the Senate, may file a copy of the return of taxes for the year 1968, or a report of substantially equivalent information for only the effective part of the year 1968.

APPENDIX C

KEY DATES UNDER SENATE CODE OF OFFICIAL CONDUCT

December 31 (each year). Quarterly reports due (filed with the Ethics Committee) of individuals who perform Senate services and are compensated by a source other than the government. (Rule 49(b))

December 31 (1977 only). Any unofficial office account which existed prior to April 1, 1977 must be closed out. (Rule 46; S. Res. 110 (313(e))

January 1 (1978). Rule 48, "Franking Privilege and Radio and TV Studios," takes effect.

January 1 (1978 only). For the first public financial disclosure under Rule 42 covered persons report personal property, real property and patent right holdings as of January 1, 1978. Report is due before May 15, 1978. (Rule 42 as amended by S. Res. 265)

January 1 (1978 only). Blind trusts not approved by the Ethics Committee as "qualified blind trusts" by May 15, 1978 must be dissolved to disclosed identity and value of holdings as of January 1, 1978. (Rule 42 as amended by S. Res. 265)

January 1 (each year). Covered persons should begin to record information for the calendar year so that they make public disclosure, by May 15 of the following year, of income; other than earned income; gifts; gifts of transportation; honorariums; securities and commodities futures transactions; purchase, sale or exchange of real property; payments of more than $5,000 from a source other than the government, etc. (Rule 42 as amended by S. Res. 265)

January 1 (each year). Each Senator's office should begin to record information needed for annual disclosure of mass mailings under the frank. First report due February 1, 1979 for calendar year 1978. (Rule 48(3))

April 1, 1978. Rule 45, paragraphs 6–10 (conflict of interest) take effect, limiting outside business and professional activity and post-Senate employment as a lobbyist.

April 15 (each year). Senators' public reports (filed with the Secretary of the Senate) are due disclosing receipts and expenditures of contributions used for official expenses. (FEC regulations 113.4 and 113.1(b) and Rule 46)

March 31. Quarterly reports due of individuals who perform services. (Rule 49(6))

May 14 (1978 only). Covered persons' confidential personal financial reports (filed with the Comptroller General) and contributions and honorariums public reports (filed with Secretary of the Senate) for calendar year 1977 under old Rule 44 are due.

May 15 (1978 only). Public financial disclosure under Rule 42 (filed with Secretary of Senate) is due, reporting real and personal property, debts, patent rights etc., as of January 1 1978.

May 15 1978 (1978). Covered persons' financial disclosure reports are subject to audit by the Comptroller General after this date. (Rule 42)

May 15 (each year). Employee reports to Senators on outside employment are due; Senators must review for conflict. (Rule 45 (3))

June 30 (each year). Quarterly report due of individuals who perform services. (Rule 49(6))

September 30. Quarterly reports due of individuals who perform services. (Rule 49 (6))

October 15 (each year). Senators public reports (filed with the Secretary of the Senate) are due disclosing receipt and expenditures of contributions used for official expenses. (FEC regulations 113.4 and 113.1(2) and Rule 46)

December 31 (each year). Quarterly reports due of individuals who perform services. (Rule 49(6))

January 1, 1979. Rule 44, outside earned income limitations, take effect.

January 3, 1979. Rule 50, prohibiting discrimination in Senate employment, takes effect.

February 1, 1979 (& each year). First annual registration due of mass mailings made under the frank during the previous calendar year. (Rule 48(3))

May 15, 1979 (& each year). Confidential filing of the individual federal tax return (with the Comptroller General) is due. (Rule 42(6))

May 15, 1979 (& each year). Full public financial disclosure report under Rule 42 (filed with Secretary of the Senate) is due.

APPENDIX D: TEXT OF FEDERAL ELECTION CAMPAIGN ACT PROVISION ON EXCESSIVE HONORARIA

(2 U.S.C. 441i)

§ 441i. Acceptance of excessive honorariums.

No person while an elected or appointed officer or employee of any branch of the Federal Government shall accept—

(1) any honorarium of more than $2,000 (excluding amounts accepted for actual travel and subsistence expenses for such person and his spouse or an aide to such person, and excluding amounts paid or incurred for any agents' fees or commissions) for any appearance, speech, or article; or

(2) honorariums (not prohibited by paragraph (1) of this section) aggregating more than $25,000 in any calendar year.

FOOTNOTES

[1] The original effective date of October 1, 1977 prescribed by S. Res. 110 was changed by S. Res. 265 (agreed to September 29, 1977). For an explanation see Report No. 95–448.

[2] All reporting individuals are urged to retain in their possession copies of their filings as once these documents are delivered to GAO the Comptroller is not authorized to open the envelopes or to permit the reporting individual to have access thereto.

[3] The blind trust provision was added by S. Res. 265 (considered and passed September 29, 1977) which came about as a result of a study by the Governmental Affairs Committee on the desirability of allowing the use of blind trusts. A report on the results of that study is currently being prepared.

[4] The Ethics Committee has reported a resolution (S. Res. 319, Report No. 95–586) which would treat travel expenses separate from the gift rule. Basically, rather than limit acceptance of such expenses, a public report would be submitted any time an outside individual or organization pays for them.

[5] See also the provisions of Rule 47 relating to lame duck foreign travel and reimburse-

employee receive reimbursement for the same expense more than once from the United States Government. No Member, officer, or employee shall use any funds furnished to him to defray ordinary and necessary expenses of foreign travel for any purpose other than the purpose or purposes for which such funds were furnished.

"3. A per diem allowance provided a Member, officer, or employee in connection with foreign travel shall be used solely for lodging, food, and related expenses and it is the responsibility of the Member, officer, or employee receiving such an allowance to return to the United States Government that portion of the allowance received which is not actually used for necessary lodging, food, and related expenses.

Effective date: January 1, 1978.

Rule 48, "Franking privilege and radio and television studios

"1. A Senator or an individual who is a candidate for nomination for election, or election, to the Senate may not use the frank for any mass mailing (as defined in section 3210(a)(5)(D) of title 39, United States Code) if such mass mailing is mailed at or delivered to any postal facility less than sixty days immediately before the date of any primary or general election (whether regular, special, or runoff) in which the Senator is a candidate for public office or the individual is a candidate for Senator.

"2. A Senator shall use only official funds of the Senate, including his official Senate allowances, to purchase paper, to print, or to prepare any mass mailing material which is to be sent out under the frank.

"3. (a) When a Senator disseminates information under the frank by a mass mailing (as defined in section 3210(a)(5)(D) of title 39, United States Code), the Senator shall register annually with the Secretary of the Senate such mass mailings. Such registration shall be made by filing with the Secretary a copy of the matter mailed and providing, on a form supplied by the Secretary, a description of the group or groups of persons to whom the mass mailing was mailed.

"(b) The Secretary of the Senate shall promptly make available for public inspection and copying a copy of the mail matter registered, and a description of the group or groups of persons to whom the mass mailing was mailed.

"4. Nothing in this rule shall apply to any mailing under the frank which is (a) in direct response to inquiries or requests from persons to whom the matter is mailed; (b) addressed to colleagues in Congress or to government officials (whether Federal, State, or local); or (c) consists entirely of news releases to the communication media.

"5. The Senate computer facilities shall not be used (a) to store, maintain, or otherwise process any lists or categories of lists of names and addresses identifying the individuals included in such lists as campaign workers or contributors, as members of a political party, or by any other partisan political designation, (b) to produce computer printouts except as authorized by user guides approved by the Committee on Rules and Administration, or (c) to produce mailing labels for mass mailings, or computer tapes and discs, for use other than in service facilities maintained and operated by the Senate or under contract to the Senate. The Committee on Rules and Administration shall prescribe such regulations not inconsistent with the purposes of this paragraph as it determines necessary to carry out such purposes.

"6. (a) The radio and television studios provided by the Senate or by the House of Representatives may not be used by a Senator or an individual who is a candidate for nomination for election, or election, to the Senate less than sixty days immediately before the date of any primary or general election (whether regular, special, or runoff) in which that Senator is a candidate for public office or that individual is a candidate for Senator.

"(b) This paragraph shall not apply if the facilities are to be used at the request of, and at the expense of, a licensed broadcast organization or an organization exempt from taxation under section 501(c)(3) of the Internal Revenue Code of 1954.

Rule 49,[11] "Political Fund Activity, Definitions"

"1. No officer or employee of the Senate may receive, solicit, be the custodian of, or distribute any funds in connection with any campaign for the nomination for election, or the election, of any individual to be a Member of the Senate or to any other Federal office. This prohibition does not apply to two assistants to a Senator, at least one of which is in Washington, District of Columbia, who have been designated by that Senator to perform any of the functions described in the first sentence of this paragraph and who are compensated at an annual rate in excess of $10,000, if such designation has been made in writing and filed with the Secretary of the Senate and if such assistant files a financial statement in the form provided under rule XLII for each year during which he is designated under this rule. The Secretary of the Senate shall make the designation available for public inspection.

"2. For purposes of the Senate Code of Official Conduct—

"(a) an employee of the Senate includes any employee whose salary is disbursed by the Secretary of the Senate; and

"(b) the compensation of an officer or employee of the Senate who is a reemployed annuitant shall include amounts received by such officer or employees as an annuity, and such amounts shall be treated as disbursed by the Secretary of the Senate.

"3. Before approving the utilization by any committee of the Senate of the services of an officer or employee of the Government in accordance with section 202(f) of the Legislative Reorganization Act of 1946 or with an authorization provided by Senate resolution, the Committee on Rules and Administration shall require such officer or employee to agree in writing to comply with the Senate Code of Official Conduct in the same manner and to the same extent as an employee of the Senate. Any such officer or employee shall, for purposes of such Code, be treated as an employee of the Senate receiving compensation disbursed by the Secretary of the Senate in an amount equal to the amount of compensation he is receiving as an officer or employee of the Government.

"4. No Member, officer, or employee of the Senate shall utilize the full-time services of an individual for more than ninety days in a calendar year in the conduct of official duties of any committee or office of the Senate (including a Member's office) unless such individual—

"(a) is an officer or employee of the Senate,

"(b) is an officer or employee of the Government (other than the Senate), or

"(c) agrees in writing to comply with the Senate Code of Official Conduct in the same manner and to the same extent as an employee of the Senate.

Any individual to whom subparagraph (c) applies shall, for purposes of such Code, be treated as an employee of the Senate receiving compensation disbursed by the Secretary of the Senate in an amount equal to the amount of compensation which such individual is receiving from any source for performing such services.

"5. In exceptional circumstances for good cause shown, the Select Committee on Ethics may waive the applicability of any provision of the Senate Code of Official Conduct to an employee hired on a per diem basis.

"6. (a) The supervisor of an individual who performs services for any Member, committee, or office of the Senate for a period in excess of four weeks and who receives compensation therefor from any source other than the United States Government shall report to the Select Committee on Ethics with respect to the utilization of the services of such individual.

"(b) A report under subparagraph (a) shall be made with respect to an individual—

"(1) when such individual begins performing services described in such subparagraph;

"(2) at the close of each calendar quarter while such individual is performing such services; and

"(3) when such individual ceases to perform such services.

Each such report shall include the identity of the source of the compensation received by such individual and the amount or rate of compensation paid by such source.

"(c) No report shall be required under subparagraph (a) with respect to an individual who normally performs services for a Member, committee, or office for less than eight hours a week.

"(d) For purposes of this paragraph, the supervisor of an individual shall be determined under paragraph 12 of rule XLV.

Effective Date: Paragraph 1, May 2, 1977 Paragraphs 2 through 6, April 2, 1977.

Rule 50, "Employment Practices"

"No Member, officer, or employee of the Senate shall, with respect to employment by the Senate or any office thereof—

"(a) fail or refuse to hire an individual;

"(b) discharge an individual; or

"(c) otherwise discriminate against an individual with respect to promotion, compensation, or terms, conditions, or privileges of employment

on the basis of such individual's race, color, religion, sex, national origin, age, or state of physical handicap.".

Effective Date: January 3, 1979.

APPENDIX B: TEXT OF OLD RULE 44

Rule 44, "Disclosure of Financial Interests"

(Continues in effect until January 1, 1978)

1. Each Senator or person who has declared or otherwise made known his intention to seek nomination or election, or who has filed papers or petitions for nomination or election, or on whose behalf a declaration or nominating paper or petition has been made or filed, or who has otherwise, directly or indirectly, manifested his intention to seek nomination or election, pursuant to State law, to the office of United States Senator, and each officer or employee of the Senate who is compensated at a rate in excess of $15,000 a year, shall file with the Comptroller General of the United States, in a sealed envelope marked "Confidential Personal Financial Disclosure of (name) ____________ __________________________", before the 15th day of May in each year, the following reports of his personal financial interests:

(a) a copy of the returns of taxes, declarations, statements, or other documents which he, or he and his spouse jointly, made for the preceding year in compliance with the income tax provisions of the Internal Revenue Code;

(b) the amount or value and source of each fee or compensation of $1,000 or more received by him during the preceding year from a client;

(c) the name and address of each business or professional corporation, firm, or enterprise in which he was an officer, director, partner, proprietor, or employee who received compensation during the preceding year and the amount of such compensation;

(d) the identity of each interest in real or personal property having a value of nor shall he permit any compensation to accrue to his beneficial interest from any source, the receipt or accrual of which would occur by virtue of influence improperly exerted from his position as a Member, officer, or employee.

Effective Date: Paragraphs 1 through 5 and 11 and 12, April 2, 1977.

Paragraphs 6 through 10, April 1, 1978.

"2. No Member, officer, or employee shall engage in any outside business or professional activity or employment for compensation which is inconsistent of in conflict with the conscientious performance of official duties.

"3. No officer or employee shall engage in any outside business or professional activity or employment for compensation unless he has reported in writing when such activity or employment commences and on May 15 of each year thereafter so long as such activity or employment continues, the nature of such activity or employment to his supervisor. The supervisor shall then, in the discharge of his duties, take such action as he considers necessary for the avoidance of conflict of interest or interference with duties to the Senate.

"4 No Member, officer, or employee shall knowingly use his official position to introduce or aid the progress or passage of legislation, a principal purpose of which is to further only his pecuniary interest, only the pecuniary interest of his immediate family, or only the pecuniary interest of a limited class of persons or enterprises, when he, or his immediate family, or enterprises controlled by them, are members of the affected class.

"5. A Member, notwithstanding the provisions of rule XII of the Standing Rules of the Senate, may decline to vote, in committee or on the floor, on any matter when he believes that his voting on such a matter would be a conflict of interest.

"6. No Member, officer, or employee of the Senate compensated at a rate in excess of $25,000 per annum and employed for more than ninety days in a calendar year shall (a) affiliate with a firm, partnership, association, or corporation for the purpose of providing professional services for compensation; (b) permit that individual's name to be used by such a firm, partnership, association or corporation; or (c) practice a profession for compensation to any extent during regular office hours of the Senate office in which employed. For the purposes of this paragraph, 'professional services' shall include but not be limited to those which involve a fiduciary relationship.

"7. No Member, officer, or employee of the Senate compensated at a rate in excess of $25,000 per annum and employed for more than ninety days in a calendar year shall serve as an officer or member of the board of any publicity held or publicly regulated corporation, financial institution, or business entity. The preceding sentence shall not apply to service of a Member, officer, or employee as—

"(a) an officer or member of the board of an organization which is exempt from taxation under section 501(c) of the Internal Revenue Code of 1954, if such service is performed without compensation;

"(b) an officer or member of the board of an institution or organization which is principally available to Members, officers, or employees of the Senate, or their families, if such service is performed without compensation; or

"(c) a member of the board of a corporation, institution, or other business entity, if (1) the Member, officer, or employee had served continuously as a member of the board thereof for at least two years prior to his election or appointment as a Member, officer, or employee of the Senate, (2) the amount of time required to perform such service is minimal, and (3) the Member, officer, or employee is not a member of, or a member of the staff of any Senate committee which has legislative jurisdiction over any agency of the Government charged with regulating the activities of the corporation, institution, or other business entity.

"8. An employee on the staff of a committee who is compensated at a rate in excess of $25,000 per annum and employed for more than ninety days in a calendar year shall divest himself of any substantial holdings which may be directly affected by the actions of the committee for which he works, unless the Select Committee, after consultation with the employee's supervisor, grants permission in writing to retain such holdings or the employee makes other arrangements acceptable to the Select Committee and the employee's supervisor to avoid participation in committee actions where there is a conflict of interest, or the appearance thereof.

"9. If a Member, upon leaving office, becomes a registered lobbyist under the Federal Regulation of Lobbying Act of 1946 or any successor statute, or is employed or retained by such a registered lobbyist for the purpose of influencing legislation, he shall not lobby Members, officers, or employees of the Senate for a period of one year after leaving office.

"10. If an employee on the staff of a Member, upon leaving that position, becomes a registered lobbyist under the Federal Regulation of Lobbying Act of 1946 or any successor statute, or is employed or retained by such a registered lobbyist for the purpose of influencing legislation, such employee may not lobby the Member for whom he worked or that Member's staff for a period of one year after leaving that position. If an employee on the staff of a committee, upon leaving his position, becomes such a registered lobbyist or is employed or retained by such a registered lobbyist for the purpose of influencing legislation, such employee may not lobby the members of the committee for which he worked, or the staff of that committee, for a period of one year after leaving his position.

"11. For purposes of this rule—

"(a) employee of the Senate' includes an employee or individual described in paragraphs 2, 3, and 4(c) of rule XLIX;

"(b) an individual who is an employee on the staff of a subcommittee of a committee shall be treated as an employee on the staff of such committee; and

"(c) the term 'lobbying' means any oral or written communication to influence the content or disposition of any issue before Congress, including any pending or future bill, resolution, treaty, nomination, hearing, report, or investigation; but does not include—

"(1) a communication (i) made in the form of testimony given before a committee or office of the Congress, or (ii) submitted for inclusion in the public record, public docket, or public file of a hearing; or

"(2) a communication by an individual, acting solely on his own behalf, for redress of personal grievances, or to express his personal opinion.

"12. For purposes of this rule—

"(a) a Senator or the Vice President is the supervisor of his administrative, clerical, or other assistants;

"(b) a Senator who is the chairman of a committee is the supervisor of the professional, clerical, or other assistants to the committee except that minority staff members shall be under the supervision of the ranking minority Senator on the committee:

"(c) a Senator who is a chairman of a subcommittee which has its own staff and financial authorization is the supervisor of the professional, clerical, or other assistants to the subcommittee except that minority staff members shall be under the supervision of the ranking minority Senator on the subcommittee;

"(d) the President pro tempore is the supervisor of the Secretary of the Senate, Sergeant at Arms and Doorkeeper, the Chaplain, the Legislative Counsel, and the employees of the Office of the Legislative Counsel;

"(e) the Secretary of the Senate is the supervisor of the employees of his office;

"(f) the Sergeant at Arms and Doorkeeper is the supervisor of the employees of his office;

"(g) the Majority and Minority Leaders and the Major and Minority Whips are the supervisors of the research, clerical, or other assistants assigned to their respective offices;

"(h) the Majority Leader is the supervisor of the Secretary for the Majority and the Secretary for the Majority is the supervisor of the employees of his office; and

"(i) the Minority Leader is the supervisor of the Secretary for the minority and the Secretary for the Minority is the supervisor of the employees of his office.

Rule 46, "Prohibition of Unofficial Office Accounts

"1. No Member may maintain or have maintained for his use an unofficial office account. The term 'unofficial office account' means an account or repository into which funds are received for the purpose, at least in part, of defraying otherwise unreimbursed expenses allowable in connection with the operation of a Member's office. An unofficial office account does not include, and expenses incurred by a Member in connection with his official duties shall be defrayed only from—

"(a) personal funds of the Member;

"(b) official funds specifically appropriated for that purpose;

"(c) funds derived from a political committee (as defined in section 301(d) of the Federal Election Campaign Act of 1971 (2 U.S.C. 431)); and

"(d) funds received as reasonable reimbursements for expenses incurred by a Member in connection with personal services provided by the Member to the organization making the reimbursement.

"2. No contribution (as defined in section 301(e) of the Federal Election Campaign Act of 1971 (2 U.S.C. 431)) shall be converted to the personal use of any Member or any former Member. For the purposes of this rule 'personal use' does not include reimbursement of expenses incurred by a Member in connection with his official duties.

Effective Date: April 2, 1977. No receipts into such accounts after April 2, 1977; and no expenditures after December 31, 1977.

Rule 47, "Foreign Travel

"1. Unless authorized by the Senate (or by the President of the United States after an adjournment sine die), no funds from the United States Government (including foreign currencies made available under section 502(b) of the Mutual Security Act of 1954 (22 U.S.C. 1754(b)) shall be received for the purpose of travel outside the United States by any Member of the Senate whose term will expire at the end of a Congress after—

"(a) the date of the general election in which his successor is elected; or

"(b) in the case of a Member who is not a candidate in such general election, the earlier of the date of such general election or the adjournment sine die of the second regular session of that Congress.

"2. No Member, officer, or employee engaged in foreign travel may claim payment or accept funds from the United States Government (including foreign currencies made available under section 502(b) of the Mutual Security Act of 1954 (22 U.S.C. 1754(b)) for any expense for which the individual has received reimbursement from any other source; nor may such Member, officer, or transportation, or entertainment, and reimbursement for other than necessary expenses, unless consideration of equal or greater value is received, but does not include (1) a political contribution otherwise reported as required by law, (2) a loan made in a commercially reasonable manner (including requirements that the loan be repaid and that a reasonable rate of interest be paid), (3) a bequest, inheritance, or other transfer at death, or (4) anything of value given to a spouse or dependent of a reporting individual by the employer of such spouse or dependent in recognition of the service provided by such spouse or dependent;

"(g) the term 'income' means gross income as defined in section 61 of the Internal Revenue Code of 1954;

"(h) the term 'political contribution' means a contribution as defined in section 301 of the Federal Election Campaign Act of 1971 (2 U.S.C. 431);

"(i) the term 'political expenditure' means an expenditure as defined in section 301 of the Federal Election Campaign Act of 1971 (2 U.S.C. 431);

"(j) the term 'relative' means, with respect to a person required to file a report under this rule, an individual who is related to the person as father, mother, son, daughter, brother, sister, uncle, aunt, great uncle, great aunt, first cousin, nephew, niece, husband, wife, grandfather, grandmother, grandson, granddaughter, father-in-law, mother-in-law, son-in-law, daughter-in-law, brother-in-law, sister-in-law, stepfather, stepmother, stepson, stepdaughter, stepbrother, stepsister, half brother, half sister, fiancé, fiancée, or who is the grandfather or grandmother of the spouse of the person reporting;

"(k) the term 'security' has the meaning set forth in section 2 of the Securities Act of 1933, as amended (15 U.S.C. 77b); and

"(l) the term 'transactions in securities and commodities futures' means any acquisition, transfer, or other disposition involving any security or commodity future."

Rule 43,[13] Gifts

"1. (a) No Member, officer, or employee of the Senate, or the spouse or dependent thereof, shall knowingly accept, directly or indirectly, any gift or gifts having an aggregate value exceeding $100 during a calendar year directly or indirectly from any person, organization, or corporation having a direct interest in legislation before the Congress or from any foreign national unless, in an unusual case, a waiver is granted by the Select Committee on Ethics. In determining whether an individual has accepted any gift or gifts having an aggregate value exceeding $100 during a calendar year from any person, organization, or corporation, there may be deducted the aggregate value of gifts (other than gifts described in subparagraph (c)) given by such individual to such person, organization, or corporation during that calendar year.

"(b) For purposes of subparagraph (a), only the following shall be deemed to have a direct interest in legislation before the Congress:

"(1) a person, organization, or corporation registered under the Federal Regulation of Lobbying Act of 1946, or any successor statute, a person who is an officer or director of such a registered lobbyist, or a person who has been employed or retained by such a registered lobbyist for the purpose of influencing legislation before the Congress; or

"(2) a corporation, labor organization, or other organization which maintains a separate segregated fund for political purposes (within the meaning of section 321 of the Federal Election Campaign Act of 1971 (2 U.S.C. 441b)), a person who is an officer or director of such corporation, labor organization, or other organization, or a person who has been employed or retained by such corporation, labor organization, or other organization for the purpose of influencing legislation before the Congress.

"(c) The prohibitions of subparagraph (a) do not apply to gifts—

"(1) from relatives;

"(2) with a value of less than $35;

"(3) of personal hospitality of an individual; or

"(4) from an individual who is a foreign national if that individual is not acting, directly or indirectly, on behalf of a foreign corporation, partnership or business enterprise, a foreign trade, cultural, educational or other association, a foreign political party or a foreign government.

"2. For purposes of this rule—

"(a) the term 'gift' means a payment, subscription, advance, forebearance, rendering, or deposit of money, services, or anything of value, including food, lodging, transportation, or entertainment, and reimbursement for other than necessary expenses, unless consideration of equal or greater value is received, but does not include (1) a political contribution otherwise reported as required by law, (2) a loan made in a commercially reasonable manner (including requirements that the loan be repaid and that a reasonable rate of interest be paid), (3) a bequest, inheritance, or other transfer at death, (4) a bona fide award presented in recognition of public service and available to the general public, (5) a reception at which the Member, officer, or employee is to be honored, provided such individual receives no other gifts that exceed the restrictions in this rule, other than a suitable memento, (6) meals, beverages, or entertainment consumed or enjoyed, provided the meals, beverages, or entertainment are not consumed or enjoyed in connection with a gift of overnight lodging, or (7) anything of value given to a spouse or dependent of a reporting individual by the employed of such spouse or dependent in recognition of the service provided by such spouse or dependent; and

"(b) the term 'relative' has the same meaning given to such term in paragraph 7(j) of rule XLII.

"3. If a Member, officer, or employee, after exercising reasonable diligence to obtain the information necessary to comply with this rule, unknowingly accepts a gift described in paragraph 1, such Member, officer, or employee shall, upon learning of the nature of the gift and its source, return the gift or, if it is not possible to return the gift, reimburse the donor for the value of the gift.

"4. (a) Notwithstanding the provisions of this rule, a Member, officer, or employee of the Senate may participate in a program, the principal objective of which is educational sponsored by a foreign government or a foreign educational or charitable organization involving travel to a foreign country paid for by that foreign government or organization if such participation is not in violation of any law and if the Select Committee on Ethics has determined that participation in such program by Members, officers, or employees of the Senate is in the interests of the Senate and the United States.

"(b) Any Member who accepts an invitation to participate in any such program shall notify the Select Committee in writing of his acceptance. A Member shall also notify the Select Committee in writing whenever he has permitted any officer or employee whom he supervises (within the meaning of paragraph 12 of rule XLV) to participate in any such program. Prior to the beginning of any such program, the chairman of the Select Committee shall place in the Congressional Record a list of all individuals participating; the supervisors of such individuals, where applicable; and the nature and itinerary of such program.

"(c) No Member, officer, or employee may accept funds in connection with participation in a program permitted under subparagraph (a) if such funds are not used for necessary food, lodging, transportation, and related expenses of the Member, officer, or employee.

Rule 44, "Outside Earned Income"

"1. During the period of service in a calendar year of a Senator, or of an officer or employee of the Senate compensated at a rate exceeding $35,000 a year and employed for more than ninety days in a calendar year, the aggregate amount of the outside earned income of such individual for such period shall not exceed 15 per centum of—

"(1) the aggregate amount of the salary of such an officer or employee disbursed by the Secretary of the Senate during such period; and

"(2) in the case of a Senator, the aggregate amount of base salary paid to Senators and disbursed by the Secretary of the Senate for that period.

"2. (a) A Senator shall not receive honoraria in excess of $1,000 for each appearance, speech, or article.

"(b) An officer or employee of the Senate covered by paragraph 1 shall not receive honoraria in excess of—

"(1) $300 for each appearance, speech, or article, and

"(2) $1,500 in the aggregate in any one calendar year.

"(c) Notwithstanding the limitations under paragraph 1 or 2(b)(2), any Senator, officer, or employee may accept honoraria in excess of the amount allowed in paragraph 1 or 2(b)(2) but not in excess of $25,000, if he donates such honoraria to an organization exempt from taxation under section 501(c)(3) of the Internal Revenue Code of 1954 and if no tax benefits accrue to such Senator, officer, or employee for such donation.

"3. (a) For purposes of this rule, the term 'outside earned income' shall, subject to the provisions of subparagraph (b), mean any income earned by an individual (other than the salary received as a Senator or officer or employee of the Senate) which is compensation received as a result of personal services actually rendered.

"(b) For purposes of subparagraph (a), the term 'outside earned income' does not include—

"(1) advances on books from an established trade publisher under usual contract terms;

"(2) royalties from books;

"(3) proceeds from the sale of creative or artistic works;

"(4) any 'buyout' arrangement from professional partnerships or businesses which is reasonably related to the fair market value of the partnership or business interest in the enterprise at the time of the sale of such interest, payable within a reasonable period of time, and not related to future services or profitability of the enterprise;

"(5) income from family enterprises, if the services provided by the Senator, officer or employee are managerial or supervisory in nature, necessary to protect the interests in the family enterprise and do not consume significant amounts of time while the Senate is in session; and

"(6) distributive shares of partnership income if the distributive share received represents not more than a pro rata return on the capital invested in the partnership and the services provided by the Senator, officer or employee are managerial or supervisory in nature, necessary to protect the interests in the partnership, and do not consume significant amounts of time while the Senate is in session.

Effective Date: January 1, 1979.

Rule 45, "Conflict of Interest"

"1. A Member, officer, or employee of the Senate shall not receive any compensation,

---

Footnotes at end of article.

"(ii) the previous trust instrument is amended, or, if such trust instrument does not by its terms permit amendment, all parties to the trust instrument, including the reporting individual and the trustee, agree in writing that the trust shall be administered in accordance with the requirements of clause (3)(C) of this subparagraph and a trustee is (or has been) appointed who meets the requirements of clause (3) of this subparagraph; and

"(iii) a copy of the trust instrument (except testamentary provisions), a list of the assets previously transferred to the trust by an interested party, and the category of value of each such asset at the time it was placed in the trust is filed and made available to the public as provided under clause (5) of this subparagraph.

"4. (a) Each individual required to file a report under paragraph 1(a) for any calendar year shall file such report with the Secretary of the Senate not later than May 15 of the next year.

"(b) Each individual required to file a report under paragraph 1(b) for a portion of a year shall file such report with the Secretary of the Senate on the last day he occupies an office or position described in paragraph 1 during such year.

"(c) Each individual required to file a report under paragraph 1(c) shall file such report with the Secretary of the Senate not later than the thirtieth day following the day on which such individual first fulfills the filing requirements of such paragraph during such year on May 15 of that year, whichever is later.

"(d) A copy of each report filed under subparagraphs (a), (b), and (c) shall be provided to the Select Committee by the Secretary of the Senate.

"(e) Each Senator and each individual required to report under paragraph 1(c) shall cause his financial disclosure statement to be filed as a public document with the Secretary of State (or, if there is no Office of Secretary of State, the equivalent State officer) in the State which the Senator represents or in which he is a candidate for the position of Senator.

"(f) The Select Committee may grant one or more reasonable extensions of time for filing any report but the total of such extensions shall not exceed ninety days.

"(g) The Comptroller General shall provide assistance in completing any reports required under this rule when requested by a Member, officer, or employee of the Senate.

"5. (a) Except as provided in this paragraph, the Secretary of the Senate shall make each report filed with him under this rule available to the public within fifteen days after the receipt of such report, and shall provide a copy of any such report to any person upon a written request.

"(b) The Secretary of the Senate shall require any person receiving a copy of any report under subparagraph (a) to supply his name and address and the name of the person or organization, if any, on whose behalf he is requesting such copy and to pay a reasonable fee in any amount which the Secretary of the Senate finds necessary to recover the cost of reproduction or mailing of such report excluding any salary of an employee involved in such reproduction or mailing. The Secretary of the Senate may furnish a copy of any such report without charge or at a reduced charge if he determines that waiver or reduction of the fee is in the public interest because furnishing the information can be considered as primarily benefiting the public.

"(c) Any report received by the Secretary of the Senate shall be held in his custody and made available to the public for a period of seven years after receipt by the Secretary of the Senate of such report. After such seven-year period the Secretary of the Senate shall destroy any such report.

"(d) The Select Committee shall review all financial statements filed pursuant to paragraph 1 to determine whether such statements are filed in a timely manner and are complete and in proper form.

"(e)(1) The Comptroller General shall, under such regulations as he may prescribe, and which are approved by the Select Committee, conduct, on a random basis, audits of approximately 5 per centum of the reports filed with the Secretary of the Senate (other than those filed by a Member of the Senate).

"(2) The Comptroller General shall, during each six-year period beginning after December 31, 1977, audit at least one report filed by each Member of the Senate, except that no such audit shall take place during the calendar year such Member is up for reelection.

"(3)(A) In conducting an audit under clause (1) or (2), the Comptroller General is authorized to request that the Select Committee issue a subpena to require the production of books, papers, and other documents.

"(B) The Comptroller General may use outside consultants to assist him in his responsibilities under this subparagraph.

"(4) The Comptroller General shall transmit the findings of each audit to the Select Committee and the individual being audited.

"6. (a) Each individual who is required to file a financial statement under paragraph 1 for any calendar year shall file with the Comptroller General, in a sealed envelope, a report containing a copy of the returns of taxes, declarations, statements, other documents, and amendments thereto, which he, or he and his spouse jointly, or any fiduciary (regarding income received on behalf of such individual), made for such year in compliance with the income tax provisions of the Internal Revenue Code of 1954. Such report shall be filed not later than the date on which such individual is required to file a financial statement under paragraph 1.

"(b) Except as otherwise provided by this paragraph, all papers filed with the Comptroller General under this paragraph shall be kept by the Comptroller General for not less than seven years, and while so kept shall remain sealed. Upon receipt of a resolution of the Select Committee, adopted by a recorded majority vote of the members of the Select Committee, requesting the transmission to the Select Committee of any of the reports filed by an individual under this rule, the Comptroller General shall transmit to the Select Committee the envelopes containing such reports. After such recorded vote has been taken, but prior to the transmittal to the Select Committee of the envelopes containing such reports, the individual concerned shall be informed of the vote to examine and audit, and shall be advised of the nature and scope of such examination. When any sealed envelope containing any such report is received by the Select Committee, such envelope may be opened and the contents thereof may be examined only by members of the Select Committee in executive session. If, upon such examination, the Select Committee determines that further consideration by the Select Committee is warranted and is within the jurisdiction of the Select Committee, it may make the contents of any such envelope available for any use by any member of the Select Committee, or any member of the staff of the Select Committee, which is required for the discharge of his official duties. The Select Committee may receive the papers as evidence, after giving to the individual concerned due notice and opportunity for hearing in a closed session. The Comptroller General shall report to the Select Committee not later than the 1st day of June in each year the names of Senators, officers, and employees who have filed a report. Any paper which has been filed with the Comptroller General for longer than seven years, in accordance with the provisions of this paragraph, shall be returned to the individual concerned or his legal representative. In the event of the death or termination of service of a Member of the Senate or an officer or employee of the Senate, such papers shall be returned unopened to such individual, or to the surviving spouse or legal representative of such individual within one year of such death or termination of service unless the Select Committee directs that such papers be returned at a later date.

"(c) Notwithstanding the provisions of subparagraph (b), the Comptroller General, after giving notice to the individual being audited, may examine the material filed pursuant to this paragraph for the purpose of conducting an audit as required under paragraph 5(e).

"(d) Whenever in any criminal case pending in any competent court in which a Member, officer, or employee of the Senate is a defendant. or in any proceeding before a grand jury of any competent court in which alleged criminal conduct of the Member, officer, or employee of the Senate is under investigation, a discovery order of such court is served upon the Comptroller General directing him to appear and produce any reports filed pursuant to this rule, the Comptroller General shall—

"(1) within a reasonable time prior to appearing in response to such discovery order of such court, notify the individual whose report is requested of the receipt of the discovery order of such court.

"(2) if such report is in a sealed envelope, unseal the envelope containing such report and have an authenticated copy made of such report, replace such report in such envelope and reseal it, and note on such envelope that it was opened pursuant to this clause in response to a discovery order of such court, a copy of which shall be attached to such envelope, and

"(3) appear in response to such discovery order of such court and produce the authenticated copy so made.

For purposes of this subparagraph, the term 'competent court' means a court of the United States, a State, or the District of Columbia which has general jurisdiction to hear cases involving criminal offenses against the United States, such State, or the District of Columbia, as the case may be; and the term 'discovery order' includes a subpena approved by a competent court.

"(e) The Select Committee on Ethics shall promulgate regulations and procedures to insure the confidentiality of tax returns and tax return information examined by the staff of that committee pursuant to subparagraph (b) above. Such regulations shall include the sanction of dismissal for any employee who knowingly and willfully communicates to any unauthorized person information derived from any confidentially filed tax return or tax return information examined pursuant to subparagraph (b) above.

"7. As used in this rule—

"(a) the term 'commodity future' means commodity future as defined in sections 2 and 5 of the Commodity Exchange Act, as amended (7 U.S.C. 2 and 5);

"(b) the term 'Comptroller General' means the Comptroller General of the United States;

"(c) the term 'dependent' has the meaning set forth in section 152 of the Internal Revenue Code of 1954;

"(d) the term 'earned income' means outside earned income (as defined in rule XLIV) and any salary disbursed to an individual by the Secretary of the Senate;

"(e) the term 'employee of the Senate' includes any employee or individual described in paragraphs 2, 3, and 4(c) of rule XLIX;

"(f) the term 'gift' means a payment, subscription, advance, forbearance, rendering, or deposit of money, services, or anything of value, including food, lodging, person for whom services were provided by any firm or association of which such individual was a member, partner, or employee unless such individual was directly involved in the provision of such services.

"(3). (a) For purposes of subparagraphs (e) through (h) of paragraph 2, an individual need not specify the actual amount or value of each item required to be reported under such subparagraphs, but such individual shall indicate which of the following categories such amount or value is within:

"(1) not more than $5,000,

"(2) greater than $5,000 but not more than $15,000,

"(3) greater than $15,000 but not more than $50,000,

"(4) greater than $50,000 but not more than $100,000,

"(5) greater than $100,000 but not more than $250,000,

"(6) greater than $250,000 but not more than $500,000,

"(7) greater than $500,000 but not more than $1,000,000,

"(8) greater than $1,000,000 but not more than $2,000,000,

"(9) greater than $2,000,000 but not more than $5,000,000, or

"(10) greater than $5,000,000.

"(b) For the purposes of subparagraph (e) of paragraph 2, if the current value of an interest in real property (or an interest in a real estate partnership) is not ascertainable without an appraisal, an individual may list the date of purchase and the purchase price of the interest in the real property instead of specifying a category of value pursuant to subparagraph (a) of this paragraph. If the current value of any other item required to be reported under subparagraph (e) of paragraph 2 is not ascertainable without an appraisal, such individual may list the book value of a corporation whose stock is not publicly traded, the net worth of a business partnership, the equity value of an individually owned business, or with respect to other holdings, any recognized indication of value but such individual shall include in his report a full and complete description of the method used in determining such value.

"(c) (1) For the purposes of subparagraphs (a) through (c) of paragraph 2, the individual need only report the source, not the amount, of any earned income over $1,000 or gifts over $100 ($250 in the case of transportation, lodging, food, or entertainment) received by a spouse or minor dependent, and if gifts of over $500 received by an adult dependent, but with respect to earned income, if his spouse or minor dependents are self-employed in his or her own business or profession, only the nature of such business or profession need be reported.

"(2) For the purposes of subparagraph (a) (3) and subparagraphs (e) through (j) of paragraph 2, a reporting individual shall also report the interests of the spouse or dependents of that individual if such interests are within the constructive control of the reporting individual. For the purposes of this subparagraph, an interest is in the constructive control of a reporting individual if the enhancement of the interest would substantially benefit the reporting individual.

"(3) No report shall be required with respect to the interests of a spouse living separate and apart from the reporting individual.

"(d) (1) Except as provided in clause (2), each reporting individual shall report, in accordance with the provisions of paragraph 2, the identity of the holdings of and the identity of the source of income from a trust or other financial agreement from which income is received by, or with respect to which an equity interest is held by, such individual, his spouse, or any of his dependents.

"(2) A reporting individual need not report the holdings of or the source of income from any of the holdings of

"(A) any qualified blind trust (as defined in clause (3)); or

"(B) a trust—

"(i) which was not created directly by such individual, his spouse, or any of his dependents,

"(ii) with respect to which such individual, his spouse, and any of his dependents have no knowledge of the holdings or sources of income of the trust, and

"(iii) with respect to which such individual has requested the trustee to provide information with respect to the holdings and sources of income of the trust and the trustee refuses to disclose the information,

but such individual shall report the category of the amount of income received by him, his spouse, or his dependents from the trust under paragraph 2(a) (3).

"(3) For purposes of this subparagraph, the term 'qualified blind trust' includes any trust in which a reporting individual, his spouse, or any of his dependents has a beneficial interest in the principal or income, and which meets the following requirements:

"(A) The trustee of the trust is a financial institution, an attorney, a certified public accountant, or a broker who (in the case of a financial institution or investment company, any officer or employee involved in the management or control of the trust who)—

"(i) is independent of any interested party so that the trustee cannot be controlled or influenced in the administration of the trust by any interested party,

"(ii) is not an employee of any interested party, or any organization affiliated with any interested party and is not a partner of, or involved in any joint venture or other investment with, any interested party, and

"(iii) is not a relative (as defined in paragraph 7(j)) of any interested party.

"(B) Any asset transferred to the trust by an interested party is free of any restriction with respect to its transfer or sale unless such restriction is expressly approved by the Select Committee on Ethics.

"(C) The trust instrument which establishes the trust provides that—

"(i) except to the extent provided in subclause (B), the trustee in the exercise of his authority and discretion to manage and control the assets of the trust shall not consult or notify any interested party;

"(ii) the trust shall not contain any asset the holding of which by an interested party is prohibited by any law or regulation;

"(iii) the trustee shall promptly notify the reporting individual and the Select Committee on Ethics when the holdings of any particular asset transferred to the trust by any interested party are disposed of or when the value of such holding is less than $1,000;

"(iv) the trust tax return shall be prepared by the trustee or his designee and such return and any information relating thereto (other than the trust income summarized in appropriate categories necessary to complete an interested party's tax return) shall not be disclosed to any interested party;

"(v) an interested party shall not receive any report on the holdings and sources of income of the trust, except a report at the end of each calendar quarter with respect to the total cash value of the interest of the interested party in the trust or the net income or loss of the trust or any reports necessary to enable the interested party to complete an individual tax return required by law or to provide the information required by paragraph 2(a) (3) of this rule but such report shall not identify any asset or holding;

"(vi) except for communications which solely consist of requests for distributions of cash or other unspecified assets of the trust, there shall be no direct or indirect communication between the trustee and an interested party with respect to the trust unless such communication is in writing and unless it relates only (I) to the general financial interest and needs of the interested party (including, but not limited to, an interest in maximizing income or long-term capital gain), (II) to the notification of the trustee of a law or regulation subsequently applicable to the reporting individual which prohibits the interested party from holding an asset and which notification directs that the asset not be held by the trust, or (III) to directions to the trustee to sell all of an asset initially placed in the trust by a interested party which in the determination of the reporting individual creates a conflict of interest or the appearance thereof due to the subsequent assumption of duties by the reporting individual (but nothing herein shall require any such direction); and

"(vii) the interested parties shall make no effort to obtain information with respect to the holdings of the trust, included obtaining a copy of any trust tax return filed or any information relating thereto except as otherwise provided in this subsection.

"(D) The proposed trust instrument and the proposed trustee shall be approved by the Select Committee on Ethics.

For purposes of this subparagraph, the term 'interested parties' means a reporting individual, his spouse, and dependents if the reporting individual, his spouse, or dependent has a beneficial interest in the principal or income of a qualified blind trust and the term 'broker' is used as defined in section 78 of title 15, United States Code.

"(4) An asset placed in a trust by an interested party (within the meaning of clause (3)) shall be considered a financial interest of the reporting individual, for the purposes of any conflict of interest statutes or regulations of the Federal Government, until such time as the reporting individual is notified by the trustee that such asset has been disposed of, or has a value of less than $1,000.

"(5) (A) The reporting individual shall file within thirty days after a qualified blind trust is approved by the Select Committee on Ethics a copy of—

"(i) the executed trust instrument of such trust (other than those provisions which relate to the testamentary disposition of the trust assets), and

"(ii) a list of the assets which were transferred to such trust, including the category of value of each asset as determined under paragraph 3(a), with the Secretary of the Senate.

"(B) The reporting individual shall, within thirty days of transferring an asset (other than cash) to a previously established qualified blind trust, notify the Select Committee on Ethics of the identity of each such asset and the category of value of each asset as determined under paragraph 3(a).

"(C) Within thirty days of the dissolution of a qualified blind trust, a reporting individual shall—

"(i) notify the Select Committee on Ethics of such dissolution, and

"(ii) file a copy of a list of the assets of the trust at the time of such dissolution and the category of value under paragraph 3(a) of each such asset with the Secretary of the Senate.

"(D) Documents filed under subclauses (A), (B), (C) of this clause shall be made available to the public in the same manner as a report is made available under paragraph 5 and the provisions of paragraph 5, as appropriate, shall apply.

"(E) A copy of each written communication with respect to the trust under clause (3) (C) (vi) of this subparagraph shall be filed by the person initiating the communication with the Select Committee on Ethics within five days of the date of the communications.

"(F) Any trust which is in existence prior to the effective date of this rule shall be considered a qualified blind trust if—

"(i) the Select Committee on Ethics determines that the trust was a good faith effort to establish a blind trust;

one, whether for remuneration or not; and never accept, for himself or his family, favors or benefits under circumstances which might be construed by reasonable persons as influencing the performance of his governmental duties.

6. Make no private promise of any kind binding upon the duties of office, since a Government employee has no private word which can be binding on public duty.

7. Engage in no business with the Government, either directly or indirectly, which is inconsistent with the conscientious performance of his governmental duties.

8. Never use any information coming to him confidentially in the performance of governmental duties as a means for making private profit.

9. Expose corruption wherever discovered.

10. Uphold these principles, ever conscious that public office is public trust.

(H. Con. Res. 175, 72 Stat. B 12.)

XI. ENFORCEMENT

S. Res. 338, as amended, establishes formal procedures in the event of a complaint against a Member, officer or employee. A sworn complaint is a statement of facts within the personal knowledge of the complainant alleging a violation of law, the Senate Code of Official Conduct or any other rule or regulation of the Senate relating to performance of duties as Members, officers or employees of the Senate. Whether the procedure is initiated by a sworn complaint or the Ethics Committee acts on the basis of information otherwise obtained, the matter may result in a formal investigation if the Ethics Committee finds, upon vote of four members, that there is substantial credible evidence which provides substantial cause for the Ethics Committee to conclude that a violation of some seriousness and within the jurisdiction of the Ethics Committee has occcurred. The results of such an investigation, with any recommendations, are to be reported to the Senate.

The Ethics Committee is authorized to publish necessary regulations, interpretative rulings and advisory opinions, and, upon written request of a Member, officer or Senatorial candidate, must issue advisory opinions in certain circumstances.

APPENDIX A: TEXT OF RULES 42 THROUGH 50

Rule 42,[11] "Public Financial Disclosure"

"Rule XLII

"PUBLIC FINANCIAL DISCLOSURE

"1. (a) (1) Each individual who for a period in excess of ninety days during a calendar year is a Senator or an officer or employee of the Senate who is compensated at a rate in excess of $25,000 a year, shall file a report containing a full and complete financial statement for that calendar year.

"(2) Each employee designated under rule XLIX to handle campaign funds during any calendar year shall file a full and complete financial disclosure statement for that calendar year.

"(b) Each individual described in subparagraph (a) who during any calendar year ceases to occupy an office or position described in such subparagraph shall file a report containing a full and complete financial statement for that portion of such year beginning on January 1 and ending on the date on which he ceases to occuy such office or position.

"(c) Any individual who seeks nomination for election, or election, to the office of United States Senator shall file in any year in which such individual has—

"(1) taken the action necessary under the law of a State to qualify for nomination for election, or election, or

"(2) received political contributions or made expenditures, or has given consent for any other person to receive political contributions or make expenditures, with a view to bringing about such individual's nomination for election, or election, to such office,

a report containing a full and complete financial statement for the preceding calendar year.

"(d) The Secretary of the Senate shall submit annually to the Select Committee on Ethics (hereinafter referred to as the 'Select Committee') a complete list of Members, officers, and employees of the Senate who are required to file a report under this paragraph and shall submit at the close of each calendar quarter a list of individuals required to file such report who have begun or terminated employment with the Senate or been designated pursuant to rule XLIX.

"2. Each individual shall include in each report for each calendar year for which he is required to file a report under paragraph 1 a full and complete statement, in such manner and form as the Select Committee shall prescribe, which contains the following:

"(a) (1) The amount and the identity of each source of earned income (exclusive of honoraria) received during such calendar year which exceeds $100 in amount or value;

"(2) the identity of the source, the amount, and the date, of each honorarium received during such calendar year and an indication of which honoraria, if any, were donated to a charitable organization pursuant to paragraph 2(c) of rule XLIV; and

"(3) the identity of each source of income (other than earned income) received during such calendar year which exceeds $100 in amount or value, and an indication of which of the following categories the amount of value of such item of income is within:

"(A) not more than $1,000,

"(B) greater than $1,000 but not more than $2,500,

"(C) greater than $2,500 but not more than $5,000,

"(D) greater than $5,000 but not more than $15,000,

"(E) greater than $15,000 but not more than $50,000,

"(F) greater than $50,000 but not more than $100,000, or

"(G) greater than $100,000.

"(4) For purposes of clauses (1) and (3), any gift described in subparagraphs (b) and (c) of this paragraph shall not be considered as income.

"(b) The identity of the source, a brief description of, and the value of any gifts of transportation, lodging, food, or entertainment aggregating $250 or more provided by any one source other than a relative during the calendar year except that any food, lodging, or entertainment received as part of the personal hospitality of any individual need not be reported.

"(c) The identity of the source, a brief description of, and the value of all other gifts aggregating $100 or more from any one source other than a relative during the calendar year unless, in an unusual case, a waiver is granted by the Select Committee.

"(d) (1) Gifts with a fair market value of less than $35 need not be aggregated for the purposes of subparagraphs (b) and (c) of this paragraph.

"(2) In aggregating gifts for purposes of subparagraphs (b) and (c) of this paragraph, the reporting individual may deduct from the total value of gifts received from any source during the calendar year the total value of gifts given by the reporting individual to that source during the calendar year, except that, if gifts with a fair market value of less than $35 received from that source are not aggregated, gifts with a fair market value of less than $35 given to that source may not be deducted.

"(e) (1) The identity and category of value of each item of real property held, directly or indirectly, during such calendar year which has a fair market value in excess of $1,000 as of the close of such calendar year; and

"(2) the identity and category of value of each item of personal property held, directly or indirectly during such calendar year in a trade or business or for investment or the production of income which has a fair market value in excess of $1,000 as of the close of such calendar year.

"(f) The identity and category of value of each personal liability owed, directly or indirectly, which exceeds $2,500 at any time during such calendar year.

"(g) The identity, date, and category of value of any transaction, directly or indirectly, in securities or commodities futures during such calendar year exceeding $1,000, except that (1) any gift to any tax-exempt organization described in section 501(c) (3) of the Internal Revenue Code of 1954 involving such a transaction need not be reported, and (2) any transaction solely by and between the reporting individual, his spouse, and dependents need not be reported.

"(h) (1) The identity, date, and category of value of any purchase, sale, or exchange, directly or indirectly, of any interest in real property during such calendar year if the value of the property involved in such purchase, sale, or exchange exceeds $1,000 as of the date of such purchase, sale, or exchange, except that (1) any gift to any tax-exempt organization described in section 501(c) (3) of the Internal Revenue Code of 1954 involving such a transaction need not be reported, and (2) any transaction solely by and between the reporting individual, his spouse, or dependents need not be reported.

"(2) For the purposes of subparagraph (e) (1) of this paragraph and clause (1) of this subparagraph, the identity of an item of real property shall include the number of acres of property (if there is more than one acre), the exact street address (except with respect to a personal residence of a reporting individual), the twon, county, and State in which the property is located, and if there are substantial improvements on the land, a brief description of the improvements (such as 'office building').

"(i) Any patent right or any interest in any patent right, and the nature of such patent right, held during such calendar year.

"(j) The identity of all positions held as an officer, director, trustee, partner, adviser, proprietor, agent, employee, or consultant of any corporation, company, firm, partnership, or other business enterprise, any nonprofit organization, and any educational or other institution.

"(k) A description of, the parties to, and the terms of any contract, promise, or other agreement between such individual and any person with respect to his employment after such individual ceases to occupy an office or position described in paragraph 1, including any agreement under which such individual is taking a leave of absence from an office or position outside of the United States Government in order to occupy an office or position described in paragraph 1, and a description of and the parties to any agreement providing for continuation of payments or benefits from a prior employer other than the United States Government.

An officer or employee of the Senate required to file a report under paragraph 1 shall include in this report the identity of any person, other than the United States Government, who paid the reporting individual compensation in excess of $5,000 in any of the two calendar years prior to such calendar year and the nature and term of the services the reporting individual performed for such person. The preceding sentence shall not require any individual to report any information which is considered confidential as a result of a privileged relationship, established by law, between such individual and any person nor shall it require an individual to report any information with respect to any

---

Footnotes at end of article.

any candidate for the Senate or other Federal office. However, two assistants to each Senator (one of whom must be in Washington, D.C.) who are compensated at a rate in excess of $10,000 per year may perform those functions.[8] These individuals are nevertheless subject to criminal laws which prohibit solicitation or receipt of campaign contributions in Federal buildings (18 U.S.C. 603) and from other Federal employees (18 U.S.C. 602). Also, employees are prohibited from making contributions directly or indirectly to Congressional candidates (18 U.S.C. 607).

Forms for designating employees to handle campaign funds are available from the Ethics Committee and are to be filed with the Secretary of the Senate. Employees designated are subject to the financial disclosure requirements of Rule 42, regardless of their salary level.

Use of Frank on Mass Mailings

Rule 48, effective January 1, 1978, prohibits a Member or candidate for the Senate from using the frank for any mass mailing within 60 days before any primary or general election in which he is a candidate.[9] "Mass mailing" is defined the same as in the franking law and regulations (39 U.S.C. 3210 (a) (5) (D)) but does not include mailings in direct response to inquiries or requests. An example is a form letter used to respond to numerous inquiries or requests concerning an issue of widespread interest. "Mass mailing" does not include news releases or communications to Members of Congress or Federal, state or local government officials.

Only official funds of the Senate can be used for preparing franked mass mailings. And all mass mailings must be registered no less frequently than annually with the Secretary of the Senate. The first registration deadline is February 1, 1979 and will cover all mass mailings during calender year 1978. Some Members may prefer to register mailings as they go out, and this is acceptable practice. The registration information and copies of the matter mailed will be available for public inspection and copying. Forms and instructions for these registrations will be available from the Ethics Committee.

Use of Senate Computer Facilities

Senate computer facilities cannot be used to store or process address lists of campaign workers, contributors, or other partisan groups. The Committee on Rules and Administration is to formulate user guides and regulations to govern this subject.

Use of Radio and TV Studios

Senators and candidates for the Senate are prohibited from using the Senate or House radio and television studios within 60 days of a primary or general election in which they are a candidate. A narrow exception permits use of the studio at the request and expense of a licensed broadcast organization or tax exempt organization.

VI. RULE 46: PROHIBITION OF UNOFFICIAL ACCOUNTS

Members may not maintain or have maintained for their use "unofficial office accounts". No funds may be received or deposited to such existing accounts after April 1, 1977, and payments from such accounts must cease by December 31, 1977.

Members' personal funds may be used to pay official expenses. Such personal funds may include honoraria. Accounts may also be maintained to receive Senate reimbursements for official expenses.

Reimbursements by an organization for necessary expenses in connection with services by a Member (speaking engagement, fact-finding, participation at conferences, and the like) may be accepted. This provision ties in with the "necessary expense" exception in connection with the acceptance and reporting of gifts under Rules 43 and 42 which is discussed elsewhere in this Manual (see "Disclosure" and "Gifts").

An account may also be maintained to receive "funds derived from a political committee." The Ethics Committee has construed this to permit payment of official expenses only by a Member's campaign committee from excess campaign funds. Exception has been taken to that ruling and it will therefore be reconsidered by the Committee.

In-kind contributions of materials, equipment and services to a Member for use in the operation of his office are prohibited. For example, office furniture or equipment cannot be accepted just as the money to purchase same cannot. Donation of an automobile for travel in a Member's home state, a research service for use in a Member's committee work, or space and facilities in a private law firm to do casework, have been held to violate the prohibition against unofficial accounts. This prohibtion does not extend to items for, which adequate consideration is given by the Member. And the Ethics Commitee has ruled that it also does not prohibit the time honored practice of accepting volunteers in a Member's office. The Committee is continuing to interpret the prohibition against unofficial office accounts and may conclude that additional exceptions were intended by the Senate.

Rule 46 prohibits the conversion of campaign contributions to personal use by Members and former Members.

Members are cautioned that provisions of Rule 46 overlap with the Federal Election Campaign Act and raise questions under the Internal Revenue Code.

Because of the complexity of unofficial accounts, the Ethics Committee is arranging for preparation of an accounting manual to assist Senate offices in operating under Rule 46.

VII. RULE 47: FOREIGN TRAVEL

Acceptance of travel expenses from foreign governments or foreign organizations is discussed under "Gifts".

Rule 47 limits "lame duck" travel by Members. Unless special authorization is received, a Member cannot use United States Government funds to travel outside the United States after the date of the general election in which his or her successor is elected; or, if not a candidate for re-election, the date of the general election in which his or her successor is elected, or the adjournment sine die of the second regular session of the Congress in which his or her term expires, whichever occurs first.

A Member, officer or employee cannot claim payment from the United States Government for any expense of foreign travel which is paid for by another source.

U.S. Government funds furnished to defray ordinary and necessary expenses of foreign travel may not be used for any other purpose. And any unused funds provided by the United States Government for foreign travel must be returned.

VIII. EMPLOYMENT PTACTICES

Effective January 3, 1979, Rule 50 prohibits discrimination in Senate employment on account of race, color, religion, sex, national origin, age or state of physical handicap.[10] The rule does not limit a Member's traditional prerogative to hire individuals based on political or geographic considerations.

The Committee on Governmental Affairs and other committees are considering procedures for handling employment discrimination complaints.

IX. PART-TIME OR PER DIEM EMPLOYEES

Most of the Code provisions that apply to employees apply only to those compensated at a rate in excess of a specified salary and who perform services for the Senate for more than 90 days in a calendar year. This is the case with financial disclosure (Rule 42), limitations on outside earned income (Rule 44), and certain of the restrictions on conflicts of interest (paragraphs 6, 7 and 8 of Rule 45).

The restrictions of Rule 43 on acceptance of gifts and paragraphs 1, 2, 3, 4, and 10 of Rule 45 on Conflicts of Interest apply to all officers and employees, regardless of salary level and days actually worked.

Government (non-Senate) employees on detail and individuals who perform services for the Senate (volunteers, contractors etc.) full-time for more than 90 days in a calendar year must agree in writing in advance to adhere to the Code of Official Conduct.

The Ethics Committee can waive application of any of the provisions of the Code to an employee retained on a per diem basis in "exceptional circumstances for good cause shown."

The supervisor of an individual, who performs services for the Senate for more than 28 days, and who is paid for this service by any source other than the U.S. Government, must report this fact to the Ethics Committee on a form available from the Committee (1) when the individual begins this work, (2) at the close of each calendar quarter while he or she continues to work, and (3) when the individual stops this work. No report is required if work averages less than 8 hours a week. The report must identify who is paying for the services and the amount or rate of compensation.

X. OTHER CONDUCT STANDARDS

The Code of Official Conduct contained in Senate Rules 42 through 50 is not the sole standard for conduct of Members, officers and employees of the Senate.

There are laws, rules, regulations and precedents which govern their conduct.

The Ethics Committee considers the Preamble to Senate Resolution 266, 90th Congress, 2d Session, pertinent:

Resolved, It is declared to be the policy of the Senate that—

(a) The ideal concept of public office, expressed by the words, "A public office is a public trust", signifies that the officer has been entrusted with public power by the people; that the officer holds this power in trust to be used only for their benefit and never for the benefit of himself or of a few; and the officer must never conduct his own affairs so as to infringe on the public interest. All official conduct of Members of the Senate should be guided by this paramount concept of public office.

(b) These rules, as the written expression of certain standards of conduct, complement the body of unwritten but generally accepted standards that continue to apply to the Senate.

Also pertinent is the Code of Ethics for Government Service adopted by concurrent resolution July 11, 1958:

Resolved by the House of Representatives (the Senate concurring), That it is the sense of the Congress that the following Code of Ethics should be adhered to by all Government employees, including office-holders:

CODE OF ETHICS FOR GOVERNMENT SERVICE

Any person in Government service should:

1. Put loyalty to the highest moral principles and to country above loyalty to persons, party, or Government department.

2. Uphold the Constitution, laws, and legal regulations of the United States and of all governments therein and never be a party to their evasion.

3. Give a full day's labor for a full day's pay; giving to the performance of his duties his earnest effort and best thought.

4. Seek to find and employ more efficient and economical ways of getting tasks accomplished.

5. Never discriminate unfairly by the dispensing of special favors or privileges to any-

---

Footnotes at end of article.

III. OUTSIDE EARNED INCOME

Explanation of Limitation

On January 1, 1979[6], Rule 44 will place limitations on the amount of outside earned income that may be received by a Member, or an officer or employee who is compensated at a rate of more than $35,000 per year, and works for the Senate more than 90 days in a calendar year.

Essentialy, these individuals will not be able to earn in excess of 15% of their Senate salary from outside sources.

Honorarium Limitations

In the case of honoraria, further limitations are imposed. Members cannot receive honoraria in excess of $1,000 per appearance, and officers and employees compensated at a rate in excess of $35,000 per year cannot receive honoraria in excess of $300 per appearance and a $1,500 total in any calendar year. In the case of honrable, the overall 15% can be exceeded up to $25,000 if the excess is donated (in the same taxable year received) to tax exempt organizations so that no tax benefits accrue to the Member, officer or employee.

Rule 44 is more stringent than the limitation on honoraria in the Federal Election Campagin laws, which currently imposes a limit or $2,000 per appearance, speech or article, and $25,000 total per calendar year. This statutory limitation applies to all Members, officers and employees of the Senate. (See Appendix D for the language of the law.)

Definition of "Outside Earned Income"

"Outside earned income" is compensation for personal services other than Senatorial salary. Such income does not include advances and royalties for books, or proceeds from the sale of creative or artistic works.

The special problems of prior involvement in partnerships or business enterprises are recognized. Outside earned income does not include "buyout" arrangements for interests in partnerships so long as payment is reasonably related to the fair market value of the partnership interest at time of sale, is payable within a reasonable period, and is not related to future services or future partnership earnings. Distributions of partnership income will also not be considered outside earned income if, and only if, the distribution received represents no more than a pro rata return on invested capital and the individual's services are limited in time and are confined to managerial or supervisory matters necessary to protect his or her investment.

The other exclusion from outside earned income is set forth in Rule 44, Sec. 3(b) (5):

"(I) ncome from family enterprises, if the services provided by the Senator, officer or employee are managerial or supervisory in nature, necessary to protect the interests in the family enterprise and do not consume significant amounts of time while the Senate is in session."

The Senate debate on that provision indicates that the Senate wished to permit an individual to protect his or her interest in a personal or family enterprise. The Senate did not, however, sanction a substantial diversion of attention from official responsibilities. A limited amount of time for keeping advised of the enterprise's affairs and making managerial decisions is permissible. Individuals are not precluded, moreover, from engaging in physical work on, for example, a family farm or ranch.

IV. RULE 45: CONFLICTS OF INTEREST[7]

Rule 45 is a combination or subjective and objective prohibitions. Among the former, currently effective, are prohibitions on compensation received by virtue of influence improperly exerted; on engaging in outside business, professional or employment activities inconsistent with or in conflict with conscientious performance of official Senate duties; and on using the official position to promote legislation where a principal purpose is to further only the pecuniary interest of the individual, his or her family or a limited class of which the individual, his or her family or their enterprises are members.

IMPROPER INFLUENCE

All Members, officers and employees of the Senate are prohibited from using their Senate positions improperly for their own personal gain. This is a broad prohibition that goes beyond the Federal bribery statute (18 U.S.C. 201, 203). If a Senator or staff member intervenes with an Executive agency to influence a decision resulting in measurable personal financial gain the rule would be violated. A violation would also occur if the individual intervenes with an agency on behalf of another and accepts compensation for this intervention.

INFLUENCING LEGISLATION

Members, officers and employees are prohibited from introducing or furthering legislation which is intended to enhance their economic interests, those of their family, or those of a limited class or group of individuals to which the individuals or family belong. The fact that people share a particular economic interest—e.g. dairy farmers, shoemakers, veterans—does not make them a limited group subject to this restriction. A Senator who is a military veteran is not prohibited from voting for a military pension bill. The limited class contemplated is more like a group affected by a private bill. For example, if the purpose of the legislation was to acquire a particular piece of property and an individual owns all or part of that property, he or she could not work on or vote for the bill.

OUTSIDE BUSINESS OR EMPLOYMENT

The general rule is that Members, officers and employees are prohibited from involvement in outside employment or business or professional activity that is inconsistent or in conflict with their Senate duties. Such conflicts can be conflicts of time. Outside activities cannot take up so much of the individual's time that Senate duties are neglected. Or a conflict can exist if the nature of the outside activity is related to the individual's official duties resulting in a clash of interests.

"Reporting Outside Activities"

Officers and employees are required to report to their supervisors before engaging in any outside activity and by May 15th each year as long as the activity continues. Forms for this reporting requirement are available from the Ethics Committee. In the first instance, it is up to the supervisor and the staff member to identify conflicts and to take necessary steps to avoid them. The Ethics Committee will provide guidance when requested, but otherwise will not question these judgments unless a complaint is received.

"Restrictions on Professional Activities"

Certain outside activities are specifically restricted. As of April 1, 1978, Members and officers and employees who are compensated at a rate in excess of $25,000 and are employed for more than 90 days in a year are prohibited from providing professional services for a fee if affiliated with an organization, allowing their names to be used by such an organization, or practicing any profession during regular Senate office hours. Professional services include engineering, real estate, insurance, legal, medical, architectural, consulting, and the like, but do not include part-time teaching or study. For example, the individual cannot continue an affiliation with a law firm, or be designated "of counsel" by a law firm.

"Serving as Officer or Director of a Corporation"

Members and officers and employees compensated at a rate in excess of $25,000 and employed more than 90 days in a year, as of April 1, 1978, cannot serve as an officer or director of a publicly held corporation, financial institution or other business entity. Service, without compensation, on the board of a tax-exempt organization or group with membership consisting of Senate Members, officers or employees or their families, (like the Senate Credit Union) is not prohibited. Also, reimbursement of expenses may be accepted in connection with such services.

The prohibition does not apply to service as an officer or director of a privately held corporation, but other conflict of interest restrictions must be observed.

A "grandfather" clause is included in the rule to allow continued service where (1) the individual had held the position for two years prior to joining the Senate, (2) only minimal time will be involved, and (3) the individual is not a member of or employed by a committee having legislative jurisdiction over the agency charged with regulating the organization's activities.

Committee Staff

Commitee staff members who are compensated at a rate in excess of $25,000 and work more than 90 days in a year are required, as of April 1, 1978, to divest themselves of any investments that may be affected by their committee's work. Where there is any doubt, the staff member must notify his or her supervisor and the Ethics Committee of the holding in question. If both consent in writing the hodling may be retained or some other action may be taken to avoid actual conflicts of interest.

Post Employment Lobbying

A Member may not lobby in the Senate for one year after leaving office. For a one year period after leaving, an employee on a Member's personal staff cannot lobby the Member or his other staff members, a committee staff member cannot lobby committee staff or members, and an "S. Res. 60" employee cannot lobby any of the above. An individual is a lobbyist if registered under the 1946 Lobbying Act or retained by such a registered lobbyist for the purpose of influencing legislation.

These restrictions do not apply to lobbying activities in the House or contacts with the Executive branch.

V. ACTIVITIES AND OFFICIAL POLITICAL DUTIES

Summary of New Rules

The new rules seek to clarify and regulate the relationship between a Member's political activities and the performance of official duties. These include a prohibition of unofficial office accounts (Rule 46, which is changes in the use of the franking privilege and Congressional radio and television studios and restrictions on the use of Senate computer facilities (Rule 48); and restrictions on staff involvement in campaign fundraising and political activities (Rule 49). The questions raised by the use of staff in campaigns and permissible political activities of staff members currently are under review by the Rules and Administration Committee. The first part of its study, a review of existing laws related to these areas, is the subject of Report No. 95–500 (printed October 17, 1977).

Campaign Activities of Staff

No rules explicitly prohibit Senate staff members from working on campaigns (except Rule 49 discussed below). However, such activity should be confined to off duty hours. Persons substantially involved in campaigns should be taken off the Senate payroll.

Under Rule 49, no officer or employee of the Senate may receive, solicit, be the custodian of, or distribute campaign funds for

---

Footnotes at end of article.

with their categories of value, with copies to the Ethics Committee.

The reporting individual is required within 30 days after additional transfers of assets to the trust (other than cash), to notify the Ethics Committee as to their identity and categories of value with a copy to the Secretary of the Senate.

If a blind trust agreement is terminated, within 30 days the reporting individual, or if deceased, his or her personal representative, must notify the Ethics Committee and file with the Secretary of the Senate a list of the trust assets and their value as of the date of dissolution.

The documents filed with the Ethics Committee and the Secretary of the Senate are available to the public through the Office of the Secretary.

A copy of any written communication between the trustee and an interested party must be filed with the Ethics Committee within five days by the person initiating it. These are not made available to the public.

Any trust in existence before January 1, 1978 will be considered to be a "qualified blind trust" if:

(1) The Ethics Committee finds that it reflects a "good faith effort" to establish a blind trust, and

(2) The previous trust instrument is amended to include the necessary provisions summarized above; or, it cannot be amended, all parties to the trust instrument agree in writing that it will be administered in accordance with those provisions, and

(3) A copy of the instrument (omitting testamentary provisions), and a list of assets and the categories of their value at the time of their transfer to the trust is filed with the Ethics Committee and made public through the office of the Secretary of the Senate.

AUDITS

Rule 42 provides for audit of the financial disclosure reports by the Comptroller General. In the case of Members at least one report will be audited during each six year term, but not in a year in which he or she is up for reelection. In the case of officers and employees, audits will be done in a random basis and will include approximately five percent of the reports per year.

The results of any audit are required to be reported to the Ethics Committee and the reporting individual and are not made available to the public unless the Committee authorizes an investigation.

The tax returns, sealed and filed each year with the Comptroller General, will not be opened by the Comptroller unless the Comptroller General gives notice to the individual that he intends to examine the return in the course of conducting an audit, or the Ethics Committee determines, by resolution of the Committee, agreed to by at least 4 members in a recorded vote, that it will examine the material.

II. GIFTS

Acceptance of Gifts

In general, Members, officers and employees of the Senate, their spouses and dependents are prohibited by Rule 43 from accepting gifts of a value in excess of $100 from any person, corporation or other organization which engages directly or indirectly in lobbying or which maintains a political action committee, or from any foreign national, unless in an unusual case the Ethics Committee grants a waiver. All gifts accepted from a prohibited source in a calendar year must be aggregated, and the total value cannot exceed $100. However, any items with a value of less than $35.00 need not be aggregated.

In the event that a Member, officer or employee finds that he or she has exceeded the $100 limit, the excess must be returned or refunded.

Exceptions to Prohibitions

The prohibition upon acceptance DOES NOT APPLY TO gifts:

(1) from relatives as defined in paragraph 7(j) of Rule 42 on Public Financial Disclosure;

(2) with a value of less than $35.00;

(3) a personal hospitality of an individual; or

(4) from an individual who is a foreign national not acting directly or indirectly on behalf of any foreign business, other foreign entity or a foreign government.

"Personal hospitality" is confined to food, lodging, and entertainment in a residence owned or leased by an individual and paid for by that individual. This exception does not apply to hospitality extended in commercial establishments.

Definition of Gift

For purposes of Rule 43 the term "gift" means virtually anything of value for which the recipient does not give equal consideration.

Exceptions to Definition

The Rule defines "gift" not to include the following:

(a) a political contribution otherwise reported as required by law;

(b) a bona fide loan made on prevailing commercial terms;

(c) a testamentary bequest;

(d) a bona fide award available to the general public presented in recognition of public service;

(e) a reception honoring a Member, officer or employee at which a suitable memento may be presented;

(f) meals, beverages or entertainment in a restaurant not in connection with a gift of overnight lodging;

(g) anything of value given to a spouse or dependent, by his or her employer in recognition of the employer-employee relationship.

Necessary Expense Exception

Also excluded from the definition of a gift are the necessary expenses of foreign and domestic travel, food, lodging and entertainment in connection with an appearance related to official duties, if furnished or paid for by the organization for which the appearance is made (the sponsoring organization) which is also a domestic United States organization.[4]

"Necessary expenses" means the actual cost of what was furnished in kind or by reimbursement, but would not include travel, food, lodging, etc. and the expenses thereof which are not necessary to an appearance which qualifies as an official duty. For example, an extension of travel beyond that required to accomplish an official purpose, or a side trip of a personal nature, are outside the exception.

The term "appearance" includes participation in seminars, speeches, lecturing for honoraria, and fact finding.

The official duties of the Senate do not include political activities or personal matters.

The organization furnishing the necessary expenses must be the person, firm, association or corporation which is sponsoring the individual's appearance.

Foreign Educational Travel

With respect to foreign travel,[5] paid for by a foreign government or foreign educational or charitable organization, for an educational program. Members must notify the Ethics Committee of their intention to participate or to allow a staff member to participate well in advance of the travel.

The Ethics Committee must determine whether participation in the program is in the interest of the Senate and the United States, and, if so, it must place in the *Congressional Record* a notice in advance describing the program and identifying the individuals who will participate.

Acceptance of travel to participate in such a program by Members, officers and employees (but not their spouses and dependents) will be approved if the principal objective is educational and the Ethics Committee determines that such participation is not in violation of law and is in the interests of the Senate and the United States. If the travel is furnished in whole or significant part by a foreign government, the Department of State must approve acceptance under provision of the Mutual Educational and Cultural Exchange Act (22 U.S.C. 2451 et. seq.). The Department of State assists the Committee, when there is doubt in determining if a foreign sponsor is private or government financed.

Other Foreign Gifts

The Foreign Gifts and Decorations Act (5 U.S.C. 7342, as amended, effective January 1, 1978), regulates acceptance from a foreign government of gifts of more than minimal value (above $100) including gifts of travel or expenses for travel taking place entirely outside the United States. Such travel may be accepted if it is appropriate and consistent with the interests of the United States. Within 30 days of accepting such travel, the accepting person must file a public statement with the Ethics Committee giving a description of the gift and the circumstances justifying its acceptance, and the identity, if known, of the foreign government and the name and position of the individual who presented the gift.

In connection with all travel, Members, Officers and employees may not accept or retain funds in connection therewith if they are not used for the necessary expenses of such travel.

Valuation of Gifts

The recipient of a gift must make a good faith effort to determine its fair market value which is the price a willing buyer and seller would reach agreement in an open market. It can be estimated or determined by appraisal of an expert. Cost to the donor may be an indication of fair market value. Each case presents its own facts.

Disclosure of Gifts under Rule 42

Rule 42 requires disclosure of gifts of transportation, lodging, meals or entertainment aggregating more than $250, and all other gifts aggregating more than $100. If a gift may not be accepted because of the Rule 43 prohibitions, described above, disclosure is not a problem. Note that the exceptions to the definition of "gift" in Rule 43 and Rule 42 differ. Some gifts which are excepted from the prohibitions of Rule 43 also are not required to be disclosed, namely those from relatives, or which constitute personal hospitality, or with value of less than $35. Some items are not by definition "gifts" for the purposes of both rules and therefore may be accepted and need not be disclosed, namely necessary expenses, political contributions, loans, testamentary bequests, and things of value given to a spouse or dependent by his or her employer (see discussions on above "exceptions to definition" and the "necessary expense" exception). But all other gifts which can be and are accepted—including gifts from certain foreign nationals described in (4) above, and (1) bonafide awards, (2) a reception and memento honoring the recipient, and (3) meals, beverages and entertainment where no overnight lodging is involved (see above discussion on "exceptions to definition")—must be aggregated (if their value exceeds $35) and reported under Rule 42 if they exceed the applicable reporting threshhold i.e., $100 or $250 as the case may be.

Footnotes at end of article.

The manual is in draft form and has not been approved by the Ethics Committee though it incorporates the interpretative rulings of the committee. It will be taken up at the next committee meeting after the Senate returns in January. Written comments received by Friday, January 13, 1978, will be considered and will assist the committee in finalizing the manual. It will be circulated to Members, officers, and employees once it has been approved by the committee.

Mr. President, I ask unanimous consent that the draft manual be printed in the RECORD.

There being no objection, the draft manual was ordered to be printed in the RECORD, as follows:

DRAFT MANUAL ON THE SENATE CODE OF OFFICIAL CONDUCT

(Prescribed by S. Res. 110, 95th Congress, Apr. 1, 1977)

FOREWORD

S. Res. 110, agreed to April 1, 1977, established a new Code of Official Conduct for Members, officers and employees of the United States Senate. This Code is embodied in Senate Rules 42 through 50, many of which took effect upon passage, and some of which will take effect on future dates.

Because of the scope and complexity of these new rules, this Manual has been prepared by the Select Committee on Ethics in an effort to explain the rules and their effect in as non-technical and non-legalistic a manner as is possible.

A word of caution is necessary since many provisions of the Code are under review by the Ethics Committee and other committees. Bills are pending in both houses of Congress that would enact changes. A new Rule 51 on acceptance and reporting of travel expenses was reported November 3, 1977, by the Ethics Committee and may be brought to the floor shortly after the Senate reconvenes. This Manual, therefore, should not be relied upon to provide definitive answers, but rather as a guide which flags the relevant provisions of the Code. We urge you to raise any questions with the Committee. The Committee intends next to issue a loose leaf notebook with an explanation of the Code, current amendments and rulings, that can be kept current through substitution and addition of pages.

DISCLOSURE

Summary of 1978 Disclosure Requirements:

By May 15, 1978 the following filings must be made:

A. For Members:

(1) Confidential financial disclosure statement for 1977 as required by old Rule 44. (With Comptroller General).

(2) Federal income tax return for 1977 as required by old Rule 44 (sealed and filed with Comptroller General).

(3) Public statement of contributions and honoraria received in 1977 as required by old Rule 44 (with Secretary of Senate).

(4) Partial public financial disclosure as of January 1, 1978 (categories of value of real and personal property, debts, patent rights, nongovernmental positions and agreements for nongovernmental future employment or continuation of benefits), required by new Rule 42 (with Secretary of the Senate).

B. For individuals who were officers and employees of the Senate for 90 days or more in 1977 and who were compensated at a rate in excess of $15,000 per year at any time in 1977, file nos. (1), (2) and (3) described above.

C. For officers and employees compensated at a rate in excess of $25,000 per year in 1978 for a period of more than 60 days between January 1 and May 15, 1978, file no. (4) described above.

D. For candidates for the Senate:

Who become candidates in 1977, file nos. (1) through (4) described above.

Who become candidates in 1978, file no. (4) described above by May 15, 1978 or within 30 days of becoming a candidate, whichever occurs later.

NEW RULE 42

Rule 42 requires a comprehensive annual financial disclosure by Members, and by officers and employees compensated at a rate of more than $25,000 per year who have served as such for more than 90 days in a calendar year, and by employees designated to handle campaign funds under Rule 49. The report for each calendar year is to be filed by May 15 of the following year with the Secretary of the Senate, and it will be available to the public. At the same time, a copy of the individual's federal income tax return is to be filed under seal with the Comptroller General.

The public disclosure report will be comprehensive, including such things as gifts received, earned income, investment income, real and personal property, tangible and intangible, sales and exchanges, and personal liabilities. Reporting forms are being prepared and will contain detailed instructions. Rule 42 takes effect on January 1, 1978.[1]

OLD RULE 44

Old Rule 44 has required limited disclosure since 1968. That rule will continue in effect until January 1, 1978. Under it, the following requirements with respect to calendar year 1977 must be met by May 15, 1978, for all individuals who were Members, officers or employees of the Senate for 90 days or more in 1977 and compensated at any time at a rate of more than $15,000 per year:

(1) a confidential financial disclosure for 1977 to be filed with the Comptroller General;

(2) copies of your 1977 income tax return [2] to be sealed and filed with the Comptroller General;

(3) a public report on contributions in excess of $50 and honoraria in excess of $300 received during 1977 to be filed with the Secretary of the Senate.

Forms and instructions will be provided by the Ethics Committee.

REPORTS REQUIRED BY MAY 15, 1978

The Rule 44 filings listed above are required for calendar year 1977. In addition, also by May 15, 1978, an abbreviated public report listing categories of value of specified financial data as of January 1, 1978 is to be filed under new Rule 42 with the Secretary of the Senate. Only in this transition year will reports be required under both rules. By May 15, 1979 a full report under Rule 42 will be filed for calendar year 1978, on forms prepared by the Ethics Committee.

FILING IN THE STATE

Under Rule 42 a copy of each report filed by Members under the rule with the Secretary of the Senate must also be filed as a public document with the Secretary of State (or his or her equivalent) in the home state.

CANDIDATES FOR THE SENATE

Rule 42 imposes upon candidates for the Senate the same disclosure requirements as upon Members, including the sealed income tax return and public report with the Secretary of State in the state he or she seeks to represent. Candidates must file within 30 days after becoming a candidate, or by May 15 of that year, whichever is later. The rule spells out in paragraph 1(c) when a person becomes a candidate.

The reporting requirements of old Rule 44 also apply to candidates for the Senate who are candidates in 1977. A candidate must file the same reports at the same time and in the same place as the incumbent opponent.

Reporting Interests of Family

Old Rule 44 requires reporting of the financial interests of Members, candidates and certain staff. The new Rule 42 requires disclosure of certain financial interests of the reporting individual's spouse and dependents. In determining who is a dependent the Federal income tax definition in section 152 of the I.R.C. is used. No report is required for a spouse who is living separate and apart under a legal separation arrangement.

Under subparagraph 3(c) of the Rule only interests of the spouse or dependents which are in the "constructive control" of the reporting individual need be disclosed, except as set forth in subparagraph 3(d) with respect to qualified blind trusts discussed below. The reporting individual has "constructive control" if the enhancement of the interest would substantially benefit the reporting individual.

Interests in Trusts and Other Financial Arrangements

Under Rule 42, the holdings of any trust, estate, custodial account or other financial arrangement from which the reporting individual or his or her spouse or dependents receives income or in which such individuals have a beneficial interest in the equity must be disclosed as of January 1, 1978. The Rule provides two exceptions.[3]

"Exception A"

A trust which on January 1, 1978 meets the following criteria: (1) it was not created by the reporting individual, a spouse or dependents; (2) None of these individuals has knowledge of the identity of the holdings or sources of the income of the trust; and (3) the trustee refuses to disclose this information when requested by the reporting individual. The reporting individual nevertheless will be required to disclose the category of value of the income received.

"Exception B—Blind Trusts"

A trust which is "a qualified blind trust" as of January 1, 1978 would be an exception. Such trusts may be required to make disclosure of certain assets. Qualified blind trusts must meet criteria which are summarized below:

(1) The trustee must be an independent financial institution, attorney, certified public accountant or broker;

(2) No restrictions may be placed on disposition of any asset transferred to the trust;

(3) The trust instrument must include certain specified provisions that will restrict communications between the trustee and the interested parties to avoid disclosure of the assets; and

(4) The Ethics Committee must approve the proposed trust instrument and the independence of the trustee must be established. This approval will be confined solely to ensuring compliance with Rule 42 and the Committee will express no opinion with respect to investment, tax or other legal considerations which may be raised by the instrument.

Proposed trust instruments should be submitted to the Ethics Committee as far in advance of proposed execution as possible to allow the Committee time for review.

Within 30 days after the Ethics Committee has approved the blind trust, the reporting individual must file with the Secretary of the Senate a copy of the executed trust (omitting testamentary provisions), and a list of the assets transferred to such trust

---

Footnotes at end of article.

istration not undertake some program that would sidetrack the project" at Barnwell and "emphasize the deep concern of some of the members of this conference that the administration specifically pay attention to keep us currently informed of their plans with respect to Barnwell."

Mr. President, one reason that I was glad to see Congress move quickly on the Barnwell matter is that the Federal Government has left the owners of Barnwell no options to proceed on a commercial basis after an investment of some $250 million. President Carter's unexpected policy shift in this area of the nuclear fuel cycle will have serious repercussions throughout the private sector. Additionally, it will make efforts by the administration and Congress to encourage future private investment in high-risk energy technologies extremely difficult, if not impossible.

Mr. President, I believe that the Barnwell plant can be used to help control international nuclear proliferation through research and development in nuclear safeguards and alternative fuel cycle development. If large, safe, efficient, economic, and well-guarded reprocessing plants are not provided to the world nuclear energy community, then nations embarking on nuclear energy programs will be forced to develop their own capability to reprocess spent reactor fuel.

A world nuclear program based on large safeguarded facilities is much more secure than such a program based on small national plants. The argument that no one would build small plants because of unfavorable economics is unsound in my opinion. A country could logically justify increasing the cost of power a few percent if that country could extend a finite uranium resource by as much as 50 percent through reprocessing and recycle of the unused uranium and recovered plutonium.

There are numerous reasons for keeping the reprocessing option open:

First. As Secretary of Energy Schlesinger stated on the October 2 Issues and Answers:

> Reprocessing is probably an indispensable step toward the ultimate solution of the waste problem. So until we have a decision on how we will handle the reprocessing issue, we cannot decide on our ultimate way of disposing of waste.

Second. An October 4, 1977, General Accounting Office report to Congress entitled "An Evaluation of the Administration's Proposed Nuclear Non-Proliferation Strategy" stated that the Congress " . . . should recognize the need for a viable research and development program for nuclear fuel reprocessing." Continuation of the Barnwell program will help achieve that goal.

Third. The breeder reactor program is absolutely dependent upon the development of reprocessing technology and capability.

Fourth. Reprocessing might prove essential for economic reasons. Recycle of uranium and plutonium, when compared with a hypothetical "throwaway" fuel cycle, results in a net differential benefit that is in excess of $10 million per year for each operating reactor.

Fifth. Reprocessing and recycle of uranium and plutonium can reduce natural uranium demands by 37 percent and separative work requirements by 25 percent. With our current uncertainty over U.S. uranium policy and future enrichment capacity, these figures are extremely significant.

Sixth. A given quantity of uranium can be used to generate nearly 60 percent more electricity when it is conserved and reused through reprocessing and recycle.

Seventh. Finally, the energy losses with a "throwaway" fuel cycle are staggering. By the year 2000, for example, reprocessing and recycle can recover the equivalent of 35 billion barrels of oil or 10.4 billion tons of coal and reduce a negative balance of trade impact amounting to $780 billion.

The case for using Barnwell to keep the reprocessing option open and at the same time serve as a model international facility to help control nuclear proliferation is compelling.

Mr. President, I personally am proud to have been an active participant in the evolution of this fiscal year 1978 program at Barnwell. On Wednesday, December 14, I was delighted to learn that officials of the U.S. Department of Energy signed an agreement for precontract costs with officials of Barnwell. The actual contract, which is currently under negotiation, shall include a scope specifically defining activities at the Barnwell nuclear fuels plant (BNFP) for a period of time ending September 30, 1978, at a cost not to exceed $13 million.

Such a contract would allow research, assessment and evaluation activities consistent with the Nation's nuclear research and nonproliferation policies, and would satisfy the intent of Congress—Public Law 95-96 dated August 7, 1977—by maintaining the professional and operating staff, and by maintaining the BNFP facilities in a condition permitting future utilization as a test vehicle to further nonproliferation activities.

Mr. President, we have preserved a valuable asset for the Nation, preserved jobs and highly trained personnel in South Carolina, and aided the administration in making a decision that will further its own efforts to control nuclear proliferation in the world.

THE STAR TIPS ITS HAT TO THE POST

Mr. **PERCY**. Mr. President, last week the Washington Post reached a milestone in its distinguished record when it celebrated its 100th anniversary.

In the best spirit of the occasion, the Post's elder but nonetheless lively competitor, the Washington Star, tipped its journalistic cap in tribute. Newspapers rarely if ever use precious editorial page space to print flattering comments about other newspapers, especially if they happen to be crosstown competitors. But the Star helped to mark the Post's anniversary by doing just that, and doing it with wit and intelligence that is characteristic of Washington's two fine newspapers.

We are indeed fortunate in Washington to have such a fine group of journalists who staff our two home newspapers. Headed by two noted publishers, Katharine Graham, and Joe Allbritton, the Post and the Star report the news of the Capitol city with dedication and the best attention to journalistic excellence. The Star's tribute to the Post is a case in point of the two papers' understanding and spirit.

Mr. President, I ask unanimous consent that the Washington Star's editorial of December 8 titled "The Post at 100" be printed in the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Washington Star, Dec. 8, 1977]

THE POST AT 100

Who are those folks you see with walking sticks and ear trumpets on L Street this week? They are the ladies and gentlemen of our crosstown friend and rival, the Washington Post. The Post is a century old this week though feeling, it confides, "not a day over 80."

The Post's centenary week is welcome excuse for setting aside the usual sparring, in collegial respect and affection—and for joining in the celebration.

The Post, we need not say but will, is a great newspaper—one of the handful of daily publications here or abroad of which that adjective may be used without fudging. Here on Virginia Avenue, we feel the spur of its greatness every day but not, we think, to our harm. Excellence is to be valued, we believe, wherever one finds it. The Post has excellence: excellence of reporting and excellence of editorial craft and conviction. Its reporters and editors keep a keen eye fixed on the capital. That the gaze is not seldom uncomfortable for some is all the better.

Having reached the same advanced age fully a quarter century ago, we would like to serve up today some gems of gerontological wisdom. But our wisdom, we fear, is all too orthodox. As a friend of ours once said of advancing age in a terse report to classmates: "More pain, less hair."

But we do not propose to let the day pass without a gesture. It has been our custom to refer occasionally in these pages to our friends and colleagues on L Street as "the other paper," the O.P. That friendly nickname rings impersonal on a birthday. Accordingly, we are pleased to announce an upgrading. We are pleased, that is, to wish many happy returns, not to the O.P. but to the J.P. The junior paper.

MANUAL ON CODE OF OFFICIAL CONDUCT

Mr. **STEVENSON**. Mr. President, the Select Committee on Ethics has prepared a manual to explain the new code of official conduct in plain language. This manual has been delayed by continuing Senate study of several subjects. In some cases these studies have not been completed. Nevertheless the committee believes that the manual should be issued now in order to provide Members, officers, and employees with guidance on this complex code of official conduct.

(8) ATA is supporting Radio Emergency Citizens Action (REACT) coffee "safety breaks" along the nation's highways.

Finally, ATA firmly supports the 55 mph speed limit. Under way currently is a major campaign by the state trucking associations to achieve voluntary compliance with and stricter police enforcement of this proven life and fuel saving speed limit.

The Department of Transportation "55 MPH Fact Book" in 1976 showed that trucks were traveling at an average 54.8 mph, just below the speed limit and much lower than the passenger car average of 56.2 mph. The 1977 edition of this book stated that "since 1974, the number of trucks and buses exceeding the speed limit has declined sharply. Trucks actually have a better compliance record than automobiles." It went on to point out that ATA during 1977 had written the chief editorial writer of every daily newspaper urging editorial support for the 55 mph speed limit.

TRIBUTE TO SENATOR McCLELLAN

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent to have printed in the Record a statement by the distinguished Senator from Washington (Mr. Magnuson).

The PRESIDING OFFICER. Without objection, it is so ordered.

Statement by Senator Magnuson

I have had the honor of serving with Senator John L. McClellan here in the Senate and in the House for nearly four decades. The Congress will miss him, his State will miss him, the nation will miss him.

The Senate has lost a man of honor, a tireless worker and a man who could be relied upon. As Chairman of the Permanent Subcommittee on Investigations, Senator McClellan helped to restore fairness and thoroughness to the Senate investigatory process. His stewardship of the Appropriations Committee and the Judiciary Subcommittee on Criminal Laws and Procedure was evenhanded and effective.

America changed dramatically while John McClellan served in the Congress. The greatest tribute that can be given a public servant is that he helped shape these changes. Government reorganization, criminal law reform, energy and defense funding, massive public works projects and revealing investigations all bore the mark of this great man. His well-known and fearless efforts to investigate the sordid world of organized crime did not end merely with a splash of headlines but led to such major legislation as the Omnibus Crime Control and Safe Streets Act of 1968 and the Organized Crime Control Act of 1970. John McClellan's long struggle to bring about the first comprehensive revision of the Federal Criminal Code stands as testimony to his desire to effect needed change. Identifying and working to remedy problems was the key to this man's effectiveness and he was remarkably effective.

The people of his home State of Arkansas were very well represented by John McClellan through the years. The development of the Arkansas River, long one of his highest priorities, comes readily to mind as a striking example of indefatigable efforts in behalf of his people. He was totally committed to helping his State as well as his country.

John McClellan and I worked together for a long, long time. After some forty years of serving together, men come to know one another. I've felt his compassion, I've seen his tireless energy, I've benefitted from his guidance, and I know of his dedication to service. I personally will remember John McClellan as a close friend as well as a colleague and I, too, will miss him.

THE BARNWELL NUCLEAR FUEL PLANT

Mr. THURMOND. Mr. President, 15 years ago, in 1962, the Atomic Energy Commission testified before the Joint Committee on Atomic Energy that the AEC considered privately owned nuclear fuel reprocessing facilities an important factor for a self-sufficient nuclear power industry. In 1967, the Government issued a policy statement which said:

> The AEC expects chemical reprocessing services to be contracted for between reactor operators and commercial fuel reprocessors without involvement of the AEC.

It was in this atomosphere that Allied Chemical applied for a permit to build a reprocessing facility at Barnwell, S.C. in 1968. Two years later, a construction permit was granted by the AEC to build the plant and work got underway at Barnwell soon thereafter.

This policy of encouragement was abruptly changed on April 7, 1977, when President Carter indefinitely deferred commercial reprocessing and recycling of spent fuel produced in U.S. civilian nuclear powerplants and stated that the Barnwell facility "will receive neither Federal encouragement nor funding for its completion as a reprocessing facility." While closing the door on any prospect for the use of Barnwell as a commercial reprocessing plant, the administration has agreed to the use of existing facilities and staff at Barnwell to further the administration's program in nuclear nonproliferation.

Mr. President, The U.S. Congress has responded to this crisis situation and authorized and appropriated $14 million in the fiscal year 1978 budget of the Department of Energy (DOE) as the initial step in an effort to utilize the facilities and staff at Barnwell. The fiscal year 1978 public works-DOE appropriation bill states that—

> Up to $14 million of this appropriation is to conduct a study of the Barnwell Nuclear Fuel Plant located in South Carolina to determine if that facility may be utilized in support of the non-proliferation objectives of the United States; and for activities contributing to the International Nuclear Fuel Cycle Evaluation to be carried out under contract at the Barnwell Nuclear Fuel Plant, including only such research, assessment, and evaluation activities as the Secretary determines are consistent with the Nation's nuclear research and non-proliferation policies and provided that the plant shall not be used to process spent fuel from nuclear reactors.

One million dollars of these funds are designated for DOE to evaluate long-term uses of the facility and, at the same time, determine how the facility and staff can be used to benefit near-term nonproliferation studies such as the international nuclear fuel cycle evaluation (INFCE). The remaining $13 million of these funds are designated to initiate nuclear fuel cycle and safeguards research and development programs at the Barnwell plant in support of the INFCE and related nonproliferation efforts. The administration now endorses this fiscal year 1978 program at Barnwell and supports its objectives, even though there was adamant opposition to the program several months ago.

Congressional intent on the fiscal year 1978 Barnwell program is clearly to carry out research activities at Barnwell which are consistent with and in support of U.S. nonproliferation policies, and which maintains the AGNS staff "in place" while the potential contributions of the facility are explored.

During committee markup of the fiscal year 1978 authorization bill on June 27, 1977, Senator Church, Democrat of Idaho, chairman of the Subcommittee on Energy Research and Development of the Senate Committee on Energy and Natural Resources, stated that—

> . . . we might very well want to make Barnwell, in the future, a model for the way we think reprocessing should take place under maximum safeguards, so we can begin to build the kind of international system that is essential if we are to have any kind of control over the proliferation of nuclear weapons.

Senator Jackson, Democrat of Washington, committee chairman, made the following statement with regard to the Barnwell plant during the course of the June 27, 1977 session:

> The chair would state it makes no sense to simply put Barnwell in mothballs. The plant is virtually complete. . . . It is set up, obviously, for domestic use, but it would be unwise to turn around and close this facility down. No matter which direction we go, the facility is needed in one form or another.

The Senate and House conferees on the fiscal year 1978 DOE authorization bill expressed the same belief and the conference report on the fiscal year 1978 authorization bill states:

> It was also the opinion of the Conferees that the Barnwell facility should be used in such a way so as not to limit the potential for eventual use as a reprocessing plant.

With regard to the desirability of retaining the AGNS staff, Senator Church, in remarks on June 8, 1977, during the course of a subcommittee hearing on the DOE fiscal year 1978 nuclear fuel cycle budget, stated: "It is crucial to keep the team there at Barnwell."

During the October 5, 1977 Senate-House conference on the fiscal year 1978 DOE authorization bill, Senator Church stated:

> The $13 million was put in to keep this whole plant intact together with the experts that are there so that it will be available for such uses as the studies show you should pursue.

Representative McCormack, Democrat of Washington, during the same conference asked that the conference report "emphasize the deep concern on the part of the members that the admin-

From breakfast cereal to midnight snack, sugar is the largest ingredient in the American diet.

Until the mid-1800's, sugar was used mostly as an additive, like salt or pepper. It was too expensive to be popular. Americans consumed, per capita, less than 25 pounds a year.

Today, each American consumes slightly more than 85 pounds of sugar every year. Twenty percent of our diet, on the average, is refined sugar.

Now the sugar manufacturers, with billions of dollars worth of profits at stake, argue that a moderate amount of sugar is good for you. The Sugar Association's president, John W. Tatem Jr., considers the present levels of per capital consumption to be "moderate."

But many researchers and nutritionists disagree. In one of its final acts, the Senate Select Committee on Nutrition and Human Needs released a report on dietary goals for the United States. Among its recommendations: "Reduce sugar consumption by almost 40 percent."

Last December, says New Times magazine, the Worldwatch Institute, an independent research group, concluded that health problems other than tooth decay have apparently grown along with the world's sweet tooth (global per capita sugar consumption has increased by 50 percent since 1950.) "High sugar intake," the study said, "is linked by many to diabetes and other diseases."

The study added that as the affluent fat and sugar diet has spread, so have a wide variety of heretofore rare diseases: heart disease, diabetes, diverticulitis and bowel cancer.

Researchers have found that sugar often is a factor in hyperactivity in children. Studies have shown that when many hyperactive children are taken off sugar and put on high-protein diets, most of them tone down. They become less distractible and easier to teach.

Ample doses of sugar are present in many processed foods and beverages as well. Sugar or corn syrup, according to New Times, is the largest ingredient in products such as Jell-o gelatin dessert; Hawaiian Punch frozen concentrate; Shake 'n Bake, Barbecue Style; Ovaltine; Tang, and Wish-Bone Russian salad dressing.

The list could go on and on. If you are concerned about the amount of sugar your family is eating, take a close look at food labels. Currently, ingredients must be listed in decreasing order of quantity. So if sugar or corn syrup is listed first, you know that product contains mostly sugar or corn syrup. You don't know the exact percentage, though.

There is remedial legislation that has been pending in the U.S. Congress for nearly a decade. Called HR 42, and introduced by consumer advocate Rep. Benjamin Rosenthal, D-N.Y., the bill calls for eight steps of labeling, the most important being full disclosure of ingredients, including the percentage and amount of each ingredient.

It would help a lot of Americans, especially those 80 million who have some kind of allergy related to food.

But H.R. 42 remains where it has been for years, ending before the Health and Environment Subcommittee of the House Commerce Committee.

Even if the bill eventually becomes law, however, few observers think it will revolutionize the American diet. Americans have become so used to chomping refined sugar in their foods that they may not give it up, even if too much of it is bad for them. After all, look at cigarettes.

COMMITMENT TO HIGHWAY SAFETY BY THE AMERICAN TRUCKING ASSOCIATIONS

Mr. PERCY. Mr. President, last week I requested that a New York Times article entitled "Raising Hell on the Highways" be printed in the Congressional Record. That article raised a timely issue—namely, that inadequate trucking safety on the Nation's roadways has reached dangerous proportions. Indeed, I intend to introduce legislation early next session to enhance enforcement efforts aimed at combating the very problems revealed in that article.

However, I believe it is also important to underscore some of the substantial progress that the trucking industry itself has made toward increasing truck safety. Many trucking firms and associations are strongly committed to highway safety and share the goal of safe roadways with all motorists. Many have advocated legislative programs similar to the one I intend to introduce.

In particular, the American Trucking Associations and its affiliated State associations have traditionally supported and promoted truck safety. Their leadership in this critical area has assisted the cause of truck safety. I commend their efforts and look forward to a continued commitment on the part of the ATA and other trucking concerns to protect the public from the hazards of unsafe trucks.

Mr. President, I ask unanimous consent that an American Trucking Associations document entitled "Trucking Industry Safety Activities and Programs" be printed in the Record.

There being no objection, the material was ordered to be printed in the Record, as follows:

Trucking Industry Safety Activities and Programs

[American Trucking Associations]

The trucking industry, as represented by the American Trucking Associations, Inc., 51 state trucking associations (including District of Columbia) and 13 national conferences, has traditionally and strongly supported and promoted truck safety.

ATA's safety programs are under the policy direction of the Safety Committee on Research and Environment (SCORE). This committee is composed of top level motor carrier executives and works to assure that truck safety efforts are carried on in an effective and unified manner.

ATA works closely with and endorses the safety efforts of the Department of Transportations' Bureau of Motor Carrier Safety (BMCS), the federal agency charged with promulgating and enforcing truck driver, commercial vehicle and motor carrier safety regulations. In fact, ATA has testified before Congress this year in favor of increased funds to enable BMCS to increase its number of field inspectors.

Truck safety on the highway can best be put in perspective by looking at the latest available accident data which compares the accident experience of various types of vehicles. For 1975 the accident rate per million miles traveled for all vehicles was 9.89. For passenger cars the figure was 11.36. For all trucks the rate was 4.70 and for tractor semi-trailer combinations the figure was a low 3.64 accidents per million miles of travel.

The BMCS regulations require that drivers be fully qualified and maintain a good safety record. Drivers must meet stringent physical requirements, including a complete physical examination every two years. In 1976, BMCS figures revealed some interesting facts. For example, of 25,666 accidents reported, less than 1,000 cases were attributed to driver physical impairments of any kind, including drugs and/or alcohol. Further, there is no indication that fatigue occurs during the hours of service permitted by BMCS (on-duty time is limited on a weekly basis so that the average daily time cannot exceed 8½ hours in a seven-day period). In fact, it has been shown that up to 30 percent of all accidents occur within the first hour of driving. The bureau also has requirements governing equipment and accessories on vehicles, and sets guidelines for equipment inspection and maintenance.

This exemplary safety record is the result of hard work on the part of ATA, its affiliated state associations and individual companies who view safety efforts as a vital part of moving this nation's freight. To be other than safety conscious is to be foolish, callous and costly. What follows are examples of the safety efforts and programs sponsored by the trucking industry and its organizations.

(1) The ATA Council of Safety Supervisors, a national organization of 3,000 truck safety professionals, works directly with state organizations and various groups to promote highway safety.

(2) The industry, with ATA support, has self-policing "Cooperative Safety Patrols". Company safety supervisors report on driver behavior and vehicle conditions as observed on the road. Reports are made on all trucks, including those not affiliated with any industry group and are sent to motor carrier management for action. Hundreds of thousands of industry patrol reports are made annually.

(3) Truck stop safety meetings are conducted by industry safety experts. They are available to any truck driver, regardless of affiliation. The objective is to reach as many drivers as possible with safety training programs. Thousands of drivers have been reached through this on-going program.

(4) Industry sponsored vehicle safety checks are conducted by ATA state affiliates to monitor vehicle conditions and to get unsafe trucks off the road.

(5) Numerous cooperative safety and educational training programs are conducted annually. ATA is a co-sponsor of fleet safety supervisor training courses at colleges and universities. State affiliates conduct hundreds of safety meetings for drivers. Each year ATA holds four regional and one national safety meeting. Frequently there are "special emphasis" training programs, such as safe transportation of hazardous materials and vehicle inspection techniques.

(6) ATA and its affiliates have numerous safety "recognition" programs. There are state and national truck "rodeos" designed to demonstrate that truck driving is a professional skill requiring judgment and knowledge. An incentive is provided by the requirement of one year of totally accident-free driving. We recognize a driver of the month and of the year, with winners selected by state associations. State Drivers of the Year compete annually for national honors. Selection criteria include long safe driving records, a good employment record, individual acts of courage and service, and participation in civic activities.

(7) ATA distributes quarterly to 50,000 trucking executives a safety program guide in an effort to focus national attention on a specific safety subject.

sustainable pace, and policymakers must resist the temptation to speed up the expansion by sharply intensifying monetary and fiscal stimuli."

Carter may not want to "sharply" intensify anything. But he probably knows he is not going to achieve Democratic goals, so he may be reluctant to compound his problems by embracing a symbol of Republican methods.

Republicans tend to believe that control of the money supply is the foremost instrument for controlling interest rates, the level of economic activity, and hence inflation. And in economic policy even more than in most fields of public policy, methods and goals are related: The primary Republican goal is combating inflation.

The country agrees, but Carter must decorously avoid seeming to agree too much. The core of his appeal to labor, blacks and liberals concerned jobs. It was his promise to reduce unemployment to less than 5 per cent. His advisers must suspect that his goal requires growth targets for the money supply higher than Burns would be happy to set.

Carter probably does not intend to try to achieve his economic goals. That is, he does not intend to risk the inflation, and electoral mayhem, that would flow from an attempt to rev up the economy enough to lower unemployment considerably and quickly. But he does not want to run up a flag announcing his conversion to prudence, thereby enraging Democrats. He may think the reappointment of Burns would be such a flag.

He inherited a government that does not have substantial uncommitted revenues. And the public fears stimulative policies that might, briefly, produce a "fiscal dividend" (a surge of revenues from constant tax rates). So Carter must reward clamorous groups with things other than appropriations.

Labor gets a higher minimum wage and labor law "reforms." For blacks, the administration filed a brief in the Bakke case, celebrating reverse discrimination. But welfare reform is a distant goal, tax reform is a receding goal, and national health insurance is not even on the horizon. Carter must pay off liberals with any coin at hand. He can "spend" Burns by not reappointing him.

Carter could not be blamed for enjoying Burns' departure. He lost his best friend and economic adviser, Bert Lance; most of his economic policies are at the mercy of the Fourth Branch of Government (Sen. Russell Long); and now he is being pressured to embrace someone who is just not cuddly.

Burns is as public-spirited and politically crafty as anyone in Washington. He has fought the inflationary rot with a determination commensurate with the stakes, which are justice and freedom. He does not just "lean into the wind." He occasionally is a counter-typhoon. He was that when he helped kill Carter's frivolous plan for $50 tax rebates, when he criticized some of Carter's other self-inflicted wounds, including the energy and Social Security policies.

But the other guys won the election and have not won much since then. They may feel that, sweet although it would be to have Burns around to blame for their failures, it also would be sweet to see him go. That is the sin of our times: the unwillingness to defer gratifications.

NEGOTIATIONS DURING COAL STRIKE ON NEW CONTRACT SHOULD NOT BE DISTRACTED BY EMOTIONALISM AND VIOLENCE

Mr. RANDOLPH. Mr. President, latest reports from the bargaining table in the negotiations for a new contract in the coal industry are encouraging. It is our hope that a calm and reasonable atmosphere will prevail in this matter most vital to the energy future of our Nation.

One thing both sides in the negotiations must constantly keep in mind is they are not merely bargaining over benefit payments or tonnage mined. Their discussions directly affect the lives of many thousands of coal miners, their families, and business firms affiliated with coal-related enterprise.

It is no arena for unreason or irrationality.

The Washington Star in its December 10 edition published a reasoned and conclusive editorial to this effect, which gives an excellent analysis of the issues. I ask unanimous consent that the editorial be printed in the Record:

There being no objection, the editorial was ordered to be printed in the Record, as follows:

Another Coal Strike

During negotiations for a new contract in the coal industry, United Mine Workers President Arnold Miller remarked: "If they think the UMW is weak, by God, just wait till December 6 and they'll find out."

Well, December 6 has come and the miners are out on strike. But has that proved the UMW is strong? No. In fact, it could be interpreted to the contrary: that the UMW did not have the strength to force its demands on the mine owners at the bargaining table.

Chances are that as the strike progresses, the UMW is going to get weaker, not stronger. Its 130,000 active miners face weeks, perhaps months, of financial hardship; its 30,000 retired miners face a cutoff of pensions after the first of the year; its members and their hundreds of thousands of dependents are without medical benefits because the fund that provides them has been depleted and cannot be replenished until the miners return to work.

Eventually the miners will go back to work. But by then, non-union mines, chiefly in the West, may have eaten even further into the UMW's share of U.S. coal production which, during the last three years, dropped from 70 to 50 per cent. Will that demonstrate union strength?

Why have Mr. Miller and other union leaders allowed themselves to bring the UMW to such a position? Internal union politics, chiefly. Mr. Miller's hold on the presidency has been infirm and he obviously felt it necessary to bow to demands from union militants that UMW locals be given the right to authorize single-mine strikes.

Mine operators feel, correctly in our opinion, that a contract giving locals the right to vote strikes probably would lead to more instability in the coal fields rather than less, as the UMW contends. It would, moreover, be contrary to a well-established trend in American industry toward arbitration rather than strikes as a means of settling disputes.

Nor does the mine owners' proposal to reduce wildcat strikes make much sense. They want to dock the pay of miners—in effect, fine them—when they participate in wildcat strikes or stay off the job without excuse.

Both sides were at fault in the failure of the old contract's grievance procedure to work satisfactorily. Miners too often tried to turn a minor dispute into a big cause and were inclined to make their point by walking off the job, despite a no-strike pledge in the contract. Mine operators, instead of trying to settle local disputes at the local level, overloaded the grievance and arbitration machinery and were eager to use the courts to press their position.

Instead of talking about how tough they are—the owners, as well as the union leaders, are guilty of that—and allowing their positions to harden further, both sides ought to be making a stronger effort to settle this basic dispute. Then they can get on to finding a way to restore medical and pension funds to financial health and to negotiating new wage scales.

Why does the strike have to be a long one, as is being predicted in most quarters? Negotiators on both sides surely are conscious of the suffering that a long strike will bring to the coal fields—miners and their families facing a bleak Christmas season and a cold winter without paydays and medical benefits.

Does it show weakness to compromise, as Mr. Miller seems to think, or does it show leadership?

EXCESSIVE SUGAR CONSUMPTION

Mr. THURMOND. Mr. President, it is hard to believe, but reliable statistics show that the average American consumes 85 pounds of sugar every year. That, by any objective standard, is far too much. Sugar can ruin the teeth, both of children and older people, and is detrimental from a nutritional standpoint. Furthermore, our gluttonous sugar consumption has been linked to several serious diseases which have been on the increase over the last few decades, including diabetes, bowel cancer, and heart problems.

There are a number of worthwhile steps which Congress can take to rectify this situation. If consumers knew what they were buying and eating, I am confident that they would cut back. It is more a matter of information than of reformation. Congress should promptly enact legislation requiring manufacturers to disclose the ingredients of their products by percentage. Thus, shoppers will not unknowingly bring home products, such as many breakfast cereals, which are truly "sickeningly sweet."

Mr. President, an excellent article on the subject of excessive sugar consumption appeared recently in the Columbia Record of Columbia, S.C. This article is well worth the attention of all those who would like to see an improvement in the American diet. I ask unanimous consent that it be printed in the Record.

There being no objection, the article was ordered to be printed in the Record, as follows:

Can Legislation Help Break the Sugar Habit?

If you have young children, Saturday morning cartoons more than likely are an important part of their weekend. And if you ever take a look at the advertising on the kiddie shows, you will see that two-thirds of the food products advertised contain refined sugar.

Sugar Smacks, Sugar Frosted Flakes, Lucky Charms and a host of other pre-sweetened cereals (plus other sugary products) are urged upon the children week after week.

I don't know about you, but I have great difficulty steering my daughter away from the pre-sweetened cereals and sugary treats when we go grocery shopping. She knows them all.

as other organizations which have benefitted from his leadership.

FARMERS PLEA FOR FAIR TREATMENT

Mr. THURMOND. Mr. President, these are hard times for the farmers of America. When experiencing similar problems in the past, farmers have usually preferred to suffer in silence. Any one who has spent much time around them, as I have had the good fortune to do, knows that they are an exceptionally resilient and resourceful lot—not the complaining type. Their present difficulties, however, have forced a number of farmers to abandon their customary reticence and call public attention to their plight. It is appropriate that they should do this.

In the last week, the farmers movement has been receiving extensive coverage by the print and broadcast media. One of the most respected radio and television stations in my State, WSPA of Spartanburg, has editorialized on the subject. I found this editorial to be most enlightening, and I would like my colleagues to have the benefit of reading it. Accordingly, I ask that a transcript of the commentary be printed in the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[WSPA-TV, FM, Dec. 7, 1977]

FARMERS PLEA FOR FAIR TREATMENT

The farmers of the nation are up in arms over the failure of the federal government and consuming public to recognize their plight of having to sell their products year after year at a price below the cost of production.

When Franklin Roosevelt, a part time Georgian, was President, the goal of his administration was to assure farmers 90 percent of parity which reflects the cost of production plus a reasonable profit.

The protesting tractor parades in Georgia reflects the deep-seated disappointment the farmers there hold for their fellow farmer and peanut growers from Plains failing to recognize their plight. They have been hit hardest by inflation because they buy in a protected market at prices fixed by someone else and have to sell in a free market at a price fixed by someone else. Since they are the low man on the totem pole, they cannot pass their increased production costs to someone else.

This system has driven the small and medium farm operator off the farms by the thousands. This has caused them to lose their political clout in Washington and what was once the powerful farm bloc in Congress has vanished.

Congressman Ronald "Bo" Ginn, of Georgia, recently explained the situation in Congress when he said only 11 of the 435 U.S. Congressional Districts in the country have more than 20 percent of their population classified as rural farm population.

While the American farmer is small in number, they continue to be a most important segment of the population because what they produce has made the United States the best and cheapest fed nation in the world. A less percentage of the consumer's dollar goes for food than ever before and by far the least in any other country.

The American farmer cannot be expected to continue to produce at prices which are driving him from the land and into bankruptcy. WSPA hopes everyone in Washington from President Carter on down will take seriously the farmers' plea for fair treatment. There is no segment of the population which deserves more sympathetic consideration and a square deal instead of the Raw Deal which they have been receiving in recent years.

A RECOMMENDATION THAT ARTHUR BURNS REMAIN FED CHAIRMAN

Mr. PERCY. Mr. President, President Carter is faced with a dilemma over whether to retain Arthur Burns as Chairman of the Board of Governors of the Federal Reserve.

On the one hand, the President sees the need to keep him in order to maintain business confidence which this administration needs more than ever before. He also realizes that he must resist excessive monetary expansion that would sharply intensify inflationary pressures.

On the other hand, the President must placate the critics of Dr. Burns—particularly those in his administration—who feel that the Federal Reserve Chairman has stymied this Nation's economic recovery and contributed to the unemployment of the 1970's. They also believe he has actively worked to counter the President's economic policies and goals.

All along, however, it has been the President, more than anyone else, who has come to realize that Arthur Burns has helped provide the needed balance to those who would overstimulate this fragile economy and impose further—and I might add, greatly unwanted—inflation and possible longer-range unemployment upon this Nation.

Mr. President, because Arthur Burns has been such a dedicated public servant and provided outstanding leadership as Chairman of the Federal Reserve during this period of economic uncertainty, he deserves to be reappointed as Chairman when his term expires January 31.

Unfortunately, frustrated critics of Dr. Burns are too apt to blame him for past economic policies which resulted in a history of high inflation and unemployment during the 1970's.

The economic record of this Nation, however, reveals just the opposite. In fact, the policies of the Fed Chairman have had to combat the adverse impact of recent world economic events, combined with the fiscal policies of this and past administrations and the unfortunate trend in continuous inflationary spending by the Federal Government.

It is true that inflation, despite the use of traditional monetary and fiscal policies to correct it, has continued at annual levels previously unknown since the 1950's. But these events are not the fault of Arthur Burns. In fact, the current inflation which we are now experiencing has its main roots in the inflationary financing of the Vietnam war.

Mr. President, there is no doubt that the need for low unemployment and stable prices is a sought-after achievement of all administrations.

During the administrations of Truman, Eisenhower, Kennedy, and Johnson, however, reasonably full employment and relatively stable prices have occurred only in 1952, 1953, 1955, and 1965.

The Carter administration's economic policies espouse the same goals. To date, however, those policies have not been realized. The administration realizes that any amount of overstimulation of the economy now through increased Government spending would only result in further inflation and higher unemployment—prospects which the recent policies of the Federal Reserve and Arthur Burns have attempted to halt through careful control of the money supply.

Yet, administration foes of Dr. Burns continue to use the Fed Chairman to blame for their own economic failures.

Nevertheless, President Carter himself must realize that recent constraints on the money supply by the Federal Reserve Chairman have been prudent and balanced. As George F. Will said in a recent column:

> (Carter) does not intend to risk inflation, and electoral mayhem, that would flow from an attempt to rev up the economy enough to lower unemployment considerably and quickly. But he does not want to run up a flag announcing his conversion to prudence, thereby enraging Democrats. He may think the reappointment of Burns would be such a flag.

Hence, the dilemma for President Carter, who has come to know the Federal Reserve Chairman and respect his judgment. It in indeed a Catch-22 situation for President Carter and a position which is ably pointed out by George Will. Mr. President, I ask unanimous consent that this column, which was published in the Washington Post of December 4, be printed at this point in the RECORD.

There being no objection, the column was ordered to be printed in the RECORD, as follows:

THE BURNS SIGNAL

(By George F. Will)

Arthur Burns recently delivered a watery compliment to the man who could reappoint him chairman of the Federal Reserve Board. Burns said he expects President Carter's economic policy "soon will take on a more constructive character." A sense of proportion usually is the first casualty of the quest for office, but Burns is campaigning with a gentlemanly diffidence.

Carter doesn't know how to fib, but he sure knows how to slalom through facts. Recently he said that his private disagreements with Burns are deeper than the public disagreements. More recently he said there are no significant disagreements. Perhaps he doesn't understand the policy prerequisites for fulfilling his campaign promises; or doesn't understand Burns; or didn't mean the promises, or something.

Burns is a strong personality and advocate, and Carter has not surrounded himself with such people. Burns has a coherent philosophy and the political skills to advance it, which make him a reproach to the administration.

And some people campaigning for his reappointment are putting the case rather too well. A banker warns Carter: "The key to long life for this economic expansion is a investors and modernization and expansion for our industries.

Just as we may be prone to blame only the Government for the lack of capital investment during the 1970's, it is to Government that we must also seek many of our solutions.

For one thing, confidence can only be realized in the form of tax cuts, incentives and clearer Government policies toward investment that will be necessary to create the millions of needed jobs in the years to come.

There is little doubt that the slow advance of capital investment has been a major disappointment during the current business expansion.

Businessmen have been faced with an unusual number of legislative proposals in the areas of energy, social security, tax reform and changing environmental protection and safety regulations—all of which have added to this atmosphere of economic uncertainty.

These concerns and the call for investment could not have been more properly stated than they were November 29 before a conference of some 500 economists, financial experts, and government representatives, sponsored by the Continental Illinois National Bank and Trust Co. of Chicago.

Chairman of the Board Roger Anderson and President John Perkins are to be congratulated for their foresight and leadership in this area.

The conference was titled "What Will Tomorrow Cost: The Challenges of Capital Formation." Speakers before the conference included several of the Nation's leading economists and financial experts. Whatever their political viewpoints and economic outlook are, they all agree that the need for capital formation will be one of the top economic problems in the years to come.

I would like to share the thoughts of these experts with my colleagues and ask unanimous consent that a condensed version of the statements given by three of these speakers, which appeared in the December 7 Chicago Tribune, be printed in the RECORD.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

CAPITAL FORMATION: ONE OF THE TOP PROBLEMS OF '70S

Last week Continental Illinois National Bank & Trust Co. of Chicago brought together leading economists, financial experts, and government representatives to discuss the problems of long-term capital formation.

Following are condensations of speeches given by three participants:

STATISTICS

William Simon is a former secretary of the United States Treasury.

Capital formation is more than just bricks and mortar. It means more jobs, high productivity, higher wages, less inflation, and all the other ingredients of a decent and growing standard of living.

But when you examine the nation as a whole, we see less of that commitment than in many other nations.

From 1960 through 1975 Japan's investments in new plants and equipment averaged 28.8 per cent a year of the country's gross national product. In West Germany it was 21.8 per cent, France 19.5 per cent, and Sweden 19.2 per cent. The United States was dead last, coming in even behind Britain with 14.8 per cent.

Another example is productivity, increasing at the rate of 3.4 per cent a year in the U.S. in 1948. From 1971 to 1975 it had fallen to 1.6 per cent.

Turning to the question of taxes and capital formation, the President seems to be uncertain of exactly what he wants to achieve. A deep cut in taxes next year is, I am sure, the first policy priority for many, but our economic agenda should include more than just reductions. It must also include crucial items like regulatory reform and fiscal and monetary restraint.

TAXES AND ACCOUNTING

Paul W. McCracken is a former chairman of the President's Council of Economic Advisers.

After the Treasury finances the deficit of the federal government, will the remaining flow of savings be adequate to finance private demands for funds? Is there a possible shortage of physical capital?

Is there some reason to think we have fallen short in building new factories or stores or office buildings and in producing machines and equipment to put in these structures?

Another question is whether the economy's plant in place is adequate to provide job opportunities for the entire work force as the demand for output strengthens.

During most of this decade the economy has been operating with generally excess capacity, and the pressure from long and rising backlogs on managements to enlarge their facilities has been largely absent.

Another key factor in the current investment malaise is the low level of corporate profitability. Real purchasing power of corporate retained earnings this year will be roughly 30 per cent below those of 1967, itself a year of sluggish economic activity with a "recessionette" in the early months.

Here we see an adverse effect of inflation on the economy that is as important as it is underrecognized—the failure of conventional accounting procedures to charge as a current cost the current value of capital expiring in the current accounting period.

The result is an overstatement of profits with the result that corporations incur a corporate profits tax liability on fictitious profits. Largely because of this, corporations will be paying in taxes about 10 per cent more of their true profits than a decade ago. A reduction in profitability and a shrinkage in retained earnings makes a sluggish pace of outlays on new facilities and equipment hardly surprising.

REGULATION

George W. Ball is senior managing director of Lehman Brothers, Inc.

Certainly there is no lack of liquidity in the financal markets of the major industrialized nations. If anything, with billions of dollars sloshing around in the Eurocurrency market, there may be too much liquidity.

But what businessmen understand very well is that the inadequate pace of investment—which is what capital formation is really all about—is determined not nearly so much by whether money is available at moderate cost as by whether they can be reasonably sure that an investment will earn a rate of return sufficient to justify it.

Here the specter of uncertainty moves in. In considering an investment a corporate management must take into account not only the attitudes and capabilities of consumers but the vagaries of often capricious bureaucracies.

Building a facility of almost any kind is no longer merely a matter of buying a plot of ground, arranging financing, and hiring a contractor. It requires submission of vast amounts of information to four or five local state or even national agencies.

While a certain amount of this is necessary, we have become too complicated a country, too preoccupied—and properly so—with legitimate social concerns to live by the lassez-faire doctrines of Adam Smith in these latter years of the 20th Century.

IN HONOR OF SIDNEY LEWINE

Mr. METZENBAUM. Mr. President, I rise on this occasion to pay tribute to one of my good friends and fellow Ohioans, Mr. Sidney Lewine, who recently retired after serving 25 years as the director of Mt. Sinai Hospital in Cleveland.

Mr. Lewine has dedicated his life to making Mt. Sinai Hospital one of the finest medical facilities in Ohio and the Nation.

At the same time, he has given unstintingly of his time to innumerable civic and professional organizations. Included have been terms as president of the Ohio Hospital Association and chairman of the board of the Council of Teaching Hospitals of the Association of American Medical Colleges.

This week, Mr. Lewine is being honored by the Greater Cleveland Hospital Association for his contributions. In conjunction with the honor, a resolution has been prepared detailing his unselfish endeavors.

I ask unanimous consent that the resolution be printed in the RECORD.

There being no objection, the resolution was ordered to be printed in the RECORD, as follows:

IN RECOGNITION OF SIDNEY LEWINE

A RESOLUTION

Cleveland is a respected pioneer in health care and hospital administration. Cleveland's stature is established in the stature of the men and women who deliver and administer that care.

In the history of Greater Cleveland hospitals over the past thirty years, one name keeps rising above the field: Sidney Lewine.

In the minds of hospital leaders nationwide, Sid Lewine is often mentioned as the symbol of Cleveland's hospital community.

His wisdom, his ability to lead through clarity of purpose and language, his genuine dedication to his hospital and its patients, to his co-workers and his colleagues have been richly harvested by his industry at all levels—local, state and national.

Although he leaves the office of director of The Mount Sinai Hospital, the firm elements of progress that bear his imprint wherever good health care is practiced will not only endure, but will live as the base on which more progress can be made for years to come.

Therefore be it resolved that The Greater Cleveland Hospital Association, which Sid Lewine served with honor as president during the trying years of 1969 through 1972, now expresses its affection and appreciation for his accomplishments in behalf of his industry and the people it serves, and

Be it further resolved that this tribute be shared, as have Sid's loyalties, with the Ohio and American Hospital Associations as well

[From the Columbia (S.C.) State, Dec. 14, 1977]

RESOLUTION ASKS BOYCOTT OF IMPORTED TEXTILE GOODS

The S.C. Textile Study Committee adopted a resolution Tuesday asking South Carolinians not to buy foreign-made textile goods imported into this country.

The panel of legislators and lay members took the action after hearing a report that increased textile imports could displace thousands of South Carolinians from their textile jobs.

The commitee also went on record opposing any reduction of import tariffs by the Carter Administration to allow even more textile goods to be sold on the domestic market.

Rep. Marion C. Carnell, D-Greenwood, proposed the buy-American measure asking "people of South Carolina to make sure that the goods they buy in a department store are American-made."

Carnell, whose district is in the state's textile belt, said he offered the resolution to encourage people to "support our own industry and to buy our own textile products."

The lawmaker said his primary concern was protecting the textile industry as the backbone of the state's economy and that other industries hurt by imports could speak out for themselves.

"Our concern is to support our own major industry in South Carolina," he said after the committee session. "That's where we get our livelihood."

Wearing apparel sold at retail has to bear a label saying where it was made, Carnell said. A consumer has no way of knowing if other products, such as a suit, has foreign-made fiber since it does not have to be labeled.

The committee voted to advise the president and members of Congress from South Carolina about its views on the import tariff question.

George Wino, chief economist of the American Textile Manufacturers Institute (ATMI) told the committee that a 50 percent reduction in import tariffs would send shock waves through the nation's economy.

Wino said assuming renewal of all bilateral agreements with foreign textile-producing countries and a 50 percent tariff cut, 2.2 million persons would have to seek new employment by 1985.

This could include 592,000 textile and apparel jobs and 1.6 million people in secondary industries "as the shock echoes through the economy," Wino added.

In South Carolina, he noted, as many as 47,000 of the state's 189,000 textile and apparel workers could be affected.

"This does not necessarily mean they will be unemployed but rather they will have to find new jobs," the ATMI official said.

Wino said impending tariff negotiations could lead to substantially higher textile and apparel imports particularly from countries other than those covered by bilateral agreements.

He said U.S. mills cannot reduce prices to meet the new competition because pre-tax profit margins are only four percent on sales.

He reported a study by Georgia Tech shows that as little as six percent increase in the domestic price spread over the foreign price spread would mushroom broadwoven fabric imports by 400 percent.

"Obviously this would decimate South Carolina's textile industry which is so heavily oriented toward weaving operations," he warned.

Wino said that the six percent annual import growth now allowed "could well" triple the growth of domestic textile consumption.

"Historically imports have grown more than twice as fast as U.S. production," he said.

Wino said South Carolina's "unique" textile structure "leaves the state quite vulnerable to fashion shifts and import shifts." Recent years have seen a turn from cotton to man-made fibers in the clothing industry, he noted.

"There is nothing you can do about it," Wino said. "Technology brought it about."

The U.S. has extended multi-fiber trade agreements, expiring this year, with Hong Kong and Korea and continues negotiations in Geneva, Switzerland, with Japan and Taiwan, Wino said.

These four Asian countries, among 18 with which this country has MFA pacts, account for 60 percent of the textile imports into this country.

Wino said that Red China is not covered by any agreement but is subject to a higher tariff than non-Communist countries. He said the Chinese present a "very acute problem" to the textile industry because of their potentially unlimited production in a government-controlled industry. That country shipped 158 million square yards of fabric into the United States last year but it has tapered off this year by 42 percent for the past nine months, Wino said.

"We would very much like to have an agreement," Wino said.

Sen. Robert C. Lake, D-Newberry, said Wino's remarks "makes us all scared to death about the import situation." Lake presided in the temporary absence of Sen. John D. Long III, D-Union, permanent chairman.

EULOGY TO LAURENCE N. WOODWORTH

Mr. MATSUNAGA. Mr. President, I was shocked and saddened to learn of the death of Dr. Laurence N. Woodworth, the Assistant Secretary of the Treasury for Tax Policy. Prior to his appointment to that post earlier this year, Dr. Woodworth served for 32 years as a professional staff member of the Joint Committee on Internal Revenue Service Taxation. I am sure that his many friends on Capitol Hill join me in extending heartfelt sympathy to his widow, Margaret, and to their four children.

I considered Larry Woodworth a personal friend and one of our Nation's finest public servants. Good government was one of his principal interests and, in recent years, his efforts were aimed at the development of a more equitable and more rational system of paying for public programs—tax reform and budget reform. He contributed immeasurably to the passage of both the Budget Reform and Impoundment Control Act of 1973 and the Tax Reform Act of 1976. On the very eve of his final illness and death, he was immersed in the drafting of further tax reforms for the Carter administration.

Almost 2 years ago, when Congress was considering the Tax Reform Act of 1976, I discovered an oversight in the House bill which would have driven Hawaii's small sugar planters out of business. Literally at the 11th hour, while the report on the measure was being prepared to go to the printer at midnight, Larry rewrote one paragraph in the report so that it would accurately reflect the intent of Congress and save the small planters and their employees. That concern with detail, and with the impact of Federal legislation on the average American, was typical of Larry. His professionalism and dedication to the public service was recognized on several occasions, not only by Members of Congress, but by the public. He was the recipient of the Rockefeller Award for public service sponsored by the Woodrow Wilson Foundation and of the National Civil Service League Award. In addition, he was active in his church and in his neighborhood, serving for 6 years as mayor of Cheverly, Md., and for 9 years on the Cheverly City Council.

Larry's death leaves a gap in the hearts of his friends and in the executive branch of the Government. His wise advice will be sorely missed when we embark upon the tax reform effort next year. While I have no doubts that Larry now dwells in the House of God, as a personal friend I am deeply saddened by the thought that he will no longer be physically present among us.

WHAT WILL TOMORROW COST?

Mr. PERCY. Mr. President, despite projections of moderate economic gains for next year, public confidence continues to remain low.

Forecasts for next year include: a real GNP growth of only 4½ percent, continued inflationary pressures, lingering high levels of unemployment, a decline seen in housing activity, and higher food prices.

Such forecasts are reflective of, as well as a cause of, a lack of confidence, which in turn results in less private capital investment for long-term growth and prosperity.

By 1985, for example, the United States will need some $4.5 trillion in capital. This is three times the $1.5 trillion invested in the past decade.

The United States continues to lag in capital formation, compared to other countries.

Investment and productivity growth in Japan, for example, is three times greater than in the United States. If this trend continues, it will bode ill for the future prosperity of this Nation and the standard of living that most Americans have come to know. Without increased capital formation through savings and investment, greater productivity will be stifled, real economic growth will diminish and fewer jobs will be created.

For this reason, I joined Senators HUMPHREY, TOWER, and CRANSTON in sponsoring the Investment Policy Act. This legislation would establish a national policy, calling on the Federal Government in cooperation with State and local governments to provide incentives to insure maximum investment in private enterprise.

The responsibility for future capital growth, however, must be shared by Government and business alike. Confidence and the proper adaptation of a political posture by the Federal Government are necessary ingredients to encourage future mittee on Environmental Carcinogenesis. In a dispute over the carcinogenicity of a particular chemical manufactured by Proctor and Gamble, Shubik was asked by another NCI scientist to state whom he was speaking for. "Proctor and Gamble," Shubik replied, without hesitation.

No wonder, then, that smoking, alcohol and excessive sunlight are the main environmental targets for the selective cancer-fighters at ACS and NCI—reduction in exposure depends safely on a change in specific personal habits, not in the habits of industry, chief producer of chemical carcinogens.

Maligning the tobacco industry or citing a few workplace carcinogens like asbestos and vinyl chloride still does not place in question the practice of pouring thousands of new chemicals, untested, unmonitored, into the environment every year. Among those already produced, nearly 2,000 are on a government list of suspected carcinogens.

NCI's bioassay (chemical test) branch was to have tested and reported on several hundred of these by now; instead it has become a testimony to the administration's lack of support for this line of attack on cancer. So few staff members were assigned to the branch that testing, reports Congressman Obey, was "turned over to a complex web of outside research firms who are, for the most part, private businesses that are also contracting with the industries that manufacture these chemicals, and in some cases are owned outright by the chemical manufacturing companies." The carcinogenesis program's original director resigned 18 months ago, followed by his assistant, chiefly because they could not tackle unassisted the ever-increasing backlog of unevaluated chemical tests. Now that backlog has reached over 200, and in the past two years, reports on only 14 chemicals have been issued. (A review of the Institute's approach to environmental causes of cancer has been initiated by recently appointed NCI Director Dr. Arthur C. Upton.)

ACS, with its proven influence over Congress, is in a unique position to influence national policy on cancer-causing chemicals. Yet they have consistently refused to give effective support to crucial bills such as the Toxic Substances Control Act, the Clean Air Act and a proposal to ban DES, a known carcinogen, from cattle feed.

"ACS will send a letter of support after a bill has already been passed by Congress," an employee of the House subcommittee on Health and Environment told me. "But they've never been of any real help, except on smoking legislation."

Perhaps worse than legislative inertia is ACS' betrayal of the trust of individuals, who call their public information service expecting to be given the latest available information.

Consider the question of the "safety" of polychlorinated biphenyls (PCBs)—a potent carcinogen and teratogen (causing birth defects) that accumulates mainly in fish. Even after lowering acceptable limits of PCB, the FDA has admitted that eating contaminated fish is still not safe for children and "women of child-bearing age". And, based on recent studies which have found PCB in both the human embryonic fluid and placenta at levels many times higher than what's considered safe, a University of Wisconsin pathologist, Dr. J. R. Allen, has said that "women *who plan to have children* had best discontinue eating fish." (Italics added.)

Here's what ACS's Irving Rimer said in response to a question about whether a pregnant woman should at least avoid eating the most contaminated species of fish:

"That fish is very good for your wife . . . It might be one of the best things she could eat in her condition. The fish you buy in a regular fish store or a regular supermarket will not be contaminated. I assure you—shop in a regular fish store and you'll have no problem at all."

You'd like to think that this was an isolated case—a single irresponsible executive who has something against irregular fish stores. But fierce protectiveness toward dangerous chemicals is typical of the top administrators at ACS and NCI.

For instance, while an FDA agent told me they regularly find residues of several different pesticides, including DDT, in food, Dr. Frank Rauscher assured me, "We don't have any pesticides showing up in the food chain anymore. DDT was thought to be a reasonably potent carcinogen in man, but we just don't have that anymore." Poof.

Among food color additives alone, there are 9 suspected and 2 known carcinogens, as a Health Research Group report based on FDA files revealed. Yet Dr. Rauscher and Dr. Lee Clark recently wrote in the Washington Post: "There is no evidence to implicate food preservatives or additives now on the market in human cancer . . ."

Meanwhile, ACS has been sniping away at the Delaney Clause, the public's main defense, weak as it is, against carcinogens in food. Despite public statements to the contrary, I was told by Larry Garfinkel, Dr. Hammond's assistant, that ACS would like to see the Delaney Clause modified so that it would be more difficult to take legislative action on chemicals based on animal test results. "There should be some human epidemiological evidence present before a substance is banned," Garfinkel said.

But as Dr. Robert Hoover, NCI Head of the Environmental Studies Section of Environmental Epidemiology, explains, "You have to use animal studies and sound biological reasoning. That's all we have, short of placing large segments of the population at risk." Because of cancer's 20–to–30–year latency period, "epidemiological evidence" would consist of a series of disasters continuing long after a substance was banned. Many scientists feel we're in for a lot of such evidence soon, due to the unthinking, uncontrolled outpour of chemicals since the 1960s.

Says Dr. Bruce Ames, University of California biochemist, expert in the field of carcinogenesis: "Most of us are walking around with little time bombs ticking away inside of us . . ."

Relax. As ACS's Dr. Hammond says, "100 percent of the people will die anyway, and there's no way in the foreseeable future to prevent that."

TARIFF NEGOTIATIONS

Mr. THURMOND. Mr. President, the people of my State remain concerned by the damage that textile imports are causing to our domestic textile industry. For some time now, under the bilateral agreements we have with a number of textile-producing nations, textile imports have been increasing twice as fast as the domestic market. Some experts are predicting that they will soon be increasing three times as fast. The situation has thus gone from bad to worse, but the worst may be yet to come.

The administration is reportedly considering granting foreign nations a reduction in textile tariffs in upcoming negotiations. Such a move would have the effect of further flooding the market with imports. While a number of nations are limited in the textile goods which they can ship to the United States, many others are not. It is only the tariff that has restrained these countries from exploiting the American market.

The importance of the textile industry, both to the State of South Carolina and the Nation as a whole, is well known. In my State alone, it accounts for 189,000 jobs. A tariff reduction of 50 percent would put as many as one-quarter of these jobs in jeopardy.

Mr. President, these jobs need to be protected. Free trade is a fine thing, provided that all nations play by the same rules. A number of competitor nations, however, are not observing the rules. I see no reason why American consumers should enrich foreign manufacturers, whose factories are often little better than sweatshops, while our textile workers here at home lose their jobs.

On Tuesday of this week, a textile study committee composed of South Carolina State legislators and representatives of the textile industry passed a resolution urging the people of South Carolina not to buy textile products made in foreign countries. To some, this may seem like an extreme measure. Yet it clearly expresses the deep fears which the uncertain policy of the present administration has stirred.

I recently received a letter from special trade representative Robert Strauss saying that the administration did not intend to jeopardize the long-term interests of the American textile industry. I was encouraged to hear this statement. I was not encouraged to learn, in the same letter, that the administration has apparently not ruled out an immediate tariff reduction. The textile workers of South Carolina are worried about the short term no less than the long term. If they are thrown out of work as a result of administration trade policy, they are going to have a hard time believing that any interests of theirs have been protected.

Mr. President, I think the time has come for the President of the United States to put an end to the doubt and the apprehension. It would be very easy for him to do this. All he would have to do is to say, flatly, that his administration will not agree to a reduction of the present textile tariff. Almost 200,000 textile workers in South Carolina, and millions more across the Nation, are waiting to hear these words. I urge the President not to disappoint them.

Mr. President, an informative article on the predicament of the domestic textile industry appeared in the State newspaper of Columbia, S.C., yesterday morning. In order that my colleagues may have the benefit of reading it, I ask unanimous consent that it be printed in the Record.

There being no objection, the article was ordered to be printed in the Record, as follows:

"You have to understand something," Rimer explained. "Somewhere around 1972 or '73, we stopped including in our calculations all skin cancers except melanoma, the only one that's fatal, and also in situ cervical cancers, because many experts don't consider these to be cancers at all. Since together they account for a large number of cases, that could be why the incidence has gone down."

No wonder cancer is "one of the most curable of the major diseases in this country," as The Hopeful Side of Cancer, ACS's basic public education primer, states. Those skin and cervical cancers, unfit for the incidence figures, are great for the grand tally of "1,500,000 Americans alive today who have had cancer," to whom ACS points as proof of the success of their "cancer-awareness" campaigns and the methods of treatment they promote.

Though their own chief statistician reportedly suggested that the figure be dropped because of its unreliable data base, ACS brazenly upped it to 2 million in 1976.

It is this type of outright dishonesty and statistical legerdemain that supports the country's system of orthodox cancer treatment and leads the public to believe that the medical establishment is well on the way to controlling cancer.

"Today, one out of three cancer patients is being saved. And it could be one in two, if the disease were detected early and treated promptly." This, the central hope-myth conjured up by ACS/NCI, has been retold since 1956. Adding a final flourish this summer, Dr. Lee Clark (ACS President and NCI's senior scientific member of the President's Cancer Panel) predicted the advance to "one in two" would come "within the next five years."

But we have yet to see even a one-in-three survival rate that has been based on a fair representation of the American population. Non-whites, for example, whose cancer death rate is higher—three times higher for males—than that of whites, were virtually left out of the one-in-three calculations, while those patients included (only 3 percent of the country's total) were treated at large private and university hospitals where presumably they were receiving the best possible care and treatment.

It is rarely mentioned in ACS/NCI educational material that "saved" refers only to being alive five years after the time cancer was diagnosed, not to long-term survival as most people would infer.

Even without all these qualifications, the fact that "one in three" survives today is no triumph. People diagnosed as having cancer in 1948-52 already had a 32 percent chance of surviving; and "the commonest cancers," according to Dr. Donald Gould, New Scientist editor, "are as resistant to treatment as they were 40 or 50 years ago."

Still, orthodox treatment methods are peddled to the public and to Congress as "known cures," diverting attention from what most scientists agree is an urgent need to pursue innovative, radically new ideas in cancer research. Criticizing NCI's research program, 1975 Nobel Prize winner Dr. Howard Temin claimed there is too much emphasis "on directed research that assumes we know how cancer is caused and can be cured . . . and that puts large sums of money in a few places to pursue only a few ideas."

But the people who carefully engineered the National Cancer Act and NCI's increasingly large sums have too much at stake personally and professionally to allow competition with their few ideas and assumptions.

Take chemotherapy—an ACS favorite. Not only does ACS co-own the patient for one of the most frequently used cancer drugs—5-fluorocaril—but Mary Lasker, a friend of Dr. Sidney Farber, who pioneered the first chemotherapeutic drugs in the late forties, has pushed NCI for years to fund a massive, impractical "Chemotherapy Screening Program," designed to test at random some 50,000 chemicals a year for their effectiveness against cancer. Though an independent commission described the project as "utterly without scientific merit" as early as 1965, NCI's first budget under the National Cancer Act (1972) tripled funds for the screening project.

In response to an ACS/NCI "educational" claim that "about one-third of all cancers are responding to chemotherapy," Dr. Marvin Zelen of the Eastern Cooperative Oncology Group, a group which specializes in clinical trials of drugs and other therapies, often funded by NCI, laughed: "It depends on what you mean by 'responding.' You have to distinguish between cure and a very temporary response—I would hesitate to say anything like that."

For some rare cancers, such as childhood leukemia, Hodgkin's disease, Wilm's tumor, chemotherapy can increase survival time, but most often only at the risk of devastating side effects, including an increased chance of developing a second cancer after a decade.

Important questions about the value of conventional treatment for certain cancers have been raised by recent studies. One, reported in Lancet, the British medical journal, in December 1975, concludes that "no immediate treatment proved a significantly better policy for patients' survival and for the quality of remaining life" for inoperable carcinoma of the bonchus; and another, which Dr. E. Cuyler Hammond, ACS Vice President for Epidemiology and Statistics, described to me, involved "a remarkable number of patients diagnosed with breast cancer in whom no evidence of breast cancer could be found later, even though they received absolutely no treatment."

OPEN SEASON ON QUACKS

Boasting the "largest repository for unproven methods information in the world," ACS's Committee on Unproven Methods of Cancer Management works hand-in-hand with local and state medical societies, and with the American Medical Association's (AMA) Committee on Quackery, forming a network of vigilantes prepared to pounce on anyone who promotes a cancer therapy that runs against their substantial prejudices and profits.

Indiscriminate in its "quack attacks," the ACS committee—whose members, half laymen, half professionals, include representatives from the Food and Drug Administration (FDA), NCI and AMA—has ruined promising careers and kept potentially valuable ideas from being seriously tested. (Their rationale is that these ideas would lure patients from "known cures" and "proven methods.")

Protesting ACS's "negative role" in this area, one established cancer researcher said, "There have been any number of people who have been unable to obtain grants and/or have been scorned by their colleagues over the years for concepts that have now become accepted in the cancer field."

An example: Dr. Bradford Coley's bacterial toxins treatment, whose two basic principles, immunotherapy and hyperthermia, are now being actively investigated by the medical establishment, has just been removed from the Index of ACS File Material on Unproven Methods of Cancer Management. As Dr. Sidney Arje, ACS Vice President for Professional Education and staff member of the Unproven Methods Committee, told me, "With all the current interest in immunotherapy and work with such things as BCG [Bacille Calmette-Guerin, a tuberculosis vaccine thought to stimulate the body's immune system to fight cancer], it's all so similar so what Coley was doing that it wouldn't be fair to keep him on the list."

How reasonable. Actually, it was only at the request of Dr. William Regelson, formerly Chairman of the Division of Medical Oncology at Virginia Commonwealth University, that action was finally taken. Had Coley's work been seriously investigated at the time, even if it were not itself a "solution," 40 years of immunotherapy research would have been gained, and many lives, perhaps, saved.

Such thoughts of wasted potential don't phase ACS.

When I asked Dr. Arje about an instance where a reporter had proved that promising elements and supportive quotes about a particular "unproven" cancer therapy had been omitted in the "quack file" write-up, he said, "I don't remember the details exactly—but basically, I mean even if we were that negative, that in itself is valid. Our purpose is to keep these unproven approaches away from the public, especially as they become popular—that's when they're most dangerous."

Most dangerous to whom? It seems that the restrictive authority of the Unproven Methods Committee is designed more to eliminate any threat to ACS's total dominance of cancer management and cancer publicity than to protect the public. For instance, I was astonished to find among some documents on unproven methods a lengthy memo by Alan Davis, ACS Vice President for Governmental Relations, warning division executives of an individual from a small private cancer institute who was asking mayors and governors to proclaim a "National Cancer Day"—not the kind of thing you'd imagine could kill a lot of people. In fact, all he was advocating were medical check-ups and early diagnosis.

"If a city or state in your division is involved," Davis wrote, "see if it is possible to have the Mayor or Governor 'deproclaim'. . . . Being for more awareness of cancer is a good way to get favorable attention, and the cause is exploited by many for various reasons, often with considerable success."

Apparently, ACS has had the most success.

TERMINAL OPTIMISM

"There's something I don't think people understand," Dr. E. Cuyler Hammond sighed. "Say something increases your risk of dying of bladder cancer (we'd just been talking about saccharin which has been shown in human studies to cause a 60 percent increase in bladder cancer in men) . . .

"Well, if it increases your risk of dying of bladder cancer, it decreases your risk of dying of cancer of the prostate, cancer of the lung, cancer of the stomach, or any other form of cancer! . . . Look, if you die of one thing you can't later die of something else, do you follow me?"

Sure. While monopolizing and bungling the areas of research and treatment, the cancer establishment minimizes the importance of cancer prevention to avoid stepping on industrialized toes.

A major source of support for ACS when it began fund-raising activity in 1945 came from industrialists enlisted by George Stringfellow, then Senior Vice President of Thomas A. Edison Industries. Since then, many have become Life Members, who act as consultants to the board of directors. At NCI, several members of the advisory board act as consultants to industrial firms. The most notable, Phillipe Shubik, was private consultant and scientific advisor to General Foods, Proctor & Gamble, Abbott Lab., Miles Lab., Royal Crown Cola Co., Colgate-Palmolive Co., the Extract Manufacturers Association, and the Calorie Control Council, during the time he served as chairman of the NCI subcomthat any change had been made in the original release other than the date, Dr. Fink later admitted to me that "certain parts of the report's summary had to be left out" after "vigorous discussion" with ACS.

CORNERING THE CRUSADERS

Mention "National Cancer Institute" to most people, even in Bethesda, Maryland (NCI headquarters), and you'll probably be "corrected": "You mean, the American Cancer Society."

ACS power and affluence depends on its being recognized as the sole dispenser of cancer information and hope, and as the sine qua non of any eventual cancer cure. Their first big publicity blitz was launched in 1945 by advertising magnate Albert Lasker, his wife Mary, now honorary chairman of the ACS board of directors, and Emerson Foote, co-founder of the Foote, Cone and Belding advertising agency. They hired a professional fund-raiser and persuaded prime-time broadcasters to speak about the horrors of cancer and our only hopes—a check and a checkup. The April fund-raising crusade was immediately effective. In its second year, $10 million was gleaned from a newly cancer-aware American public. Since then, ACS has become the wealthiest of the health charity groups, its officials the highest paid, and, with its image as *the* cancer-fighting organization in the country, is not about to sit back and watch things change.

A former employee of NCI's Office of Cancer Communications, specifically charged by Congress "to disseminate information to the practicing physician and to the general public," told me of the disintegration of the entire Program Liaison Branch, basically because of ACS interference.

"When NCI gets recognition for some piece of public information, ACS doesn't like it. Sometimes we'd be at the eleventh hour with the budget and everything approved by our superiors, and suddenly there'd be a meeting scheduled with ACS in New York. Their Public Information and Education people would have objections to it, and that was the end. Or they'd have us do busy work, like run tests on messages or think again whether we should say 'Us Against Cancer' or 'We Against Cancer.' "

Eventually it was nothing against cancer, and after 4 or 5 frustrating years, the branch's four staff members left for other jobs and have not been replaced.

Why would an NCI Division Director, in this case Mr. Paul Van Nevel, insist that his staff consult first with ACS? An NCI source from another department explains: "If you make waves, someone will get in touch with someone else and before you know it Mary Lasker says to the NCI Director: 'We don't like your director of such and such, so maybe you should think about getting a new one.' "

"A red herring of ridiculous proportions!" Benno Schmidt, a Wall Street investment banker who has been chairman of the President's Cancer Panel, the apex of NCI's power structure, since 1971, spoke in an angry voice of the nasty suggestions of an "ACS–NCI link" brought up at the House preliminary oversight hearings on NCI this summer. "I never even heard from the American Cancer Society—in five years no one from there has even called me."

Hasn't Mr. Schmidt been aware of ACS President and former Vice-President Dr. Lee Clark, who has been serving with him on the President's Cancer Panel for five years; or of ACS past officer director and Pennwalt Corporation director, Dr. Jonathan Rhoads, who has sat next to him at NCI's monthly National Cancer Advisory Board meetings (Rhoads is the Advisory Board's chairman); or of several other ACS members who serve, or have recently served, on the Advisory Board or on important NCI committees—including Mary Lasker, Emerson Foote, Frank Dixon (consultant for Eli Lilly and Co.) and Elmer Bobst (chairman of the Warner-Lambert pharmaceutical company and old Nixon friend and campaign contributor).

No one controls Benno Schmidt, but he would not have been singled out for such an important position if his views did not coincide with ACS interests. When Senator Ralph Yarborough (the original sponsor of the National Cancer Act legislation) appointed a panel of consultants to make recommendations for the act, names were "suggested to him" by Mary Lasker and an ACS lobbyist in Washington, including the name of Benno Schmidt, who became chairman.

Considering the act's provision that officials be appointed by the President without any outside review, and the fact that both Mary Lasker and Benno Schmidt were frequent visitors to Nixon's and Ford's White House, it was natural that members of the panel of consultants and other ACS favorites would fall into position on NCI's National Cancer Advisory Board, which has final say as to where research funds go.

Also, monitoring of NCI activities under the act was left to the 3-member President's Cancer Panel, which is to say, to Benno Schmidt.

"He runs the whole Advisory Board and President's Cancer Panel," said an Advisory Board member. Asked at the oversight hearings how the President's Panel does its monitoring, Benno Schmidt replied, "If instances come to my attention, I raise those questions, discuss them and satisfy myself that what was done was done for good reason."

Apparently, he is easily satisfied. The "NASA-style management," as he still dares to refer to the new NCI administration, spawns terrible inefficiency and waste—partly because favoritism takes precedence over fitness in filling top positions.

When 253 of the professionals on the NCI staff were asked in a 1974 survey to indicate problems adversely affecting their job performance at the Institute, half cited "widespread lack of confidence in the scientific acumen of the decision-making hierarchy" and a third complained of the "shortage of qualified scientific and technical personnel, and available billets.

A NEW TYPE OF WELFARE

With so few in-house scientists, the new millions were dished out to private institutes and industries, commercial research labs and large universities. There, who's doing what research is so far beyond NCI monitoring capacity that some researchers do unrelated work with government money while others receive money only by the grace of the "excellent writing and preparation" of professional grantsmen, which commercial organizations can well afford and which has "little or no relevance to the kind of laboratory research they do," according to Dr. Solomon Garb, Scientific Director of the American Cancer Research Center and Hospital in Denver, Colorado.

In effect, the influx of funds initiated by the National Cancer Act created a new type of welfare system—as Dr. Watson described it, one "more palatable to this administration because the recipients cannot solely sop up beer and watch TV, but instead will wear clean white lab coats and look into cancer cells. Not being trained for the task, however, they are most unlikely to fathom the inner workings of the cancer cell, and in a ghoulish way will be forever assuring the continuation of their job descriptions."

The mainstay of NCI's welfare system is contract research, which absorbs 40.6 percent of all its research funds, and invites abuse and poor quality work. For example:

The Special Virus Cancer Program, which depends mostly on contract research, has been glutted with mis-used funds—nearly half a billion dollars to date—since its inception in 1964.

"A self-perpetuating bureaucracy, full of conflicts of interest, its existence justifying its further existence . . ." was the way a 1974 review by outside scientists (the Zinder report) characterized the Special Virus Cancer Program. Those running it, the report charged, come "from a narrow section of the scientific community, and receive large amounts of the money they dispense . . ."

While grant applications must pass through the NIH peer review system, for contracts "there is practically no review," said a scientist whose institute receives large sums of money from NCI for contract research. "And there are many areas where a researcher can apply for either a grant or a contract to do the same thing."

Apparently those with weak proposals go for the contracts. In the case of the virus program, the Zinder report claimed that "less than half of the contract proposals would have been approved if reviewed by a real grant peer review."

No one yet knows exactly what is going on at Fort Detrick, the former biological warfare research center in Frederick, Maryland, part of which was transformed into a cancer research center after Nixon's emotional "swords into plowshares" speech. Specializing in viral oncology, and in research and testing of possible carcinogens, the center, managed by a division of Litton Industries, has received a total of $119 million a year since 1972—the largest amount for a single contract in the entire program.

"We've wasted a fortune on that system; absolutely nothing has come out of it," said Dr. Garb. "I was one of the most enthusiastic supporters of the Center, and I have to say I'm sorry now. We can't even tell why it's not working—but say you have a handful of quarters and put them in a pop machine. If you dont get any soda after the fifth quarter, you are entitled to say the machine is no damned good, even if you don't know what's wrong with it." Next year's budget deposits another $24 million quarter in Fort Detrick.

"If what the General Accounting Office (GAO) has apparently found in reviewing the Eppley contract is an indication of how other contracts and research efforts at the Cancer Institute have been administered. I think Congress has no choice but to consider a complete overhaul of the Institute," reported Congressman David Obey.

Eppley Institute of Omaha, Nebraska, which has received $20 million from NCI in the past eight years has been charged with using NCI contract money for non-related projects, and for charging the government for supplies used in industrial projects—including 53,000 laboratory test animals which Eppley claims were destroyed. But the stickiest question raised by the GAO findings is one of conflict of interest: Eppley Director Philippe Shubik has been an influential member of the National Cancer Advisory Board since its inception, and at the time of the alleged contract irregularities was chairman of the NCI subcommittee on Environmental Carcinogenesis. As such, he was the member most responsible for overseeing the division that awarded Eppley contracts. Ironically, in defense of Shubik, the *Cancer Letter*, an NCI-affiliated weekly, states: "Why Obey has singled out Shubik as a target for conflict of interest charges is a mystery. Nearly every scientific member of the Board, the President's Cancer Panel, and the various advisory committees could be subject to such charges. . . ."

STATISTICAL ABSTRACTIONS

It took Irving Rimer, ACS Vice President of Public Information, alone among the top ACS executives, to crack the cheeky new statistics riddle in ACS's 1975 annual report: "Cancer incidence," it teased, contradicting every other source on the subject, "has declined slightly in the last 25 years."

Congress or by the Department of Health, Education, and Welfare, ACS was guaranteed influence and placement on the Institute's two major decision-making bodies: the three-member President's Cancer Panel and the 23-member National Cancer Advisory Board. And the new budget-approved process, bypassing the National Institute of Health's complex review system, has brought funding from $230 million in 1971 up to $819 million for next year—an unprecedented amount for a single health institute, nearly one-third of the total NIH budget.

"They've [ACS] turned NCI into a dollar pump . . ." says a member of the House Appropriations Committee, which okays funds for NCI. "They run the whole program, the money goes where they want it to go."

Meanwhile, many concerned top-notch employees have left NCI in furstration because "nothing ever gets done"; officials with corporate and institutional loyalties betray public interest, and millions of dollars are consumed by research that goes virtually unreviewed.

Some of the programs are reportedly so ill-conceived and irresponsibly executed—closer to publicity maneuvers than real strikes against cancer—that they've led to coverups among the self-monitored, ACS-controlled clique that dominates NCI policy and funding decisions. "The little Watergate that broke before the big one," is the way one highly respected employee at NCI describes the nation's cancer program.

X-RATED MAMMOGRAPHY

The most ambitious folly to date and the first joint ACS–NCI undertaking is the Breast Cancer Detection Demonstration Project. "The greatest PR thing the NCI and ACS have ever done," former ACS President Dr. Hamblin Letton called it in July 1976, even after it had already become clear to many scientific experts that the mammoth screening program, involving 270,000 women aged 35–70, had become the "scorched earth" phase of the cancer war. Because of abuse of one of three screening techniques—mammography (breast x-ray)—there is a significant risk that more women under 50 will die from cancer because of the program than will be saved by it. And then there is the dark horse horror which materialized this fall (though some scientists had warned about a possible problem much earlier): an undetermined number of women in the program, dozens counted already, have had their breasts removed without there having been any trace of cancer.

It was typical of the slapdash manner in which the joint ACS/NCI program was initiated that early questions about the fatal potential of repeated mammography were totally ignored, as were research findings published well before the program began, which, years later, were to result in complete revision of the screening guidelines for younger women. "We just didn't do our homework the way we should have," said NCI Assistant Director Dr. Bayard Morrison, the only administrator who concedes negligence.

Those directly responsible for NCI's part in the program—Dr. Diane Fink, Director of the NCI Division of Cancer Control and Rehabilitation (also on the ACS board of directors until recently); Dr. Frank Rauscher, then NCI Director; and Dr. Guy Newell, NCI Acting Director in the program's later stages—insist they had no reason to suspect there was any serious question of radiation risk until 1975. At ACS the official amnesia runs on till 1976. But NCI's own files clearly expose these feeble lies. Among many early memos and letters sent to Dr. Frank Rauscher (now ACS Senior Vice President for Research) was one by Dr. Newell himself, dated October 1973, only a few months after the screening project had begun. Responding to ACS's suggestion that the number of screening centers be increased from 20 to 27, Newell wrote: "I cannot in all good consciousness [sic] agree to this unless some specific concerns and questions are addresses and answered as to the safety of repeated mammography by an expert group."

But an ever-obedient NCI administration agreed to shell out more taxpayers' money for the extra centers, while giving not a thought to the appointment of even one radiation biology expert—especially irresponsible considering that the study on which the screening program was based, conducted by the Health Insurance Plan of Greater New York, showed absolutely *no benefit* to women under 50, who made up 85 percent of the program participants, and for whom any added risk would have a longer time to play itself out.

In addition to the radiation problem, some scientists, after careful analysis, questioned the validity of the program itself: "The project is ill-conceived and is not likely to result in significant patient benefit," wrote Dr. Marvin Zelen, then Professor of Statistics at University of Buffalo. And Dr. John Bailar III, then NCI Deputy Associate Director for Cancer Control, expressed doubt whether anything at all could be learned about reducing breast cancer mortality considering the project's lack of proper research design.

Responding to all these criticisms, in a confidential in-house memo, breast surgeon and ACS Senior Vice President for Medical Affairs, Dr. Arthur Holleb, conceded: "I do not feel qualified to answer with statistical expertise." Yet he went on to denigrate the critics with pathetic ad hominem arguments such as: "I am always suspicious of the man who comments on a breast cancer project and refers to the anatomic site as the 'brest,'" referring to a typo in one of the critic's letters.

The idea for the screening program originated with ACS. It was first on a list of suggestions sent to NCI by Dr. Holleb, shortly after the National Cancer Act was passed, as to how the new Cancer Control Program money (which ACS had lobbied for) should be spent.

Though NCI agreed from the beginning to fund about 85 percent of the $54.6 million project, ACS has commanded every detail, backed by the American College of Radiologists.

As Dr. Kenneth Olson, formerly Chief of Diagnosis of NCI's Division of Cancer Biology, explained in a 1973 memo: "This project has limited objectives and they have been pretty much dictated by ACS. In summary they are: Can ACS volunteers mobilize a large number (100,000 per year) of women for thermography, mammography, and a physical examination? . . . This rather ends the objectives. . . ."

While not bothering to establish adequate research protocol (though a follow-up study was planned) or to review previous research findings, ACS took great care to see that the 27 centers were distributed evenly over its fund-raising zones and that the centers themselves refrained from fund-raising so as not to cut into ACS profits.

RUNNING THE RISK

At each challenge to the program, ACS and other mammography proponents responded not with scientific reasoning but with professional arrogance.

NCI Chief of Cancer Diagnosis, Dr. William Pomerance, tried to persuade screening center directors, many of whom are affiliated with ACS or the American College of Radiologists, to raise the minimum age for x-ray screening from 35 to 45. "They all fell on me," he reported, "and even went so far as to decide in their protocol they would start with age 30. I know that at this moment their reaction is hysteria, but there you have it. . . . It does give you an idea as to the tenor of the medical profession. . . ."

As the controversy became more heated, women participating in the program were not even informed that there was a controversy—the word "risk" did not appear on the informed consent sheets until May 1976, and was not clearly described to them until May 1977.

Meanwhile, not even the simplest precautions were taken to keep x-ray exposure to a minimum. A report by Ralph Nader's Health Research Group showed that 33—or 55 percent—of the x-ray machines surveyed in 1975 emitted more than the acceptable limit of 2.5 Roentgens per film; in 1976, 11 centers were still exposing women to dangerous doses of x-rays. This meant that, even for thousands of women over 50, mammography could result in greater risk than benefit, as one of three expert groups, finally appointed by NCI, suggested in a March '77 report. Belated as it was, the expert groups' appointment was not even initiated by NCI directors, but was the result of efforts by Dr. John Bailar who, after a fruitless 3-year barrage of ACS and NCI directors' offices, brought the questions of radiation risk to the public in a paper presented before the American Association for Cancer Research. The conclusions of the expert groups, based chiefly on the same November 1972 National Academy of Sciences report ("Biological Effects of Ionizing Radiation") that Bailar and others had referred to, confirmed that asymptomatic women under 50 should not receive repeated x-ray screening unless they had a personal or family history of breast cancer.

While publicity generated by the experts' reports forced the NCI to shift sluggishly from passive negligence to sincere efforts to modify screening procedures, ACS, along with the American College of Radiologists, attempted to sabotage these efforts and to keep women ignorant of the experts' conclusions:

August 1976: A letter from NCI based on the panel's preliminary report was sent to all screening center directors advising them to restrict x-ray screening of women under 50. Several refused to comply, publicly referring to the new guidelines as "so much more government gobbledygook" and "Potomac Fever." One source reported that center directors calling ACS for advice were told to "Go ahead and screen 'em," and to justify their doing so by certain loopholes in the guidelines, loopholes which ACS was reportedly responsible for inserting. In the following six months, 75 percent of women being screened at the centers were still in the under-50 group.

September 1976: The New York City division of ACS circulated over 15,000 copies of an "Urgent Message to Women," which advised women under 50 to undergo mammography if they fell into one or more of several risk categories. By ACS's own account, these risk categories include 80 percent of all women under 50. While ACS officials denied that their national office had anything to do with it—it was just a rambunctious act by one of their madcap local branches—Dr. Holleb himself told me that he had personally approved the Message and, he added proudly, "I'd still stand behind it." In fact he'd written an editorial for the Nov./Dec. issue of ACS's Ca: A Cancer Journal for Clinicians, the medical journal with the largest circulation in the world, that made just about the same points as were made in the Urgent Message.

March 1977: NCI's Office of Cancer Communications, under Paul Van Nevel, prepared a press release to announce the conclusions of the expert groups. Rather than release it on the date expected, Drs. Fink and Newell and Mr. Van Nevel went to New York City to consult with ACS. The resulting press release consisted of wishy-washy doubletalk bearing little resemblance to anything the experts had written: Though Dr. Newell denied before a congressional subcommittee this summer

Health, Education, and Welfare reversed a policy that denied approximately $7 million in medicaid funds to New York City. This revised policy now permits the Federal Government to cover the medical expenses of medicaid-eligible inmates of jails and prisons during the first month of their incarceration.

CASEWORK

Over 40,000 constituent requests were received by my Washington and New York offices for 1977. Of these cases, 30 percent were HEW- and other social service-related requests; 32 percent were military and veterans cases; 27 percent visa and immigration problems, and 21 percent were other assorted problems handled by my casework staff.

In addition, I have requested GAO to investigate the practices of several agencies in regard to constituent services and treatment. At present, GAO is investigating the New York City Veterans' Administration's payment procedures in order to ascertain that our New York veterans are receiving their payments in an accurate and timely manner. My offices are assisting small businesses in obtaining Government funding and guaranteed loans and have also been instrumental in clarifying problems of small business in New York—particularly with Defense Department policy changes, bonding practices for minority business and other contract problems. Finally, I have been involved with the Postal Service to insure more efficient service for New York in light of recent postal cutbacks.

CONCLUSION

The 1st session of the 95th Congress has produced notable achievements while pointing up problem areas in need of attention during the next session. My efforts in the coming year will be directed to such areas as expansion of the jobs program targeted to hard core unemployed and to youth, increased housing for all citizens, improved health and medical care for our citizens, especially beginning with pregnant mothers and children, the adjustment of formulas to provide New York State with additional money for education, housing, revenue sharing, and other social services and, finally, forcefully addressing the crisis of America's older cities.

Although much remains to be done, these are goals to which I have dedicated myself for the 30 years I have spent in public service. America's first year of its third century has brought many occasions for hope in the continued betterment of mankind. And it has confronted us with new challenges which, together, we must determine to surmount.

DELETION OF DR. JOHN H. GRIMM FROM OCTOBER 26, 1977 CONGRESSIONAL RECORD LISTING OF MILITARY PERSONNEL OPPOSING THE PANAMA CANAL TREATY

Mr. TOWER. Mr. President, on October 26, 1977, there was a list of flag officers opposing the Panama Canal treaty inserted into the Congressional Record. The name of a resident of Houston, Tex., Dr. John H. Grimm, brigadier general, U.S. Air Force Reserve, was inadvertently included in that list provided by the Reserve Officers Association. Dr. Grimm's name should be deleted from that list.

WAR ON CANCER

Mr. NELSON. Mr. President, Congress soon will be considering renewed authority and funding for federally supported biomedical research programs, including the budget for the National Cancer Institute "war on cancer."

Since 1971, the year the National Cancer Act was amended, $4 billion has been spent on the program, an increase in allocations from $230 million in 1971 to $819 million for 1978.

Hard questions must be asked about the program's implementation and the merits of such a massive infusion of funding.

What results are we getting for the effort?

How well is the funding monitored and accounted for since such a large part of it goes into the academic and corporate research sectors in the form of grants and contracts?

Is an effective peer review of contracts in place, as required by the 1975 renewal of the act, so that funds to private companies for targeted research are subject to the same scrutiny and dispersement for scientific merit as are grants?

Should greater attention be focused on environmental causes and possible prevention of cancer?

What is the role of the private research and fundraising sector in influencing policy and supporting the national cancer program?

And, importantly, has the focus on cancer deprived us of support for valuable research in other areas—which, in fact, might produce serendipitous breakthroughs for cancer research?

A number of these questions and others are addressed in a thoughtful article on the subject by Ruth Rosenbaum, "Cancer, Inc." New Times magazine, November 25, 1977.

As the article points out, cancer incidence in the United States has not declined significantly, and research efforts to determine causes and to prevent environmental exposure to carcinogens remain small.

The same concerns that some of us raised about the program in 1971 still remain and new problems have become evident. When Congress looks at the Federal biomedical research program early next session, careful scrutiny should be given to the "war on cancer" effort, so that it may be improved where possible and the public assured that the effort is meaningful.

I ask unanimous consent that the New Times article be printed in the Record.

There being no objection, the article was ordered to be printed in the Record, as follows:

[From New Times, Nov. 25, 1977]

CANCER, INC.

(By Ruth Rosenbaum)

It was another war to end all wars . . . "A national crusade," Congress has resolved, "to be accomplished by 1976 in commemoration of the 200th anniversary of our country. . . ."

Richard Nixon launched the "all-out assault on cancer" with the National Cancer Act on December 23, 1971, intending to trigger "the same kind of concentrated effort that split the atom and took man to the moon." With the government division—the National Cancer Institute (NCI)—at the front line, receiving an immediate doubling of funds and a revamped administration directly responsible to the president, Nixon called for participation by private industry and research labs, and for the enlistment of the American Cancer Society (the largest privately funded health agency). We were at a point in cancer research, Nixon said, "when problems begin to break open and results begin to pour in. . . ."

"A bunch of ———!" was Nobel Laureate James Watson's private opinion of the National Cancer Program; more restrained before Congress, he called the meeting that drew up the 3-volume National Cancer Plan "asoporific orgy," producing no "promising leads" as it claimed, but "only delaying actions"—with the main research thrust toward "just much more of what has already shown itself unlikely to cure a major cancer."

Creating a super-administration to dole out millions to a few popular research areas and for frantic construction of facilities, with so little basic knowledge of cancer, was like trying "to put a man on the moon in 1920, before missiles were invented . . . [by giving] contracts to cannon manufacturers, ladder builders, and many, many administrators . . . but [with] no support for missile research," said Dr. Ruth Sager, Chief of the Cancer Genetics Division at an NCI-affiliated cancer center.

Five years and $4 billion later, nothing has changed—neither in research emphasis nor in cancer's grip on American lives. Yet the cancer generals' yearly proclamations of "great strides" are louder than ever.

The National Cancer Institute, with hundreds of millions of taxpayers' dollars, and the American Cancer Society, with millions contributed in good faith by a hopeful public, serve more to bolster the status of cancer's current ruling class through carefully distorted facts—"careful public relations," as Dr. Watson put it—than to optimize the chances for real progress against the disease.

The U.S. still holds the record for cancer incidence—50 percent more than the world average—while the chance for an American to survive a cancer invasion has not increased more than 1 percent since the late forties. And this, despite improvements in early diagnosis and refinements in surgery, chemotherapy and radiation therapy—the only hopes that the American Cancer Society and the National Cancer Institute dangle before the public.

THE DOLLAR PUMP

Since NCI was founded in 1937 (largely through ACS lobbying) as the first of the National Institutes of Health (NIH), its policies and narrowly defined research priorities have reflected the opinions and ambitions of the medical professionals—gynecologists, surgeons, radiologists and pathologists—who dominate the scientific half of the ACS governing board (many of whom serve on NCI committees).

Founded in 1913 by a handful of physicians and laymen dedicated to "educating the public . . . getting them to seek medical advice early," ACS evolved in the 1940s into a coalition of medical professionals and powerful laymen from the top strata of industry, business and the Republican party who tailored public education programs to suit the needs of fund-raising crusades.

It was a small group of ACS members and associates who handcrafted the National Cancer Act, insuring that government funds for the National Cancer Institute would boost their self-serving strategies. With top NCI appointments no longer subject to review by suspension of all commercial air service between that country and the United States; denial of export licenses for certain armaments; and publication of a list of foreign airports and other public facilities which are dangerous and unsafe for use by American travelers. Hearings on this legislation will occur early next year.

SENATE ETHICS CODE

As a member of the Senate Special Committee on Official Conduct, I assisted in the development of and adoption of Senate Resolution 110 to establish a code of official conduct for Members, officers, and employees of the Senate. This measures requires full public financial disclosure by Members and high level officers and employees of the Senate with respect to income, assets, holdings, transactions, and liabilities; gifts from one source with aggregate value of over $100; limitation on outside earnings; certain restrictions on post Senate employment, use of unofficial office accounts, and a series of requirements specifically designed to prevent conflict of interest or appearance of such conflict. As a member of the Governmental Affairs Committee, I also worked on legislation to establish a statutory ethics code for Federal employees in all three branches of our National Government.

While it is a fact that improper practices of a few have reflected badly on the image of Congress as an institution, I believe that the ethical standards of most public officials are as high if not higher than in any other walk of life. Nevertheless, public perceptions are vitally important in a democracy; they are the basis for public confidence or lack of it. I believe that public confidence has been reenforced by the adoption and enforcement of the strong ethics code embodied in Senate Resolution 110.

CONSUMER PROTECTION

Senator RIBICOFF and I continued to push for the enactment of the Consumer Protection Act which we originally introduced in 1969. Having then been joined by Senator PERCY, we have worked in cooperation with President Carter and Esther Petersen, the President's Special Assistant for Consumer Affairs, to overcome substantial opposition from a segment of the business community. In an effort to facilitate passage of the bill we have joined with the Consumer Federation of America, the National Consumers' League, Congress Watch, and other citizen organizations. I anticipate a major effort to pass the bill early this year.

SENATE CONFIRMATION PROCESS

I introduced with Senators RIBICOFF and PERCY legislation designed to standardize the Senate confirmation process, to insure an adequate investigation and review of the background of all Presidential nominees—including FBI findings and financial data—and to establish a Senate Office of Nominations to review background information and to report its findings to the relevant committee having jurisdiction over the nomination. Lack of specific standards relating to affirmative qualifications as well as the scope and nature of the investigation have resulted in a frequently uneven and inadequate confirmation process. This legislation is designed to focus on providing a thorough review of the nominee's financial background as well as his qualifications and views on different policy questions. It is designed to supplement executive branch investigations without requiring a duplicative investigation which could have the effect of driving many people with complex private affairs away from Government service. Hearings are expected on this resolution in February 1978.

SMALL BUSINESS

This past year marked the initiation of significant development in Federal activities respecting the small business community. I am pleased to have the opportunity to continue my efforts in contributing toward this development.

In 1976, the Senate Small Business Committee received authority for legislative jurisdiction over the programs and activities of the Small Business Administration. Previously, the committee served only in an advisory capacity. During 1977 the committee embarked on a systematic legislative program, including a variety of initiatives to improve information concerning small business needs and activities, and to strengthen existing major Federal programs in small business financing, procurement and management assistance, as well as targeted assistance for minority small businesses. I have participated actively in supporting these initiatives.

I have also undertaken a primary role in developing specific areas that I believe warrant particular attention. Some of these include primary authorship of S. 1228, the Equal Opportunity Enterprise Act, a bill to provide a legislative basis and to strengthen existing Federal activities to assist minority small businesses; several major activities to define and strengthen the role of women in small business enterprise; as well as primary cosponsorship of legislation to improve the availability of capital and investment opportunities that contribute to meeting the needs of small businesses located in major urban centers.

I shall continue to pursue an active, developmental role respecting both the committee, and the Federal Government's efforts to assure a favorable economic and commercial climate for the small business sector.

NEW YORK STATE

Many times during the year, New York communities, organizations and businesses come to me for assistance in dealing with the Federal Government.

Woodburn Court

This 147-unit, subsidized rent housing project in Binghamton faced many serious problems in gaining approval from the Department of Housing and Urban Development. After numerous meetings with top level HUD officials and over a year of concentrated effort, the project was approved and groundbreaking held in May.

Potsdam Paper Corp.

When three paper company executives came to me in January and said they wanted to purchase and reopen a closed paper mill in Potsdam (St. Lawrence County) employing about 135 persons, I offered my assistance in obtaining a guaranteed loan from the Economic Development Administration. The $1.4 million loan was obtained, problems with the Federal Power Commission incidental to the sale were resolved, and I was honored to be the main speaker at the September opening of the Potsdam Paper Corp.

Snow Disaster Declaration

When an extraordinary blizzard hit northern and western New York in January, I went to work with the State and local governments in obtaining a major disaster declaration from the President to get necessary Federal assistance into the affected areas.

North Country Housing

Six senior citizens housing projects received funding and rental subsidy approval after I called together project sponsors and Federal officials in a 2-day February meeting in Watertown to thrash out issues blocking approval. The housing will be built in Madrid, Lowville, Canton, Clayton, Star Lake, and Heuvelton.

NEW YORK CITY

The precarious financial situation of New York City and Yonkers continue to be a major concern. Although both cities have made significant gains in achieving sound fiscal health this has not been without tremendous sacrifice on behalf of their residents and of New York State in general.

In New York City, the Citizens Committee for New York City which I caused to be organized—described by the New York Daily News as the largest volunteer effort in history short of wartime—continues to respond to the needs of neighborhoods created by the reduction in essential services. This year the Citizens Committee received a Federal grant from the U.S. Administration on Aging to enable individual block associations to provide supportive services to those elderly residents on their blocks.

One of the causes of New York City's financial condition is the loss of 600,000 jobs over the past 5 years. The economic regeneration of New York City has been and will continue to be my high priority. In that regard, I recently asked members of the business and labor community in New York City to join together as a committee and work with officials on the local, State, and Federal level to stop this hemorrhage of jobs and to assist in the redevelopment of New York's economy.

The city's tightened budget underscores the need for increased Federal assistance. I was successful in convincing the Commerce Department to restore approximately $369,000 to the borough of Manhattan. The funds will be used for programs to assist small minority businesses.

At my urging, the Department of

quire smaller monthly payments in the early years and gradually larger payments in later years. This would have the effect of making homeownership more available to young families whose incomes are likely to increase over the years.

On the floor of the Senate I introduced two amendments to the act—both adopted—to increase the loan limits for two-family dwellings insured by FHA and for section 8 apartment units utilizing GNMA tandem mortgages. These higher limits were necessary to permit utilization of these programs in high cost housing areas such as New York.

I also joined Senator CHAFEE and others in sponsoring an amendment, subsequently adopted to provide greater operating subsidies for housing projects insured and assisted under section 236. The measure will help troubled Mitchell-Lamas, as well as Federal projects, meet the higher utility costs incurred each year.

RURAL DEVELOPMENT

In addition to assistance to rural communities on specific projects, such as those described below, I cosponsored two bills of specific interest to rural New Yorkers. S. 1736, incorporated into the Food and Agriculture Act of 1977, permits farm improvement loans for solar energy equipment. S. 1200 provides more adequate funding for rural water and sewer systems, particularly those of our neediest communities. Although no action was taken on S. 1200 this session, I am hopeful movement will be made next year.

NUTRITION

With Senator DOLE and others I introduced a bill to make major revisions in the Food Stamp Act of 1964. This bill, incorporated with modifications in the Food and Agriculture Act of 1977, improves access to the program and streamlines its administration. The most significant change is the elimination of the purchase requirement so that the neediest families, who were unable to participate in the program because they did not have the money to purchase the stamps, may receive stamps regardless. This change, coupled with the introduction of a standard deduction for shelter, work, and other expenses, should greatly simplify the administration of the program and help eliminate abuses.

ELECTION REFORMS

Once again this session legislation to provide partial public financing of senatorial campaigns and permit direct election of the President failed of passage. Although the public financing bill was debated on the floor of the Senate, the bill did not pass because of the obstinacy of the majority. I supported efforts to make improvements in the bill reported by the committee and shall work to see that the issue is brought to the Senate floor next session. The direct election of the President necessitates a constitutional amendment. This process takes a good deal longer than does legislation.

GOVERNMENT REORGANIZATION AND REFORM

In conjunction with President Carter's major commitment to reorganize and revitalize the executive branch of the Federal Government, and in my capacity as a senior member of the Governmental Affairs Committee, I sponsored major legislation to reauthorize and expand the basic authority of the President to accomplish this goal pursuant to the Executive Reorganization Act. Specifically designed to promote more precise assessment of areas where Federal agencies serve duplicative, uncoordinate, and sometimes contradictory purposes, the act is designed to improve delivery of services to the American taxpayer at more reasonable cost.

In addition, I have helped to enact the first two in a series of Presidential reorganization plans dealing first with the budget and staff reduction of the Executive Office of the President and the White House staff, and, second, with the reorganization of the U.S. Information Agency, the Voice of America, and other cultural and educational functions of the Department of State.

Pursuant to Senate Resolution 71, passed by the Senate in 1975, I joined in the most comprehensive study of Federal regulation ever undertaken by the Congress. This study was published last year in five volumes dealing with the regulatory appointments process, congressional oversight of regulatory agencies, public participation in regulatory proceedings, delay in the regulatory process, and organization of regulatory agencies. At a time of particularly high inflation and unemployment, there has been concern that some regulatory programs were fueling inflation.

Also, there was a growing concern over the size and complexity of the Government over the paperwork burden imposed by regulatory agencies, and over the waste and ineffectiveness of certain regulatory programs. The study looked across the spectrum of the Federal regulatory system and considered seriously the potential for airline and trucking deregulation; the greater use of economic incentives to clear up the environment; reorganization of food, banking, and transportation regulation and the specific cost and benefits of regulatory programs which directly affect the marketplace. I intend to join with other members of the Governmental Affairs Committee next year in introducing several pieces of legislation designed to implement the major recommendations of this extensive study.

In addition to these major proposals designed to reshape the Federal bureaucracy to make it more efficient and workable, I have also participated in the consideration of legislation to create a Cabinet-level Department of Education, and to reorganize the equal employment opportunity functions of the Federal Government specifically by strengthening the EEOC and the Department of Labor with regard to this important function.

CRIME AND CRIMINAL JUSTICE

STANDARD SENTENCING

One problem which plagues the administration of our judicial system is the great disparity of sentences imposed for offenses of a similar nature. This has contributed to a rising lack of confidence in the general effectiveness of our criminal justice system. Respect for the law itself has also been seriously compromised. To deal with this problem, Senator GARY HART and I introduced the Federal Sentencing Standards Act of 1977. The principal purpose of this bill that will be considered by the Senate early in 1978 is to narrow the discretion which may be exercised by sentencing judges by employing a "presumptive sentence" which would be fixed for each gradation of criminal behavior. All individuals convicted of crimes of that degree of seriousness would receive the presumptive sentence, unless there were specific, carefully defined circumstances of aggravation or mitigation. Indeterminancy of sentencing would be phased out. Hearings were held on the bill in the Senate Judiciary Committee which has endorsed these principles in its proposed legislation to reform the Federal Criminal Code.

MARIHUANA REFORM

My legislation to decriminalize the personal, private possession and use of one ounce or less of marihuana, originally introduced by the Congressman (now Mayor-Elect) KOCH and me in 1972, gained significant support during the last year. President Carter's specific endorsement of our bill and the continuing progress during the past year toward decriminalization in several States, including New York, have made passage of our Federal bill more likely next year. The bill would substitute a civil fine of up to $100 for the current criminal penalty. Commercial sale of the drug for profit would remain a Federal criminal offense.

GUN CONTROL

In the important area of gun control, I again sponsored two measures—the Intergovernmental Handgun Control Act, and the Intergovernmental Law Enforcement Cooperation and Reorganization Act. Major opposition from the National Rifle Association and others have prevented significant action on this legislation. One of these bills would transfer Federal responsibility for firearms from the Treasury Department to the Justice Department. The other would prohibit the possession, sale, importation, or delivery of handguns in certain standard metropolitan areas. Persons exempt from these restrictions would include law enforcement officials, licensed security guards, and military agencies. The measures were referred to the Judiciary Committee and to the Government Operations Committee. I expect to return to this measure in the new year.

ANTITERRORISM

With Senator ABRAHAM RIBICOFF, I introduced legislation that would use diplomatic initiatives and strong sanctions to encourage all nations to work together to combat international terrorism including airline hijackings. The bill would direct the United States Government to identify and impose sanctions on countries that aid or abet individuals or groups which commit international acts of terrorism. Nations so identified could be subject to sanctions including duced during the last Congress which also passed the Senate, but was not acted upon by the House of Representatives due to the crush of legislation before the Presidential election. I believe that the current measure will be approved by the House shortly after Congress reconvenes in January and that this long overdue and much needed legislation will soon become law. The bill requires the licensing of all clinical laboratories performing medical testing; the establishment of national standards to improve the performance and personnel of these facilities; and prohibition of fraud and abuse in laboratory business practices.

I also introduced a measure which I believe will bring us closer to attaining a comprehensive national health program, a commitment I have strongly advocated during my tenure in the U.S. Senate. My bill, the national health insurance for mothers and children bill, would establish a comprehensive system of national health insurance for mothers and children as well as begin a long overdue shift of emphasis to preventive medicine, health promotion, and health maintenance rather than relying on traditional episodic illness treatment.

I was a cosponsor of the Health Services Extension Act which has become public law. This bill extended assistance to many Federal programs including the National Cancer Institute, community health centers, national health planning and development, health resources development, sudden infant death syndrome, hemophilia sufferers, and community mental health centers.

In response to wide public opposition to the proposed ban on saccharin by the Food and Drug Administration, I cosponsored a bill which would impose an 18-month delay of the ban in order to allow further study and investigation, not only on the part of the scientific community and the government, but on the part of the public as well. The Senate-passed bill contained labeling requirements which would alert the consumer to the potential hazards of saccharin or products containing the substance. I believe that this measure is an equitable one which preserves the use of saccharin for those who use it for medical and dietary purposes, while at the same time makes the public aware of the potential dangers of its use so that they can make an "informed choice." This measure has been signed into law.

In addition, the Human Resources Committee reported legislation which would establish a safety program for recombinant DNA experiementation (the material which makes up genes) in order to insure the public's protection in those parts of the country where such experimentation takes place. However since reporting the bill, new studies have been presented by the scientific community suggesting the need to reevaluate the approach of our bill, and we are now in the process of that reevaluation.

I introduced the most comprehensive and far-reaching legislation in this Congress to reform the Food and Drug Administration and to provide a new process by which the Agency can better assure the public about safe and effective medicines.

The bill—the Comprehensive Drug Amendments of 1977—is a major consumer protection bill. S. 2040 would not only guarantee better decisions for the public health, but would for the first time make sure these decisions would not be made in a closed and secret fashion. The public would finally participate in these important decisions and understand why these decisions have been made. Today this is a closed and secret process and the public never knows why certain drugs are allowed on the market and others remain unavailable.

The public's confidence in the FDA and its decisions has been impaired. This bill would provide for a new and open process which would provide the public with opportunities to become part of this crucial deliberative process and thereby reestablish an understanding and confidence in its decisions.

Finally, I joined my colleagues on the committee in cosponsoring the Hospital Cost Containment Act, which establishes a transnational system of hospital cost containment and a system of capital allocation designed to encourage communities to avoid the creation of unneeded and duplicative hospital facilities and services. I firmly believe that we must begin to take steps toward more permanent reforms in the way we finance and deliver health care. In this regard, Senator Edward Kennedy, chairman of the Subcommittee on Health and Scientific Research, and I, along with the National Journal, cosponsored the National Leadership Conference on Controlling Health Care Costs held in Washington on June 27–28.

The conference addressed the health costs issue through six critical areas of health manpower, planning, reimbursement, quality, delivery system, and technology. I am committed to seeking solutions to curb the continued upward spiral of health costs in the United States which jeopardizes quality health care by delaying the implementation of a national health insurance program and threatens other social priorities such as welfare, education, employment, and housing.

HANDICAPPED

This last session has seen landmark advances for handicapped citizens. Regulations implementing section 504 of the Rehabilitation Act, which I am pleased to have coauthored, will prohibit discrimination against handicapped individuals in all Federal programs. Enforcement of section 504, the beginning of equal public education services for handicapped children mandated by Public Law 94-142, the Education for All Handicapped Children Act which I cosponsored, and the implementation in all 50 States of the protection and advocacy systems for the developmentally disabled—mandated by the Bill of Rights provisions of Public Law 94-103 which I authored, all make 1977 as a year of historic improvement in the realization of the guaranteed rights, education, and opportunities to which handicapped citizens are entitled.

I introduced S. 2042, a bill to assure that New Yorkers begin to receive their fair share of Federal funds under the $760 million vocational rehabilitation program. The current funding formula unfairly discriminates against our handicapped citizens.

I was active in the passage of the extension of the Education of the Handicapped Act (Public Law 95-49) which includes my amendment to better assure continued services to children with severe learning disabilities.

I will shortly introduce legislation to correct a ridiculous and unconscionable situation in our current law which presently requires that a handicapped person, employed and earning more than $200 a month, is deemed ineligible for any home health assistance, because employment precludes that person being considered "disabled" for purposes of assistance. To present the disabled worker with a choice of either working and losing all assistance or not working at all, in order to retain eligibility for needed, life-sustaining services, is, in effect, no choice at all. My bill will permit handicapped individuals to utilize only those public services needed, rather than forcing them onto welfare rolls at much greater taxpayer expenses, and at devastating cost to their own self-fulfillment.

CHILD AND HUMAN DEVELOPMENT

The Congress recentlv passed the provisions of S. 961, which I cosponsored, to improve adoption procedures among States, to assist adoption of special and handicapped children, and to extend and improve the child abuse prevention program. This measure has been signed into law by the President.

VETERANS

Far too few New York veterans use their GI bill opportunities, largely because today's GI bill, unlike the World War II law, does not take into account State differences in educational costs. I introduced S. 1899, a bill to provide tuition assistance to GI's who are attending high cost educational institutions. The Senate recently accepted the principle embodied in my bill—that our veterans deserve equal opportunity to use their once-in-a-lifetime chance to attain adequate education and training, regardless of State of residence—by enacting a similar tuition assistance provision as part of the GI bill amendments. Unfortunately, the House added a requirement that States share the cost of tuition assistance. I am committed to the removal of this unfair burden on GI bill opportunity for New York veterans.

HOUSING

I strongly supported the Housing and Community Development Act of 1977, which is now law. Among the significant changes to our urban policy made by this act was the addition of a $400 million program of Urban Development Action Grants targeted at our neediest major cities and a redefinition of eligibility for Community Development Block Grants.

The new criteria for participation will help correct the imbalance that has existed favoring newer cities over older ones such as we have in New York State. Also incorporated in the act were certain provisions of S. 664, which I had joined Senator Brooke in cosponsoring, permitting the Federal Housing Administration to insure mortgages that re-

Labor. This new law supersedes the previous Coal Mine Safety and Health Act and the Federal Metal and Non-Metallic Mine Safety Act with a strong and comprehensive regulatory approach to protect workers in one of the most hazardous occupations in our Nation's workforce.

Black Lung Benefits

The Black Lung Benefits Reform Act of 1977, which I cosponsored, has passed both the Senate and the House in differing forms and I am confident that it will be finally enacted early next year. The black lung benefits program, first enacted in 1969, provides benefits to coal miners and their survivors who have contracted disabling black lung disease as a result of exposure to excessive levels of coal dust. The bill will provide benefits to many persons who had been unfairly denied them in the past and also shifts financial responsibility from the U.S. Treasury to the coal mine operators through an industry trust fund financed through a tax on coal production. This trust fund was created through an amendment which I sponsored in the Human Resources Committee.

Mandatory Retirement

I have had a special interest in age discrimination legislation for many years. I introduced my first such bill back in 1951 when I was a Member of the House of Representatives. My efforts reached fruition in 1967 when the Age Discrimination in Employment Act was passed.

To expand further the protections of the act, I introduced legislation this year to phase out gradually over a 7-year period the act's upper age limit of protection which is presently age 65. My bill would also make clear that pension plans cannot contain forced early retirement provisions.

The Senate Human Resources Committee held hearings on my bill and finally approved a measure raising the upper age limit to 70 years of age effective January 1, 1979. For collectively-bargained pension plans which have 65 as the mandatory retirement age, the effective date for making changes will be no later than January 1, 1980. Though still committed to phasing out the age gap altogether, I support raising the age limit to 70 as an important interim measure. The House has passed a similar bill and I am confident that a bill will finally be enacted early in the next session of Congress.

Preparing for Employment Education

The education provisions of the Youth Employment and Demonstration Projects Act of 1977 provide Federal assistance to build essential linkages between the worlds of school and work for our young people. My amendment insures that in-school youth will participate in job programs to help them make the transition from school to the labor force. Another provision I authored funds cooperative efforts among national, State, and local officials to gather and distribute career and occupational information. This eliminates wasteful duplication and will give our young job seekers the information they will need to plan for and find a job.

The relationship between education and work will also be strengthened by career education legislation, which I cosponsored in the Senate. This measure will serve to implement a concept of career education which will give our schoolchildren a more realistic view of all the career options open to them.

I also worked closely with the Department of Health, Education, and Welfare to insure that needy students in certified trade schools could continue to pursue vocational training with Federal support.

Gifted and Talented

I am particularly gratified by legislation which I introduced authorizing the President to proclaim "National Gifted and Talented Children Week." Our society has a very real obligation to develop fully the potential of these children. Their special needs and abilities require recognition and careful development. I am also reviewing the present Federal program for gifted and talented children, which I authored in 1974. Consideration next year in the Congress will focus on how to strengthen efforts already begun.

Energy

Institutional, as well as individual, conservation is crucial to our ultimate self-sufficiency in energy. Thus, I joined with other Senators in sponsoring the Emergency Educational Assistance Act, which will assist educational and other institutions in the improvement of physical facilities to conserve precious energy resources. The prospects for enactment are excellent. It will particularly aid institutions in the Northeast which suffered greatly from the severe winter of 1977.

Impact Aid to Education Districts

During this session of Congress, I strongly opposed proposed cuts in impact aid to federally affected areas, and these cuts were rejected by Congress. Impact aid payments to students in federally supported public housing and other facilities have been continued.

Indo-Chinese Refugees

Refugees entering this country from Southeast Asia have special education requirements. To meet these needs, I supported legislation which would provide Federal educational assistance to Indo-Chinese refugees. I worked to insure inclusion of adult refugees in education programs, which will enable them to participate fully in the life of their new homeland.

Truman Scholarships

I am honored to serve as vice president of the Board of Trustees of the Harry S Truman Scholarship Foundation. This year the foundation successfully established new scholarship awards to young people pursuing careers of public service. This is the official Federal Government memorial to this great President. In 1977, the first scholarships were established and awarded to an outstanding group of young persons. College students entering their third year are eligible. Interested parties should contact officials at their own colleges who make all nominations.

Next Year

The extension of all major Federal programs for elementary and secondary education is currently being examined by Congress. I am particularly concerned that the needs of students in urban areas be fully met. Review and improvement of these programs will be a major educational activity of the Congress next year. I shall continue to fight to see that New York State gets its fair share.

ARTS AND CULTURAL ACTIVITIES

As the original author of the law for Federal aid to the arts, I have long been a strong supporter of greater Federal aid for cultural activities in our Nation. The situation has improved markedly, but we still have a long way to go in the Federal Government.

Libraries

I take particular pride in an amendment which I introduced to the Library Services and Construction Act to include special emphasis on public libraries in the Nation's urban centers. Congress adopted this amendment, which would provide funds to urban libraries to continue and improve essential services. My amendment aids not only the major resource libraries, but an entire network of interdependent institutions, the core of which is the urban library.

Artist Contributions Tax

I have introduced and am working for legislation to amend the Internal Revenue Code to provide equal treatment to artists who contribute their own works to nonprofit organizations. Such gifts increase the opportunity for the public to enjoy great works of art. Current tax law is an obstacle to artistic contributions to museums, libraries, and universities, because the artists cannot deduct the true value of his work when he gives it to the public. I will make every effort to insure that the anomalies in the Tax Code are rectified so that our country's cultural life will continue to improve.

White House Conference on the Arts

I recently cosponsored a resolution authorizing the President to convene a White House Conference on the Arts. A national meeting will build on the work of a State conference in each State to examine State and local needs. This activity will enable the growing number of individuals and organizations concerned with the arts to meet and discuss pressing financial and policy issues. With a coherent national arts policy, we can enrich the quality of life of all Americans.

HEALTH

In the Health Subcommittee of the Senate Human Resources Committee, on which I serve, and also as ranking minority member of the full committee, I have dealt with many important public health issues this year, including clinical laboratories regulations and improvement, the ban on saccharin, hospital cost containment, preventive medicine, pricing of medicines, biomedical research, the health of children, and CIA drug experimentation on humans.

During the first session, I reintroduced the Clinical Laboratory Improvement Act of 1977 which has passed the Senate. S. 705 is essentially the same bill I introing Act—CETA—to bring the cumulative total to 1 million special, 1 year public service jobs. Although I was not entirely satisfied with the appropriation of funds—enough for a cumulative total of 725,000 jobs—I supported the decision of the administration and Secretary of Labor Marshall that local governments might not be able to absorb more than 725,000 jobs. I have been gratified to learn in recent weeks that the administration is considering expanding still further the number of jobs provided for under CETA.

Second, my analysis of the unemployment situation convinced me that with half of the U.S. unemployed being between the ages of 16 and 24, youth unemployment required enactment of special measures. In January, Senator HUMPHREY and I authored and introduced the Comphrehensive Youth Employment Act of 1977, provisions of which were later incorporated in the President's own bill, submited in April 1977. The Youth Employment and Demonstration Projects Act of 1977, which I cosponsored and managed on the Senate floor as ranking minority member of the Senate Subcommittee on Employment, Poverty and Migratory Labor, was signed into law as Public Law 95–93 on August 5. I take great satisfaction in the enactment of this major bill, to deal decisively with the tremendous unemployment problem borne by our Nation's young people. I am particularly pleased that Congress agreed to the amendment I offered to facilitate the transition of young people from school to work, by encouraging local governments and education agencies to operate jointly various career education and work experience programs for in-school youth. Over $130 million is authorized for these programs in fiscal year 1978.

Similarly, Public Law 95–93 contains provisions which I authored to expand our systems of ocupational and career information collection and delivery.

Minimum Wage

Along with Senator HARRISON A. WILLIAMS, I introduced minimum wage legislation this year to provide overdue wage protection for millions of American workers who are at the bottom of the age scale and who are least able to protect themselves against the effects of our highly inflationary times. This legislation has now been enacted, providing an increase in the minimum wage to $2.65 an hour in 1978, $2.90 in 1979, $3.10 in 1980 and $3.35 in 1981.

The bill also includes an expanded exemption for small retail and service businesses from the minimum wage increases. Such establishments will be exempt if their gross sales volume is under $275,000 beginning July 1, 1978, $325.000 beginning in July of 1980, and $362.500 beginning December 31, 1981.

In my judgment, this bill provides the minimum required for the poorest members of the work force, and at the same time is compatible with the need to increase employment opportunities and to mininize inflationary economic pressures.

Pension Reform

As a principal coauthor of the private pension reform law (ERISA), I have closely been monitoring the law's implementation. In major policy addresses in August and September, I called for improvements in the law.

I favor full vesting of benefits after 5 years of service and required cost-of-living increases for retirees. I support the expansion of the joint and survivor annuity protection so that the vested benefits of participants who die early will be paid to their surviving spouses. I also favor permitting employees who are covered by poorer pension plans to contribute tax deductible amounts to individual retirement accounts in an amount equal to the difference between $1,500 and the employer's annual contribution to the plan.

In October, the Senate Committee on Human Resources, of which I am the ranking minority member, held oversight hearings on ERISA. We covered such topics as improved administration of the law, better protection under the termination insurance provisions, reduction of paperwork requirements, and improved treatment of multiemployer plans. We also discussed my bill S. 2019, which would delay for 1 year mandatory coverage of multiemployer plans by plan termination insurance. The purpose of this bill is to avoid the potential dumping of hundreds of millions of dollars in unfunded liabilities on the Federal insurance company (PBGC) until a long-term solution to multiemployer problems can be devised. A bill providing for a 1-year deferral has just passed the Congress and has been sent to the President for his signature.

Aging

The 95th Congress began with an effort to recognize the committee structure of the Senate, including abolishing the Senate Special Committee on Aging. I am pleased to report that I joined with other Senators to save the Special Committee on Aging.

Labor and Reform

This year the Labor Subcommittee held extensive hearings on the Labor Reform Act of 1977 (S. 1883) which I introduced after President Carter endorsed the goals of increased administrative efficiency and strengthened remedial powers for the National Labor Relations Board. I expect the Human Resources Committee to approve this bill early next year, as it incorporates practical improvements in the administration of the existing labor laws which are designed to reduce the instances of persistent refusals to comply with the law by some employers and unions. Since the bill is not intended to change the substantive rights of either labor or management, it will not affect the balance of power at the bargaining table. Most of the bill's provisions are primarily addressed to protecting the rights of employees during the critical period before a collective bargaining relationship is first established. I will work on the bill in committee to insure that in the next session that it achieves its stated purposes.

Sex Discrimination

I introduced legislation (S. 955) to prohibit employment discrimination against women on the basis of pregnancy. This bill is designed to overrule the Supreme Court's decision in General Electric against Gilbert (1976), which held that discrimination against pregnancy was not sex discrimination under title VII of the Civil Rights Act of 1964. Discrimination against pregnancy and childbirth is not only bad family policy, I believe it is obviously harmful to the full opportunity of women to participate on an equal basis with men on the job. The bill does not go so far as to mandate benefits for pregnant employees, but simply requires employers to treat pregnancy-related conditions on the same basis as they treat any other nonwork related disabling condition with regard to benefits and leave policies.

Productivity and Quality of Working Life

Early in 1977, I introduced in the Senate a bill to provide a greater opportunity for U.S. workers to participate in the decisionmaking process in their own firms. S. 533, the Human Resources Deelopment Act, which was introduced in the House of Representatives by Representative LUNDINE of Jamestown, N.Y., would authorize the Secretary of Labor to fund demonstration projects involving enhanced labor-management cooperation, especially through joint cooperative committees. I believe these joint decisionmaking and problem-solving committees can result in improved productivity and job-security, by releasing the creative potential of workers, by improving morale and by enriching workers' job experience. Hearings were held in the Employment and Poverty Subcommittee in September, and it now appears that a bill will be reported by the full Human Resources Committee in the next session.

Antipoverty Legislation

In 1977 I cosponsored two major bills to extend authorization of existing antipoverty programs.

The Legal Services Corporation Act Amendments of 1977 would extend for 5 additional years the authorization of this vital program to make a reality the words etched in stone on the facade of the U.S. Supreme Court Building in Washington, D.C.: "Equal Justice Under Law." During committee consideration, I moved the amendment to permit legal services lawyers to act in desegregation cases on behalf of indigent clients. I believe we must afford an opportunity to our poor to redress their grievances by working within our system instead of from without. This bill was passed by Congress on December 15, will become law soon and while amended it will do the job.

I also cosponsored the Economic Opportunity Act Amendments of 1977, to extend for 3 more years our community-based antipoverty programs. Our bill, which will be acted upon early next year, makes a number of much needed improvements in existing legislation, such as providing for an 80/20 Federal share-local share funding arrangement, in contrast to the 60/40 approach contained in present law.

Mine Safety and Health

The Federal Mine Safety and Health Amendments of 1977, which I cosponsored, was enacted this year to bring all safety and health mine enforcement activities within one legislative framework to be administered by the Department of amendment—the due process amendment—giving all parties a hearing before the Department can impose fines or penalties upon them in regulatory proceedings.

In the area of energy policy, I am a principal cosponsor of the Nuclear Non-Proliferation Act, S. 897, which would set new standards for licensing of reactor and nuclear fuel exports, insuring that recipient countries could not divert any such material for atomic weapons purposes. The bill has not yet been enacted, but is pending on the Senate's calendar.

Additionally, I sponsored a concurrent resolution directing the President and the Federal Power Commission to study the causes of the July 13 Consolidated Edison blackout in New York City, and to recommend actions to prevent such occurrences in the future.

CONSERVATION

I continued to cosponsor the effort to provide tax credit assistance to homeowners who insulate their residences (now law). I authored amendments to the Energy Conservation Act, S. 2057, requiring a study of ways to expand the the utility audit conservation program to apartment houses and cooperatives; to the Coal Conversion Act, S. 977, providing loans and loan guarantees to companies that are in difficulty financing conversion from oil and gas to coal power boilers; and I cosponsored an amendment to the Utility Rate Reform Act, S. 2114, which allows local gas companies, such as Brooklyn Union, to keep my gas for their own customers that is saved by conservation programs. I opposed efforts to deregulate the price of natural gas.

Nonlegislatively, I helped found and now honorarily cochair, the New York Alliance to Save Energy, a nonprofit voluntary citizens group dedicated to encouraging energy conservation in the State.

RESEARCH AND DEVELOPMENT AREA

I authored an amendment to the ERDA authorization bill which funds a study to develop a plan for the decommissioning of the West Valley Nuclear Storage site; and I was instrumental in obtaining funding for the new Brookhaven National Laboratory high energy particle accelerator, Isabelle, on that same bill.

I cosponsored the Oil Spill Liability and Compensation Act, S. 121, to provide protection from spills such as the *Argo Merchant* last year; the Solar Energy in Government Buildings Act, S. 672, which would require solar installations in enough buildings to begin bringing the cost down; and the Regional Energy Development Act, S. 2161, which would allow the Northeast States to form an energy conservation and development authority with the benefit of Federal loan guarantees. Hearings are now scheduled on this bill in the Governmental Affairs Committee.

ENVIRONMENT

The Congress passed two major environmental laws this year, the Clean Air Act amendments and the Federal Water Pollution Act amendments. I supported both and voted to limit the delay in auto emission standards to only 1 year. I also sponsored an amendment to the clean air bill which allows New York City to substitute alternative solutions to the East River bridge toll requirements contained in its original transportation control plan.

I introduced S. 747, the Aircraft Noise Retrofit Act, which continues my effort to require all airplanes in the fleet to meet existing noise standards by 1983. The bill would place 2 cents from the current airplane ticket tax directly into a fund usable only for making airplanes quieter. I also cosponsored the Beverage Container Recycling Act, S. 276, which would ban throwaway cans and bottles within 3 years.

SOCIAL SECURITY

It is absolutely essential that we restore fiscal soundness to the social security system. I believe that a gradual increase in the amounts employers and employees pay is the best way of dealing with the short-term funding problems of social security. Further study is necessary, however, before we take such long-term steps as using general tax revenues to fund social security when unemployment is high.

Current law restricts the financial freedom of our older citizens. I have called for the gradual increase in the earnings limitation so that many of our older citizens may engage in beneficial employment. Those who need extra money should be permitted to work. I am opposed to raising the age for the payment of retirement benefits from 65 to 68 years of age. Such an increase would reduce freedom of choice by forcing many employees who want to retire to continue working in order to support themselves.

The bill just passed incorporates many of these principles.

WELFARE

A pressing problem for New York as well as for the Nation is the need for comprehensive welfare reform providing a more equitable distribution of the welfare burden. I introduced S. 1977 to provide for a uniform 75 percent Federal reimbursement rate for welfare expenses as a necessary interim step to provide fiscal relief to our cities and States. This would replace the present system of reimbursement ranging from the 50 percent received by New York to 78 percent. I joined Senators MOYNIHAN and WILLIAMS in introducing S. 2084, the President's welfare reform measure, to demonstrate my firm commitment to comprehensive reform of our income maintenance system.

UNEMPLOYMENT COMPENSATION AND REFORM

I have long been deeply concerned about the viability of the Federal-State unemployment insurance (UI) system. The economic recession of the past 3 years has jeopardized the financial stability of the UI system and left it unable to provide sufficient benefits during prolonged periods of high unemployment.

In July 1977 I introduced legislation (S. 1853), along with Senator HARRISON A. WILLIAMS, JR. of New Jersey, to strengthen the UI system and enable it to meet future economic emergencies. This proposal, the Unemployment Compensation Reform Act of 1977, would redistribute the economic burden of the UI system by the establishment of a cost equalization reinsurance grant program, financed through general revenues, which would allocate grants to States when the insured unemployment rate reaches 6 percent or more. These grants are provided to pay a portion of the States' extraordinary UI costs during periods of high unemployment.

S. 1853 would also establish a two-stage, standby program of extended benefits to be activated on the basis of excessive national or State unemployment levels. This standby program will eliminate the necessity for ad hoc congressional action in creating emergency unemployment assistance programs when the Nation is plagued by high unemployment. Since the beginning of 1975, millions of workers would have exhausted their regular State benefits without being able to find new jobs. It was only through action by the Congress in creating the Federal supplemental benefits program that they were able to provide for themselves and their families. The Unemployment Compensation Reform Act would eliminate the need for such emergency congressional action in the future.

This act addresses the current problem faced by those States, such as New York, that have experienced high rates of unemployment for prolonged periods of time. The bill would provide that States now in the deepest debt would be given additional time to repay their loans for unemployment compensation to the Federal Treasury, and it would lessen the effect of the present penalty tax imposed upon employers in States with outstanding loans by providing that the penalty tax would be no more than 0.3 percent in any year.

The Unemployment Compensation Reform Act is designed to bring the Federal Government into responsible partnership with the States in meeting the needs of American workers who are unemployed through no fault of their own, a goal I have been striving to achieve for many years.

EMPLOYMENT POLICY

LABOR AND JOBS

As 1977 began, our economy continued to suffer from the persistent and severe unemployment of nearly 7 million people. My own analysis of the problem led me to conclude that cyclical unemployment and youth unemployment—representing by far the major part of the problem—demanded the immediate attention of the 95th Congress. First, the abnormally slow pace of economic recovery in 1976 from the deep recession had failed significantly to reduce the number of unemployed in comparison to prerecession levels. In many areas of our country the recession had never ended, for all practical purposes.

Accordingly, I asked Senators MUSKIE and BELLMON, the chairman and ranking minority members, respectively, of the Committee on the Budget, to consider making provision in the fiscal year 1977 budget for the creation of an additional 690,000 public service jobs under the Comprehensive Employment and Train-

New York State Residents in Bolivian and Mexican Prisons

I have been very concerned about the treatment of Americans in Bolivian prisons. Many New York residents have been held there without sentencing for over a year. I have authorized a GAO investigation into this problem as well as into the behavior of the Drug Enforcement Administration. Their report to Congress is due in February 1978.

The new treaty with Mexico for U.S. prisoners to be repatriated is now in effect.

INTERNATIONAL ECONOMICS

State of the World Economy

Serious challenges are facing the international economy in the form of rising protectionist sentiment, continued large financial surpluses in the oil-exporting countries, large deficits with attendant mounting international debt in the oil-importing countries and high levels of inflation and unemployment. These challenges seriously cut into the ability of many countries to undertake sustainable real growth policies. In addressing this issue, I have sought to spur the responsible officials in Government, business and labor to develop the necessary economic, political, and diplomatic solutions to these problems.

To meet these challenges, I have recommended that the oil-rich countries be induced to provide greater funds for development of poor countries to international financial institutions; new international trading rules be developed to protect the legitimate concerns of the United States and of both the exporting and importing countries; and that our assistance, retraining and relocation programs for workers who are laid off due to imports be reexamined to insure that they are effective and responsive to the needs of the workers.

Problems Facing the Steel Industry

I urge the President to maintain until June 1979, the quotas on specialty steel imports in order to permit the domestic specialty steel industry to complete its already underway major restructuring program.

I then urged the President to take all necessary action under U.S. law to insure that the U.S. steel industry is protected against unfair and illegal trading practices.

And I also urged the President to instruct his Special Trade Representative to develop in the Multilateral Trade Negotiations long-term international solutions to the problems facing the international steel trade.

Overseas Trips

In June, I served with Secretary of State Vance as a member of the U.S. delegation to the Conference on International Economic Cooperation (CIEC) to discuss the elements of mutually acceptable solutions to the problems of the developing countries (North-South dialog).

MAJOR LEGISLATION

S. 1771, authorize extension of the Overseas Private Investment Corporation for (3 or 4) years.

S. 2152, authorize U.S. contribution of $1.7 billion to the Supplementary Financing Facility (Witteveen Facility) of the International Monetary Fund to provide greater official balance of payments financing to countries facing serious international payments and debt problems.

Public Law 95–52, extend the authority of the Export Administration Act to control U.S. exports; this legislation includes a prohibition against the participation by U.S. citizens in certain discriminatory and trade restrictive practices resulting from the Arab boycott of Israel.

Public Law 95–118, provide increased participation by the United States in the World Bank and other international financial institutions. I was instrumental in developing language on human rights provision of the bill.

Public Law 95–88, authorize appropriations totaling $1.65 billion for fiscal year 1978 for bilateral assistance, international disaster assistance programs, and voluntary U.S. contributions to international organizations. I sponsored amendments authorizing $1 million study on southern Africa; an assessment of health programs under AID and the earmarking of up to $60 million in aid to India.

S. Res. 271, request the President to create a Commission on Domestic and International Hunger and Malnutrition (cosponsor).

ECONOMIC POLICY

As chairman of the Senate Republican Policy Committee's Economic and Social Issues Subcommittee, I was responsible for the formulation of a broad and multifaceted economic policy program: "Permanent Jobs and Investment for America." Our program was incorporated into 10 separate legislative initiatives, including proposals for permanent income tax rate reduction; expanded youth employment and training program, tax incentives to homeowners to upgrade their energy-saving insulation materials; a targeted employment tax credit to firms for hiring the long-term unemployed; a reduction and simplification of income taxes on the first $100,000 of corporate (small business) profits; an increase in the tax exclusion on dividends and interest; and accelerated depreciation of plant and equipment placed into service in high unemployment areas.

Each of these proposals has been considered by the appropriate legislative committee of the Senate, and some, including the youth employment bill, the insulation tax credit, and the employment tax credit, have been enacted in whole or in part.

I regret, however, that the administration opposed and the Senate did not agree to the tax bill amendment offered by Senator Danforth and me in April 1977. Our amendment would have struck the $50 tax rebate scheme proposed by the new administration, and substituted a permament tax cut of between 4 and 14 percent in income tax rates in the taxable income brackets below $20,000. In my judgment, the administration's $50 rebate was like a pep-pill, giving only a one-shot quickie stimulus to spending. The permanent tax cut would have given consumers and businesses confidence that their incomes would be higher over the long term as well as in the short run. I believed these lasting qualities to be essential to achieve and sustain permanent jobs and durable economic prosperity for our country. It is my hope the permanent tax cut which the administration is now believed to be considering will be enacted in time to assure continued and stable economic growth.

In the next session of the 95th Congress I intend to continue my role in developing and putting forth an enlightened economic program to deal with the severe structural economic problems which continue to beset our country.

Economic Activity

One of the provisions under title VI of the Comprehensive Employment Training Act, Public Law 94–444, set up a National Commission on Employment and Unemployment Statistics to study and analyze the methodology and validity of employment statistics. Because I am ranking member of the Joint Economic Committee and the Human Resources Committee, I am serving as an adviser to the Commission. Their findings will aid us in determining better foundations for the assignment of Federal grants, revenue-sharing and local and regional assistance.

I took an active part in formulating the minority views in both the annual and mid-year economic reports to the Joint Economic Committee. In the mid-year report, I pointed out the need for increased productivity, a long-standing interest of mine, which has become increasingly important in today's economic world of increasing wage costs and high inflation. In addition, I reemphasized the need for extensive conservation measures to be considered in any energy legislation.

Women's and Consumer's Rights

With respect to women workers in our economy, I set up hearings on this issue for the Joint Economic Committee. In addition, I sent a request to the chairmen of all House and Senate committees to consider the economic impact on women of new legislation. This procedure is already followed in the Human Resources Committee and has proved successful in avoiding errors, the inequitable treatment of women. I also took an active role in a conference on minority and female contractors in Federal procurement. This conference examined the actual progress of the participation of female and minority contractors in getting Federal contracts. I expect much useful information and several legislative proposals to emanate from this work. I advocated passing laws to assure allocation of procurement dollars to minorities and women.

ENERGY

Energy was one of the most active legislative areas in the first session. I was a cosponsor, developer, and conferee on the act creating the Department of Energy, S. 826. I authored title VII of that act, energy planning, which requires the President to periodically submit a comprehensive energy supply and demand forecast, for 5 and 10 year periods, together with proposals for meeting our future energy needs. I also sponsored an man of the board of S.C. Crop Improvement Association and Foundation Seed Association.

He served for several years in the state House of Representatives as the representative from Greenwood County. He was Master Farmer in the first South Carolina group in 1928 and twice served on the Clemson Board of Visitors. He was on the Governor's Advisory Committee for Agriculture and served on the building committee for Greenwood County Courthouse. He served as chairman of the Extension County Agricultural Committee. He was an honorary member of the Block & Bridle Club and Agronomy Club of Clemson University. He was elected to the national honor society of Agriculture, Gama Sigma Delta in 1975 His wife, Mrs. Ethel English Wells Henderson, died in 1967.

He is survived by two daughters, Mrs. Thomas C. (Janie Neel) Hambrick of Nashville, Tenn. and Mrs. Hubert H. (Laura Pratt) Sprouse of Union; two sons, W. N. (Nat) Henderson Jr. of the home and Fred P. Henderson of Ninety Six; two sisters, Miss Louise Henderson and Mrs. W. A. (May) Barnette, both of Greenwood; eight grandchildren; nine great-grandchildren.

Funeral services will be Saturday at 3 p.m. at the Blyth Funeral Home Chapel at 1425 Montague Ave. with the Rev. Donald Morris and the Rev. Morgan Kizer officiating. Burial will be in Elmwood Cemetery.

Pallbearers will be Fred B. Henderson Jr., William G. Dean, Thomas Wells Henderson Jr., Paul Jeter, W. A. Barnette III, Hank Barnette, Hubert H. Sprouse Jr., Ed Barnette, Robert Pratt Henderson and Carwell Henderson.

Honorary escort will be members of the Men's Bible Class of First Baptist Church, Ninety Six.

The body is at the funeral home. The family will be at the home and will receive friends from 7 to 9 tonight at the funeral home.

Memorials may be made to the building fund of the Ninety Six First Baptist Church or the charity of one's choice.

[From the Columbia (S.C.) State, Oct. 29, 1977]

FARMER FOR 75 YEARS, W. N. HENDERSON DIES

NINETY SIX.—William Nathaniel "Will" Henderson, 90, a pioneer in farm improvements, died Friday at Self Memorial Hospital.

Born in Greenwood County, he was a son of the late Thomas Payne and Laura Pratt Henderson. He was a member and former deacon of the Ninety-Six First Baptist Church.

He was an active farmer for over 75 years, and attended Clemson College. At the time of his death, he was actively farming 500 acres with his son Fred, plus 1,000 acres leased land. He produced cotton, pedigreed seeds, beef cattle and farm cured pork products.

He and his son twice won first in the state's cotton contest and won first prizes on cured hams at the S.C. State Fair. He served as Senior Appraiser with the Federal Land Bank for 20 years and also served as chairman of the Loan Committee.

He was a charter member and past president and presently chairman of the board of S.C. Crop Improvement Association and Foundation Seed Association. He served for several years in the State House as Representative from Greenwood County.

Mr. Henderson served twice on the Board of Visitors at Clemson University and was an honorary member of the Block and Bridle Club and Agronomy Club at Clemson. He was elected to the National Honor Society of Agriculture, Gamma Sigma Delta, in 1975.

Surviving are two daughters, Mrs. Thomas C. Hambrick of Nashville, Tenn. and Mrs. Hubert H. Sprouse of Union; two sons, W. N., Jr. and Fred P. Henderson of Ninety Six; two sisters, Louise Henderson and Mrs. W. A. Barnette of Greenwood; eight grandchildren and nine great grandchildren.

Services will be 3 p.m. today at Blyth Funeral Home with burial in Elmwood Cemetery.

The family suggests that those who wish may make memorials to the Ninety Six First Baptist Church Building Fund or a charity.

[From the Greenwood (S.C.) Index-Journal, Oct. 31, 1977]

MISTER WILL

"To amount to anything in life," W. N. Henderson used to say, "you have got to be above average."

"Mr. Will," as we all knew him, was certainly above the average. His Broadacre Farm in Greenwood County was a showcase for Mr. Henderson's extraordinary knowledge of agriculture, reflecting more than 75 years of farming activity.

He was designated a Master Farmer in 1928, the first year such a title was conferred. He saw times change and trends come and go and was a leader in new, more efficient ways to coax the land to yield its fruits.

He was 13 at the turn of the century when the plantation owners were fading from the scene. Cotton farming was in a depressed state, but his parents were hard workers and they sent him to Clemson College to learn more about farming.

In 1908 he bought a 160-acre farm and put his college-learning to good use, improving his poor land. Over the years he experimented with new farming methods, new machinery, new breeds of animals and new varieties of seeds.

Farmers in the area began to look up to him as a man of ability and often turned to him for advice.

He saw farming change from a way of life dependent upon the hired hand and the mule to highly scientific, highly mechanized operation.

Mr. Will was also known as "The Ham Man" and those who have tasted his smoked ham or country ham know it as a rare treat. He won many a prize for his ham and he was proud of the fact.

Mr. Will was recognized for his contribution to agricuture in 1975 when the national honor society of agriculture Gamma Sigma Delta elected him to membership.

Greenwood County can proudly boast that W. N. Henderson, a man who was "above average" was one of her own.

ANNUAL REPORT

Mr. JAVITS. Mr. President, today I am submitting my 29th annual report to the people of New York State on my activities in the 1st session of the 95th Congress. In this report I wish to review the year 1977, its historical importance, the activities of Congress, and my role in these congressional activities.

ANNUAL REPORT—1977

The past year has witnessed the traditional transfer of the stewardship of our country after a Presidential election, signs of some growth in our economy, passage of important legislation, and improved prospects for peace in the Mideast.

The 29th annual report of my activities in the Congress mirrors this activity in the Nation and the world and demonstrates how I have served the people of the State of New York.

FOREIGN RELATIONS

As a member of the Senate Foreign Relations Committee, I have long been keenly interested and closely associated with the search for a just and lasting peace in the Middle East. In July, I visited Israel, Egypt, Jordan, and Saudi Arabia and talked with the heads of state in each country to assess the chances for peace. In my judgment, there is a unique opportunity for significant progress toward peace. President Sadat's historic visit to Jerusalem has significantly advanced the chances for peace. The United States must continue its critical role as Israel's strong supporter and use its influence with Arab governments to facilitate a peace.

During the year I also attended as a U.S. delegate the Conference on International Cooperation in Paris (North-South meeting), the meeting of the North Atlantic Assembly (NATO Parliamentarians) in Brussels, and the ILO meeting in Geneva, where I also consulted with our SALT negotiators. In addition to Mideast peace, I regard the dangers arising from the world's present monetary and financial system to be the most serious challenge our Nation has faced since the world depression of the 1930's.

MAJOR LEGISLATION

S. 1160, an amendment to insure continued arms aid to Israel on a high-priority basis (author, now law).

S. 1160, an amendment to revise congressional approval procedures for the sale of U.S. arms abroad to make a more coherent, rational policy (author, pending in SFRC).

S. 1520, an amendment to resume economic assistance to India following restoration of democracy there (author, now law).

S. 174, to require U.S. compliance with U.N. sanctions against the importation of Rhodesian chrome (cosponsor, now law).

S. 1190, an amendment to provide $20 million to assist Soviet Jewish refugees settling in Israel (author, now law).

S. Con. Res. 7, to express the sense of Congress condemning Soviet emigration policy (cosponsor, passed both Houses).

S. 897, to establish safeguards to prevent the proliferation of nuclear weaponry through the development of nuclear energy (cosponsor, pending in SFRC).

S. Con. Res. 12, to offer assistance for the relief of earthquake victims in Rumania (author, pending in SFRC).

S. Res. 175, to deplore brutal murders and executions in Uganda (cosponsor, passed Senate).

S. Res. 151, to encourage resolution of a provision of the Canadian Tax Code adversely affecting U.S. television stations, especially in upper New York State (cosponsor, pending in Senate).

S. 489, to provide financial assistance to Portugal to ease the serious economic situation there (cosponsor, enacted in separate legislation).

DEFENSE

H.R. 7933, an amendment to reverse President Carter's decision to halt production of the B–1 bomber (voted no, amendment defeated).

H.R. 7533, an amendment to halt production of the "neutron bomb" (voted yes, amendment defeated).

Shipmasters of passing freighters often ignore the refugee boats because the ports of call in nearby Asian countries refuse to admit them. One boatload of 249 refugees, picked up by a chartered mercy ship, remained anchored off Singapore for more than two months. Eventually the refugees were taken to Switzerland, France, Britain and Austria.

The Associated Press the other day reported a shocking story from a small port in Thailand. Fifty Vietnamese, half of them children, had made it there in a 30-foot boat. They thought they'd made it to freedom, but Thai marine police refused to let them ashore and towed the crammed fishing boat three hours back into the Gulf of Siam. No one knows what happened to them.

The Indochinese refugee problem seems to grow faster than the world community can respond to it. The United States last July increased its quota to 15,000; Australia is accepting 2,000 a year; Canada 450; New Zealand 420; Belgium 150; Denmark 50. And France is taking in about 1,000 a month.

The United Nations High Commission on Refugees and the United States have been seeking greater liberalization of immigration policies, particularly in Japan, to provide the refugees at least a temporary haven. Japan imposed a ban on permanent asylum.

Not even when the refugees make it to relative safety are there well-established and working programs to channel them to new homes.

The United States should improve its program for the Indochinese refugees. In the American conscience there should be little choice but to respond. Private voluntary agencies throughout the nation, including Columbia, have worked smoothly in placing the Vietnamese into communities. But the Congress must determine to open the doors. The 15,000 quota set in July is already met.

A State Department official said very few of the refugees are on welfare rolls. They get jobs and are willing to work; their children go to school; and there is hardly a trace of crime attached to them.

But that should come as no surprise to anybody. The refugees understand the blessings of liberty, which we so often take for granted.

GET INVOLVED

Mr. HATCH. Mr. President, Utah has the distinction of having some of the best broadcasters and broadcasting facilities in the entire Nation. The Utah (or Salt Lake) television market, for example, in area is the largest in the world.

Our broadcasters are determined to provide the public service required by Federal Communications Commission charter, Several of our radio and television stations reflect community interest and call attention to specific needs through expression of a particular point of view. One of those television stations which does take an editorial stance each day of operation is KSL, a pioneer of modern broadcasting.

Recently KSL editorialized, in a very eloquent manner, the need for our citizens to remain as a silent majority no longer but to get involved. I agree totally with that editorial; and in many of my speaking opportunities, I have encouraged our citizens to cease being spectators and become participants. Because of my continuing hope that our people will divorce themselves from apathy and get involved, I ask unanimous consent that the KSL editorial entitled "Get Involved," be printed in the Record.

There being no objection, the editorial was ordered to be printed in the Record, as follows:

Get Involved

(By Jay W. Lloyd, senior vice president and station manager of KSL Television)

It has been estimated that you spend two and half hours of every working day working for the government. Strange, isn't it, that so very few of us spend as much as 15 minutes a day telling the government where we stand?

Why is it that we hear so many folks complaining about this, that or the other, and what we hear is, "why doesn't somebody do something?" When are we all going to realize that we are that somebody?

What this really means is that it's pretty much up to you. Here are some of the things you can do.

Know your Congressman. Contrary to what you may think, he does care about your opinion, because if enough of your neighbors share it, he's going to pay attention. Write to him, see him and talk to him when you can. When you write, identify your concern clearly. Give your personal experience. Say how the issue affects you, your family, your business, your community. Avoid form letters. They do not have nearly as much credibility as your own words.

Do the same thing with your two Senators, and also with your State Representative and Senator. Two other things. Be reasonable. That goes a long way. And don't write just to complain. A letter of praise is often the most effective way to a goal.

But the important thing is not to say, why doesn't somebody do something. Be somebody. Do something. Get involved.

THE DEATH OF W. N. HENDERSON

Mr. THURMOND. Mr. President, in his Notes on the State of Virginia, Thomas Jefferson wrote:

> Those who labor in the earth are the chosen people of God, if ever He had a chosen people, whose breasts He has made His peculiar deposit for substantial and genuine virtue.

Our third president lived far too long ago to know Mr. W. N. Henderson of Ninety Six, S.C., who died on October 29, 1977. He could not, however, have described him more precisely. Mr. Henderson was living confirmation of the validity of the Jeffersonian attitude toward farmers and the farming life.

Mr. Will, as W. N. Henderson was affectionately known, spent 75 years in patient and productive cultivation of the soil. Born and reared on a farm, he acquired a wealth of practical experience during his boyhood and early manhood. Attendance at Clemson College gave him further insight into the theory and practice of farming. At 21 years of age, he bought a 160-acre farm. He was still working the land when death overtook him in his 91st year.

It is hard for the younger generation to conceptualize what farming was like in South Carolina around the turn of the century, when W. N. Henderson was getting started. It has since been completely transformed. Many old-timers could not, or did not wish to, keep up with the transformation. W. N. Henderson was leading it. His experiments and innovations not only helped to assure his own success, but provided his neighbors with a worthy model to imitate. W. N. Henderson was named a master farmer in 1928.

W. N. Henderson's achievements in agriculture are too numerous for me to provide a complete list. He was particularly proud, though, of his cotton and his cured hams, which won prizes on a number of occasions.

Dedicated as he was to his profession, Mr. Henderson was also active in politics and in community affairs. He represented Greenwood County for 7 years in the State house of representatives. He also served two terms on the board of visitors at Clemson University. In short, he was the kind of mainstay of society that Thomas Jefferson hoped farmers would prove to be in America.

Mr. President, if it is true—as in some sense it certainly is—that farmers are the chosen people of God, it is reasonable to suppose that God will not allow their earthly labors to go unrewarded. W. N. Henderson has now gone to claim his reward. His family and friends will ask nothing more than that this will be commensurate with his services to his State and his fellow man. In that event, it will be a noble reward indeed.

Mr. Henderson is survived by a devoted family, including his daughters, Mrs. Thomas C. Hambrick, of Nashville, Tenn., and Mrs. Hubert H. Sprouse, of Union, S.C.; his sons, W. N. Henderson, Jr., and Fred P. Henderson, of Ninety Six, S.C.; his two sisters, Louise Henderson and Mrs. W. A. Barnette, of Greenwood, S.C.; eight grandchildren; and nine great-grandchildren. To all of them I extend my deepest sympathy. I hope that their sorrow at losing this outstanding man will be tempered by their pride in his great accomplishments.

Mr. President, at the time of the death of W. N. Henderson, a number of articles appeared in his honor in the South Carolina press. In order that my colleagues and the general public may have access to further details about his life and career, I ask unanimous consent that three of these articles be printed in the Record.

There being no objection, the articles were ordered to be printed in the Record, as follows:

[From the Greenwood (S.C.) Index-Journal Oct. 28, 1977]

Will Henderson Is Dead at 90

Ninety Six.—William Nathaniel (Mr. Will) Henderson, 90, of the Epworth Section, a pioneer in farm improvement, died this morning at Self Memorial Hospital following a short illness.

He was born in the Phoenix Section, Oct. 29, 1886, a son of the late Thomas Payne and Laura Pratt Henderson. He was a member and former deacon of the First Baptist Church. Mr. Henderson was an active farmer for over 75 years and attended Clemson University. He was still actively farming 500 acres with his son Fred, plus 1,000 leased in cotton, pedigreed seeds, beef cattle and farm-cured pork products.

He and his son twice won first in the State Cotton Contest and won all first prizes on cured hams at the S.C. State Fair. He served as senior appraiser at the Federal Land Bank for 20 years and also served as chairman of the loan committee of the FLB, he was a charter member, past president and presently chair-

State Department and the Pentagon, both of which have classified the engines and electronic equipment as "civilian," even though their end use and capabilities are inherently military. By allowing the sale to take place, the executive branch of our government seems determined to continue a policy of military-arms support for Chile, despite Congress' unequivocal demand that this support end.

At least three of Embraer's EMB–111 Bandeirante maritime patrol planes have already been delivered to Chile. Powered by two Pratt & Whitney turboprop engines, the aircraft are equipped with a modified AN/APS–128 radar produced by the AIL division of Cutler-Hammer of Deer Park, N.Y.

According to the authoritative arms handbook "Jane's Weapons Systems," radars of this type . . . "will be fully integrated with EMB–111's onboard inertial navigation. Included in the proposed missions for the EMB–111 are operations with naval vessels, sonar searches, shipping surveillance, anti-smuggling patrol and transport of cargo and personnel."

Congress, of course, is under the impression that the flow of U.S. military equipment to Chile has been stopped. In response to reports of the torture, arrest and disappearance of thousands of Chileans following Gen. Augusto Pinochet's seizure of power, Congress cut off both direct military aid and Pentagon arms sales to Chile in 1974. The ban, however, did not stop delivery of equipment "in the pipeline"—material already ordered and scheduled for delivery—nor did it cover the sale of military equipment by private U.S. companies. Thus, in 1975 and 1976, Chile received nightvision equipment, revolvers, ammunition, trucks, aircraft and aircraft engines, and riot-control chemicals—all of this through private arms transfers.

But in 1976 Congress amended the International Security and Arms Export Control Act, extending its prohibition to include both military training of Chileans by Americans and just such private-sector sales. Nevertheless, the EMB–111s, with their American engines and radar devices, were sold to Chile. To understand why, it is necessary to look at the loopholes in the law as it applies to third-country arms sales (the second country, in this case, being Brazil).

Normally, any third-country transfer of U.S. military equipment must be cleared through the State Department's Office of Munitions Control. The office decides, often with the advice of Pentagon technicians, whether a specific type of equipment is inherently military or civilian, which is a crucial distinction. If the item is considered military, U.S. law applies—and, in this instance, approval for a third-country deal with Chile would have been denied. If the item is considered civilian, Commerce Department statutes may apply in some cases, but no approval from the munitions control office is necessary.

Last year, Cutler-Hammer, manufacturers of the EMB–111's search radar, approached the State Department for permission to make the indirect sale to Chile. All parties involved knew that the transaction, if it involved equipment designated as military, would violate U.S. law. But, rather than simply block it, government officials cooperated in helping the deal to go through. If Cutler-Hammer could come up with a civilian version of the radar, these officials advised, the deal would no longer require State Department approval.

By mid-1977, Cutler-Hammer had supposedly made a few alterations in the radar, whereupon the State Department nodded its okay and the Chilean navy got its planes.

The determination that Cutler-Hammer's "new" radar was "civilian" seems especially curious. Fitted on airplanes with a purely military mission, the radar has a specific function: According to an Embraer brochure, it allows for detection of such difficult-to-spot targets as "a fishing trawler at more than 90 km. in rough sea"—a function fundamentally military in nature.

This is not an isolated example, by the way, for, as one State Department official told these authors, "You can construe a military aspect to any of this commercial (civilian) equipment."

The use of Pratt & Whitney engines on the EMB–111s transferred to Chile was more straightforward. The Office of Munitions Control argues that the engines are, once again, "civilian" items. But while this engine can be used in civilian aircraft, it is clearly a military item because, after all, it has been installed in a military plane destined for the Chilean armed forces.

U.S. government officials also note that, since the engines are designed and manufactured by Pratt & Whitney of Canada, they do not fall under the transfer regulations affecting U.S.-made equipment. Yet Pratt & Whitney of Canada is a subsidiary of United Technologies, a Connecticut-based multinational corporation. This typifies another loophole used by U.S. companies to escape prohibitions on arms sales abroad.

Section 406 of the International Security Assistance and Arms Export Control Act of 1976 explicitly prohibits any military and "security-supporting" assistance to Chile, any military education and training, any credits, any loan guarantees, any export licenses for commercial sales or transactions. Yet, in closing their eyes to sales of the EMB–111, government and industry officials have skirted what Congress meant to be an all-inclusive ban. Surely this violation of its intent deserves the remedial attention of Congress.

REFUGEES FROM COMMUNIST VIETNAM

Mr. THURMOND. Mr. President, the Communist leaders of Indochina are continuing to make war on their own people. That is the only way to explain the steady stream of refugees puring out of Vietnam and Cambodia.

These refugees, it should be remembered, are not leaving with the permission of their governments. Far from that, they put themselevs in jeopardy of their lives by fleeing. Yet so great is the tyranny there—and by reliable accounts, the butchery—that thousands upon thousands are taking the risk.

Even those fortunate ones who do get past the borders have no assurance of safety. Many must battle the sea in small, unseaworthy boats, others have to hew their way through the jungle. Then there is the problem of finding a country where they can settle down and build a new life.

One would think that most free countries would be proud to welcome these resolute men and women who would rather die than live in slavery. Sadly, that is not the case. Thailand, which has more Vietnamese refugees than any other country but the United States, is becoming more and more inhospitable. Other free countries have clamped tight restrictions on the number of Indochinese immigrants they will accept. Even the United States, which increased its immigration quota to 15,000 a year just last summer, is closing its doors to many who are seeking entrance.

Mr. President, this is a situation which requires congressional action. We have undoubtedly been generous already, but we must be more generous still. Surely in this big, warm-hearted country, there is room for these victims of oppression. I need not add that this country is far from blameless in this tragic turn of events.

In addition, I urge the administration to use its influence with other nations to get them to liberalize their immigration policies. We need feel no hesitation or embarassment in taking this step, for our experience with the refugees that came here after the fall of Saigon provides an excellent augury for the future. They have made surprisingly smooth transitions to the American way of life, and have for the most part become responsible, productive members of their respective communities.

On reading of the latest chapter in the ongoing tragedy of Indochina, I cannot help remembering some of the earlier ones. I cannot help remembering the strident protests over alleged American crimes against humanity during the war. I cannot help remembering the confident predictions that the Communists we were fighting were really wise and moderate men who would rule in the best interest of their people. I cannot help remembering the loud denials that Communist victory would mean a bloodbath. Those who voiced these protests and predictions and denials are not heard from very often these days. The silence is deafening. It would be too much to hope, I suppose, that they might confess their mistakes. They might, however, at least manage a few meek complaints about Communist misgovernment.

Mr. President, I feel that this is an appropriate time to reaffirm my adamant opposition to establishing diplomatic relations with Communist Vietnam and Cambodia. People who deal so ruthlessly with their own citizens can hardly be counted upon to deal fairly and honestly with people of other nations. An exchange of Ambassadors, under the circumstances, would be a mockery.

An excellent article on the current situation in Indochina appeared on Wednesday, December 14, in the State newspaper of Columbia, S.C In order that my colleagues may have the benefit of reading it, I ask unanimous consent that it be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

CONGRESS MUST RESPOND TO PLIGHT OF REFUGEES

We forget what happens to innocent people in the awful aftermath of war, and it is now happening with a vengeance to the Vietnamese, Laotians and Cambodians at the hands of their Communist conquerors.

The ordeals of the thousands upon thousands of refugees fleeing to freedom from tyranny are sheer horror stories. And the number of those refugees increases steadily—more than 1,000 a month escaping now from Vietnam.

More than 94,000 have fled to Thailand, and the Thais are becoming increasingly hostile to them. Thousands of others have taken to the sea from Vietnam in small, unseaworthy boats hoping to make it to Malaysia or Australia. U.S. sources estimate that they have a 30 to 50 percent chance of survival.

their stock is callable in 1981—and the Pritzkers can't wait to call it in and go completely private again with Marmon.) Jay also runs the family's Hyatt hotel chain and major lumber interests and manages his own substantial businesses too.

Marmon, which is worth about $600 million, wasn't a result of a transfer of the Pritzker fortune from real estate, but a whole new fortune created almost from nothing. It was built with virtually no financial investment by the Pritzker family.

A. N. Pritzker, father of Jay and Bob, and his brother, Jack built a fortune in real estate. When Bob and Jay were in their 20s, Bob got a job in a factory and worked his way up to manager of a small division of U.S. industries. Jay worked as a consultant for the family businesses and tentatively started making merger deals. One day Jay called Bob and said a broker had offered to sell a small Ohio company to him. If they bought it, would Bob care to run it? Bob agreed.

"The total purchase price was under $2 million," recalled Bob Pritzker. "Jay made a very imaginative business deal that required very little capital from us."

That was the deal that started Marmon. The magic was in the deal—and the Pritzker name. Thousands of young men dream of going into business for themselves, but getting started is the problem—they lack the money to finance it and no bank will back them untested.

The Pritzker name got the young brothers off the ground. Their father introduced them to his bankers, the First National Bank of Chicago, which financed most of the acquisition with a $1 million loan. In later takeovers, the Pritzker name continued to make the difference.

Profits from the first company helped finance acquisition of the second, and two helped buy a third, and so on.

"I dreamed of some day running a company doing $20 million a year in sales," said Bob. The business now is 50 times greater than that.

[From the Chicago Daily News, Dec. 8, 1977]

How Pritzker Buys a Firm

(By Dick Griffin)

One day in 1968 Robert A. Pritzker, president of the Marmon Group, heard that a small manufacturer of leaf springs for cars and trucks was up for sale. But there was a catch:

Nobody had been willing to buy it because the owner refused to submit the company's books to an audit, and he refused to guarantee the accuracy of his financial statements. He also refused to negotiate on his selling price, which was a mysterious $3,006,000.

Pritzker, then 42 years old and head of the family-owned Marmon for 15 years, visited the company and liked what he saw.

"I had a hunch about the man, that he was just stubborn," he recalled. "It was a question of what you wanted to believe about a human being."

He decided to buy the business and paid the full price, never learning what the extra $6,000 was for.

He found that the company was exactly what the man had said it was, and it has become one of Marmon Group's most successful businesses. Pritzker is proud of the decision.

"He was just set in his ways. I trusted him and it turned out right. The company has done exceedingly well for us. Its sales and earnings are five times what they were in 1968 and I presume it's No. 1 in its industry in the United States."

"THAT'S HOW IT'S DONE"

Judgments like that are keys to the decision-making process followed by Pritzker and his brother, Jay, chairman of Marmon, when they are considering an acquisition.

The company they started on mainly borrowed money has acquired about 50 corporations in its 24 years of operations. Sales of the acquired concerns ranged from $2 million a year to the $600 million Cerro Corp., taken over last year.

If the company in question is compatible with one of Marmon's existing businesses, Bob Pritzker probably will evaluate the business and make the buying decision himself.

But if it's a large and complicated deal, Jay evaluates the company financially and handles the negotiating. Bob examines the factories, techniques and products. Other Marmon officials often join in the evaluations, but the brothers alone make the final decision.

"We both are usually enthusiastic or lukewarm; there's rarely a difference of opinion," said Bob. "When we do disagree, it's because, say, Jay's high on the financial aspect but I'm not crazy about that line of business. On a big deal like Cerro, we couldn't disagree and still buy it."

The factors they consider include:

Is it a line of business they want to be in? Bob Pritzker asks questions like—Can Marmon's management handle this sort of business? Would it offend our sense of ethics? Would it be fun to run? They stay away from businesses that are highly involved with government regulatory agencies, chronically faced with a lot of lawsuits or need high-powered promotion to sell their merchandise.

Can they make a profit with it? If they can't, there's no reason to buy it. They want to know the probable return on investment, then the absolute profit. The former is the more important factor.

What's the downside risk? Under the worst of circumstances, how much could they lose?

Do they trust the seller? In a smaller acquisition, that's a major question for Bob. "If I don't trust him, I don't want it. In a small company, one man can have a major influence on the business and if he's a fraud he could outsmart me," he said. "Jay is less concerned about this because he handles only the big acquisitions and one man has little impact on a big company."

They've made some mistakes. They say one was Hammond Corp., the financially troubled electronic organ company they acquired for Marmon last January for $35 million. "It wasn't worth what we paid for it," said Bob.

Another mistake was Jamesway Co., a Canadian farm equipment maker acquired in 1961. "We sure didn't come out a winner on that one," said Bob Pritzker. "We're breaking even at best, and it took a lot of work to get there.

"You're going to win some and you're going to lose some. You're just not going to hit them all right."

WASTING TIME

Another mistake was negotiating to buy a small company that seemed to fit with a Marmon manufacturer. Bob Pritzker met with the owner time and again over a year, and the numbers kept changing. Finally, Pritzker figured out what was going on and he gave up in disgust.

"The guy just liked to negotiate. Some are like that. It's ego fulfilling and a social event. They also get an idea what their business is worth. There are a few companies around that everybody has looked at. You ask somebody at a party if he had thought about acquiring such and such and he says yes, and pretty soon you find that everybody in the room had negotiated with them at one time or another."

Another problem they have found is the Optimistic Executive. One firm they acquired never did as well as its presidentt had predicted it would. After getting one particularly optimistic forecast from him, Bob Pritzker called him and his vice presidents to his La Salle Street office and urged them to reconsider their forecasts.

"Come back on Monday with a new one," he told the president. "I want the worst possible prediction for the next quarter. I don't care if you tell me you're going to lose a hundred million bucks. But if you predict that you will make a dollar more than you actually do, I want your resignation."

Four months later the forecast was proved to be 20 per cent too high. The president resigned.

"MARMON, NOT PRITZKER"

The Pritzkers like their privacy so much that they recoil at suggestions that they rename the company the Pritzker Group. Marmon is a meaningless name that came with one of their acquisitions, but it has provided a measure of anonymity for the owners.

It also has caused some confusion. Marmon has received letters asking about the tenets of their religion and a hotel once billed one of their sales meetings as a church function.

They joke about starting their own choral group—the Marmon Tabernacle Choir.

With all their money why do they work so hard at building Marmon into a big company? (The Pritzker family, which also controls the Hyatt hotel chain and has many other investments, is worth perhaps $750 million.)

"Certainly the money isn't the incentive," said Bob Pritzker. "I think it's because it's fun to succeed and I want Marmon to succeed. You want to have a better season for your team next year.

"What we want to build is a stable company that will exist far into the future, long after we're gone."

CHILE STILL GETS U.S. MILITARY EQUIPMENT

Mr. ABOUREZK. Mr. President, for some time now, the Congress has shown wisdom in denying the sale of military equipment to Chile because of that country's consistent pattern of gross human rights violations. Therefore, it should be particularly shocking to discover through a recent article in the Los Angeles Times that military equipment from the United States still reaches Chile by way of Brazil despite the ban and that the Pentagon and Department of State have determined that this action is not against the law because the American equipment in the sale has been classified as "civilian." This cozy arrangement between the manufacturer and the governments of Brazil and Chile does violate the spirit and intent of the legislation and is profoundly disturbing. I therefore ask unanimous consent that the article by Michael Klare and Cynthia Arnson be printed in the Record.

There being no objection, the article was ordered to be printed in the Record, as follows:

[From the Los Angeles Times, Nov. 25, 1977]

Chile Still Gets U.S. Military Equipment

(By Michael Klare and Cynthia Arnson)

American military equipment is being sold to Chile, by way of Brazil, in violation of the intent and spirit of a 1976 federal law prohibiting both U.S. military assistance and private-industry sales of such material to that country. Specifically, the Brazilian aircraft firm Embraer is selling to the Chilean navy patrol planes equipped with American engines and search radar.

This transaction has the approval of the (states)," the submission said, "One should not accede to the spectre of unheated homes and gasoline rationing to the south in the event that no West Coast oil port is built."

The inquiry, headed by Dr. Andrew Thompson of the University of British Columbia, opened a three-day session during which oil companies, environmentalists, inquiry staff, and other groups will present their positions on evidence heard during six weeks of hearings that recessed in mid-November.

Formal and community hearings were recessed indefinitely because there currently are no active oil port applications in Canada.

A proposal involving an existing terminal at Cherry Point, Wash., was killed by U.S. federal legislation, and a plan by Kitimat Pipe Line Ltd, to build an oil port of Kitimat, B.C., and a pipeline to Edmonton for shipment to the U.S. is being held in abeyance.

Other major conclusions and recommendations in the staff submission:

Any port applicant should be required to put up a filing fee based on a percentage of the project cost, and in excess of $1 million, as a mark of good faith and to defray costs of government assessments of ports.

The responsible agencies and departments of the Canadian government should study the various oil supply questions identified by the inquiry, including the potential benefits of an East Coast port, in order to determine the Canadian interest in a West Coast port.

The National Energy Board should hold public hearings on oil policy questions before any port application is considered.

The lack of adequate data from port applications has made it impossible to determine the ultimate use or size of a West Coast oil port. Applicants should be required to provide a detailed market study to help resolve these questions.

THE REDFORD CANCELLATION

Mr. DURKIN. Mr. President, I believe it was the late humorist Fred Allen who first remarked that you could put all the sincerity in Hollywood in a flea's navel. Judging by the "sincerity" recently demonstrated by one of today's biggest movie stars, Robert Redford, that statement is as true of Hollywood today as it was a quarter of a century ago.

As some of my colleagues may know, Mr. Redford abruptly canceled his appearance at a fundraiser he was to highlight for Senator WILLIAM HATHAWAY. Although insisting that he still admires and respects Senator HATHAWAY, Mr. Redford canceled his appearance because he disagreed with Senator HATHAWAY's position on the proposed Dickey-Lincoln hydroelectric project.

What is so sadly ironic and irrational about Mr. Redford's action is that he indicated his cancellation was compelled by his commitment to environmental issues. Everyone in this chamber appreciates this irony, for we all know BILL HATHAWAY to be a concerned and dedicated environmentalist. Since the day he entered public service, BILL HATHAWAY has consistently demonstrated serious commitment to the environmental cause and energetic leadership on its behalf.

BILL HATHAWAY has long supported strong legislation to protect our environment from toxic substances and pesticides. BILL HATHAWAY was a strong supporter of the early phase out of the use of fluorocarbon sprays in aerosol cans. BILL HATHAWAY has supported the policies established in the Clean Air Act and the Water Pollution Control Act, and he has fought amendments which would weaken these acts at the expense of our environment. Senator HATHAWAY's record on energy is one strongly supporting conservation as well as the increased use and development of environmentally safe alternate energy sources, such as solar energy.

This fine record also has not gone unnoticed by those outside this Chamber. For example, Ralph Nader's Public Citizen organization recently ranked Senator HATHAWAY seventh highest in the Senate for his record on environmental and consumer issues. It is clear that those whose business it is to know where BILL HATHAWAY stands on environmental issues know he stands on the side of clean air, pure water, and conservation.

It is a pity that Mr. Redford did not decide how he felt about BILL HATHAWAY's position on the Dickey-Lincoln project before he indicated his "sincere" commitment to highlight a fundraiser for him. And it is an even greater pity that because of his "sincere" commitment to environmental issues, Mr. Redford felt compelled to cancel an engagement in support of Senator HATHAWAY on the basis of one single issue—about which even experts disagree—even though Senator HATHAWAY has demonstrated deep concern for the environment on literally dozens of issues over the years.

Mr. Redford is a fine actor. Perhaps he should remain in Hollywood, where his dialog is written for him, and where "sincere" commitments are like pie crusts—easily broken.

THE PRITZKER FAMILY

Mr. PERCY. Mr. President, the Chicago Daily News recently ran two feature stories on one of Chicago's most prominent families, the Pritzkers.

The articles not only emphasize the Pritzkers' enormous business success, but also illustrate that this success is based on hard work and a highly developed sense of business ethics.

Throughout the years I have known this family, they have always been willing to share the fruits of their success with others through various philanthropic endeavors. They have, for example, given $10 million to the University of Chicago School of Medicine.

Because of the Pritzkers' extraordinary achievements and because of the contribution they have made to life in the city of Chicago, I would like to share these articles with my colleagues and ask unanimous consent that they be printed in the RECORD.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

[From the Chicago Daily News, Dec. 7, 1977]

THE MIGHTY RICH PRITZKER PRESERVE

(By Dick Griffin)

The public owns almost no stock in it. Brokers don't talk about it. It doesn't advertise. And it sells almost nothing to the consumer. In truth, few persons have ever heard of it, the Marmon Group.

It's owned mainly by a single family but it's bigger than such well known giants as the North Western R.R., Marshall Field & Co. and the Wm. Wrigley chewing gum business. Its sales volume is in the $1¼ billion range and it will earn more than $50 million after taxes this year, boxcar figures that would put the company well up in the Fortune 500 list of the nation's biggest manufacturers.

The company is essentially the private preserve of the Pritzkers, Chicago's richest family. (Their fortune was estimated at $750 million in a recent Chicago magazine article. That figure seems conservative.) Pritzkers started it in 1953 and Pritzkers still run it 24 years later.

Marmon is a precise reflection of its founders, like some other companies that were run by the same strongwilled founder for many years (such as RCA, CBS, IBM and Northwest Industries). Marmon reflects the talents and interests of Robert A. Pritzker, 51, who has been running the business since he was 26, and his better known brother, Jay, 55, the financial genius of the family.

Bob Pritzker, an industrial engineer (Illinois Institute of Technology, class of '46), loves complex mechanical things. His older brother, a lawyer (Northwestern University law school, class of '47) finds joy in complex financial transactions. Together they have built a giant corporation that makes mainly complex work-a-day products like leaf springs for cars, trucks and trailers; transmission gears; clutch plates; gray iron castings for pumps; work gloves; copper wire and cable; aluminum tubing; casters, wheels and rubber bumpers; underground mining equipment; right-angle gear drives, and poultry incubators.

When Marmon is considering acquiring a company, one of the criteria is whether Bob Pritzker, its president, is interested in the business—would it be fun to run, or does he want to learn about that business?

"We don't buy companies to sell them for a profit; we buy them to operate them," he said in a lengthy interview in his fifth floor office at 39 S. La Salle. "It's aesthetically satisfying to me to see people walk in one door of a factory, material come in another door and something useful go out a third door. We really make an effort to make only useful products."

He said he wouldn't let Marmon go into certain businesses that would clash with his sense of what's proper. Among the businesses he'd reject "even if they offered a good economic opportunity":

Cigaret manufacturing. "We don't smoke but that's not it. I just don't want to make them."

Handguns. "I'm ambivalent about what the country should do about handguns, but I don't want to be the one who makes them."

Drugs whose use is abused. "I just couldn't get up in the morning and exhort my salesmen to push some more of those things down the public's throat."

And he runs a tight company, with few frills. The family has taken no dividends from Marmon and the brothers are the only family members working there. J. Ira Harris, senior partner here for the big Salomon Brothers investment banking firm said of Bob Pritzker:

"He's a super operating guy. He can squeeze water out of a rock."

Jay Pritzker is the part-time chairman of Marmon, a job that becomes full-time when major financial matters develop. He finds companies to acquire for Marmon and negotiates the acquisition. He worked for 2½ years on the 1976 acquisition of Cerro Corp., which was twice as large as Marmon. He dealt with the tax and accounting problems, persuaded stockholders and directors and worked with personnel and government units that got involved. (That acquisition brought 15,000 shareholders into Marmon as owners of a preferred stock issue, and they have 18 per cent of the voting rights in Marmon. But in 1972. Again, it was the senior Senator from West Virginia who initiated legislation which led to the construction of the National Air and Space Museum which attracted more than 12 million visitors during 1976.

His compassionate concern for the handicapped is well known. Through his efforts vendors stands in post offices across the country were operated by the blind.

It is impossibe to enumerate in this space here the many accomplishments of this dynamic public servant or his contributions to the welfare of West Virginia and the nation. But his friends in every walk of life are legion. He probably knows more fellow West Virginians by first name than any other man or woman in the state.

From a very parochial standpoint, we must say that Senator Randolph always has been good to the Wheeling area and the Northern Panhandle of West Virginia even though he calls Elkins home. There isn't a project in the area where federal funds have been involved that hasn't received the personal assistance of Senator Randolph in boosting the effort along. Even outside the sphere of government, he has helped provide funds for local projects through his service on the Board of Trustees of the Benedum Foundation.

Senator Randolph is a man for all seasons and we believe there is much he can still contribute to his state and country during another term in the United States Senate. We are most happy that he has decided to make the race again.

TENTATIVE ENERGY CONFEREES' AGREEMENT WOULD DELAY DISTRIBUTION OF ALASKAN OIL

Mr. MELCHER. Mr. President, there has not been a constructive recognition by the energy conferees that the urgency of allowing oil pipelines from the U.S. west coast to inland States demands a legislative timetable that will: First, set a date for making the decision as to whether required permits will be issued and; second, if an affirmative decision is made, set a deadline for the issuance of those Federal permits.

The Senate passed such provisions in the energy package without opposition. That time frame would clear the way for Northern Tier Pipeline Co. to know if its application would be approved before the end of 1978. The proposed Northern Tier Pipeline would transport 900,000 barrels of Alaskan and other crude oil to States in the West, Upper Plains, and Midwest and could be completed in 1980.

The proposed Sohio Pipeline from Long Beach, Calif., to Midland, Tex., for gulf coast refineries is expected to carry 450,000 barrels of oil per day and has received Federal approvals.

For both, or similar pipeline proposals, the Senate-passed provisions limited judicial review on the Federal permits should they be challenged in court.

Both pipelines are urgently needed to provide a balanced distribution system for petroleum products throughout the United States. Until these are in operation, Alaskan crude oil must be unloaded onto small tankers to get through the Panama Canal at substantially higher transportation costs.

The conferees this month tentatively made changes in the Senate provisions that will result in the loss of a full construction season for the northern pipeline. In addition, at the administration's insistence, the conferees adopted provisions that interject a dormant proposition for a pipeline in Canada as an alternative to Northern Tier's application for a pipeline within the United States.

That dormant proposition is the new Kitimat pipeline from British Columbia to Edmonton, Alberta, where it would connect with other existing pipelines to transport the oil southeasterly to the U.S. upper midwest. While this proposal has nothing to do with the U.S. Federal permits, the Kitimat Co. earlier this year did apply to the Canadian Energy Board for Canadian permits. An inquiry board was appointed by the Canadian Government to review the application. However, Kitimat then asked that its application be held in abeyance—that there be no consideration by the Canadian Government of the proposal unless the Kitimat sponsors renewed their application.

While the reasons for their "hold in abeyance" request are the Kitimat proponents' prerogatives, some comment on their proposal is pertinent.

Oil transported in their pipeline would cost U.S. refineries a higher tariff than would be the case with the all U.S. Northern Tier Pipeline.

The continuance of the Canadian permitting system would not result in reaching a decision until late 1979, meaning no completion of the pipeline until 1982, 2 years later than what could be the case for Northern Tier if the Senate provisions were adopted by the conferees.

The sheer futility of allowing the subject of a Canadian alternative to influence decisionmaking by the U.S. Government is made even clearer in an Associated Press article which appeared in the Great Falls, Mont., Tribune and which states the Thompson Commission staff view that there is no compelling need for an oil port at Kitimat or elsewhere on the Canadian west coast. We could wait forever for Kitimat. I ask unanimous consent that the article appear following my statement.

The PRESIDING OFFICER. Without objection, it is so ordered.

(See exhibit 1.)

Mr. MELCHER. Kitimat's pipeline would also result in distribution of Alaskan crude oil in such a manner as to penalize, through higher costs for petroleum products, the following: eastern Washington, Oregon, Idaho, Montana, both North and South Dakota, Wyoming, Utah, Colorado, western Nebraska, Kansas, and Missouri. These are in addition to moderately higher Kitimat tariffs for Minnesota, Wisconsin, Illinois, Indiana, Ohio, Michigan, and western New York as compared to tariffs for Northern Tier—Amoco compared and documented the projected tariffs.

In addition, transportation of Arabian or Indonesian crude oil supplies to all of these States through Kitimat would be with much higher tariffs than would be the case with the much shorter and direct distribution through the U.S. northern tier pipeline.

It is also important to point out that the 40-inch, 1,500-mile Northern Tier pipeline would use $500 million worth of steel produced by 4,500 steel workers employed for 1 year in the United States as compared to Canadian steel orders for Kitimat from foreign countries, possibly Japan. Northern Tier, during its 2 years of construction, would employ 5,000 construction workers. It would also provide employment for several hundred people in operation and maintenance of the pipeline after completion.

Northern Tier Pipeline Co.'s application to construct a major oil pipeline in the United States constitutes the first independent oil pipeline entry during this decade. Recently only major oil companies have entered the expensive process of seeking State and Federal permits for such construction.

Sohio has spent over $30 million with the process of obtaining those permits still not completed. Seadock and Loop applications for Gulf Coast oil tanker facilities were by major oil companies and, while unsuccessful, they still paid millions of dollars on those applications.

The Justice Department Antitrust Division views Northern Tier's application, if proven to be sound, as the only new entry in oil pipelines, ownership and operation field that would provide a competitive influence on the oil pipelines owned and operated by the major oil companies.

While the Kitimat proposal could be built without any consideration, help, or hindrance by the United States, the conferees have accepted the administration-recommended consideration of Kitimat as an addon to our Senate proposal. It cannot help but confuse and delay Northern Tier's proposal.

Meanwhile crude oil distribution will be lacking and refiners in a score of States will not be sure of a stable, dependable supply.

Who wants Kitimat's application reviewed? Some of the people in the State of Washington object to an oil tanker facility at Port Angelus, Wash., which is the location of Northern Tier's proposed tanker facilities. The Washington Legislature several months ago endorsed the Northern Tier proposal. In any case, both the Senate and conferees have not abridged the Washington State siting prerogatives which, if they so decide, can completely turn down Northern Tier's application. They have their option.

What I believe the conferees should finally adopt is a shorter time frame for the decision and issuance of the Federal permits for Northern Tier. Part of that is the removal of the confusion, uncertainty, and delay that interjecting the Canadian proposal causes. Urgent U.S. needs require a prompt U.S. solution.

EXHIBIT 1

"NO COMPELLING NEED" FOR PACIFIC OIL PORT

VANCOUVER, British Columbia.—United States oil requirements can be met through oil exchanges or other alternatives, and there's no compelling need for a West Coast oil port, the staff of the West Coast oil ports inquiry has reported.

Canada should reject any potential pressure from the U.S. for an oil port on Canada's West Coast which causes a premature decision to be made on the basis of inadequate information, says the staff submission, released Monday in advance of presentation by commission counsel Russell Anthony.

"The point to bear in mind is that even without exchanges (of oil) a West Coast oil port is not absolutely needed in order to avoid crude oil shortages in the northern tier college which their own children cannot afford to attend.

"We must not lose sight of the fact that the families who are paying the taxes to finance this aid are themselves finding it more and more difficult to educate their own children." he said.

The burden of rising tuition costs is particularly hard on women from middle class families, according to proponents of the tax credit.

They earn less than men at part-time jobs during college, and they benefit less than men from athletic and other scholarships. In many cases, they also lose out when a family decides it cannot send all its children to college and conclude it is more important for her brothers.

The concept of tax credits for college is not new. Sen. Abraham Ribicoff, D-Conn., the principal cosponsor of a bill with Roth, has been introducing such bills in the Senate since 1963.

What is new is the growing demand for tax relief that congressmen and senators have been hearing from back home.

The Roth-Ribicoff bill, for example, carries 25 cosponsors spanning the political spectrum from such conservatives as Senators Barry Goldwater, R-Ariz., and Strom Thurmond, Jr., D-S.C., to such liberals as Senators Ribicoff, Hubert Humphrey, D-Minn., and Frank Church, D-Idaho.

"Next to the cost of a home mortgage," Humphrey says, "the expense of a college education places a major financial burden on parents.

"They know that a higher education has become almost a necessity for their children to have opportunities . . . and they frequently must make heavy sacrifices to provide these opportunities."

The Roth-Ribicoff bill also has the key support of Sen. Russell Long, D-La., chairman of the Senate Finance Committee which must pass on the bill.

Twice last year, with Long's support, a similar Roth bill passed the Senate only to die in the House. As a result, proponents of the measure are concentrating their efforts this year in the House.

A bill identical to the Roth-Ribicoff bill has been introduced in the House by Rep. Tom Corcoran, R-Ill., with 27 cosponsors. Most observers think this will be used as the primary House bill.

Like the Roth bill, the Corcoran bill provides a tax credit—a cut in taxes owed—for educational expenses of $250 in 1977, $300 in 1978, $400 in 1979, and $500 thereafter for each student attending an institution of higher education.

Other bills pending in the House and Senate vary the amount of the credit, but use basically the same concept. A few call for tax deductions rather than credits, and one, introduced by Rep. Abner Mikva, D.-Ill., would provide interest free loans by deferring some taxes while the student is in college.

Proponents say prospects in the House are brighter this year because Rep. Al Ullman, D., Ore., House Ways and Means Committee chairman who had been negative to the idea in the past, now says he will keep an open mind on it.

Rep. Barber Conable, R., N.Y., ranking GOP member of the Ways and Means Committee, is a strong supporter of the idea.

The real trouble appears to be with the Carter administration which has indicated it is opposed to the measure as expensive, inequitable, and of little real help to parents.

During public hearings before a House Budget subcommittee held recently by Rep. Paul Simon, D., Ill., Laurence Woodworth, assistant Treasury secretary for taxation, questioned giving tax relief to families who really didn't need it.

It would be better, he reasoned, to target federal aid to those who really need it because the cost of an over-all tax credit would be too high. A tax credit of $500, for example, would cost the federal government $2.2 billion a year, he said.

"It could easily become a major drain on federal revenues," he argued. "And, when your tuition bill is $4,000, $500 really isn't that much."

Woodworth's logic was disputed by Conable and Rep. Philip Crane, R., Ill.

Need, Crane said, is relative, and he pointed to his own situation, saying he soon will have four of his eight children in college at the same time.

"If I, as a congressman making $57,500 a year, have trouble sending my kids to college, how do you think someone on $18,000 can do it? asked Conable. He said he was forced to sell his Washington home to keep three children in college.

Although technically families with incomes as high as $25,000 qualify for government supported loans to send their children to college, in reality it does not happen.

"My impression is that no one with family income of $10,000 or more gets much financial aid," said Allan W. Ostar, executive director of the American Association of State Colleges and Universities.

The steepest declines in college attendance, Ostar said, have been among students from middle-income families whose incomes are from $7,500 to $15,000.

"An average two-child family at the $15,000 level has discretionary income of $700 a year," he said. "You're not going to be able to send a kid to college with only that."

Sponsors of the tuition tax credit concept expect to be able to attach it to President Carter's tax reform package, which the House Ways and Means Committee will begin considering this fall and which will go to the Senate Finance Committee early next year.

If Carter does not personally and actively oppose it, they predict it will pass Congress.

"This is not a new position that Larry Woodworth took before the Simon subcommittee, Corcoran said. "I'm convinced he was speaking for himself and not President Carter.

"I think he will get it passed this time," he added, "and, I'm betting on Carter signing it. I have that much faith in him as a politician."

EDITORIAL HIGHLIGHTS SENATOR RANDOLPH'S LEGISLATIVE ACHIEVEMENTS AND OUTSTANDING SERVICE FOR WEST VIRGINIA AND NATION

Mr. MUSKIE. Mr. President, earlier today it was my pleasure to call attention to the contributions made by the chairman of the Committee on Environment and Public Works, Senator JENNINGS RANDOLPH, in bringing to this body the conference report on the Clean Water Act. His work on this legislation was typical of his leadership in the Senate for the past 19 years.

The Clean Water Act was not the only legislation approved today which had the active involvement of Senator RANDOLPH. He was a principal architect of the conference report on the black lung legislation and he was an active cosponsor of Senator GLENN's natural gas bill.

Less than a week ago we received the welcome news that Senator RANDOLPH will be a candidate for reelection next year. When he first ran for the Senate in 1958 I went to West Virginia to assist him in that campaign. His performance as a Member of this body long ago convinced me that my confidence in him was not misplaced.

Mr. President, that Senator RANDOLPH is recognized for his ability and his value to his State and our Nation is reflected in an editorial recently published in the Wheeling News-Register. It shows that in West Virginia he is respected as a man of integrity and a productive legislator for the people he represents.

I ask unanimous consent that the editorial be printed in the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD as follows:

SENATOR RANDOLPH WILL GO AGAIN

We were not surprised by the announcement over the weekend that West Virginia's senior United States Senator Jennings Randolph would seek another six-year term at next year's elections.

Given the excellent state of the Senator's health and the reported progress in Mrs. Randolph's recovery from an illness, it was to be expected that the popular veteran lawmaker from Randolph County would make the race again. In recent days, he has been urged to run again by President Carter, Vice-President Mondale, Senate Majority Leader Robert C. Byrd and Governor Rockefeller. Many important Democrats and Republicans alike around the state also have given Senator Randolph encouragement in helping him make up his mind in favor of entering tho '78 campaign.

His age doesn't bother us at all, for at 75, he is one of the most energetic and alert individuals we know. A much younger man would have difficulty trying to follow the Senator's rigorous schedule each week. When the Senate is not in session or he has a weekend free, Senator Randolph is back in West Virginia visiting with friends in one of the state's 55 counties. On some weekends he may have two or three speaking engagements in several areas of the state.

That West Virginia is fortunate to have a man of Senator Randolph's calibre and experience in Washington cannot be overlooked. He is the only member of Congress today who served during those famous first 100 days of Franklin D. Roosevelt's administration, some 45 years ago. He now ranks 13th in seniority among the 100 senators and this does not include his 14 years in the House.

Senator Randolph either heads up or serves on some of the most important committees in the United States Senate. He is chairman of the powerful and massive Senate Committee on Environment and Public Works and chairman of the Subcommittee on the Handicapped. He also is a member of the Committees on Human Resources and Veterans Affairs.

His colleagues well recognize this remarkable man's farsightedness and leadership in Washington's legislative halls over these many year of service to West Virginians and all Americans. Decades ago he foresaw the approaching energy crisis and sought to have this nation adopt a meaningful national energy policy. He vigorously fought for coal's rightful place on the energy scene and battled for better safety for the coal miner.

Senator Randolph championed the cause of a federal highway system to link all parts of this country with a modern thoroughfare system. In 1965, he sponsored legislation creating the Appalachian Regional Commission which since has meant so much to West Virginia and other areas in Appalachia once considered poverty-ridden and underdeveloped. He has fought vigorously ever since to see that West Virginia received its fair share of ARC funds to build roads, hospitals, clinics, airports, education programs and park improvements.

As long ago as 1942, Senator Randolph introduced legislation to give 18-year-old's the right to vote. The measure finally was enacted than three decades, on grounds that the available federal funds should be based on need and go to poor families. He said the rapid increase in tuition has changed many minds in recent years because of the impact on middle-income families.

The education community is far from solidly behind the credit, however. Not only are some of the members of these associations still opposed, but also most in the group representing the private colleges with the highest tuitions strongly oppose the Roth Amendment.

Chris Topping, director of government relations for the 700-member National Association of Independent Colleges and Universities, expressed concern that the tax credit might "accentuate the trend" away from the more expensive schools to those where the credit would cover more of the tuition costs.

She expressed fear, shared by some other educators, that Congress might cut other education funds to offset the cost of the credit. She also questioned whether there will be an outcry from parents if colleges raise tuitions after a tax credit takes effect, even though tuition increases are inevitable.

"Is this really going to be a freebie?" she asked. "Or are we going to have a trade off with some cuts in the student loan program or the educational grants?"

The 1.7 million member National Education Association, representing elementary and secondary school teachers also has come out against the Roth amendment. The association fears that the tax credit might result in "backdoor financing" of parochial education by setting a precedent. Forty-three senators have cosponsored a bill to provide tax credits for attending private elementary and secondary schools.

Besides the merits of the case, a large measure of politics caused the impasse in the Senate-House conference on the amendment.

The President, besides being opposed to the cost of the program and its help to wealthy parents, also was reported to be opposed to a boost to the Republicans who have been the chief force behind the amendment.

College-Tuition Tax Credit: A Middle-Class Balm

(By Mark R. Arnold)

If you're planning to send a child to college in the next few years, reflect on these numbers from a recent survey by the College Entrance Examination Board: The average cost of a year's education for a student who goes away to a four-year private institution next fall will be $4,811. The average cost at a public institution will be $2,906.

Those figures, up 5 per cent from this year's charges (for tuition, room, board, and incidental expenses) are potent political arguments for one of the year's most popular—and most controversial—proposals in Congress: an income-tax credit for college expenses.

More than 50 tuition-relief bills have been introduced in Congress this year. Under most, a taxpayer regardless of income could subtract from his tax bill the educational expenses of a full-time student family member, up to a specified limit. The leading Senate bill, sponsored by Delaware Republican William Roth and Connecticut Democrat Abraham Ribicoff, would set the maximum credit at $250 in 1977, rising to $500 in 1980 and thereafter. It would apply to tuition, fees, books, and supplies required for courses at private and public colleges and universities and postsecondary vocational schools.

The legislation is a prescription for middle-class tax relief, and Senator Roth, for one, is proud of it. "I think working people are entitled to provide for the upward mobility of their children without going into serious debt," he says. "A lot of these same people have been paying taxes for years to send other people's children to college. It's time to restore to them the same opportunities [for a college education] available to the rich and the poor."

Twice last year, Roth's tuition-relief bill passed the Senate by three-to-one margins but died for lack of House action. This year a House Budget subcommittee has already held two days of hearings, and more are planned. Proponents hope to graft the bill onto tax-reform legislation to be fashioned by the Ways and Means Committee later this year, or onto other tax legislation. Supporters represent the ideological spectrum from Republicans Barry Goldwater and Strom Thurmond to Democrats Hubert Humphrey and Daniel Moynihan.

There's a rub, however: The Carter Administration stanchly opposes tuition tax relief. Officials term it expensive, ineffective, and inadequate. "Passing it without Carter's support will be tough," says one Senate strategist, "but we have a fighting chance."

The conflict over the bill reflects a fundamental disagreement over the extent of the middle-class "tuition gap" and of the proper role of Government in bridging it. Current Federal policy is to provide student assistance based on proven need. Families with incomes of $12,000 or less generally can qualify for "Basic Opportunity Grants," and those with incomes up to $25,000 are eligible for Government-guaranteed student loans. All told, Washington is dispensing $8.5 billion in student aid this year, compared with $3.4 billion in 1972. Federal administrators say the increase in aid, coupled with rising incomes, has neutralized the 35 to 40 per cent rise in college and university charges over the past five years.

Supporters of the tuition legislation dispute this conclusion. Their calculations suggest that the enrollment of students from families earning $10,000 to $20,000 has declined in recent years while enrollment of students at lower and higher incomes has remained stable.

"Growing numbers of qualified students are being denied a college education because of increasing costs," explains Roth. He says middle-income ($10,000 to $20,000 a year) students' college-attendance rate dropped 8.8 per cent from 1969 to 1974.

Besides helping to offset this middle-income squeeze, backers of college-tuition credits insist that the subsidy is needed to help restore the vitality of private colleges, many of which are losing enrollment as mounting costs make them less competitive with tax-supported institutions.

At a recent budget hearing presided over by Illinois Rep. Paul Simon, a Treasury official sought to refute these arguments. Asserting that the plan could "easily become a major drain on Federal revenues," Assistant Secretary Laurence N. Woodworth said that a tax credit of $500 would initially cost $2.2 billion, but that pressurse to expand it might prove inexorable. "When your bill is $4,000," he reasoned, "$500 really isn't much help."

Woodworth and Mary F. Berry, assistant Secretary of Health, Education, and Welfare for education, questioned the efficiency of a universal subsidy that would extend tax relief to families that don't need help along with those that do. They also insisted that financially troubled institutions would be tempted to raise tutition enough to offset the increase in educational buying power.

POOR TOOLS FOR HELPING

Woodworth's testimony infuriated New York Rep. Barber Conable. Conable is ranking Republican on the House Ways and Means Committee and—more important—a father seeking to support three children in college. He accused Woodworth of taking a "cavalier attitude" toward the problems of middle-class Americans. He confessed that he had been forced to sell a large home in suburban Washington to find the money to pay his children's way.

"If I as a congressman making $57,500 a year have trouble sending my kids to college," asked Conable sternly, "how do you think someone on $18,000 can do it?" Woodworth acknowledged that paying for a college education can be painful, but he insisted that a tax credit is a poor tool to assist those who need help. Retorted Conable: "Sometimes it's better to use poor tools than none at all."

VARIOUS PLANS PROPOSED

The Roth-Ribicoff bill avoids the direct-subsidy approach of the GI Bill, thus simplifying administration. A family with one child in college would get a $500 tax credit; a family with two or more, $1,000. Other, similar measures in Congress would limit the subsidy to families with more than one child in college, or peg the subsidy to tuition level or to family income, or substitute tax deferral for a tax credit.

The bill's fortunes in Congress ultimately may rest with two men: Senate Finance Committee Chairman Russell Long, who has twice voted for it and pledges to work for its passage, and Long's House counterpart, Chairman Al Ullman of the Ways and Means Committee.

Ullman's position is unknown, and he seems to want to keep it that way. "There's no question that the tuition credit has tremendous popular appeal," says an aide to Ullman's committee. "It strikes just where the voters are, in the middle where people think they're taking it on the chin.

"On the other hand, it's expensive as hell and amounts to a top-bracket subsidy. So it comes down to questions like: Is it needed? Can we afford it? Are there better ways to accomplish the same ends? Right now we don't know the answers. If the bill gets the kind of attention it deserves, we may find out."

[From the Chicago Tribune, May 29, 1977]

He Makes $20,000 Per Year But Cannot Afford to Send His 3 Children to College

(By Arthur Siddon)

Washington.—William Levitas of Portland, Ore., the son of an emigrant coal miner, went to college 27 years ago on the GI bill.

Now an accountant with a $20,000 annual income, Levitas recently received a shock when he learned the cost of a college education has risen so sharply he won't be able to send his own three children to college.

A growing number of middle income Americans are discovering the same thing—despite their upward mobilitiy, they are finding it difficult, and in some cases impossible, to give their children the opportunity for a college education they themselves received.

A recent survey by the College Entrance Examination Board showed that today it costs an average of $2,906 a year to attend a public college and $4,811 to attend a private one—up 37.5 per cent in four years. Some private schools run much higher—almost $6,000 at Harvard, for example.

Demands for congressional relief have spiralled as college costs have climbed. During the first five months of the 95th Congress, 47 bills were introduced calling for tuition tax relief.

Their champion in Congress is Sen. Bill Roth, R-Del., who points out that the middle income family ($10,000 to $20,000) is being pinched because the rich will pay the price no matter what the cost, while the poor have access to various federal and state aid programs.

Indeed, Roth said, middle income families are becoming increasingly aware that their tax dollars are sending needy students to opportunity for upward mobility that a college education offers? I believe this revenue impact would be a worthwhile and necessary investment in the future of our country—an investment that would be returned in higher earnings, better job opportunities, and consequently, higher Federal tax revenues.

Over the past 10 years, the Senate has passed college tax credit legislation by substantial majorities six separate times. This year there are more than 50 pieces of legislation providing college tax relief already introduced in the House of Representatives and a majority of House Members are cosponsors of some form of tuition tax relief. It is an idea whose time has come, and I believe Congress will enact this legislation to provide middle-income taxpayers relief from a financial burden that no other generation has ever experienced.

Mr. President, I ask unanimous consent to print in the Record articles on the college tax credit legislation from the New York Times, the Baltimore Sun, the National Observer, and the Chicago Tribune.

There being no objection, the articles were ordered to be printed in the Record, as follows:

[From the New York Times, Dec. 13, 1977]

Tax Aid for College Parents: Idea's Time Has Come

(By David E. Rosenbaum)

Washington, December 12.—The House-Senate conference committee on the Social Security bill is deadlocked, and one of the most important pieces of legislation of the year is thus stalled over the unrelated issue of whether a special tax break should be given to the parents of college students.

On the surface, it may seem illogical to tie up the Social Security measure, which involves the largest peacetime tax increase in the nation's history and which is the product of a year of hard work, over a question that has been discussed in Congress on and off since the time that today's college students were born.

But to say that is to ignore political realities. For millions of middle-class families, their finances strained by the high cost of sending their children to college, a tax credit to help offset tuition payments has enormous appeal. A senator or representative who defends their cause cannot help but score political points.

ADMINISTRATION IS OPPOSED

The Carter Administration, on the other hand, thinks it is a bad idea, one that would primarily benefit wealthy Americans at a substantial cost to the Treasury, and most tax specialists and educators agree.

But even those opposed to it concede that it is almost certainly an idea whose time has come, if not this year then almost certainly next year or the year after.

It has been clear for years that a majority of Senators and Representatives would vote for such a tax break if they had a chance to do so. Until now, a few powerful legislators like Wilbur D. Mills, the former chairman of the House Ways and Means Committee, Al Ullman, the present chairman, and Russell B. Long, chairman of the Senate Finance Committee, have used their influence and parliamentary skills to prevent the matter from coming to a conclusive vote.

But, as Mr. Long, a Louisiana Democrat, told his conferees last week, "The string has run out." The support for a tuition tax credit is so overwhelming, he said, that it is foolhardy to hold out any longer.

A MARGIN OF 5 TO 1

Indeed, the proposal now before the conference was passed by the Senate by a vote of 61 to 11, a margin of more than 5 to 1. It would give every taxpayer a credit of up to $250 for each dependent attending college or a post-secondary vocational school full time. In other words, for each child in college, parents could substract $250 from the income taxes they would otherwise owe.

In the House, more than half the representatives are sponsoring one bill or another that would grant similar tax relief, and, on a test vote there in September during the budget debate, the concept was approved by a vote of 311 to 76.

Nonetheless, because the House has strict rules against nongermane amendments, the tax credit plan was not added to the Social Security measure. Thus, Mr. Ullman, an Oregon Democrat, and his colleagues were able to hold out against its adoption once more.

It is not difficult to understand why there is much strong support for a tax break for those with children in college. Tuition costs have risen to such an extent that they are now a serious financial burden even to affluent families, in many cases the most expensive outlay a family ever makes except for the purchase of a house.

According to the College Entrance Examination Board, the average cost of a public university is now nearly $2,800 a year. For private universities, it is $4,600 and tuition and fees at the most selective schools are more than $7,000 a year.

The argument for a tax credit that would offset some of that staggering cost is straightforward. Senator William V. Roth Jr., a Delaware Republican, put it this way in the Senate debate last month:

THE OTHER VIEWPOINT

"There are millions of families today who are neither affluent enough to afford the high cost of college nor considered poor enough to qualify for the many different Government assistance programs which their taxes make possible. We are rapidly approaching a situation in this country where only the very affluent and the very poor will be able to attend college, and I am convinced that action must be taken to ease the financial plight of middle-income American families."

The argument against a tax credit for tuition payments is more complicated and less appealing politically. It boils down to this: The Government has limited resources to apply to higher education; that being the case, the money that is available should be concentrated on the people who need help the most.

The $250 credit voted by the Senate would hardly help a family to meet its burdensome college expenses, and, once it was on the books, there would probably be pressure to raise the credit to $500 or $1,000 a year. The $250 credit would cost the Government more than $1.2 billion annually in lost revenue.

Moreover, by one calculation, two-thirds of the benefits would go to families with incomes in excess of $25,000 a year, even though only 15 percent of American families are that well off.

[From the Baltimore Sun, Dec. 13, 1977]

College Officials Reverse Stand, Favor Tax Credits to Aid Tuition Costs

(By Stephen E. Nordlinger)

Washington.—Contrary to the assertions of the Carter administration, many of the nation's college officials, after years of opposition, favor tax credits to help pay the soaring costs of tuition.

Spokesmen for associations representing colleges and universities said yesterday that there is a growing feeling among educators that it was "inevitable" Congress would soon provide college tax relief to middle-income parents to help cover college expenses, despite the views of the administration.

The issue suddenly has become so controversial on Capitol Hill that Senate-House conferees broke up late last week without clearing a multibillion-dollar payroll tax increase to shore up the Social Security System because they could not agree on a proposed college tax credit.

After a two-hour argument, the House conferees balked at accepting a Senate-passed credit, sponsored primarily by Senator William V. Roth, Jr. (R., Del.) that would provide a $250 tax credit a year for students enrolled full-time in a college, university or vocational school. Congressional negotiators unsuccessfully tried again yesterday to settle the dispute.

The proposed credit would cost $175 million the first year, but rise rapidly, as its use increased, to an estimated $1.2 billion annually. Over the first four years of the Carter administration, it would drain $4.8 billion from the Treasury, a major cause of President Carter's opposition.

Joseph A. Califano, Jr., the Secretary of Health, Education and Welfare, in denouncing the Roth amendment as a boon to "some of the wealthiest people in America," said after the conference dead-lock that "most people who are sophisticated in the area of education" oppose the proposal.

A survey of associations speaking for the colleges and universities disclosed yesterday, however, that many educators have recently switched their views, apparently in response to the rising complaints of parents over the costs of higher education.

So many members of the prestigious American Council on Education, representing 1,500 private and public colleges, have changed their minds that the organization, after more than a decade of opposition, has switched to neutrality.

"There has been a great increase in aid to low-income parents, and now there appears to be real need for middle-income tax relief," said Sheldon Steinbach, the group's counsel.

The 325-member American Association of Colleges and Universities, representing Towson State University and other publicly supported institutions, also has decided to be neutral after its long-standing opposition.

"There is a division of opinion but many see the need to help the middle-income students, and there is hope that there won't be tuition increases to offset the tax credit," said John P. Mallan, executive director of the association's government relations division. Mr. Mallan said that the basic federal aid programs appear well enough established to void a possible threat to cutbacks to pay for the proposed credits.

The 1,000-member American Association of Community and Junior Colleges just came out in favor of the Roth amendment. These schools might go through a major boom if the tax credit is passed.

"The poor people get billions of dollars of help, and the rich have their credits for oil and condominiums, so why shouldn't the middle class parents get a little bit of help?" asked John E. Tirrell, vice president of governmental affairs for the group.

Many in the 142-member association representing the major state universities also appear to be backing a tax credit, according to a new survey being completed. Gerold Roschwalb, the director of government relations, who has followed the issues for years for the association on Capitol Hill, said that it appears "inevitable" that some form of tax relief would be passed to benefit middle-income parents with children in college.

"It is a very politically appetizing thing with parents climbing the walls over college costs," he said. "There are tremendous pressures." He suggested that some of these same pressures had influenced many of the association members to accept the tax credit.

In the past, the association and other groups opposed the credit, which has been before Congress in various form for more customers may be located in several counties and cities, which means he must fill out forms for each of these jurisdictions, creating a major headache. If he has mail order customers, he has to complete forms which apply to taxation in every place he has a customer. This is not an insuperable problem for a corporate giant. Corporations employ teams of tax lawyers and certified public accountants and bookkeepers—even computers—but it is a nightmare for a Mom and Pop business with a single bookkeeper.

I have introduced a bill to regularize State taxation of interstate commerce to create uniformity in the tax forms of different jurisdictions. This means a bookkeeper's knowledge of completing many different forms and methods of tax computation will be unnecessary. This week, I held hearings on this bill in Biloxi, Mississippi. The Judiciary Committee of which I am a member, authorized me to call for these hearings, and to hear witnesses appearing both for and against the concept. I believe the hearings and the testimony of numerous witnesses bring us a step closer to the day when we will enact a simplified law to help relieve the overwhelming paper burden bearing down on nearly every individual in the United States and which is driving up the cost of living. Overregulation is a practice which can be and ought to be avoided to enable citizens and small businessmen to conduct their lives and businesses in the least complicated and most profitable manner.

THE PANAMA CANAL TREATIES: A POSITIVE STEP

Mr. CRANSTON. Mr. President, in the past few weeks I have had the opportunity to discuss firsthand with my constituents issues of particular concern to them. One of the topics most frequently mentioned was the new Panama Canal treaties.

I am sure that many of my colleagues found, as I did, a sense among their constituents that these treaties represented another retreat from our Nation's position as a world leader. The feeling that the United States is turning its back on the traditions and the heritage that have made it a great nation is a real one. Particularly in the aftermath of the Vietnam war, many Americans seem to feel that the United States is no longer willing to defend the principles on which this country was founded. Inappropriately, the Panama Canal treaties are seen as one more indication of this retreat.

David McCullough, whose authoritative study of the history of the Panama Canal, "The Path Between Two Seas," was recently published, succinctly articulated and rebutted this feeling in a letter to President Carter. In his letter to the President, Mr. McCullough argues correctly that these new treaties—far from being a retreat from our principles—are instead an eloquent expression of "a strong, still-creative, still-purposeful people." Mr. McCullough notes the immense pride we all have in the Panama Canal. The canal, built despite overwhelming odds, is a symbol of the creativity and vigor of our country in that period of our history. And today the new treaties signify that our country continues to be a nation of great principles, great creativity, and great courage. I heartily agree with Mr. McCullough's conclusions. I ask unanimous consent that his letter to the President be printed in the Record in its entirety.

There being no objection, the letter was ordered to be printed in the Record, as follows:

Accords Are Idealistic as Well as Logical, Historian McCullough Tells President

Dear Mr. President: Rosalee and I were so very pleased and honored to be able to meet you last Friday, and especially on such a propitious day in your campaign for the canal treaties. Your generous inscription on the newspaper picture of you and Gen. Torrijos, as well as your thoughtful remarks about my book, pleased us more than I can say, and we thank you most sincerely.

May I add also that after so many years of studying and writing about dead Presidents, I found it an enormous thrill to see and shake the hand of a live one.

During our afternoon at the White House, I had, as perhaps you know, a chance to talk at some length with presidential aides Landon Butler and Joseph Aragon, and it was Butler's suggestion that a letter covering some of my thoughts on the Panama issue might be of help to you in the months to come.

Mr. President, I am concerned about a certain lack of creative fervor in what has been said in behalf of the treaties thus far. The opposition has a "cause." Its response is full of emotion, even passion, while the arguments for the treaties, however intellectually solid, remain for many people largely an abstraction.

This is not to discount for a moment the powerful logic of the case for the treaties. Indeed, the more we are told of the hard practicalities involved—political,. military, operational—the more convincing they become. They virtually speak for themselves, if presented in language of the kind the layman can understand, and, when set forth for the country by a Commander-in-Chief who is himself a former naval officer and engineer, their effect cannot help but be profound, perhaps even deciding.

But how much more important and useful this great national debate could become, how much better off we will all be for it, if the treaties are seen also as the expression of a high ideal, if in making this historic decision we can sense what Theodore Roosevelt called "the lift toward nobler things which marks a great and generous people."

There are, as I know you appreciate, all kinds of reasons why suddenly we seem to care so intensely about the canal, a subject most of us have never given much thought to until lately. To say that the opposition springs from some vague or naive nostalgia for a simpler past is really to miss the point. There is a grandeur about the Panama Canal and a grandeur of a kind we like to think of as particularly American. The canal is a triumph of an era we remember fondly for its confidence and energy, youth and sense of purpose. The canal is something we made and have looked after these many years; it is "ours" in that sense, which is very different from just ownership.

It works, still. Despite time and change it remains a huge American Success, and this just now, in the aftermath of Vietnam, is of psychological import. (There is a haunting kind of irony to the realization that we went into the jungles of Vietnam to rescue a disastrous French failure, just as once we went into the jungles of Panama to rescue a disastrous French failure.)

Probably it is the aura of power surrounding the canal that has the most to do with our feelings about it. We have known since school days of the tremendous powers called forth to build it—the power to eradicate disease, the power to literally move mountains. There is its own miraculous power to lift and transport ships from ocean to ocean. It is both the symbol and implement of sea power. So when we talk of the canal, whether we are old, young, for or against the treaties, we are talking about very elemental feelings about our own strengths, and it is this, I think, that makes the thought of giving it up or giving it away so disturbing to many people who fail to see the treaties as a positive step.

Still, by the same token, we want, all of us, a more humane and stable world.

We want to be builders no less than did that generation which created the canal.

So for all these reasons it is imperative that the case for the treaties be expressed in the most positive terms, *and* with eloquence. It is because the canal is of such critical importance, because it must be kept secure and in use, because we reserve it as a monument to the human spirit, that the long outmoded Bunau-Varilla treaty has to be replaced and the nature of our presence in Panama brought up to date. Our decision must not be a grudging concession, but a far-seeing, constructive innovation. This, we should be able to say, is something we do because we know it is right. This is not merely the surest way to "Save Our Canal," it is the strong, positive act of a still-confident, still-creative, still-purposeful people.

Our sanction of this unprecedented step can become a source of national pride and self-respect in much the way building the canal was. It is the spirit in which we act that is so very important. The way we say yes to the treaties, the words we use, can, on the one hand, influence how we stand in the eyes of all Latin America, but it can also influence how we stand in our own eyes, and that, too, I know you will agree, is "in the national interest."

I think of what Theodore Roosevelt might say were he alive today. (I have a small bust of him which looks down on me from the top of a file cabinent as I write this.) An ardent reader of history, he knew the world has its moods. He saw history itself as a force, and the history of our own time and the changes it has brought would not be lost on him. He adored and drew inspiration from the great deeds of the past, and was often saddened by the passing of an era before his eyes—the vanishing of the great frontier days of the West, for example. But change was inevitable, he knew, and necessary. Change was growth. The true conservative, he once remarked, keeps his face to the future.

He believed down to his boots in a strong Executive, in *presidential* leadership, and the fact that the treaties reflect the policies and intentions of three prior administrations, in addition to your own, would carry enormous weight with him. Well before anyone else, Roosevelt recognized the importance of Alfred Thayer Mahan's thesis (the nation that controls the sea controls the decisive factor in warfare), and so it is hard to picture him dismissing or discounting such testimony to the military value of the treaties as voiced by the Joint Chiefs.

But were he to endorse the treaties, as I am quite sure he would, it would be mainly because he would see the decision as one by which we are demonstrating the *kind* of power we wish to be. For Roosevelt the canal was a gateway to the very different and uncertain new world of the new 20th century, a world in which the United States had no choice but to play a major part. "We cannot avoid meeting great issues," he said. "All that we can determine for ourselves is whether we shall meet them well or ill."

Mr. President, the Panama Canal is a vast, heroic expression of that age-old desire to bridge the divide and bring people closer together. The task now, it seems to me, is to give the country the conviction that this too is what the treaties are all about.

Sincerely,

David McCullough.

AMERICAN-MEXICAN PRISONER EXCHANGE

Mr. DOLE. Mr. President, under the provisions of a treaty with Mexico, many Americans convicted in Mexico of drug offenses have recently been repatriated to the United States. Many of these prisoners were found guilty by Mexican courts of trafficking in huge amounts of illegal drugs. Drugs valued up to $10 million were seized when some of these individuals were arrested.

Despite the severity of these offenses, these drug traffickers were welcomed back to the United States with the possibility of immediate parole and substantial lessening of their sentences. The welcome accorded to these individuals is especially difficult to understand considering the pain and suffering that their drug hauls would have caused. Perhaps some should be released immediately and perhaps some in U.S. jails deserve similar treatment.

I have written to Attorney General Griffin Bell to express my concern about the reputedly lenient treatment given to those guilty of serious drug offenses. Those convicted in Mexico of serious drug offenses should face the same consequences as if they had been convicted in the United States. Simple principles of justice require equality of treatment be given to those Americans returning from Mexico.

I ask unanimous consent that my letter to Attorney General Griffin Bell be printed in the Record.

There being no objection, the letter was ordered to be printed in the Record, as follows:

U.S. Senate,
Washington, D.C., December 15, 1977.

Hon. Griffin Bell,
Attorney General of the United States, U.S. Department of Justice, Washington, D.C.

Dear Mr. Attorney General: I have read newspaper accounts and viewed television coverage of the U.S.-Mexico prisoner exchange. I am concerned because it appears that a distinction between offenders has not been made.

I realize that a number of Americans in Mexican prisons were convicted for possession of small amounts of marijuana, and possibly deserve a review of their sentences. I cannot, however, support the same treatment of serious drug offenders. It is reported that some of the convicted Americans, charged with possession of up to 100 kilograms of marijuana—an amount worth approximately $10 million—will be freed.

If these serious drug violators are freed, we will have grossly ignored the intent of the treaty and could set a dangerous precedent by this inconsistent and unequal treatment. Drug offenders convicted in the United States, many of whom are young and have been imprisoned for possession of small amounts of marijuana, will continue to serve their sentences. They will not be home for Christmas. As I recall, the U.S. government urged Mexico to crack down on narcotics violators, and financial and technical assistance was given to Mexico. Within two years, the arrests of Americans in Mexico tripled, and, encouraged by U.S. authorities, Mexico stiffened its drug laws, establishing a minimum prison term of five years and three months—with no right to parole for all drug violators.

I would appreciate being advised of the disposition contemplated for those convicted of serious drug offenses in Mexico. I am also requesting a complete list of the cases involved in the U.S.-Mexico prisoner exchange and a list of those to be released and/or paroled by the U.S. government and the nature of charges against them.

Thank you for your attention to this matter.

Sincerely yours,

Bob Dole,
U.S. Senate.

YOUTH UNEMPLOYMENT—AN INTERNATIONAL ISSUE

Mr. HUMPHREY. Mr. President, in a letter to President Carter early this year, I proposed that the Organization for Economic Cooperation and Development (OECD) conduct an International Conference on Youth Unemployment, with which the United States and all member countries are currently struggling.

A number of other Senators joined me in this request. Also, the Joint Economic Committee of the Congress concurred that an OECD-wide Conference should take place this year. And President Carter, who was in full agreement, carried the youth unemployment conference message to the May economic summit.

I am happy to report that this OECD meeting is this week taking place in Paris, chaired by U.S. Secretary of Labor Ray Marshall.

As I pointed out in a message which was read on my behalf today at the Conference, the problem of youth unemployment is not a sudden aberration. A similar pattern is emerging in other OECD countries. Everywhere the need is for well-crafted action by our governments right now.

The purpose of the OECD Conference, involving participants from 22 nations, is to provide an opportunity for its members to share with each other the experience that each nation has gained in coping with the youth unemployment crisis.

The implications of inaction are broad and deep. Unemployed young people add further weight to protectionist pressures that seek to preserve existing jobs by putting tighter reins on the international flow of goods, capital, and technology.

And there is no denying the economically, socially, and politically destabilizing effect when millions of young people have no role to play in our societies.

Also, as we look to the future, we must be fully aware of the extraordinary requirements that this generation, with its greater numbers, will place on each of our nations for years to come: Housing, education for their children, health care as they grow older, and income for their retirement years, for example.

We must develop the capacity to anticipate these demands and respond effectively to them.

Unless we do all of this, we will be condemning an entire generation of our children to Government by crisis, to Government that will shortchange them throughout their lives.

Mr. President, I ask unanimous consent that the text of my remarks, as delivered to the Conference on my behalf, be printed in the Record.

There being no objection, the remarks were ordered to be printed in the Record, as follows:

Statement by the U.S. Delegation Under Agenda Item 4, "General Discussion of Youth Unemployment in OECD Countries"

How can we put our young people to work? That seemingly simple question has been a growing challenge to the best academic and political minds in the industrial world in recent years. The problem of youth unemployment has proved so intractable that its solution will require significant changes in the nature of American economic policy, including manpower policy, and the manner in which such policies are designed.

There is little question about the severity of the problem. The cold statistics, the broken and disrupted young lives, and this Conference itself, all indicate a problem that has reached crisis proportions. Despite almost two and one-half years of recovery, this problem continues to plague the economies and dash the hopes and dreams of millions of young men and women and their parents in America and in many nations throughout the world. The reduction in the overall rate of unemployment that has occurred masks staggeringly high levels of unemployment among our sons and daughters.

The American problem has been stark. Every economic, ethnic and regional grouping of our young people is being affected. But, among minority groups and teenagers, the problem has been seriously compounded by urban decay and rural neglect. These factors have combined to make the problem of unemployed youth a national tragedy—a national crisis.

In the first half of 1977, a monthly average of 3.3 million young people under the age of twenty-five were looking for work in America without finding it—that is almost 50 percent of all the unemployed in our nation. The situation for teenagers has been even more desperate, with unemployment rates well over twice the national average. The recovery has hardly affected minority group teenagers at all—leaving them with unemployment rates that hover around the 40 percent mark.

But the problem is not just a matter of America's history, our unique economic system, our racial problems, or the product of big city life.

Against a background of historically low unemployment rates, almost all OECD countries are now struggling with the spectre of high unemployment rates for young people. For the OECD area as a whole, the unemployment rate for young people has now reached a staggering 10 percent.

Behind the rising tide of unemployed young people are several trends that suggest the youth employment problem will be with us for some time. The demographic explosion that followed World War II was bound to put new pressures on our labor markets. At much the same time, shifts in the skill requirements for industry and many services, and labor practices and national laws all made it more difficult for young people to get and hold their first job.

Unemployment at any age can blight a life. Lost income and opportunities are only part of the cost. It is hard to weigh the burden that enforced idleness puts on family or self esteem.

And for young people, the first missed opportunity, the year or two of waiting, the feigned lethargy that hides an eroding self confidence—all these can sear a young person for life. We are all weary from the endless litany of graduation speeches pointing to a small gathering of young people as the future of the nation, if not the world. But that particular cliche has grown tiresome through overuse, not because it is not true. The young are the future of Western democracy as well as next year's industrial work force. These young minds and hands hold our collective destiny, and we ignore that simple fact at our own peril.

As many of you know, I have toiled in the employment vineyard for a long time. I have never believed that we could afford to neglect the new plant for the mature vine. I saw this tidal wave of grief ripple across our land with its tragic consequences and felt that we must learn more about how others are dealing with it in order to be effective in reducing its dimension in the United States. In February of this year, many Senators joined me in writing a letter to President Carter that urged an international conference on the youth employment problem as an opportunity to share our common experiences. Following hearings in April, the Joint Economic Committee of the Congress strongly recommended the holding of an OECD-wide youth employment conference this year.

At the same time, President Carter and many within his Administration were working toward similar goals. The President carried the youth employment conference message to the May economic summit. It fell on receptive and concerned ears. Many of your governments had reached the same conclusion and some had made an identical proposal.

So here we are. In this case, I believe, the many cooks have prepared an excellent broth. I am very pleased that this Conference has been seen of such significance to require ministerial level representation and that my good friend Ray Marshall, our distinguished Secretary of Labor, is in the chair. The advantage of such a high level conference is that those who make policy have an opportunity to look closely at a problem and how it has been attacked elsewhere. The importance and complexity of the youth employment problem warrant a long hard look indeed.

CHALLENGE TO GOVERNMENT

The causes of youth unemployment vary in nature and importance from one country to another. But there are several obvious threads in America that appear to run through most of the industrial world.

First, and foremost, is the slow recovery from the past recession. Slow growth rates and high overall rates of unemployment are bound to exacerbate the employment problems of young people. They are the last hired and the first fired. A deep recession or slow growth puts youth at the end of a queue that all too often does not reach the open door of employment.

Second, the vagaries of births and deaths have played their part in the employment of the young. The demographic bulge started in America shortly after World War II and was large enough and long enough to swell the ranks of young people entering the labor force well into the 1970's. Slow growth and recession created crisis as a consequence of the dramatic increase that occurred simultaneously in our labor force.

Third, the structure of industry has changed. Sophisticated machines require ever higher levels of training. The burgeoning service industries are a mix of high skill positions and a large number of low-skill, essentially dead-end jobs. As new technology pushes productivity up and labor requirements down, as imports put more pressure on labor intensive industries, and as services put more and more emphasis on specialized education, the problem of an adequate number of entry level jobs increases.

Fourth, beyond a slowing, shifting economy and the growing number of young people in the labor force, a change in societal values has complicated the youth employment picture. More and more American women have begun looking for work at the same time that the baby boom bulge of working age. Attitudes have also changed. Expectations are high. More and more of our young people are provided with an education—whether at a secondary or a university level—that all too often, prepares them inadequately to meet the real requirements of the world of work.

The emergence of such clear-cut trends, and the inability of our government to respond to them effectively, points to some serious deficiencies in the way our government makes policy. The baby boom bubble is a perfect case in point. It was no mysterious development that could be anticipated. On the contrary, it was totally predictable. For years, the baby boom generation made an unmistakable mark on the economy as these youngsters moved from diapers to discos. At least in America, the reaction was to train too many teachers and build too many schools, given the long term needs of our school age population. At the same time, very little attention was given to where the jobs would come from for these young people when their schooldays were over.

Periodic recessions have highlighted another major government policy weakness. The slowness of our public response to economic downturns has made it much more difficult to put the economy back on the right track and closer to acceptable levels of employment. Our public thinking must anticipate economic problems where it is possible, and responses must be in place before the crisis exists. Where it is not possible to predict a crisis, we must be in a much better position to answer it quickly than we are today. I do not claim that we have a reliable crystal ball. But, I do believe that we can anticipate many changes that will occur and that, if we care to, we can influence these changes in socially constructive directions.

The problems of youth unemployment is not a sudden aberration. In the United States, youth unemployment rates relative to those for adults have increased steadily in the last two decades. A similar pattern seems to be emerging in other OECD countries. In some countries, particularly the United States, demographic trends should help reduce the magnitude of youth unemployment in the 1980's. That may not be the case in Europe. But everywhere the need is for well crafted action by our governments right now.

WHAT SHOULD BE DONE?

Different countries have already responded to the youth employment crisis in a variety of ways. One purpose of this Conference is to share with each other the experiencee we have gained. Virtually every country in the OECD has given priority to the development of approaches to solve this cruel problem.

In the United States, we recently committed $1.5 billion to a broad new attack on youth unemployment under the leadership of President Carter. Our new program ranges from direct job creation to a renewed emphasis on training and apprenticeship. It provides help for those who have left school and other potential "drop outs" alike. And, it focuses a good deal of attention on jobs in the communities in which our young people live. As young people come to constitute a smaller percentage of the total work force in years to come, we hope that some of these programs can be phased out or targeted more specifically to the employment problems of especially hard to employ segments of our youth population.

Specifically targeted programs for the young or for any group can not be expected to carry the full weight of bringing order to the labor markets. We have to push the American economy past recovery and on to a new plane of vigorous, but stable economic growth. We need the type of long-range economic policy planning that will pinpoint trends and design policies to meet them. Simple demand management has not been enough to meet the needs of declining regions or aging central cities, nor has it been able to control inflation or to put all the people back to work. The challenge to all of us is to come up with the bold and creative new policies and program that take us beyond the inadequate answers available today.

The implications of inaction are broad and deep. Unemployed young people add further weight to protectionist pressures that seek to preserve existing jobs by putting tighter reigns on the international flow of goods, capital, and technology.

Many of you here today, representing your nations, saw and suffered through the Great Depression as I did. You all remember what prolonged unemployment did to the democratic West. It is different today. The very spectre of the past may help protect us from the future. But there is no denying the economically, socially and politically destabilizing effect when millions of young people have no role to play in our societies.

John Stuart Mill once wrote, "Ask a man to do nothing for his country and he shall have no love for it." Our conference today, in one sense, is to find ways to restore a love for their country in the minds and hearts of millions of our children. They have a tremendous contribution to make, and we must see to it that they have their chance.

But these are just the observations and the warning signs perceived by one citizen of the United States. They are far from a full exposition of the variety of new initiatives that are required. Nor have the various efforts of the individual countries given us a clear indication as to which policy works best in what circumstances. We desperately need this opportunity to meet, compare notes and freshen our policies with the experience of others. It is time for us to see to it that youth will indeed be served.

In conclusion, I would suggest that we must broaden our thinking somewhat and put the current youth employment crisis into perspective.

We must recognize that the demographic causes of the current crisis will be recurring and producing new demands on us in the decades ahead, as the wave of young people mature and continue through life.

We must be fully aware, as we look to the future, of the extraordinary requirements that this generation will place on each of our nations for years to come—housing, education for their children, health care as they grow older, and income for their retirement years, for example.

We must develop the capacity in the United States, and perhaps in your countries as well, to anticipate these demands and respond effectively to them.

And, unless we do all of this, we will be condemning an entire generation of our children and fellow citizens to government by crisis, to government that will short-change them throughout their lives.

My first hope for the Conference, is that it will help us all to do better in meeting the job needs of this generation. But, more fundamentally, I hope that it will also alert our governments to the unique requirements that this generation, throughout their lifetimes, will put on our governments.

PINE BLUFF VILLAGE

Mr. BAKER. Mr. President, I ask unanimous consent to have printed in the RECORD a statement by the distinguished Senator from Maryland (Mr. MATHIAS), and the material attached thereto.

The attachment ordered to be printed in the Record is as follows:

Statement by Senator Mathias

I am particularly proud of a new housing project for the elderly and handicapped to be located in Wicomico County on the Eastern Shore of Maryland. Construction has just begun on the project—Pine Bluff Village—but, when completed, it will be a sheltered community that will provide independence and dignity to its inhabitants, while giving them the benefit of living in a convenient, secure environment designed especially to meet their needs.

The announcement about Pine Bluff Village, prepared by the Maryland Department of Economic and Community Development, explains the origins and purposes of this unique project in rich detail.

Maryland Department of Economic and Community Development

Annapolis, Md.—Construction has just started on Pine Bluff Village in Wicomico County for the elderly and the handicapped, the first "fully sheltered" communal development financed by Maryland's Department of Economic and Community Development.

"Pine Bluff Village", a Department spokesman said, "is designed to give the elderly and the handicapped a new sense of dignity and independence, free of restrictive lives as institutionaled shut-ins.

The new project will provide near total services and security programs for its residents. Located near Salisbury, the 151-unit project is close to grounds where artifacts indicating an Indian civilization between 7 and 10 thousand years ago were found.

The $3.9 million financing will come from the sale of tax exempt bonds, which will be repaid from proceeds of the project rather than with tax revenues as with general obligation bonds. It was also noted that the tax exempt status of the Department's Community Development Administration bonds along with a Federal Section 8 subsidy will enable Pine Bluff Village residents to pay rents which are within their means.

Maryland's Home Financing Program, authorized by the General Assembly, recognized that high interest rates and large down payments together with the rising prices of new and used housing have put a first-home purchase out of reach for too many families. Maryland was the first such state program in the nation to make direct mortgage loans to its citizens.

The term "sheltered" in the Pine Bluff Village project comes from the fact that all apartment clusters, dining and recreation areas are designed for communal living and all areas are connected by enclosed walkways.

The $3.9 million project was delayed in its earliest stages because of some evidence of an Indian civilization 7 to 10 thousand years ago, such as lithic (stone) tools, pottery shards and several other artifacts of possible aborigine origin. Nearly a half-dozen Federal and State historical and archeological organizations examined the evidence before the required professional approval was given. Wicomico itself came from the Indian "wicko-mekee" or "village on a Stream". Pine Bluff is at the juncture of the Wicomico River and Tony Tank Creek.

A striking feature of the "sheltered" community is the enormous communal dining area, which abuts a large lounging area. The kitchen has "commercial" dimensions.

The project was preplanned to serve the elderly, along with handicapped persons, including the blind. Certain areas are scored or textured, to provide "indentity" check points for the handicapped, including some walks and walls, even door knobs and raised numbers in elevators. Virtually every area is geared to the wheel chair, including ramps, furniture, service and emergency buttons or gear all at wheel chair height.

A feature that helps dispel any "recluse" proclivities is the landscaping of the outside area. It will leave large numbers of "native" trees, including great stands of stately oaks, maple and Austrian pine, many over 80 feet tall. The outside space will include shuffle boards, games, picnic tables and barbecue pits. There will be space of individual gardens as well as huge communal garden plots.

Construction and permanent financing for Pine Bluff Village will be provided by the Department's Community Development Administration. The state's agency has the full approval of Wicomico County officials. The project will be insured by the Maryland Housing Fund, which insures mortgages for multi-family as well as individual homes.

In its short history, the Department of Economic and Community Development has registered through its 5 major housing programs a cumulative total of 8,000 Maryland families directly helped—with more than $150 million in loans and mortgage-insurance assistance to developers and individuals.

The programs run a full range of housing assistance—all directed at providing new and rehabilitation housing assistance to the elderly and handicapped and the many hundreds of individuals and families who quite literally are frozen out of the housing market the whole gamut of rising costs, including high down payments. These have included: (1) the Maryland Home Financing Program (MHFP), was established in 1972 to make low-interest mortgage loans to low-income and disadvantaged citizens of Maryland; (2) Maryland Housing Rehabilitation Program (MHRP) loans are concentrated in locally designated target areas where additional private rehabilitation investment can be stimulated. (3) CDA Development Financing Program—provides financing to private limited dividend developers and nonprofit sponsors of new and rehabilitated housing for limited-income families and elderly individuals. (4) The Development Financing Program provides construction and permanent mortgage loans, and (5) Section 8 Programs—this program utilized federal funding to provide rental assistance payments to lower income families across the state.

A TRIBUTE TO SENATOR HUMPHREY

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent to have printed in the Record a statement by the distinguished Senator from Minnesota (Mr. Anderson), and the material attached thereto.

The material ordered to be printed in the Record is as follows:

Statement By Senator Anderson

A very fine tribute to my close friend and colleague, Senator Hubert H. Humphrey, recently was brought to my attention. The tribute was delivered by the Senator's legislative assistant for foreign relations, Mr. Richard McCall, at the Torah Fund Award Ceremonies for Senator and Mrs. Humphrey, held at Penn Valley, Pennsylvania, on December 12. The Senator and his wife, Muriel, were unable to attend this highly significant occasion, but I believe the statements in this tribute richly express the deep sentiments we all hold for Hubert Humphrey.

Personal Observations of Senator Hubert Humphrey

(By Dick McCall)

If in our own trials we show more concern for those less fortunate than ourselves, it is the Hubert Humphrey in us.

If we take little comfort in our own comfort because of the discomfort of others, it is the Hubert Humphrey in us.

If it hurts us deeply to see others suffering and we reach out to alleviate that suffering, it is the Hubert Humphrey in us.

If we weep for those in poverty and despair—the disadvantaged—it is the Hubert Humphrey in us.

If we feel a personal injustice until there is justice for all, it is the Hubert Humphrey in us.

If we believe that it is the right of every human being to live in dignity and freedom—to have a good job at a living wage, decent housing, a good diet, and adequate health care, it is the Hubert Humphrey in us.

If we are never satisfied until the basic human needs of all are satisfied, it is the Hubert Humphrey in us.

If we do, and feel, these things throughout our daily lives, then Hubert Humphrey is always with us.

For I believe that Hubert Humphrey is the embodiment of all that is good and decent in every one of us.

WATERWAY USER CHARGES—"THE SAGA OF A SENATE BILL"

Mr. WALLOP. Mr. President, over the past 8½ months, the Washington Post has carried a series of articles on the evolution of legislation to establish an inland waterways user charge. This issue will once again be back before the Senate when it considers H.R. 8309 and Senator Domenici's amendment 1460.

The Washington Post series, now numbering two dozen articles, has followed the legislation through the Senate committees, the Senate's floor action last June, action in the House this fall, and now the legislation's return to the Senate. Mr. President, this series of articles by T. R. Reid may be the most thorough coverage ever given by a newspaper to the development of a single bill. It provides an instructive analysis of many aspects of the legislative process.

Whatever happens from now on, we can anticipate that some form of user-charge legislation will be enacted next year. And it will be enacted because of the effective leadership Senator Domenici has demonstrated on this issue.

Mr. President, to enable my colleagues to review the entire history of this legislation and the excellent and fair coverage by T. R. Reid and the Washington Post, I ask unanimous consent that Mr. Reid's series of articles be printed in the Record.

There being no objection, the articles were ordered to be printed in the Record, as follows:

Saga of a Senate Bill—Battle Lines Drawn Over Waterway Fees

(By T. R. Reid)

Among the hardy legislative perennials that blossom in Washington every spring is a short-lived species called a "waterway user charge bill" that puts forth a simple idea: those who ship freight on the nation's canals and rivers should help the government pay for building and maintaining those waterways.

Traditionally, the legislation is launched with a glowing press release pointing out that it would save the government hundreds of millions of dollars annually and eliminate a fundamental inequity of national transportation policy.

And traditionally, the nation's barge operators, who have never paid a penny to use the multi-billion-dollar network of channels, locks and dams built for them by the Army Engineers, manage to sink the legislation before it navigates even the first step toward passage.

That traditional pattern seemed to be extending itself one afternoon last month when Sen. Pete Domenici, an amiable Republican from New Mexico, strolled to the front of the Senate chamber and plopped a user charge bill on the long marble desk.

But this year, the pattern of quick death for such legislation may be broken. Because of new attitudes in the executive branch, a series of new studies of transportation policy and a surprisingly favorable vote last year in a Senate committee, Domenici's bill—designated S. 790—has a fair chance to become law.

Accordingly, the nation's barge operators and their customers are gearing up for an all-out effort to stop S. 790.

They have retained a battery of lawyers, including two ex-senators and Richard Nixon's chief White House lobbyist, to argue for the status quo.

Bargemen have become regular visitors in Senate offices, and they have invited senators to return the favor. Meanwhile, an ad hoc alliance of transportation executives, unions, environmentalists and economists is preparing to wage equally strenuous battle on behalf of the Domenici bill.

Those who favor a waterway user charge cite arguments of equity, economy and environment.

It is inequitable, they say, for the government to provide free facilities to one form of transit while other modes must pay. "Highway and airport users pay taxes into a trust fund," Domenici says. "Railroads and pipelines must go into the private capital markets for their right-of-way funds. But the barge industry gets a free ride."

Proponents add that a government facing a $60 billion budget deficit can no longer afford to foot the $240 million annual bill for operating and maintaining the nation's inland waterways—not to mention hundreds of millions more for new construction.

Environmentalists, who see the Army's corps of dredgers and dam builders as a scourge upon the earth, think the political pressure for new locks, dams, and waterways would decrease if the bargemen had to help pay for the projects they push through Congress.

On the other side, barge operators argue that waterway tolls would reverse a tradition as old as the Republic.

The bargemen recite from memory a section of the Northwest Ordinance of 1787 guaranteeing that inland waterways "shall be common highways and forever free . . . without any tax, impost, or duty therefor."

To complement that ancient rationale, the barge operators offer a modern one: energy conservation.

They argue—and government figures bear them out—that a barge is one of the most energy-efficient ways to move bulk freights. To institute tolls now would discourage barge use at a time when the nation most needs it, the bargemen say.

Most government agencies and independent observers who have weighed the competing arguments come down on the side of some user charge for the waterways. Every administration since Franklin Roosevelt's has backed a user charge, and a host of recent studies has supported these recommendations.

In his Senate confirmation hearings the new Transportation Secretary, Brock Adams, called a user charge both "justified" and "desirable."

In Congress, however, these policy considerations have taken a back seat to politics. Coincidences of geography and political longevity have given the barge operators friends in high congressional places.

Barge traffic moving down the Mississippi runs through the back yard of Judiciary Committee Chairman James Eastland (D-Miss.) and Armed Services Committee Chairman John C. Stennis (D-Miss.) on its way to the port of New Orleans, home base of Finance Committee Chairman Russel Long (D-La.).

Feeding into the Mississippi is the $1.2 billion McClellan-Kerr Arkansas River barge channel, which was completed in 1971 and named in part for Appropriations Committee Chairman John McClellan (D-Ark.), who was one of its chief congressional patrons.

The only major waterway west of the Arkansas, the Columbia Snake River system, snakes through the constituency of Commerce Committee Chairman Warren Magnuson (D-Wash.) and Energy Committee Chairman Henry Jackson (D-Wash.).

With friends like that supporting their fight against tolls, the waterway interests would seem to have little to fear from an adversary like Domenici, whose most important position is the ranking minority seat on the Senate Subcommittee on the Upper Atmosphere.

But Domenici, for all his casual, country-boy manner, had carefully taken the measure of his opposition before introducing his bill, and devised a strategy to confound the forces arrayed against him.

To win passage of a bill that had powerful enemies, he would link it to a bill that had powerful friends. With little trouble he found the perfect vehicle: the user charge plan would be submitted as an addendum to a bill calling for revamping Lock and Dam 26.

Lock and Dam 26 (it is the 26th facility a barge passes on the downriver haul from Minneapolis) stands at Alton, Ill., near the confluence of the Mississippi, Illinois, and Missouri rivers, and is thus the pivot point of the nation's major water highway.

Aging, outmoded, too small for the modern "jumbo" barge, the lock has been targeted by bargemen as the chief obstacle to expansion of Midwest water shipping. The industry is seeking $400 million to expand and rebuild the facility.

Logically, the links between Lock 26 and the user charge plan are just close enough to let Domenici merge them in a single bill. Politically, the linkage is precisely right: the very opponents of user charges are the chief advocates of rebuilding the lock.

Bills that are joined can be unjoined, of course, on the Senate floor. But the linkage with Lock 26 would help Domenici get his bill into and out of a committee; late last year, he pushed a joint user charge-Lock 26 bill through the Public Works Committee (it was dumped in parliamentary maneuvering on the floor). And the connection with the $400 million Lock 26 project would provide a continuing reminder of how much money the government spends on toll-free waterways.

There is a certain justice in Domenici's linking those two issues, because it was Lock 26 that first brought the waterways to the New Mexican's attention.

As a junior member of the Water Resources Subcommittee of the Public Works Committee, Domenici has sat through countless hearings where rivermen presented ambitious and expensive plans for a new lock.

"There was an awful lot of money at stake," Domenici says. "You know that $400 million estimate is just a beginning. And I kept thinking, why should people in New Mexico pay that much for something that was mainly going to benefit the Mississippi basin?"

At yet another Lock 26 hearing last fall, Domenici lost patience. He stormed out of the room, pausing at the door just long enough to grumble.

"This is screwy—get me a user charge bill."

The targets of that grumble, Hal Brayman and Lee Rawls, were two young Domenici staff aides who are accustomed to cryptic directions from the boss.

"The senator is an idea man," Rawls says. "He's always hitting on some brainstorm he wants to legislate on. He's always telling us to write him a bill."

Among the ideas Domenici has thrown at Rawls and Brayman was an automobile excise tax pegged to the amount of air pollution each model caused. (The staff quickly discarded that one, only to see another senator introduce it, to editorial acclaim, a few months later.) Another would have eliminated federal regulation of trucking rates; that, too, died under the staff's criticism.

But waterway tolls hit more fertile ground. Brayman, a seven-year veteran of the Public Works Committee staff, had long thought that bargemen were getting an undeserved free ride from the government. He had convinced Rawls, and the two jumped at the chance to write a bill for Domenici.

Explaining the bill in conversation recently, Brayman said, "We're phasing in, over 10 years, charges that will make the barges pay half the government's cost of building and servicing the waterways."

But such direct language would never do for an actual piece of legislation. There are no "barges" in S. 790; the bill applies to "shallow draft cargo vessels." The phrase "half the government's cost" becomes, in legislative argot, "50-per centum of the Federal navigation-related expenditures." The plan Brayman described in 23 words consumes five pages of legalese in the bill itself.

With their user charge translated into the necessary verbiage, the two stapled last year's Lock 26 authorization bill to the front of it.

For balance, they stapled at the end six more pages from a bill creating a "Mississippi River System Council." Such a council is a dream of Sen. John Culver (D-Iowa), whose support Domenici would need to pass the user charge provision.

Finally, Rawls and Brayman wrote an explanatory "speech" (which they knew would never be spoken) and handed the whole passage to Domenici for delivery to the marble desk in the Senate chamber.

As he carried his brainchild to the Senate floor, Domenici was already thinking about the rough road ahead. Unless he could make some arrangements, S. 790 would die beneath the thumb of a hostile committee chairman.

Avoiding Senate Foes—Staff Deal Keeps Waterways Bill Alive

Even before Pete Domenici introduced his bill to require barge operators to pay for using government-built waterways, the senator from New Mexico had a nagging feeling that his measure, S. 790, might not be long for this world.

He could introduce the bill, all right, but that formality was barely a first step toward passage. About 1,000 bills are introduced in the Senate each year; fewer than 10 per cent progress to a committee hearing.

Domenici was worried—and with good reason—that that roadblock might be the death of his bill, too.

If Domenici were to call his waterway fee a "tax"—which might prove the easiest way to collect the money—the bill would be assigned to the Senate Finance Committee.

But Finance Committee Chairman Russell B. Long (D-La.) is an implacable foe of waterway charges in any form. Domenici knew that Long could find several years' worth of other bills to consider before he would schedule a hearing on S. 790.

So it was quickly decided that a bargemen's fee would not be called a "tax." Instead, it would be an "inland waterways charge."

That language would almost surely throw the bill to the Senate Commerce Committee, which has jurisdiction, under Senate rules, over "inland waterways (except construction)."

Commerce Committee Chairman Warren G. Magnuson (D-Wash.) was perhaps not as harshly disposed toward waterway charges as Long was, Domenici knew, but he wasn't particularly favorable to the idea either. Further, the chairman of the appropriate subcommittee of Commerce was none other than Russell Long.

The most congenial spot for S. 790 would be Domenici's Public Works Committee. Domenici has good relations with Sen. Mike Gravel (D-Alaska), who chairs Public Works' Water Resources Subcommittee, and he was confident that Gravel would agree to hold hearings on waterway charges.

Further, a majority of the Gravel subcommittee and the full Public Works Committee had approved a user charge plan that Domenici proposed late in the 94th Congress. (That bill died in parliamentary skirmishing on the Senate floor.)

The problem was in the rules. There seemed almost no way to stretch them to bring S. 790 to the Public Works Committee.

But Domenici had an idea.

The Senate's first major item of business this year was a major reorganization of its committees and their jurisdiction. Sen. Adlai E. Stevenson (D-Ill.) had worked long and hard on a reorganization plan but had run into stiff opposition on the Senate floor.

Domenici guessed that Stevenson would be willing to agree to almost anything to save votes for his plan. On the afternoon of Feb. 3, Domenici went loping over to the Senate floor to engage Stevenson in a "colloquy," as the senators call it, to create some "legislative history" that would circumvent the rules.

"Would the senator yield?" Domenici asked, and Stevenson graciously surrendered the floor.

Wouldn't it make sense, Domenici said, if the user-charge legislation went to Public Works Committee? "I agree," Stevenson replied. "It appears to me that is logical."

With a quick grin, Domenici slipped off the floor and went back to regale his staff with the story of his triumph.

But first-term Republicans in a heavily Democratic Senate should never be too quick about claiming victory. Domenici had not counted on Murray Zweben, the savvy Senate parliamentarian who decides the committee assignment for each Senate bill.

"I saw that colloquy with Stevenson," Zweben said later. "I knew what they were up to. You don't think these guys can fool me with some canned legislative history, do you?"

Thus on Feb. 24, when Domenici formally introduced S. 790, Zweben took a compromise route; he assigned the bill jointly to the Public Works and Commerce committees. Domenici's ploy to maneuver past Magnuson had apparently failed.

As if that weren't enough, S. 790 suffered a more serious blow a week later.

In January, 1976, the Ford administration, like most administrations before it, had concluded that considerations of equity and economy required that barge operators pay a toll for using the waterways. In a message to Congress, Ford promised "quickly" to send a user charge bill to Capitol Hill.

What with one thing and another, Ford didn't get around to sending up the bill until Jan. 19, 1977, the day before he left office. In accordance with protocol, Magnuson, as chairman of the Commerce Committee, agreed to introduce the Ford bill.

Magnuson brought the bill to the floor on March 4. Zweben was not present then, and an assistant parliamentarian, unfamiliar with the joint assignment given S. 790, assigned this bill to Magnuson's Commerce Committee.

"We started jumping around a little when that happened," said Lee Rawls, a Domenici staff aide. "The joint referral had been acceptable, because Public Works could at least go ahead and hold hearings. But with the administration bill assigned just to Commerce, it looked like we couldn't start anything."

Rawls took the problem to Hal Brayman, another Domenici staffer, who had some contacts on the Commerce Committee staff. Brayman immediately undertook telephone negotiations, and he discovered a surprising development.

Although Magruson and some other Commerce members would probably oppose a user-charge bill, most of the committee staff seemed to think Domenici's plan was an overdue change.

Accordingly, a staff-to-staff agreement was worked out. Magnuson would go back to the floor and have the Ford administration bill jointly assigned, as S. 790 had been. Public Works could then proceed with its hearings, and Commerce members would not raise a point of order challenging Public Works' right to report a user charge bill to the floor.

For the moment, at least, S. 790 was still alive.

The Rites of Passage—Friends of Waterway Fees Get Their Day

The parliamentary rites of passage began officially for S. 790 yesterday, and for supporters of the bill almost everything came up roses.

In a hearing before a Senate Public Works subcommittee considering the legislation, which would require barges to pay tolls to use the nation's inland waterways, S. 790 found three partial friends and one enemy among senators, and an all-out advocate from the academic world.

The academician, a white-haired, tweed-suited gentleman who could play an Ivy League economics professor in the movies if he were not one in real life, was Dr. William Vickrey, an expert on transportation economics from Columbia University.

Reading from a richly polysyllabic statement in his deep, rumbling voice, Vickrey said a system of waterway fees would benefit consumers, the government and even the barge operators who would have to pay the tolls.

Since the government first began building waterways immediately after the revolution, barge traffic has moved free of tolls or taxes. Barge operators say instituting tolls now would increase the costs of goods moved by water—mainly food, fuels and steel—and would cause serious economic dislocation in the water freight industry.

Vickrey took issue with both points.

He said waterway tolls would eliminate an "artificial" rate advantage enjoyed by water shippers, leading to "efficient allocation of [freight] traffic among [transportation] modes." With each shipment moving by the most efficient means, he said, the nation's total transportation bill would be reduced.

On the waterways, tolls would eliminate congestion, Vickrey said, reducing the time needed for each shipment and thus reducing barge operators' net costs.

The professor's arguments were cloaked in academic jargon—he made much of "distributional impacts" and "the intra-marginal residue of costs"—that seemed to confuse the subcommittee members, but Sen. Pete V. Domenici (R-N.M.), sponsor of the waterway toll bill, was nonetheless clearly delighted.

"I gather you're telling us that user charges . . . will have a net effect that benefits the consumer," Domenici said, and he beamed when Vickrey agreed. Before Vickrey left the hearing, Domenici took pains to establish that the professor had not been paid for his testimony by the railroads or competitors of barge operators.

Yesterday's hearing, which was arranged after considerable parliamentary maneuvering on Domenici's part, also dealt with a proposal to build a new $400 million lock and dam on the Mississippi River at Alton, Ill.

Sens. Adlai E. Stevenson (D-Ill.), Charles H. Percy (R-Ill.) and John Danforth (R-Mo.) advocated immediate construction of the facility, saying it is essential for unimpeded barge traffic on the nation's main water freight route.

Percy also endorsed the waterway toll legislation, which he said would end a "grossly unfair" subsidy that penalizes competing modes of shipment.

Stevenson and Danforth said they agreed with the "principle" of waterway charges, but both suggested that more study might be required before tolls could be instituted. They both expressed concern that Domenici's controversial toll plan would kill the new lock and dam if the two issues come to the Senate floor together.

Sen. Dewey F. Bartlett (R-Okla.) was the only senatorial witness who came right out and said he was opposed to the waterways tolls.

He was concerned, he said, that a toll system would reduce traffic on the new Arkansas River Navigation System, a $1.2 billion waterway that has made Tulsa, Okla., a seaport.

Conspicuously absent from yesterday's session were representatives of the executive agencies that build the waterways and determine national transportation policy.

They had turned down invitations to the hearing, saying the Carter administration needed more time to settle on a position on the issue. But they are to testify in three weeks, and that testimony may mean more to the future of S. 790 than anything that was said yesterday.

Railroads, Bargemen Find, Fund Allies

When Sen. Pete Domenici (R-N.M.) heard the names of those who had signed up to lobby on S.790, it sounded as if the debate on his bill would involve a bunch of good-government types carrying on a philosophical discussion about public policy.

Among those supporting the legislation, which would require barges to pay a toll for using the nation's inland waterways, were such pristine-sounding groups as the "Environmental Policy Center," the "Coalition for American Rivers," the "Council for a Sound Waterways Policy" and the "Public Interest Economics Center."

Those opposing the waterway toll included the "Association for the Improvement of the Mississippi River," the "Upper Mississippi Valley Association" and a passel of former congressmen and executive branch officials.

In fact, as Domenici gradually discovered, the efforts of all those organizations and officials were financed by the two major combatants in the lobbying war: the railroads fighting for barge tolls, and the barge lines fighting against.

There are a few independent voices debating S.790. But they have been dwarfed by the political and commercial interests struggling to scuttle, or to save, the bill.

Commander-in-chief of the allied forces lobbying for the waterway tolls is Joe Feeney, a genial, 53-year-old bundle of energy who is a lawyer for the Western Railroads Association in Chicago.

Feeney has been lobbying for years on another waterway issue—the proposed $400 million lock on the Mississippi River at Alton, Ill. Because Domenici, for political reasons, linked his barge toll proposal to legislation authorizing the Alton lock, Feeney has become the railroads' chief lobbyist on both subjects.

As soon as Feeney began to plan his campaign, however, he found himself up against a ticklish tactical problem.

The railroads, as chief competitor of the barge industry, are naturally suspect when they speak out on waterway issues. Feeney explained recently. To make a convincing case for the waterway charge, he would have to find some allies outside the railroad business.

"I knew there were environmentalists and other people out there who agreed with us," Feeney said. "But these guys are getting along on baloney sandwiches—they didn't have the money or manpower to do the kind of studies you need."

Feeney, of course, had money, but the problem was getting the environmentalists to take it.

"If you ever wanted to see a bunch of people who were skittish about dealing with railroads, it was those bearded environmentalists," Feeney said. "Hell, some of the guys had sued us a few times."

In essence, the environmentalits told Feeney that they could not clean up the world with dirty money. So Feeney set up a laundry.

In a vacant office at the Western Railroads' headquarters, Feeney established the "Council for a Sound Waterways Policy." Each month the railroad group writes a check to the council, which in turn sends a monthly grant to environmentalists lobbying for waterway charges and against the Alton lock.

Originally, Feeney said, the council was to be jointly funded by railroads, rail unions, and environmentalists. In fact, he said, the railroads have chipped in about $100,000 and the only other contribution was a check for about $1,000 from the Sierra Club.

Feeney said the council has provided grants of "probably a little over $1,500 per month" to the Environmental Policy Center, a Washington organization which has coordinated environmental lobbying on S. 790 in the capital. That represents about 10 percent of the center's budget.

The council sends another $5,000 a month to the Coalition on American Rivers, a conservation group in Urbana, Ill., which has fought several improvement projects on the Mississippi.

Feeney said the Izaak Walton League of America has also received "material support," but no cash grants, from the railroad council.

Representatives of the center, the coalition and the Walton League all testified in favor of Domenici's waterway fee plan before a Senate Public Works subcommittee last week.

None of them mentioned any connection with the railroad association.

In contrast, a spokesman for the "Pensacola Environmental Association" who testified against the bill stated clearly that his testimony had been paid for by barge interests.

Another recipient of the railroads' largesse is the Public Interest Economic Center, a Washington-based group established to "provide some public interest input into economic decision-making." The center has actively lobbied on behalf of waterway charges.

Lee Lane, of the economic center, is forthright about his support from the rail industry.

"We decided we wanted to help Sen. Domenici, because the policy of free waterways is a tremendous boondoggle," Lane says. "But we needed some support, so we looked around and got a $35,000 grant from the railroads. Without it, we wouldn't be able to do much on the issue."

Lane says the railroad money constitutes "about a tenth" of the center's budget.

Despite their ingenuity in aiding allies, however, the railroads have made a basic strategic error in their lobbying on S. 790, according to some observers.

Of the bill's two main provisions the railroads support waterway tolls and violently oppose the new Alton facility. But they have concentrated much of their money and attention on the Alton project, treating the toll question as almost an afterthought.

"They're waging war, all right, but they're fighting the wrong battle," says Lane, the economist. "Setting up a nationwide system of tolls for the barges would be a much greater victory for the railroads than stopping that one lock."

A Shefferd Lang, who describes himself as the "long view man" for the Association of American Railroads, agrees. "If we had tolls, the pressure for all the new locks and dams would drop, because the barges would have to pay for them.

"But I can't get our people to see that. They've been fighting the (Alton) dam for so long they can't see past it."

The railroads' opponents, the barge interests, have no similar myopia.

Over the years the bargemen have established a network of "associations" and "committees" to lobby for the Alton lock, a longstanding dream of the waterway industry.

But this year, when it looked as if Domenici might be making progress on his toll proposal, a group of big barge lines and major shippers financed a new "American Inland Waterways Committee," to concentrate on S. 790.

The committee went fishing for lobbyists in Washington, and offered sufficiently lucrative bait to land two of the biggest.

One was Timmons and Co., the firm set up by William Timmons and Tom Korologos, who had been the chief lobbying agents for the Nixon and Ford administrations. For balance, the committee also retained the firm headed by George Smathers, the former Democratic senator from Florida.

Signing up Smathers was a particular coup. For the past five years, the smooth Floridian had been a lobbyist for the railroads, and he was known as a dedicated champion of rail interests.

Last month Smathers ended his rail contract. As of 10 days ago, he became an equally dedicated advocate of his former adversaries, the barge operators.

The switch was financed by Louis B. Susman, a St. Louis lawyer who had been hired by the bargemen to run their Inland Waterways Committee.

Susman, a prominent Democratic fundraiser, was a political patron of James Symington, a liberal Democrat who lost his seat in Congress in 1976. Searching for a suitable job, Symington ended up in the Smathers firm. Soon thereafter, Susman's barge committee arrived, too, as a major new Smathers client.

Under the Registration of Lobbies Act, the firm was required to report its new client and a fair estimate of the fee it would receive. Symington dutifully filed on March 31 a statement saying that his fee during the 95th Congress from the Susman committee would be "$500 or more."

That would seem to be an understatement. Railroad officials say Smathers received about $8,000 per month, plus expenses, when he lobbied for them.

Members of the firm said their fee arrangements are "confidential".

Symington did provide some insight, however, into his lobbying tactics during an interview last week.

"People who want to achieve a certain result in Congress shouldn't rely on pressure tactics or Washington lawyers," Symington said. "The thing to do is to bring in average citizens to see their congressmen and talk about the legislation."

Last week Symington discussed S. 799 with Sen. Mike Gravel (D-Alaska), the chairman of the subcommittee handling the bill.

The "average citizen" he invited with him to the senator's office, Symington said, was Paul Hall.

Paul Hall is a citizen of New York who happens to be president of the Seafarers' International Union, one of the major political forces in Gravel's state. In Gravel's 1974 reelection compaign he was given $15,500 by Hall's union.

At the last minute Hall couldn't make it. Symington took Korologos instead.

Symington said he has also contacted executive agencies as they try to establish the Carter administration's stance on S. 790. He said his position as a former congressman is no significant help in gaining access to top executive officials.

"This is an open government," he said. "All kinds of citizens are being welcomed into offices of those in high positions."

When he was in Congress, Symington sat on the Commerce Committee with Brock Adams, who is now, as Secretary of Transportation, deeply involved in determining federal waterway policy.

A Transportation Department information officer said last week that Adams has had one meeting on the waterway issue with people from outside the government:

"He had a talk with Jimmy Symington about it."

Executive Branch Still on the Fence About Waterways Bill

The sound and fury surrounding S.790 started up again this week as a Senate subcommittee continued hearings on the bill. But the star witness didn't show up.

Transportation Secretary Brock Adams was supposed to appear before the Water Resources Subcommittee to state the Carter administration's position on the legislation, which would establish, for the first time, a system of tolls for barges using the nation's inland waterways.

Late last week, though, with Adams' testimony just a few days off, the administration discovered that it didn't have a position Adams had to track down the subcommittee chairman, Mike Gravel (D-Alaska), in Juneau to ask for a 10-day reprieve.

On the surface it would seem easy to discern the administration's views on waterway issues.

For one thing, Adams, Jimmy Carter's chief spokesman on transportation matters, wrote an article in 1975 supporting the concept of waterway user charges.

And in February Bert Lance, director of the Office of Management and Budget, included in his "Fiscal Year 1978 Budget Revisions" a line item predicting $80 million in receipts from waterway tolls—an inclusion that would seem to imply support for legislation establishing the tolls.

But things weren't that simple.

Lance's line item, for example, didn't really reflect a political position on the poll legislation. It reflected the budgeteers' instinctive urge to add in any potential receipt that can offset the ever-increasing list of expenditures.

If it was subterfuge for Lance to include receipts from a toll system that hadn't been established, there was a precedent for it. The Ford administration had budgeted the same $80 million "receipt" for two years when there wasn't even a waterway toll bill before Congress.

Adams, meanwhile, had found that the freedom to express his views that he enjoyed as a congressman was strictly curtailed when he became a spokesman for an administration.

The government, he discovered, was full of disparate agencies, each with its own constituency and view on waterway matters.

The Environmental Protection Agency concluded that waterway tolls would reduce the pressure from barge lines for more and bigger waterways; EPA agreed with Adams that the tolls would be a good idea.

But at the Commerce Department, the Maritime Administration didn't want its favorite industry to have to pay to use the waterways. As stated with lyric alliteration by a spokesman, Walter Oates, "Marad's position is one of opposition to the imposition of tolls."

Across the Potomac at the Pentagon, the Army Corps of Engineers was hesitant, too. The Agriculture Department wavered between opposition and neutrality.

To complicate things, the toll proposal had been linked in the Senate with something more controversial: authorization for a major new lock and dam on the Mississippi at Alton, Ill.

The Corps of Engineers strongly supported the Alton lock; EPA didn't like it; OMB thought it was too expensive; the Transportation Department wasn't sure.

Within the White House, the Alton proposal had prompted one of the rare disagreements between Carter and Vice President Mondale.

As a senator from Minnesota and as Carter's running mate, Mondale had strongly supported the new lock. Candidate Carter had been fuzzy, saying the facility required "further study."

Lance, as OMB director, is the executive branch's umpire in areas of disagreement, and his staff began in February—within days after S. 790 had been introduced—to mold the various executive views into a single voice.

That process involved a whirlwind of meetings, memos, "action papers" and telephone conversations.

Adams visited Army Secretary Clifford Alexander to see if they could find common ground on the issues. A working group of subcabinet-level people from eight agencies met at the Executive Office Building to discuss the legislation.

Lance's staff rather quickly came to the disconcerting realization that its efforts to forge agreement had led to further disagreement.

There was a rough consensus within the government in favor of the waterway charges but there was considerable disagreement over the form they should take. Some agencies proposed a fuel tax; some wanted tolls, some had other mechanisms in mind.

There was no consensus on the Alton lock. Early this month Adams sent a team of engineers to Alton to review the technical basis of the Army Corps' arguments.

By late last Wednesday, when a "decision memo" should have been started on its way to the Oval Office, Lance's staff members knew they were nowhere near a decision.

Adams and Gen. Ernest Graves of the Army engineers were deputized to pass the bad news to the Senate. They spent two days trying to find Gravel, who was politicking in his home state. Finally, Thursday afternoon, they made contact and Gravel agreed to reschedule the administration testimony for May 2.

Carter would have 10 more days to decide how he feels about S. 790.

FINALLY, OPPONENTS' DAY CAME

For weeks the Washington lobbyists for the waterways industry had anxiously scanned each day's Congressional Record looking for their resolution. Finally, last Tuesday, there it was.

On April 25 Sen. Russell Long (D-La.) introduced a Senate resolution calling for a "detailed study" of "numerous unanswered questions" relating to federal support for commercial transportation.

Neither Long's resolution nor his prepared remarks about it mentioned Sen. Pete Domenici (R-N.M.) or Domenici's bill, S. 790, which would require barge lines that transport freight on the nation's inland waterways to help the government pay for maintaining those waterways.

But Long's resolution was an arrow aimed at the heart of S. 790.

For one thing, the soft-spoken senator from Louisiana wasn't thinking of any short-term study; his resolution specifically called for 24 months of investigation. In Congress, where "let's study it" is a standard euphemism for "let's kill it," that resolution would be the kiss of death for Domenici's bill for at least two years.

And Long, who is probably the Senate's strongest opponent of any waterway charge, had conveniently resolved that the study should be carried out by the Senate Finance Committee—a committee chaired by Russell Long himself.

For the waterway lobbyists, Long's resolution was perfect. They couldn't have been happier if they had written it themselves.

In fact, to a large extent, they had.

It was back in September, 1976, when Domenici first started talking about a toll system on the waterways, that Washington representatives of the major barge lines and their chief customers had come up with the "study" strategy.

"There was quite a group of us that worked on it," recalls Jim Smith, president of American Waterways Operators, an industry association. "We were on it, and the National Waterways Conference, and some others.

"Sen. Long's staff had some input into the language of the thing, too," Smith said.

An official at another industry association said he attended several sessions last fall in Long's office to work on the resolution.

For the most part, he said, Long was too busy to attend; instead, the work was directed by Herbert R. Harr Jr., a New Orleans port official who was then chairman of the National Waterways Conference, an umbrella group of shippers, barge lines, and local waterways authorities.

Long said in an interview that he had asked his staff to prepare the resolution. "But of course, you always want to refer something like that to the people who are going to be affected," he said with a gentle grin.

All this spring, while Domenici's bill was picking up support from this economist and that senator, the waterways people bit their nails waiting for the resolution to appear. They could hardly start lobbying for its passage, after all, until Long got around to introducing it.

For Domenici and his staff, the Long resolution was demoralizing, but not entirely unexpected.

In February, when he introduced S. 790, Domenici had maneuvered adroitly to keep the bill out of Long's committees. But he knew that no money bill could long escape Russell Long.

"Of course, I knew that Sen. Long was going to have something to say on the issue." Domenici said after he read the resolution. "And I knew he thought the Finance Committee was the right place for it.

"But the resolution for a study of all transportation came as a surprise to me. I thought at least we might get a [waterway toll] bill moving this year."

Still, there were grounds for maintaining stiff upper lips in the Domenici camp.

"It's one thing to put in a resolution," said Hal Brayman, of Domenici's staff. "It's another to pass it—even if you're a committee chairman. I think a lot of senators will understand pretty well what this study was designed to do."

Moreover, Brayman noted, there is one person in Washington this spring who has at least as much influence with Congress as Russell Long does—Jimmy Carter.

"The most important thing for the user charge bill right now is what the administration says," Brayman added. "If they come down here and say the nation needs the income from waterway fees, and needs it now, I don't think many people will want to wait for a two-year study."

But will the administration say that? Two weeks ago, in his message to Congress on water projects, Carter had come out in favor of waterway tolls. But would he be willing to fight Russell Long head-to-head to get them?

Those questions may be answered in a hearing this afternoon, when the Carter administration finally tells the Senate what it thinks about S. 790.

CARTER SUPPORT THROWS WRENCH IN WATERWAYS BILL

The Carter administration finally took a stand on S. 790, and for supporters of the waterways bill it was a good news/bad news sort of day.

It was good news when Transportation Secretary Brock Adams told a Senate Public Works subcommittee that the administration strongly supports the principal goal of the legislation: to require barge lines using the nation's inland rivers and canals to help pay for the maintenance of those waterways.

Noting that the federal government now spends nearly $1 billion annually keeping up the waterways, Adams said, "It is simply not equitable, not just, that profit-making businesses should have this much of their costs met by the American taxpayer."

The bad news came when the Secretary proposed a method for collecting the waterway fees. Adams suggested a federal tax on the diesel oil that fuels the barges.

As a practical matter, the fuel tax would be the simplest and soundest method of imposing a barge charge. It would be considerably easier to collect and administer than such other proposals as a network of toll gates along the waterways or a federal licensing fee for barges.

Politically, however, the fuel tax is the worst possible approach to a waterway user charge.

A fuel tax would be, after all, a tax. Like all new tax plans, it could not reach the Senate floor without first winning approval of the Senate's tax-writing arm, the Finance Committee. That committee, though, is chaired by Russell Long (D-La.), whose home state includes two of the world's largest barge ports and who is, consequently, a resolute foe of any form of waterway charge.

It was precisely to avoid Long, in fact, that Sen. Pete Domenici (R-N.M.), the author of S. 790, carefully kept the word "tax" out of his bill. Domenici always talked about his plan as a "toll" or "fee" and he had hoped that semantic distinction would keep his legislation in the Public Works Committee, safely out of Long's clutches.

As soon as Adams uttered the phrase "fuel tax" at yesterday's hearing, Domenici and Sen. Mike Gravel (D-Alaska) undertook to explain that sad political reality.

"If this is put forward as a fuel tax," Gravel said, "it will have to be referred to another committee . . . the chances of getting a waterway tax out of that committee might be fairly remote."

If the truth were known, Adams already was aware of that. During the deliberations on the Domenici bill within the administration, he had tried to explain that a fuel tax was, politically, an unwise approach.

But the secretary had been overruled by Bert Lance's team at the Office of Management and Budget, who insisted that Long might be sold some form of barge tax. So Adams, the good team player, had presented the Lance position as his own before the subcommittee.

To soften the blow somewhat, Adams readily agreed to Gravel's suggestion that he give the subcommittee a detailed "toll" proposal as an alternative to the "tax" plan.

But the damage had been done. By espousing a fuel tax, Adams had provided an invaluble weapon for senators who oppose the whole idea of waterway charges.

If Domenici's bill reaches the Senate floor, the opponents can now argue, with the Carter administration's blessing, that the Finance Committee is the appropriate place for such legislation—knowing full well that any waterway bill sent into Long's committee is unlikely ever to come out.

Adams, whose appearance drew a packed, standing-room-only crowd of lobbyists, congressional aides, and reporters to the hearing room, threw another procedural monkey wrench into S. 790's works by proposing an 18-month delay in construction of a major new lock on the Mississippi at Alton, Ill.

The Alton facility is the chief legislative goal this year of the barge industry. Domenici had joined his waterway charge plan to the Alton proposal, in the hope that barge interests might accept the toll as a necessary price for approval of the new lock.

But with Adams proposing "deferment" of the Alton project Domenici had lost his vehicle.

On the day when its basic principle had received a strong push forward from the executive branch, S. 790 was in worse shape than ever.

Waterway Toll Bill Emerges for Eventual Vote on the Floor

Spurred by next Monday's congressional budget deadline, the waterway toll bill, S. 790, sailed through two Senate committees in one week and emerged yesterday, more or less intact, for an eventual vote on the Senate floor.

The burst of progress on the bill, which would require barge lines to pay for their use of federally built and maintained waterways, began last Thursday when the Public Works Committee approved the measure by a surprisingly strong 14-to-1 vote.

Then yesterday S. 790 came before the Commerce Committee, and even though most Commerce members knew next to nothing about the bill, they, too, proceeded to vote on it. They voted to put off the imposition of tolls for at least 18 months pending a new study of the issue.

Because the bill had been "jointly referred" to the two committees when it was introduced in February, both committees' versions of the bill will be reported to the Senate floor. That in itself constitutes a considerable victory for Sen. Pete V. Domenici (R-N.M.), S. 790's sponsor, who had feared that his controversial proposal would be left for dead in one of the two committees.

The committee votes marked a vindication of the strategy Domenici had devised when he first introduced his bill in February.

Domenici had linked his toll proposal with a bill authorizing construction of a major new barge lock on the Mississippi at Alton, Ill. As Domenici planned it, the Alton lock would be a vehicle on which the toll plan could ride through committees.

That's just how things worked yesterday in the Commerce Committee. Most Commerce members are opposed to the waterway tolls, but they strongly favor the new lock. Because the lock authorization involves federal spending, it had to be reported out of commitee by next Monday to comport with the requirements of the congressional budget procedure.

Consequently, such opponents of waterway tolls as Russell B. Long (D-La.) and John C. Danforth (R-Mo.) found themselves pushing to get S. 790 out of committee and onto the floor.

Because of the haste, yesterday's Commerce Committee session was something less than a model of responsible legislating. Hardly any of the committee members had had time to read S. 790, and they had to work on the bill in almost total ignorance of its provisions.

Things got off to a bad start when the committee chairman, Warren G. Magnuson (D-Wash.), undertook to explain the bill to the members. About one-third of the way through, the 72-year-old chairman lost his train of thought, and the explanation was abruptly halted.

That didn't stop the members from debating the bill, however. Sen. Ted Stevens (R-Alaska) and others complained that S. 790 would make pleasure boaters pay for navigational aids on inland rivers. No one seemed to know that the bill specifically excludes pleasure craft, and states that federal spending for navigation aids shall not be recouped through the toll system.

There followed a flurry of amendments to the bill, and amendments to those amendments, with the result that by the time the committee finally voted to report out S. 790, nobody was certain exactly what the Committee version of the bill would say.

"Without objection," Magnuson said, "we'll let the staff clean all this up." Nobody objected.

The Public Works Committee's consideration of the waterway toll a week earlier began in a subcommittee, which held a "markup" session (where members "mark up" the printed bill with various amendments) just after the hearings ended.

Under the Senate's new "sunshine" rules, most markup sessions are supposed to be held in public. But when the subcommittee members arrived for the markup, they huddled around Chairman Mike Gravel (D-Alaska) with their backs to the audience, and discussed the bill in muffled tones that could not be heard beyond the huddle.

After 40 minutes of whispered discussion, the members turned around, Domenici made a motion, and S. 790 was sent on its way.

The version of S. 790 that came out of the Public Works Committtee was nearly identical to the one that Domenici had introduced before the hearings.

Of some 60 witnesses who testified, only one—a sand and gravel dealer from Kentucky—was to have any effect on the bill eventually reported from the committee.

The gravel dealer had asked for an amendment to spare his small business, which relies on waterway shipment, from economic disadvantage. He got a legislative commitment that the barge toll would not significantly harm small businesses.

Among the witnesses whose testimony had no effect was Transportation Secretary Brock Adams. Despite large Democratic majorities on both Senate committees, neither paid the slightest attention to the views of the Carter administration, which Adams had presented in testimony.

The administration could still influence S. 790, of course, by lobbying on the bill as it comes to the Senate floor.

"I expect there'll be a lot of that," Domenici said. But that was in the future. For the present, the bill had gotten out of committee, and that was not bad at all.

"Hostage" Plan Aids Barge Toll Backers

While printers were printing, schedulers were scheduling, and lobbyists lobbying all over the Senate, the waterways toll bill, S. 790, moved towards a final vote—and got a major boost along the way.

With a little help from a well-placed friend, Sen. Pete Domenici (R-N.M.), the bill's sponsor, found himself in a legislative catbird seat. His chief opponents had been forced to admit that they might have to vote for Domenici's bill.

S. 790 would require barge lines hauling freight through canals, locks and channels built and maintained by the government to pay a charge for using those waterways. The barge industry, which has never paid a penny for the multibillion-dollar inland water network, has mounted a steadfast fight in the Senate against the bill.

Meanwhile, the barge interests have been working for Senate passage of a long-sought $420 million authorization to rebuild Locks and Dam 26, the 26th federally built barge facility downstream from Minneapolis on the Mississippi.

Since he first introduced S. 790, Domenici has worked to link his fee proposal with the authorization for the new lock.

Late Friday evening, Domenici and the rest of the Senate learned that the two measures would indeed be linked—by Jimmy Carter. In a letter to the Senate, Transportation Secretary Brock Adams said that senators who favor the new lock would have to vote for S. 790, too, to get it.

"I feel I should inform you," Adams wrote, "of the President's very firm intention to veto any bill authorizing construction of a new Locks and Dam 26 . . . which does not also contain a provision for the establishment of waterway user charges."

In essence, Carter had adopted a "hostage" strategy, holding the new lock hostage to the imposition of tolls. Presumably, some pro-barge senators would now have to vote for S. 790 to free the hostage.

For Domenici, Adams' letter came as a godsend, but the cherry New Mexican had to admit the message was not exactly a bolt from the blue. In fact, Domenici had been nudging Adams toward the "hostage" position for the past few weeks in a series of friendly phone calls.

Adams and Domenici have been friends since Adams' service in the house of representatives. In one of those "odd couple" arrangements that pop up in Congress now and then, the liberal Democratic congressman from Seattle and the conservative Republican senator from Albuquerque had developed a close relationship during long working sessions in the House-Senate conference on the annual congressional budget.

Adams had chaired the House Budget Committee, and he had retained his interest when he left Congress to join Carter's Cabinet. To keep up, he made regular calls all spring to his friend Domenici. The senator would recount the latest budget developments, and then steer the conversation around to S. 790.

Adams and the White House also had reasons of their own for sending the "hostage" letter. Carter and his budget director, Bert Lance, were both suspicious in general of the Army Corps of Engineers' grandiose plans for the new lock, and both were anxious for the income that waterway tolls could provide.

Adams, moveover, was angry that his carefully prepared Senate testimony on the lock—he suggested that construction be delayed for a study—had been totally ignored by pro-barge senators on the Public Works and Commerce committees.

When he heard that Adams' letter was on the way, Domenici's first fear was that it would arrive on the Hill too late to do any good. So Lee Rawls, of the senator's staff, dashed off a note to William Hildenbrand, who works for Minority Leader Howard H. Baker Jr. (R-Tenn.), beseeching him to have S. 790 put off a few weeks on the Senate floor schedule.

Hildenbrand has a working relationship with his counterparts on the majority staff that permits either side to delay scheduling of any bill. It was arranged that the measure would not come to the floor for another week to two, giving Adams' message time to sink in before the final vote.

Meanwhile, the mechanics of moving the bill from committee to the Senate floor were proceeding apace. A committee report, containing the views of the two committees that had considered S. 790, and a new text of the bill, containing committee amendments, were rushed to the printers and distributed to every member.

The actual record of the Public Works Committee's hearings would not be printed before the Senate vote, but Hal Brayman, another Domenici staffer, saw to it that the most favorable parts of the record got out anyway.

Brayman wrote a series of speeches quoting various supporting witnesses. The speeches were distributed, one each, to Republicans supporting Domenici. They are being inserted, by a different senator each day, in the Congressional Record.

Like hungry dogs responding to Pavlov's bell, packs of lobbyists descended on the Senate office buildings in anticipation of the impending floor vote.

Senators who live thousands of miles from the nearest waterway suddenly found themselves engulfed by silk-suited lawyers pushing the views of the barge companies, who oppose S. 790, and the railroads, who favor it.

The first rule in any successful lobbyist's book is to bring local pressure to bear. Pressure, from every state in the union, was being brought. Telephone calls, telegrams and sacks of letters about S. 790 were pouring in to Washington.

And a few letters were going the other way. Newspapers in Albuquerque, Santa Fe, Las Cruces, and Alamogordo, N.M., began receiving letters from "concerned citizens" of Arkansas, Mississippi, and other river states denouncing Domenici.

With a final Senate vote approaching, the battle of S. 790 was heating up.

House Counterpart to Senate Barge Toll Bill Languishing

When the framers of the Constitution set out to design our system of representative democracy, they must have had something like H.R. 4339 in mind.

H.R. 4339, the "Transportation Users Equity Act," is the House of Representatives' version of S. 790, the controversial Senate proposal to require barge lines to pay tolls for their use of federally built and maintained waterways.

The House bill was introduced early this spring by Berkley Bedell, a gentle soul from Spirit Lake, Iowa, who represents the northwest corner of his state in Congress. But it could not be called Bedell's own brainchild.

Rather the legislation was the product of Bedell's constituents, who complained to the Democratic Congressman at various town meetings that private barge lines were receiving, for free, billions of dollars worth of public support. In Monona County, in Osceola, in Winnebago the subject came up, and the people asked him to do something about it.

Unfortunately for Bedell, the barge toll idea is considerably less popular in the House Public Works Committee, to which H.R. 4339 has been referred. Committee members say Bedell's bill is unlikely even to be scheduled for hearings, much less receive a favorable vote, in Public Works.

Therein lies the rub for advocates of the waterway toll, who have watched with growing optimism all spring as the Senate toll legislation, S. 790, has gradually picked up support as it moves toward a final floor vote.

S. 790, too, seemed a nearly hopeless cause when Sen. Pete Domenici (R-N.M.) introduced it in February, but deft parliamentary maneuvering by Domenici and strong support from the Carter administration have given the bill at least a 50-50 shot at passage, according to preliminary head counts by lobbyists on both sides of the issue.

In the House, the legislation faces much longer odds. Bedell, a sort of lamb among lions in Congress, is just not the type to pressure a bill past hostile committee leaders. "I don't usually call the chairmen or cajole people or things like that," he says.

Yet the quiet congressman, who looks and talks like a prairie Mr. Peepers, does have a way of getting things done.

In Spirit Lake High School during the depression, Bedell used to braid dog's hair around old fish hooks and sell the resulting trout flies to make spending money. He built that pastime into a fishing tackle concern with 800 employees and $20 million in annual sales.

With similar industry, Bedell set out in 1971 to get to Congress, and ran almost full-time for three years to unseat Republican Wiley Mayne. The next question was what to do in Congress once he'd arrived there.

For answers, Bedell established a regular circuit of "open door meetings," 44 of them each year, in which his rural constituents debate and vote on issues they want Bedell to get involved in.

Most of the farmers in Bedell's corner of Iowa ship their grain to market by rail. They had long paid higher freight rates than eastern Iowans, who ship by barge on the Mississippi. Waterway rates were lower because the barge lines paid nothing for construction and maintenance of their rights of way.

"I never knew much about this," Bedell said. "But at these meetings people kept saying it wasn't fair. The railroads had to pay for their track bed; truckers paid into a fund for highways. Why should the barges go free?"

This spring Bedell brought that message back to his legislative assistant, Bill Endicott, and the two decided to put in a bill. But neither knew much about the barge business, and neither was patricularly adept at writing legislation, either.

So Endicott took the matter to Ward Hussey.

Hussey, a cheery veteran of 30 years' service in the Office of the Legislative Counsel, is the House's chief bill writer. His raison d'etre is to help members like Bedell put their ideas into legalese, and for Hussey it is a labor of love.

Beneath an office bulletin board that features a "statute of the month," Hussey talks happily to anyone who will listen about the salad days when he was drafting the Marshall Plan and the Internal Revenue Code of 1954.

For Hussey and his staff, a little thing like a waterway toll bill was a piece of cake. They borrowed some language from Domenici's bill, threw in some boiler plate conditions and exemptions, and ground out H.R. 4339 in a few days.

With the draft of a bill in hand Endicott prepared a "Dear Colleague" letter explaining the concept and asking for co-sponsors. Ten signed on (only one from the Public Works Committee, however), and Bedell dropped his bill in the hopper.

But there it stopped. With powerful opposition on the Public Works Committee, H.R. 4339 seems to be headed only for oblivion.

And that poses a frustrating problem for Domenici, who has steered his own toll bill so artfully through the Senate. All his efforts would be futile if the idea came to a dead halt in the House.

Consequently, even before he has won in the Senate, Pete Domenici has been plotting how to get S. 790 through the other half of Congress.

Steering Through the Shoals—With Senate Course Charted, Measure Almost Snagged in House

With the prospects for Senate passage of his waterways toll bill, S. 790, looking brighter all the time, Sen. Pete V. Domenici (R-N.M.) turned late last month to a rather fundamental problem he had ignored all spring: there was another house of Congress to worry about.

Domenici had steered his bill—which would establish, for the first time, a set of tolls for barges hauling freight on the nation's inland waterways—through two Senate committees, and lobbyists were reporting that it stood a good chance of victory on the Senate floor.

In the House of Representatives, though, the toll proposal was making less forward progress than a barge on a sandbar. The bill had been introduced by a junior member, Rep. Berkley W. Bedell (D-Iowa), and promptly hurled in a hostile subcommittee.

Domenici's Mission Impossible, then, was to find a means, in the Senate, to force his idea through the other half of Congress. By last week, he had a plan.

Article I, Section 7 of the Constitution establishes the requirement that a bill must be approved by both houses of Congress before it can be signed into law by the President. But that section doesn't explain how the two houses should work together to settle on a jointly acceptable form for each bill.

Over the decades Congress has developed the conference procedure, in which legislation that has been passed in similar but not identical forms by the two houses is sent to a "conference committee" with representation from both Senate and House.

The conferees are charged with developing a single version of the bill which can be presented to each house for final passage. In most cases of dispute, each house yields partly to the other and a compromise bill is agreed to.

The possibility of a compromise in conference provided Domenici with the opening he needed. If the Senate were to pass his toll bill while it was still mired in the House subcommittee, he might still get the measure to the House floor by insisting on it in a conference. And on the House floor, unlike the subcommittee to which it had been assigned, the waterway toll seemed to have a good chance of passage.

To employ that strategy, though, Domenici had to be sure he could get his measure to a conference. Since a waterway toll bill would probably never pass the House, and thus never reach a conference, the senator needed a vehicle.

Domenici had earlier found one to help his toll plan get through Senate committees. He had attached it to a bill authorizing a major new Mississippi River barge facility at Alton, Ill. But the Alton project was not sure of House passage, so the senator looked around for a safer bet.

The one he chose was S. 1529, a compendium of two dozen or so "pork-barrel" public works projects which had been lumped, for administrative convenience, into a single "omnibus" public works bill.

Because the omnibus bill contained goodies for almost every section of the country, it seemed sure to win passage in both houses of Congress without much trouble. And because it included numerous waterway projects, it would be a perfectly logical place to append a proposal for a waterway toll.

The omnibus bill offered other advantages, too. Because it was a product of the Senate Public Works Committee, the Senate conferees on the bill would be chosen from Public Works members—who favor the waterway toll.

As a member of the Public Works Committee, Domenici would have a good chance to be appointed a conferee on the omnibus bill, so that he could personally push his waterway toll in the conference session.

Finally, the omnibus bill included about $100 million worth of flood control projects in West Virginia, the home of Senate Majority Leader Robert C. Byrd. Thus it seemed likely that Byrd would schedule the omnibus bill for a Senate vote fairly soon.

Accordingly, Domenici decided that his original bill, S. 790, would be allowed to die. Instead, the senator would propose the waterway toll and its "sweetener," the Alton project, as floor amendments when the omnibus bill came up for a vote.

Whether the Senate would approve the toll plan was still uncertain. But if it did, Domenici knew, he now had a means to get it through the other half of Congress as well.

Corporate Killer Fish Are Circling Waterway-Tolls Bill

When you're running a corporation as big as U.S. Steel, it's not always easy for the right hand to know what the left hand is doing. That must explain the huge firm's lobbying position on S. 790.

Ohio Barge Line, Inc., a U.S. Steel subsidiary that hauls raw materials and steel along various Midwestern waterways, has contributed more than $5,000 to the lobbying effort against the Senate bill, which would require barges to pay tolls for use of inland waterways built or maintained by the federal government.

Meanwhile, the Elgin, Joliet, and Eastern Railroad, another wholly-owned subsidiary of U.S. Steel, has contributed undisclosed sums to the Western Railroad Association, the rail industry umbrella group that has spearheaded lobbying in favor of the waterways bill.

U.S. Steel's schizophrenia on S.790 may be unusual, but the giant steelmaker's involvement in the lobbying fight is definitely not. As the controversial waterways proposal heads toward a final Senate vote—probably sometime this week—some of the biggest fish in America's corporate sea are circling the Capitol, looking for a legislative kill.

As with most economic legislation in Congress, the waterways toll plan is being debated largely in terms of its effect on consumers and small business. But also as with most economic legislation, the lobbying is being financed largely by big business.

Under the 1946 Regulation of Lobbying Act, all those involved in the lobby campaign should report how much they are spending on the effort.

In practice, the act is so structured that anyone who wants to can conceal his identity and his expenditure. Thus it is impossible to detail precisely who is spending what on S. 790.

But records that are available indicate that railroad interests, which favor the waterway toll, have spent at least $350,000 on the toll legislation and a companion bill that would authorize construction of a major new barge facility on the Mississippi at Alton, Ill.

Those chipping in to the rail fund include most of the nation's big railroads, conglomerates such as IC Industries (which owns everything from railroads to Midas Mufflers to Dad's Root Beer), and two government-funded rail behemoths, Amtrak and Conrail, whose annual dues to the Association of American Railroads help pay for that association's lobbying team.

The railroad spending seems to have been at least matched by the barge industry, which opposes the toll.

The barge business is a curious combination of small, one- or two-boat piloting concerns and huge industrial, mineral, and agricultural firms that maintain large river fleets.

Those big barge shippers have been generous in supporting four different industry groups lobbying against the toll. Contributors include Dow Chemical; Peabody Coal; Cargill, the grain giant; American Electric Power, the nation's largest utility combine; and Mobil, Sun, and Ashland Oil companies.

Once you've raised the money, how do you start lobbying? The two sides in the S. 790 fight have adopted opposite approaches to the problem.

The railroad people, on the whole, are working through senators' staffs. Using their own loquacious lobbyist, Robert Bird, and a squadron of environmentalists and economists supported by railroad funds, they have tirelessly carried their message—in personal visits and voluminous literature—to every administrative assistant in the Senate.

The staff strategy is a proven winner; one of the great Senate victories in lobbying lore—the civil rights lobby's defeat of the G. Harrold Carswell Supreme Court nomination—was won by convincing staff members, who convinced their senators, that Carswell was unfit for the court.

But it also has a hitch. While one lobbyist is busily selling a senator's aide, he may find out that his adversary has been working equally hard on the senator himself.

And that, in the case of the waterway toll, is where George A. Smathers comes in. Smathers has been hired by the bargemen to take their case directly to the senators.

George Smathers is a smooth-talking, ingratiating Floridian who served three terms as a Democratic senator and set up shop along "Lobbyists' Row" on K Street N.W., after retiring from Congress in 1968.

With his convincing ways and close friendships among senior Senate Democrats, Smathers' operation has been able to command fees of $2,000 per month and more from major corporate clients.

For the past five years, in fact, Smathers had been paid about $100,000 per year, according to rail executives, by the railroad industry to lobby in support of the waterway toll.

Then this spring, the highly paid Smathers changed his spots. Smathers was signed up by the barge industry, and immediately began lobbying assiduously against the toll proposal he had so assiduously supported while he was on the railroad payroll.

The quick turnabout seems not to have impaired Smathers' effectiveness with his old friends in Congress. He and his new associate, former Democratic Rep. James Symington of Missouri, have been calling senators and cornering them in the hallways to spread the bargemen's message.

Indeed, the opponents' direct approach to senators seemed to be working so well that one of the chief supporters of the waterway toll began last week to employ that lobbying tack in addition to the staff strategy.

Secretary of Transportation Brock Adams, who has led the fight for the Carter administration, which supports the toll idea, began placing calls to his friends in the Senate to convince them that S. 790 deserved their vote.

Not all the lobbying effort was aimed directly at Capitol Hill. There was also a concerted effort to win the hearts and minds of the news media, on the theory that what was printed about the waterway toll would influence senators' perception of the issue.

Accordingly, a barge industry group two weeks ago hosted some 20 reporters on a free, two-day barge tour of the Ohio River Valley.

And last week senators on both sides of the issue were approaching Washington reporters proposing news stories about the bill that would run a day or two before the Senate vote. Each side's version of the story, of course, supported its view of the toll proposal.

Last week, Sen. Pete Domenici (R-N.M.), the sponsor of the waterway toll bill, and Sen. Russell Long (R-La.), its chief opponent, both suggested that reporters write a news story a day or two before the Senate vote. Each man's version of the proposed story, of course, supported his view of the issue.

Whether all the money and effort would bear fruit remained unclear, however. With the vote just a few days off, Lee Lane, an economist who has been lobbying in favor of the waterway toll, was almost ready to conclude that it had all been in vain.

"The more I talk to people," Lane said, "the more I'm afraid that half the Senate doesn't understand the issue and the other half can't make up its mind."

Senators Leave Education on Toll Bill to Final Hours

With the waterways toll bill due to come for debate on the floor within 24 hours, members of the U.S. Senate yesterday afternoon decided it was time to find out what the legislation was all about.

Despite hundreds of thousands of dollars worth of lobbying effort and millions of words in reports, "Dear Colleague" letters and newspaper articles, most senators who had no direct interest in the legislation had to admit to their assistants that they weren't really sure what it was they were about to vote on.

Accordingly the offices of Sen. Pete Domenici (R-N.M.), sponsor of the waterway proposal, and Sen. Russell Long (D-La.), its chief opponent, were getting calls from staff aides all over the Senate.

"I've got to write a floor memo for my guy telling him how to vote," the staffers would say. "What's the deal on this thing, anyway?"

The problem is that, until late yesterday, neither side was entirely certain what the final "deal" would be.

The basic outlines of the Domenici measures were clear. But for the past week, the New Mexican, growing increasingly nervous as the final vote approached, had been engaged in nonstop negotiations with various colleagues to design a bill that would pass the Senate.

For a number of reasons, Domenici had decided, however, that he would bring up his original bill, S-790, as a floor amendment to the omnibus rivers and harbors bill, which was scheduled for debate today.

Long, for his part, had to deal with barge industry lobbyists who were pleading with him to find some parliamentary device that would keep Domenici's bill from reaching an up or down vote on the floor.

The legislation that sparked it all would require barge lines hauling freight on inland waterways to help the federal government pay for building those waterways.

Last week, with the vote count showing his chances to be too close for comfort, Domenici set out to win over some of his adversaries.

Through innumerable phone calls and meetings with farm state senators, the New Mexican kept asking if there wasn't some way that his bill could be made palatable to farmers.

Over the weekend Domenici and two Minnesotans, Hubert Humphrey and Wendell Anderson, hit on a plan. They would establish a limit or "cap," on the barge toll that would guarantee that commodity prices would not increase more than 1 percent because of the waterway fee.

Not until yesterday afternoon were the details resolved. But at 6 o'clock last night an excited Domenici was able to drop on the desk at the front of the Senate chamber an amendment, with 13 cosponsors, that would assure farm support for the barge toll.

Long, meanwhile, was being pressed from both sides. The barge industry, concerned that Domenici had them beat, had been asking him to find some way—even a filibuster—to prevent a vote.

But Long's allies in the Senate, Sens. John Danforth (R-Mo.) and Thomas Eagleton (D-Mo.), argued that they ought to let the bill come to a vote on the floor.

Last night, as the bill was formally brought up so debate could begin this morning, it was still not clear when—or even if—the Senate would finally vote on the waterway toll.

U.S. Waterway Tolls Approved by Senate

The Senate yesterday approved legislation that would require commercial barge lines to pay tolls for using federally built and maintained inland waterways.

In a legislative skirmish that pitted a first-term Republican, Sen. Pete V. Domenici

(N.M.), against one of the Senate's senior Democrats, Russell B. Long (La.), Domenici prevailed with the argument that "railroads and truckers pay for their rights-of-way and barge lines should, too."

About 16 per cent of the nation's freight is shipped by barge over 25,000 miles of inland waterways built and maintained by the Army Corps of Engineers. The Department of Transportation estimates that federal spending on the waterways is about $1 billion annually.

Since the Northwest Ordinance of 1787, which declared that the waterways should be "forever free," shippers have not been required to reimburse the government for its waterway expenditures.

Yesterday's vote marked the first time that either house of Congress has voted for a waterway fee.

The waterway fee proposal has been introduced in the House, but appears to be making no progress.

Yesterday's Senate vote came as an amendment to a $730 million rivers and harbors bill, which contains several politically popular projects and should pass in the House. When that bill comes to a House-Senate conference, Domenici hopes to add the Senate-passed waterway toll to the conference version, which will go back to both houses.

However, Long warned that Domenici's strategy might be unconstitutional, citing a clause in the Constitution requiring that revenue bills originate in the House.

In passing the waterway toll plan, the Senate also approved a $421 million authorization for a new lock and dam on the Mississippi at Alton, Ill.

The crucial vote in a seven-hour Senate session that was alternately crackling and comatose came when Long and Sen. Adlai E. Stevenson (D-Ill.) suggested a study of the toll proposal in place of the Domenici bill.

The two Democrats argued that too little was known about the impact of a waterway toll on the freight industry and consumer prices to approve it without further study. Domenici and his supporters replied that the idea has been extensively studied and that the Long-Stevenson move was a back-handed method of killing the toll proposal.

The study proposal was defeated on a 51-to-44 vote, and a subsequent Stevenson study proposal lost by a larger margin. When those votes made it obvious that proponents of the toll had a majority, support for Domenici's bill grew. The final vote was 71 to 20.

The Senate legislation would empower the Department of Transportation to develop a system for collecting the barge fees. Unless it was rejected by a two-thirds vote in Congress, that system would take effect in 1979.

The long day on the Senate floor was relatively anticlimactic for proponents of the waterway fee, who have been battling in Senate committees and corridors since Domenici proposed the bill in February.

Domenici adroitly maneuvered the proposal through two Senate committees and managed to keep it away from the Finance Committee where Long, a strong advocate of the barge industry, would almost surely have buried it.

The proposal prompted a major lobbying fight between barge interests, who opposed it, and the railroad industry, which backed it, causing a difficult choice for senators in states where both industries operate.

When Stevenson's amendment came up yesterday, for example, Sen. Charles H. Percy (R-Ill.) stood at the front of the chamber carefully tabulating the vote. When it became clear that Stevenson's proposal would lose, he voted for it.

That move allows Percy to tell the barge interests that he supported them by voting for the plan and the railroads that he waited until he was sure they would win before voting against them.

WATERWAYS TOLL BILL FACES NEW THREAT: DEATH BY "BLUE SLIP"

In Robert Louis Stevenson's "Treasure Island," the pirates exchanged death threats by passing notes marked with "The Black Spot." In the Congress, the same message is conveyed via "the blue slip."

A "blue slip" is a parliamentary form letter through which the House of Representatives can kill, irrevocably, certain bills passed by the Senate. Next week, when Congress comes back from recess, that fate may await S. 790, the waterways toll bill.

It is a frustrating prospect for Sen. Pete Domenici (R-N.M.), the sponsor of the waterways toll bill, which would require, for the first time, that barge lines pay a fee for using inland waterways built and maintained by the federal government.

Despite opposition from some of the Senate's most powerful Democrats, Domenic had successfully steered his bill through two committees and onto the floor. There, two weeks ago, he staved off potentially crippling amendments and won passage of the waterways toll by a healthy 71-to-20 vote.

When the senators had finished action on the bill, it was passed on to the myriad clerks and secretaries responsible for informing the House that the Senate had acted.

The Senate's legislative clerk compiled, with scissors and tape, a final version of the toll bill containing all the last-minute amendments adopted during the floor debate.

The resulting compilation of paper went to the bill clerk, who logged it in his huge ledger and passed it to the enrolling clerk, who logged it in his ledger and passed it to the public printer, who printed a final text and passed it back to the enrolling clerk, who passed it to the secretary of the Senate, who certified its official passage by the Senate and passed it back to the enrolling clerk, who walked over to the House chamber. In a brief ceremony unchanged since the birth of Congress, he formally presented "a message from the Senate to the other body."

Beneath all the ancient protocol, however, lay a constitutional provision that made the waterways toll bill a possible candidate for a "blue slip."

Article I, Section 7 of the Constitution—one of the few clauses in that document that divides responsibilities between the two houses of Congress—provides that "all bills for raising revenue shall originate in the House of Representatives."

That sentence, known to scholars as the "origination clause," was based on 18th century practice in the British parliament, where only the House of Commons—considered the more representative of the two houses—could originate tax levies.

Although it is not frequently invoked, the "origination clause" is dear to the hearts of the members of the House. They jealously guard their prerogatives and they have prepared a form letter—printed on a blue slip of paper—to inform the Senate whenever they feel their power of origination has been violated by a Senate-passed bill.

Such a letter makes a Senate-passed bill a legal nullity in the House. And the Senate has no recourse.

As soon as the waterways toll bill was formally delivered to the House—about a week after it passed in the Senate—Rep. Al Ullman (D-Oreg.), chairman of the House's tax writing Ways and Means Committee, asked his chief of staff, John Martin, to determine whether the Senate was treading on the House's constitutionally guaranteed turf.

Accordingly, opponents and proponents of waterway tolls quickly engulfed Martin in legal briefs arguing whether Domenici's bill is a proper target for an origination clause "blue slip."

Like bands, slang, and dress styles, constitutional clauses tend to go in and out of fashion over the generations. The origination clause was highly popular among constitutional lawyers in the last quarter of the 19th century, and has been invoked rarely since.

Thus Martin found himself reading briefs about a series of century-old Supreme Court cases in which citizens had challenged various federal taxes on ground that they had originated in the Senate.

The decisive issue in those cases seemed to be whether the "revenue raising" aspect of a particular bill was the bill's main feature or an incidental effect of legislation primarily designed for other purposes.

In 1897, for example, when Congress enacted a Senate-originated bill that taxed bank notes, the Supreme Court upheld the tax because its main purpose was to regulate banking, not to raise money.

There is some question, though, whether all the legal arguments would carry much weight if the waterways toll bill came up for a "blue slip" in the House.

Under House rules, a floor vote would be required on the origination clause question. But House members rarely vote against measures that seem to protect their own prerogatives. If Ullman were to decide that the waterways toll bill violates the origination clause, the House would be extremely likely to vote for a "blue slip."

So, just two weeks after their triumph on the Senate floor, Domenici and his pet bill were in serious trouble.

WITH TIMELY TUG, BARGE TOLL MAKES SUDDEN TURNABOUT

With a timely tug from Tip O'Neill, the barge toll bill, S. 790, slipped past a potentially lethal parliamentary obstacle last week and seemed, all of a sudden, to be in line for quick approval in the House of Representatives.

It was a remarkable turnabout in the fortunes of the bill, which had appeared, just two weeks ago, to be facing an insurmountable constitutional problem.

The legislation, which would require barge lines to pay a fee for their use of federally built and maintained inland waterways, had squeaked through the Senate late in June and been sent to the House.

But the House's chief tax writer, Ways and Means Committee Chairman Al Ullman (D-Oreg.), took one look and raised his furry eyebrows.

The waterway fee would, of course, produce revenues. That made S. 790 a "revenue bill" Al Ullman knew that the Constitution specifically states that all revenue bills must originate in the House. So Ullman began hinting that S. 790 might be a candidate for a "blue slip"—the form notice the House sends the Senate when it finds that the Constitution's "origination clause" has been violated.

A blue slip would have killed S. 790. That prospect dismayed proponents of the waterway fee. It also caused consternation in the barge industry, which opposed the fee but strongly favored another section of the bill that authorized construction of Locks and Dam 26, a major new barge facility on the Mississippi.

Accordingly, friends and foes of the waterway toll began searching for a compromise that would avoid the blue slip. Inevitably, their search led them to Rep. Thomas P. (Tip) O'Neill, Jr. (D-Mass.), the Speaker of the House and a compromiser par excellence.

Personally, O'Neill was inclined to let the Senate bill move on to a House vote. For one thing, his close friend, Brock Adams, the Secretary of Transportation, was pushing hard for the waterway fee. For another, the Speaker wanted to clear away as much pending legislation as possible so the House could get down to uninterrupted work on the White House energy package.

Professionally, however, O'Neill felt he could not let S. 790 go unchallenged.

Like Winston Churchill, who declared that he had "not become the King's First Minister to preside over the liquidation of the British Empire," O'Neill wanted everyone to know that he had not become Speaker to stand by while the Senate violated the House's constitutional prerogatives.

O'Neill conferred with Adams. He huddled with Ullman. He chatted with Harold T. (Biz) Johnson, the California Democrat who chairs the Public Works Committee. And last week, in a meeting with all the principals, the Speaker spoke.

To avoid the origination problem, O'Neill said, the House would have to originate its own version of S. 790. Johnson's committee would approve the locks and dam project. Ullman's committee would write a waterway fee bill. The two measures would be linked on the House floor, passed, and sent to the Senate.

It had taken the Senate five months to achieve all that, but O'Neill said he couldn't wait that long. The two committees were to finish their work by July 25. The full House would vote a day or two later. By Aug. 1—when O'Neill wanted to start debate on the energy bills—the waterway toll would be back in the Senate.

With both Adams and the barge industry backing that proposal, the Speaker's tight timetable seemed likely to be met. Both committees immediately scheduled hearings and "markup" sessions for this week, and all concerned were predicting that the bill would move through the House almost precisely the way O'Neill programmed it.

The problems, if there were any, lay in the Senate. With a new waterway toll bill coming over from the House, the Senate would have to vote on the measure a second time. Would opponents of the toll try again to defeat it?

Apparently not, according to Sen. Russell Long (D-La.), who had been the bill's leading Senate adversary.

"There's only so long you can drag these things out," Long said in his gentle bayou twang. "We tried to beat this bill once, and we lost. Not by much, but we lost. We're not going to get anywhere trying to do it again."

For the present, at least, there was smooth sailing ahead for the waterways bill.

CLEARS COMMITTEES, NEARS HOUSE FLOOR—WATERWAY FEE IS WATERED DOWN

With a sudden surge of support from a most unlikely source—the barge industry—the waterway toll bill moved lickety-split through two House committees in a week, and yesterday it seemed almost sure of House passage by Friday.

The controversial legislation, which would require barge lines transporting freight on the nation's inland waterways to help the government pay for maintaining those waterways, was approved by the Public Works and Ways and Means committees after both held rapid-fire hearings last week.

That meant that the tight schedule established by House Speaker Thomas P. (Tip) O'Neill Jr. (D-Mass.) would most likely be met. The legislation could pass in the House and be dispatched to the Senate later this week.

The Senate has already passed a waterway toll bill. But O'Neill shelved that measure when it came to the House, on grounds that it violated the House's constitutional prerogative to originate all revenue bills.

In a meeting on July 12, O'Neill directed Ways and Means Committee Chairman Al Ullman (D-Ore.) and Public Works Chairman Harold T. Johnson (D-Calif.) to "originate" a House version—and get it done by the end of July.

The bill that emerged from those committees reflects the basic structure of the Senate bill.

Both the House and Senate versions would force barge lines, for the first time, to pay for using inland waterways. Both provide the same "sweetener" to offset that blow: funding for a major new barge facility at Locks and Dam 26, the 26th dam down the Mississippi from Minneapolis.

But the House bill takes a sharply different course toward collecting the barge charge. While the Senate bill contemplates a system of tolls or license fees, the House Ways and Means Committee yesterday approved a considerably simpler mechanism: a tax on the diesel fuel that drives the barges.

The fuel tax proposal was put forth by Ullman, and it quickly found support from almost everybody interested in the legislation. Even the barge lobbyists said that, if they had to pay at all, a fuel tax would be the least painful way.

For one thing, the "tax" would be distributed more evenly over the industry than a "toll" system, the bargemen said.

Further, a "tax," unlike a "fee" or a "toll," would be the province of the Ways and Means Committee in the House and the Finance Committee in the Senate—both of which include mostly pro-barge members. If there had to be some waterway charge, the bargemen felt, it would be nice to keep it under the thumb of those two committees.

With that issue settled, the Ways and Means members turned to the central question in every tax bill they write: how much?

To collect the same amount that the Senate bill would raise, Transportation Secretary Brock Adams told the committee, the proper fuel tax would be about 42 cents per gallon, phased in at 4 cents annually for the next decade

The barge lobbyists had a more modest idea. They suggested 4 cents per gallon once and for all—without the yearly increase Adams suggested.

The tax writers, as is their wont, looked for a compromise—and hit on one that deeply pleased the bargemen. They would phase in a tax that would go no higher than 6 cents per gallon—just 14 per cent of what Adams had asked.

Lobbyists for railroads, the barge lines' arch competitors, were aghast when that proposal surfaced. Barge lobbyists, in contrast, found themselves actually working for a barge charge—as long as it was strictly the 6-cent plan.

With Ullman, O'Neill and the bargemen all in favor, the Ways and Means members went happily along, passing the 6-cent tax and sending it to the floor.

It was a watered-down waterway bill, to be sure, but the central concept—the barge charge—was intact.

RAILROADS RAISE IMPEDIMENT IN COURT TO BARGE TOLL BILL

For a piece of legislation that started the year with scarcely a chance of passage, the waterway toll bill, S. 790, was in fairly good shape when Congress went home last week.

But with the legislators out of town on vacation, the bill ran into a new kind of trouble.

The new trouble is not legislative; the bill is in jeopardy because of a suit in federal court.

And ironically, the suit was filed by a railroad association—even though the barge toll bill would indirectly benefit, and is backed by the railroads.

When Congress recessed, the House had still not voted on its version of the Senate-passed measure, which would require barge lines to pay for using the inland waterways.

Nonetheless, backers were sanguine. Everybody seemed to think the bill would slide through somehow this fall without any more serious problems.

But everybody was ignoring Judge Richey.

Judge Charles R. Richey of the U.S. District Court for the District of Columbia is in a position to create a significant problem for S. 790. The judge is about to rule in a lawsuit that could scuttle the careful legislative linkage that has propelled the waterway bill through Congress all year.

When Sen. Pete Domenici (R-N.M.) first proposed the waterway charge in February, he knew it would face resolute opposition from the barge industry, which has never paid a penny for the federal government's multibillion-dollar investment in inland waterways.

To neutralize the industry's opposition, Domenici linked his proposal with a piece of legislation which the bargemen forcefully favored; authorization to build a major new barge facility on the Mississippi at Alton, Ill.

Domenici's legislative construct received presidential sanction in May, when Jimmy Carter announced that he would veto any bill authorizing the Alton project unless a waterway charge bill was passed.

With that assurance, Domenici had used the Alton project to drive the waterway fee to passage in the Senate. The same ploy had pushed the fee successfully through two House committees.

In short, the waterway fee looked like a winner in Congress as long as it had the Alton facility to push it forward. But the judge is preparing to rule in a case that could stop the Alton project indefinitely.

The case came to Richey in 1974, when the Army Corps of Engineers first announced its plan to build the $500 million lock and dam on the Mississippi at Alton.

A group of railroads, concerned that a big new barge facility would drain away Midwestern freight traffic, went to Richey's court to stop the corps. They won the first round in September, 1974, when the judge told the Army that it needed specific authorization from Congress to undertake the Alton work.

The authorization which Domenici attached to his waterway bill was the answer to that lawsuit.

When it became clear that the authorization would probably be passed, the railroads went back to Richey with another argument: the Army's environmental impact statement for the Alton dam was inadequate.

The requirement that every major federal project be accompanied by a statement of its environmental effects enables opponents of particular projects—if they can prove that an impact statement is inadequate—to tie the government's hands for months, years, or, sometimes, forever.

The railroads' complaint in Richey court raised that possibility for the Alton project. If Richey were to find the impact statement lacking, the dam would be delayed indefinitely while the Army and environmentalists tried to agree on a statement that the judge would accept.

If Richey were to stop the Alton dam on that ground within the next few weeks, it would probably be dead at least for the rest of 1977. That, in turn, would act as a brake on the throttle pushing the waterway to bill through Congress. S. 790 would most likely be a goner.

For the moment, the fate of the waterway fee seems to be in the hands of Charles R. Richey.

TOLL BILL ROILS PLACID LIFE ON THE MISSISSIPPI

Aboard the motor vessel Bernard G.—The muddy Mississippi bends gently westward around the sleeping town of Hickman, Ky., and the two huge diesels driving this towboat throttle down to take the turn. In the ensuing silence, a passenger can almost hear Huckleberry Finn out there somewhere on his raft, carrying on even now about "the *goldurndest* river a body ever see."

For the Mississippi today seems at first glance, to be the same natural wonder that won the heart of Huck Finn.

Boats like the Bernard G., pushing long strings of barges upstream and down, can go hours without sighting a village, whole days without passing under a bridge. For long stretches, the mile-wide river is flanked by nothing but virgin forests and high sand bluffs.

Closer examination reveals, however, that the Father of Waters is no longer Mark Twain's "magnificent untamed torrent." Forty years of damming, diking and dredging by the U.S. Army Corps of Engineers have harnessed the great river, making it a reliable, predictable highway for the barge lines that move enormous quantities of grain, chemicals and fuel between Minneapolis and New Orleans.

The considerable expense of the federal government's waterway work—more than $1 billion annually, according to the Department of Transportation—and the competitive advantage it has given the barge lines over truck and rail freight companies have prompted repeated efforts in Congress to make the barge industry pay a fee for using federally built and maintained inland waterways.

This year, for the first time, the Senate has passed a waterway fee bill—S. 790—and the House seems likely to follow suit.

In Washington, that development has been viewed as a parliamentary and political coup for backers of the bill. Out here on the river, though, S. 790 is a dagger in the back.

As the bargemen see it, a Congress that has always been generous in funding water projects has suddenly changed the rules.

"The politicians don't understand," says Bob Gardner, who serves as commodore of the towboat fleet maintained by the Alter Co. of Davenport, Iowa.

For years we've been doing a job out here—hauling grain—and we don't do it bad when people leave us alone. This year, all of a sudden, we're in this political volleyball game with a bunch of people who don't understand the river or our business."

To try to understand the river and the booming freight business it supports, I rode down the Mississippi recently aboard the Bernard G., one of Alter Co.'s six towboats.

The Bernard G. (the name was the brainchild of Alter's president, Bernard Goldstein) is painted gleaming white, with yellow trim, and looks like four-tiered rectangular wedding cake, with a forest of antennas sprouting from the top layer.

She is 145 feet long and 40 feet wide, about average for Mississippi towboats. Her draft is only nine feet—any more and she could not get through the 29 locks the Corps of Engineers operates along the river.

The top tier of this floating cake is the "pilot house"—what a seagoing sailor would call the "bridge." Beneath it are three more enclosed structures, each slightly larger than the one above, housing crew and guest quarters, a galley and dining room and various storage lockers.

The lowest deck is essentially one big engine room, holding the two thundering Detroit Diesel engines that send a never-ending shudder through the spine of the boat (at full power, the crewmen's coffee vibrates right out of the cups.)

The diesels' 5,600 horsepower make the Bernard G. one of the most overoverpowered 145-footers that ever took to water. But of course the power is not for the towboat; it is there to push the load.

Terminology is backward here. Although the riverboats are called "towboats," they don't tow. They push the barges ahead of them. But the nest of barges that is pushed is called the "tow."

To the crew of the Bernard G., the tow assembled for the downriver trip I took was smaller than normal; to this newscomer, it was prodigious. Each barge is roughly the size of a three-story, 10-unit apartment building. Our tow consisted of 21 of them, strung together in a four-by-five block (with the extra barge out front) that covered five acres of river.

The barges were grain hoppers for the most part, but there were some molasses and tallow tanks along as well. In total, Bernard G. was pushing about 30,000 tons of freight on this one trip; it would take six 100-car trains to move as much. Like most riverborne grain, the cargo was destined for New Orleans and rendezvous with a Europe-bound freighter.

The barges are bound tightly together by iron cobwebs of 1½-inch cable wound in intricate networks around each corner of each barge. A separate set of cables, their tautness maintained by winches, ties the tow to the front of the Bernard G.

The ties that bind the barges will burst if bound too lightly, or give way if not held taut enough. To guard against either, deck hands are roaming about the tow all the time, kicking and pulling at the lines in the same boatman's ballet that Huck Finn watched at night from his raft.

Four decks above the tow, the Bernard G.'s pilot house looks more like something from Star Wars than from Mark Twain.

Dials glow, warning lights blink. The pilot sits between two large radar screens. He scans the digital readout from two sonar units that read the river's depth. He steers not with the classic multi-spoked wooden wheel, but with a stainless steel tiller linked by hydraulic drive to the rudders astern. Bay windows on all four sides provide a 360-degree view of the river.

The Bernard G.'s two drivers, Capt. Ken Bain and Pilot John McNeil, who inhabit the pilot house in alternating six-hour shifts, reflect two sharply different styles of piloting.

McNeil, a perfect country gentleman from Greenville, Miss., is the tortoise. When the chart shows a sharp curve coming, he will cut the engines a half-mile upstream, letting the current carry boat and tow gently through the turn.

Bain, a hotrodder from Savannah, Tenn., prefers to barrel into the turns at full speed (about 11 miles per hour), wrenching the pneumatic throttle from "full ahead" to "full astern" to keep the unwieldy train of barges from piling over a bank or sand bar.

Under either man, though, the pilot house has an air of easy nonchalance, like a suburban family out for a Sunday drive. The difference is that this "car" has a hood longer than three football fields jutting out beyond the windshield.

Where the river is wide and the curves easy, it seems simple enough to keep the long tow in line. Around the sharp bends, though, driving a riverboat is like pushing the Washington Monument up the Rock Creek Parkway ahead of the family station wagon—with no brakes.

The federal government's multibillion-dollar investment in the waterways helps make that feat possible.

At almost every turn the Army has put in a dike or jetty to direct the current and keep boats in midstream. A fleet of workboats is continually dredging a passable channel along the shifting river bottom. To mark the channel, the Coast Guard maintains lights and buoys every quarter-mile or so along the Mississippi's 1,800-mile course.

In making the river safe, the government has created a new danger traffic. Freight movement on the inland waterways has skyrocketed in the past two decades; today 10 per cent of the nation's freight moves by water. As a result, the Bernard G is almost never out of sight of another boat and tow.

To avoid collisions, the river pilots are constantly on their radios. They let the boats ahead know they are coming, and inform those behind of what's in store.

The casual chatter of the air waves makes the whole river seem like a big family, and in some ways it is. The boatmen almost all share the same Southern country upbringing; they are common stock in a common business, and they all seem to feel an affinity for every boat and crewman on the river.

The sense of family is emphasized within the crew of Bernard G., who live together on the little boat for 30 days at a time or more. Although the boat is regularly in such ports as St. Louis or New Orleans, the crewmen get no liberty. Bernard G stops only for the few hours needed to drop one tow and pick up another.

In a port or on the river, a crewman works seven days per week, two six-hour shifts each day.

Each six-hour watch includes a driver (either Bain or McNeil), an engineer to watch the diesels, and three deckhands working the tow. The 11th crew member, the only woman aboard, is the boat's cook, nurse and den mother. Janie Devers, a Tennessee belle who serves up at each change of watch a gargantuan and delicious banquet of country food.

A boatman generally works 30 days on the boat and then takes 15 or 20 days off, so he is actually on the job only seven to nine months of the year. For that, a beginning deckhand can expect to earn $9,000 to $11,000 annually. A captain's pay will approach $30,000.

The work is exhausting, even for the brawny rivermen, and when a six-hour watch is done the men of Bernard G. sit in Janie's air-conditioned galley for an hour or more, sipping Dr. Pepper and regaining their strength.

The talk around the galley table is half river jargon and half country stories about the farms back home.

Bain is a constant topic, for he apparently drives even less delicately ashore than he does in Bernard G.'s pilot house.

"I remember the week he cracked up his wife's car one day and his own the next," chuckles engineer James Porter in his easy drawl. "Then he goes and rents another, and damn if that one doesn't end up a wreck too."

The boatmen are an independent breed, distrustful of big business and big government in equal proportions, and there is rarely any talk of politics. This year, though, S. 790 is changing that.

On the bulletin board above the color television in the crew's lounge is a letter from a barge industry lobbyist, seeking contributions for the political battle back in Washington. That has started the crewmen thinking, and they all have their views about the waterway fee.

"Maybe I'll surprise you," says deckhand Phil Little, one of the few with a differing opinion, "but I think they ought to pass it. The government's got a lot of money in this river. If the truckers have to pay, why don't we?"

In the pilot house, John McNeil demurs.

"It's like you go over here to some little stream," he says, and "catch you a mess of fish" Then that fellow comes up and says, "you got to pay me for those catfish." It's not right.

"It ain't the idea of paying the $3. It's the idea of paying for a river. It's not right."

WHERE A WATERWAY TOLL WOULD PINCH

LITTLE ROCK.—They laughed in 1946 when Sen. John L. McClellan (D-Ark.) talked about building a port in this land-locked city 400 miles from the sea. Today, the only ones laughing are the stevedores who earn $7.88 an hour unloading Japanese steel at the foreign trade zone maintained by the Little Rock Port Authority.

Thirty years and $1.2 billion in federal money have transformed the Arkansas River from a serpentine gulch of sandbars and mud banks to a shimmering blue freightway connecting Little Rock (and Tulsa, 300 miles upstream) with the sea.

The development of the river has been a factor—but not the only one—in a major economic reversal in the Arkansas basin that has turned the dusty agricultural states of Arkansas and Oklahoma into bustling centers of industry.

Now Congress is threatening to take away at least part of the bounty the river project has brought.

For this is where the waterway toll bill, S. 790, would pinch.

S. 790, which passed the Senate in June and should emerge in some form from the House this month, would force commercial barge lines to pay a toll for using federally maintained inland waterways such as the Arkansas.

That could seriously limit the Arkansas River's economic utility. Without the free right of way, bargemen here could not set their rates low enough to compete with truck and rail shippers.

A study by the Congressional Budget Office predicted that the Senate-passed bill would eliminate 96 per cent of the Arkansas' freight traffic. The bill's sponsor, Sen. Pete Domenici (R-N.M.), says the impact would be far less.

For waterway boosters here, S. 790 looms as a death warrant.

"It would kill the goose that laid the golden egg, as far as we're concerned," said Wallace Gieringer, director of the Port Authority at Pine Bluff, 40 miles downstream from Little Rock.

"We're getting more and more development along the river, but we haven't even been open for navigation for 10 years yet. This system is too young to survive a blow like that Domenici bill."

If the river were to dry up economically, because of the legislation, it is not clear how seriously the region's overall economy would be affected. Some local planners suggest the impact would not be fatal.

"The river is a tool, I say, one tool, in our kit for attracting industry here," said Windell Adams of the Arkansas Industrial Development Commission.

"We'd hate to lose it. But we have some excellent rail lines here, we have interstates. Most of the economic revival here began before they built the river."

Congress authorized the Army Corps of Engineers to "build the river" in 1946, but construction did not begin until 1957.

The Army spent 15 years on the job, which it proudly labeled "the largest civil works project in history."

To provide a navigable channel all the way to Tulsa, the Army put in 17 dams, each requiring a lock to permit boat passage. Where a river's oxbow turns were too sharp for barge traffic, the Army simply tunneled through the earth to build a new, straight river.

On completion in 1971, the Arkansas project was hailed as a triumph of man's reshaping of nature. It became the model for a host of other huge projects, including the Tennessee-Tombigbee waterway under construction in Mississippi.

To celebrate completion of the project, Army engineers prepared an official history of the river.

"For more centuries than man can count," the history notes disapprovingly, "the Arkansas River was left to its own devices. . . . Now the Arkansas works for mankind."

Barge traffic moving downstream carries coal, ore and agricultural products to ports along the Mississippi.

Coming up to Little Rock and Tulsa are steel and other industrial materials and various forms of fuel, including diesel fuel for the Missouri Pacific Railroad, the waterway's arch competitor.

In a classic instance of carrying coals to Newcastle, the barges also are bringing bauxite to Bauxite, Ark.

Bauxite was the site of America's only significant deposits of the powdery red ore, the principal source of aluminum. The local mines are almost depleted, and so the Alcoa and Reynolds Aluminum Co. plants here are bringing in bauxite from Jamaica and Venezuela.

In addition to the commercial traffic, the river project has been a boon to recreational boaters, creating a chain of placid lakes and eliminating the seasonal changes that used to turn the best fishing holes into sandbars during the dry months.

The recreational craft move through the 17 locks just as the barge boats do, without paying any transit fee.

A 14-foot rowboat can pull into a $100 million lock anytime, and the eight-person Corps of Engineers lock crew will move 27 million gallons of water, free, to let the fisherman rise over the dam and go on his way.

The fear among waterway proponents here is that, if a harsh waterway fee bill is passed, the fishermen in their 14-footers will be the only people still using the $1.2 billion river the Army created.

"We're all proud of the river project and what Sen. McClellan got for us here," said James C. Oliver, a Little Rock freight broker who deals with all modes of transit.

"But nobody is moving things by water because of the romance of the river. It's just cheaper. If some bill passes that raises rates on the river, all that barge freight is going to move some other way."

A Watered-Down Waterway Toll Bill Glides Past New Milestone in House

With its opponents perched somewhat unhappily on board, a watered down waterway toll bill glided past another milestone yesterday in its journey toward a final House vote.

At the urging of Rep. Al Ullman (D–Ore.), chairman of the Ways and Means Committee, and Rep. Ray Roberts (D–Tex.), ranking member of the Public Works Committee, the Rules Committee voted yesterday to pass on to the House floor the waterway bill, which would force commercial barge lines to pay for their use of the nation's inland waterways.

It was not the happiest task Ullman and Roberts ever shouldered. Both are strong opponents of the waterway fee. Indeed, Ullman told the Rules Committee that the Senate-passed waterway bill, S. 790, "would totally destroy the whole transportation system."

But Ullman and Roberts are realists. They think that some form of waterway fee is likely to pass Congress this year. So their two committees had set about to devise the smallest fee they could get away with.

They settled on a federal tax of 6 cents per gallon on the diesel fuel that drives the barges. Even that figure was anathema to the barge industry, but it is far lighter than the fee the Senate bill would impose, and had won the grudging support of most bargemen.

Having been approved by both Ways and Means and Public Works, the waterway bill was ready for the House floor. But to gain admission to the floor, a House bill needs a ticket—a parliamentary jargon, a "rule."

The ticket booth is the Rules Committee. It controls the flow of legislation to the floor by parceling out tickets, or "rules," that establish when a bill can come up, how much debate there will be, what kind of challenges can be made and other conditions.

Like most traditional institutions, the Rules Committee has developed parlance and procedures all its own. There are "open rules"—permitting almost any amendment on the House floor—and "closed rules"—permitting no amendments to a committee bill—and various shades of rule in between.

Ullman and Roberts yesterday were asking for a "modified open rule" that fits neatly with their overall view of the waterway fee. The rule they asked for would have permitted floor amendments to cut the fee established in their bill, but would not have allowed any effort to raise it.

Sitting beneath a huge crystal chandelier in the Rules Committee's elegant chamber in the Capitol, Ullman and Roberts presented their case. The two apparently had not had time to do their homework; they disagreed in their answers to some of the committee's questions, and on some others they simply ducked.

The Rules Committee was deferential, until Rep. Christopher J. Dodd, a brash, young Connecticut Democrat, gained the floor.

Wouldn't it be a little fairer, Dodd asked gently, if the rule permitted amendments to increase the tax as well as to cut it?

A few members muttered in agreement, but they were cut off by the gruff, stentorian voice of Rules Committee Chairman James J. Delaney (D-N.Y.), who said: "If we open this thing up, we'll never get a bill off the floor."

Ullman and Roberts were followed to the witness stand by two junior congressmen, Berkley W. Bedell (D-Iowa) and Robert W. Edgar (D-Pa.), who asked for a rule permitting a floor vote on an amendment that would establish a waterway fee about twice as high as the Ullman-Roberts plan.

When Bedell and Edgar had finished, the Rules Committee seemed split. Consequently, the members settled on a compromise: the fuel tax bill would go to the floor under a closed rule, permitting only one vote, yes or no, on the 6-cent-per-gallon plan.

There would be a chance for both sides to challenge that rule on the floor. But the full House rarely second-guesses the Rules Committee. A House vote on the waterway toll—6 cents per gallon or nothing—seemed assured.

Waterway Toll Bill Waits Turn in House

Two weeks ago, when the House Rules Committee approved a "closed rule" for the waterway toll bill, the legislation was officially ready for debate and a vote on the floor. The next step seemed simple enough: the bill would be placed on a calendar and come up in its turn.

But in Congress, where even routine activities are subject to labyrinthine procedural and political plotting, the scheduling of the waterway bill was not a simple process.

After countless meetings, memos and telephone calls, and six revisions of next week's "tentative" legislative calendar, it was still not clear last night when the bill would come up.

The Department of Transportation and the freight industry lobbyists kept telling the House leadership that the bill, which would require commercial barge lines to pay for their use of federally maintained waterways, marked a major change in federal transportation policy.

But Majority Leader Jim Wright (D-Tex.) and Speaker Thomas P. O'Neill Jr. (D-Mass.), trying to schedule votes on the Federal Trade Commission legislation, the cargo preference bill, and President Carter's first government reorganization plan, kept pushing the waterway bill to the end of the list.

The scheduling process for each week's votes in the House is a complicated procedure that takes up much of the workday for Craig Raup, a senior staffer in Wright's office, and Gary Hymel, who is O'Neill's right-hand man.

The two are subjected to almost constant pressure from members who want a quick vote on this bill, or a delay in scheduling that one.

They like to keep the schedule fluid, but that policy causes problems. Sponsors of major legislation want to know precisely when their bills will be on the floor, so that lobbyists can be alerted and the normal flurry of "Dear Colleague" letters can be dispatched at the proper moment.

Scheduling for the waterway bill began on Sept. 21, the day the Rules Committee passed on the measure. Raup visited the Rules staff to find out how much time the bill would need on the floor.

For the next two weeks he and Hymel fended off calls from various congressional offices and from the Department of Transportation's lobbyists who were pushing for a quick floor vote.

When O'Neill, Wright, and their team of Democratic whips met for their weekly calendar meeting last Thursday morning, the group hit on a complicated plan that would squeeze the bill onto the floor in three different segments.

Formal approval of the Rules Committee's "closed rule" was set for Thursday afternoon. (The rule passed easily, as almost all rules do.)

Debate on the bill was set for next Tuesday. It seemed logical, then to have a vote on Wednesday, but that day had been set aside for O'Neill's pet bill, the House reorganization, so the waterway bill once again gave way.

It was finally decided to schedule a floor vote for next Friday. But Friday is the day the House quits work early (usually at 3:30 p.m.), so that plan could not be called more than tentative.

But in the scheduling business, everything is tentative. So Raup called the House cloakrooms and told them Oct. 14 was the day. That information was inserted into the recorded message at the cloakroom's switchboard.

House Reluctantly Approves Weakened Waterway Toll

Like a schoolboy accepting a spoonful of some particularly vile medicine, the House of Representatives yesterday finally swallowed the waterway toll bill and sent the measure on to further skirmishes in the Senate.

By a deceptively lopsided vote of 331 to 70, the House approved legislation to require commercial barge lines to pay for their use of federally built and maintained inland waterways.

It was the first time the House has ever voted any form of waterway charge. But the bill was still a disappointment for supporters of the waterway toll, because the House version is considerably weaker than S. 790, the waterway bill that the Senate passed in June.

The bill passed yesterday would impose a fuel tax of 6 cents a gallon on the diesel fuel that drives the barges. That would bring in less than 10 per cent of the government's annual expenditure on inland waterways. The Senate bill, in contrast, would impose a system of fees rather than a tax and would recover all of the federal money spent on maintenance of waterways, and 50 per cent of new construction costs as well.

Even the relatively mild House version was a blow to the barge industry, which has never paid a cent for its use of the nation's 25,000-mile inland waterway freight network.

But the barge owners were forced to back the bill because it had been linked to authorizing legislation for Locks and Dam 26, a $432 million barge facility on the Mississippi at Alton, Ill. The Alton authorization was approved yesterday as part of the toll legislation.

The House bill, in short, was a compromise—one that left hardly anybody really happy, but hardly anybody unhappy enough to vote "no." Accordingly, the two hours of debate yesterday turned into one chorus of complaints.

Several members—including Berkeley W. Bedell (D-Iowa), and Joe Skubitz (R-Kan)—said the waterway tax would be too low. Just as many—including Otis G. Pike (D-N.Y.) and M. G. (Gene) Snyder (R-Ky.)—said just as angrily that it would be too high.

Pike shouted that the fuel tax was a "shotgun bill," which would pass only because the Alton project was being held hostage. Rep. William M. Ketchum (R-Calif.) disagreed with Pike about the wisdom of the legislation, but agreed with him on the procedure. "We shouldn't be operating under a blackmail principle," Ketchum intoned unhappily.

Those who supported the bill could reply only that it was necessary medicine, however distasteful. "If we don't use the shotgun, we'll be aiming a cannon at the most vital arm of our transit system," observed Rep. Bill Frenzel (R-Minn.).

House passage reflected once again that the waterway bill, which was considered almost hopeless when it was introduced last winter, has had something of a charmed life.

When the bill arrived at the House after the Senate vote in June, it seemed doomed when House members raised a constitutional challenge: the waterway toll would raise revenues, and the Constitution mandates that revenue bills must originate in the House.

House Speaker Thomas P. O'Neill Jr. (D-Mass.) stepped in then to save the bill from constitutional extinction by developing the compromise fuel tax plan that finally passed yesterday.

The waterway user fee has prompted a furious lobbying campaign, pitting railroads, environmentalists, and the Carter administration, which support the fee, against barge lines and farm groups, which oppose it.

Yesterday, though, few lobbyists were evident. Everyone considered the House vote a foregone conclusion. The real battle would take place, once again, in the Senate, which must now reconsider the waterway toll in the light of the House action.

Toll Returns to Senate for New Struggle

Having emerged relatively intact from a four-month sojourn in the House, the waterway toll bill went back to the Senate yesterday and quickly became enmeshed, once again, in a three-way parliamentary involving Pete Domenici (R–N.M.), Russell B. Long (D-La.), and President Carter.

At the end of a complicated legislative day, Sen. Domenici had once again won the support of the President and seemed to have a fair chance of prevailing a second time over Sen. Long.

Domenici is the sponsor of the waterway bill, which would require barge lines, for the first time in history, to pay for their use of federally maintained inland waterways. Long, whose state boasts two of the world's largest barge ports, has been the bill's leading congressional adversary.

Last spring Domenici won Senate passage of the bill through a strategy of linking the waterway charge to legislation authorizing a major new barge improvement on the Mississippi at Alton, Ill. Carter cemented this Domenici connection by threatening to veto a bill authorizing the project at Alton if a waterway fee was not approved along with it.

With the Alton authorization providing the impetus, Domenici won Senate passage in June and the measure moved to the House where the pressure for the Alton facility once again overcame aversion to the waterway toll.

However, the House, which approved the bill last week, watered down the waterway toll considerably. Instead of the Senate-passed fee structure, which would eventually recover almost all of the federal government's annual waterway spending, the House approved a mild fuel tax that would recoup less than 10 per cent of the government's annual cost.

When the bill went back to the Senate, Long was resolved to ditch the Domenici plan and push for Senate approval of the House version. He seemed in a strong position to do just that, because the House fuel tax, like any proposed tax, would be referred automatically to the Finance Committee—which Long chairs.

Or would it?

Three weeks ago Domenici and his staff aide, Hal Brayman, started thinking about that referral to Long's committee. After numerous conferences with parliamentarian Murray Zweben, Brayman found a way to avoid it in the arcane language of Senate Rule 14.

Accordingly, Domenici was one of a handful of senators on the floor at 9:05 a.m. yesterday when Majority Leader Robert C. Byrd (D-W. Va.) started working through the routine business of referring this bill and reporting that one.

While a reading clerk was droning through a required recitation of the House-passed waterway bill, Domenici jumped up.

"I object to any further consideration of this measure," he said, and under Rule 14, that was enough. The bill could not be referred to the Finance Committee or any other committee. It would move immediately to the final calendar, where it would be scheduled for a floor vote. That would let Domenici substitute the original Senate bill for the House version, without the intervention by Long.

Long, though, who has learned a good deal about parliamentary procedure in his 29 years in Congress, was undisturbed. Less than an hour after Domenici's floor ploy, Long gathered the Finance Committee for a "markup" session on the waterway bill.

Although the measure had not formally been referred to the Finance Committee, Long knew that his panel could make a recommendation anyway, bringing it to the floor as an amendment in the form of a substitute. The "amendment" that Long had in mind was the mild fuel tax passed by the House.

Then Carter stepped in. As the Finance Committee members were entering the meeting they received copies of a letter from Transportation Secretary Brock Adams, asserting that the House bill was not good enough.

Adams reiterated Carter's earlier threat. The Alton project would be vetoed unless the Senate passed a "substantial" waterway toll. What would be "substantial" was left unstated except for the observation that the House version was not "substantial" enough.

Long was plainly peeved. "I'd be inclined to call their bluff," he said. But other committee members were anxious to have the Alton project approved and they convinced the chairman to reconsider.

Long, therefore, scheduled a committee hearing on the waterway toll for Friday afternoon, and seemed to recognize that he might have to give in once more to the Domenici-Carter combination.

OPERATION RECOGNITION

Mr. RIBICOFF. Mr. President, a very interesting and informative article appeared in the September issue of Moment magazine concerning the efforts of Operation Recognition to obtain International Red Cross recognition of the Red Star of David-Magen David Adom. I ask unanimous consent that this article be printed in the Record.

There being no objection, the article was ordered to be printed in the Record, as follows:

[From Moment magazine, September 1977]

HOW THE INTERNATIONAL RED CROSS . . . EXCLUDES ISRAEL

(By Richard Magat)

In 124 nations through the world, voluntary organizations participate in one of the most durable humanitarian movements in history—the Red Cross. Among them is Israel's Magen David Adom (MDA), the Red Shield of David Society. Yet, unlike all but one of the others, it is not officially recognized as a member of the Red Cross "family," known as the International Red Cross. (Also outside the pale is the Red Cross Society of Cyprus, on the grounds that it denies membership to a group of its nationals, Turkish Cypriotes.)

The situation is not without irony. The founder of the Red Cross, Henry Dunant, a 19th century Swiss businessman, was himself an advocate of the establishment of a Jewish homeland in Palestine. At the First Zionist Congress in 1897 Theodor Herzl called him "a Christian Zionist."

Nor is it without paradox. One of the seven sacred "Fundamental Principles" of the International Red Cross is "universality," meaning that its work transcends national, political, and sectarian interests.

Despite nonrecognition of Magen David Adom, the Israeli government and the Red Cross movement have worked amicably on many occasions, including the wars since Israel's Independence. And MDA has contributed generously to Red Cross disaster relief campaigns throughout the world. Furthermore, Israel thus far has enjoyed many of the protections afforded by the International Red Cross system. Ambulances and hospitals marked with the Red Shield of David have not been fired upon by enemy forces, medical personnel bearing MDA armbands are treated as noncombatants, and captured Israeli soldiers are covered by the Geneva Conventions specifying humane treatment.

But because MDA is not officially recognized, a country disregarding the symbol during combat would not, in a technical sense. be violating international law. Thus, Israel sends its army into the field without the security afforded other sovereign nations.

Nor are the disabilities entirely hypothetical. During the American blood collection effort for Israeli soldiers in the Yom Kippur War, nonrecognition snarled the ordinarily efficient international system for blood collection in wartime. Identification of Israeli POWs, shipment of packages to them, and prisoner exchanges must be conducted through third parties instead of directly with the recognized Red Crescent Society of an enemy country. And along with these pragmatic disabilities, nonrecognition of the MDA is yet another symbolic affront to Israel.

The failure to recognize Magen David Adom, an issue since 1949, is now emerging from the corners of scholarly journals, abstruse discussions among international legal scholars, and hushed diplomatic interchanges, into the consciousness of the wider Jewish public.

RELIEF AND DIPLOMACY

Behind the MDA recognition issue are three institutions which bear a loose but complex relationship to one another: the International Committee of the Red Cross (ICRC), the League of Red Cross Societies, and officially recognized national societies the world over.

The ICRC, the original body established in Geneva in 1863, is the drafter and monitor of international humanitarian law, which consists of those pillars of the laws of warfare, the four Geneva Conventions (and their 400 articles), to which most countries are signatories. To this day the 25-member committee is entirely Swiss (In fact it was all Genevois, *haut Genevois*, until after World War I. when a German-speaking Swiss member was elected.) It has a staff of some 400, including delegates who may be resident at trouble spots for periods ranging from weeks to years.

The League of Red Cross Societies is an association of the national societies, created largely under American impetus following World War I. The League and the ICRC are cousins, but not quite on intimate terms. Some of their operations dovetail, but they are staffed separately and located in separate buildings two miles apart in Geneva. They have competed and occasionally contended with one another, and in fact their relations are governed much as those between sovereign nations, by a written agreement.

The third party consists of the national societies, which range from largely-paper organizations to highly complex institutions with large professional staffs and thousands of active volunteers. National societies operate in countries as ideologically different as Chile and China. The quality of their work is also diverse and unpredictable; some Communist-bloc Red Cross societies are, in a professional sense, extremely competent while some West European societies are feeble.

International Red Cross experts regard Magen David Adom as one of the best national societies. In addition to its extensive domestic work, MDA since 1939 has provided relief supplies in more than 48 countries for victims of epidemics, wars, and natural disasters. MDA has sent teams to African countries to give first aid training, and, in the 1970's alone, it sent relief shipments to Nigeria, Togo, Nicaragua, Italy, Ethiopia, Niger, Cameroon, Turkey, Roumania, Peru, Indonesia, Nepal, Costa Rica, Colombia, Dahomey, India, Chile, Haiti, the Philippines, Cambodia, Bangladesh, Cyprus, and Honduras.

The public perceives the Red Cross mainly as a provider of relief in time of disaster, ranging from floods to earthquakes to wars. Individual national Red Cross societies also conduct a delicatessen of peacetime functions, some of which, depending on the country, are vital, (e.g., blood collection), others trivial (anachronistic health services that bear almost no relation to need in some of the world's poorest countries). In one country or another, Red Cross services include first aid, kindergartens, holiday camps for the elderly, home visiting services, help to immigrants in finding jobs, rehabilitation homes for prostitutes, and reforestation projects.

The humanitarian protection function is largely the province of the ICRC. The first Geneva Convention, in 1864, established that medical personnel and civilians who came to the aid of wounded soldiers were to be considered neutral. The scope of legal protection expanded over the next century to embrace the tracing of civilians dislocated by war and the protection of individuals caught in civil wars as well as of wounded soldiers and POWs. But the ICRC also provided diplomatic protection not specified by codified law—to victims of hijackings, refugees, and political prisoners, for example. In many respects the ICRC is a private diplomatic service, but because of its rigorous neutrality, it has potent persuasive power—greater than the remonstrances of individual countries, which are always suspect on grounds of national self-interest, or of many other international organizations.

The Committee carries weight because another of its principles is discretion. It will call public attention to a violation of the Geneva Conventions only when behind-the-scenes efforts have failed and it believes disclosure will be effective. When gas warfare was used in the civil war in Yemen in the 1960's, for example, the ICRC called upon all the belligerents to refrain from the practice, but it did not name the guilty party.

Because it is neutral and discreet, because so many countries have ratified the Geneva Conventions which undergird its positions, and because it has been at it so long, the ICRC since World War II has had access to 300,000 political detainees in more than half the countries of the world, including some of the most extreme authoritarian regimes. Unlike other groups concerned with human rights, it refrains from inquiring into the reasons for imprisonment and detention, or the causes of civil strife and authoritarian rule. After visits to prisons and internment camps, the International Committee of the Red Cross will give a country a chance to correct inhumane conditions and desist from inhumane practices without public exposure. However, the Committee cooperates quietly and informally with such vocal organizations as Amnesty International.

Critics charge that the practice of discretion gives governments a way of deflating foreign criticism by permitting access to political prisoners or other civilian detainees. Nonetheless, ICRS inspections have improved the welfare of innumerable political prisoners.

The Red Cross, then, is a principal actor in the worldwide human rights effort "industry," which is expanding with the growth of authoritarian regimes, anticolonial and secessionist movements, international terrorism, and the Carter Administration's boldly stated intent to exert moral leadership in this realm.

THE CATCH

To take the Red Cross at its word, the only obstacle to recognition of the Magen David Adom has been the Israeli organization's insistence on using the red shield of David as its emblem.

To qualify for membership in the League of Red Cross Societies, a national society must first be recognized by ICRC. But as far as Israel's Society is concerned, therein lies the catch.

Of the recognized National Societies in 124 countries, the majority use the original emblem of the red cross; others are known as Red Crescent Societies (some of whose crescents are curved to the left, —Pakistan, Tunisia, and Turkey—others' to the right); and one country, Iran, has a symbol all to itself, the red lion and sun.

Israel signed the Geneva Convention in 1949, with the reservation that it could adopt neither the cross, the crescent, nor the lion and sun in place of the red shield of David. But the position of the ICRC was and is that symbols should not proliferate beyond these three.

Further, the Committee position (taken in hindsight, say its critics) holds that the red cross does not represent Christianity. Rather, it claims that the emblem, reversing the colors of the flag of Switzerland, honors that country's role as the birthplace of the movement.

Many non-Christian countries, such as Japan, Korea, and China did not challenge this concept as they signed the Geneva Conventions without reservation. But others, including Egypt, followed the lead of Turkey; eighteen Moslem countries have now adopted the red crescent.

The Magen David Adom Society had been established in Palestine in 1930, but no issue of membership in the International Red Cross arose because recognition by a government is one of the ten conditions to international recognition as a National Society. With Israel's independence, the red shield of David became the official emblem of all Israeli medical services, military and civilian, and Israel designated Magen David Adom as the national voluntary aid society under the Geneva Conventions.

The 1949 diplomatic conference was the first major international forum outside the

United Nations in which the new State of Israel was represented. Armistice terms were still being negotiated, and it had not yet been admitted to the UN.

The Red Cross argued that further multiplicity of symbols would endanger the protective function that the symbol gives war wounded and prisoners:

"What we must avert at all costs is the possible confusion between these emblems and the neutral symbol of fraternal and mutual aid in time of war. . . . There is danger that national emblems, symbolic of belligerence, might take the place of the symbol of charity that must be essentially neutral; there is the danger that a profusion of signs might weaken the protection afforded to ambulances and wounded soldiers."

Shabtai Rosenne, Israel's Ambassador to International Organizations in Geneva, has done an exhaustive analysis of the recognition issue. ("The Red Cross, Red Crescent, Red Lion and Sun, and the Red Shield of David," *Israel's Yearbook on Human Rights*, Vol. 5/1975. Tel Aviv.) He recalls that the majority of the governments represented on the key committee in the 1949 conference rationalized rejection of the red shield (by a vote of 22–21, with seven abstentions) in the interests of unity within the Red Cross movement. According to the statement of the slim majority,

"It was . . . solely to avoid creating fresh obstacles to the adoption of a single emblem, that the Committee refused to recognize new symbols, such as . . . The Red Shield of David, while recognizing that this emblem, which is several thousand years old . . . is well known and respected in those parts of the world where it is used. But the Committee felt unable to accept this *de facto* situation, owing to the risk of establishing a new precedent and rendering the desired unification still more difficult."

This argument was countered by non-Israelis as well as the Israeli representative, and it is interesting to note among them the French, who declared:

"Unity [of the emblem] should not be attained at the cost of legitimate national or religious pride. . . . The French delegation does not see how it will be possible to refuse an exception . . . which is based on considerations closely resembling those which inspired the very legitimate exceptions previously granted."

The International Committee is influential and can propose and lobby for changes in the official symbols. But the symbols can be approved only by governments, in the infrequent diplomatic conferences or in the quadrennial International Red Cross Conference (where Red Cross societies and the two central bodies also have votes). In 1949, as now, the opposition was at least as political as legalistic. Third World countries lacked the voting strength they now have, but opposition by Arab, East European, and some West European Catholic countries was enough to win out.

Attempts to place the issue before various Red Cross meetings over the next two decades failed, and the deadlock continued, little known in the Jewish community. In the meantime, the issue was raised independently, in a major three-year study of the International Red Cross sponsored by the Red Cross but conducted by an independent international staff. In his final report in 1975, Donald D. Tansley, a high-ranking Canadian civil servant who directed the study, declared,

"To the outsider, whether viewing it from a humanitarian viewpoint or from a viewpoint of logic, the present situation seems ridiculous. The lack of agreement on a common symbol suggests disunity, lack of universality, lack of equality . . . and an acceptance of politics of the very kind that the Red Cross professes to abhor. It suggests partiality in favour of Christian and Muslim peoples and in favour of Iran. It suggests partiality against other religious-cultural groups and against Israel."

As a solution, the report suggested using the red cross along with the symbol of each National Society. Were this to be adopted, it is likely that other national symbols besides the shield of David would bloom; the Indians would prefer the red locust, for example, and Thailand the red flame.

MDA is willing to use a neutral, nonreligious symbol if the red star of David is unacceptable, so long as all other symbols are surrendered and all national societies use the new symbol. However, proposals for a universal symbol have been turned down on each occasion they have been advanced.

At the 1976 session of the diplomatic conference, the delegations of Canada, West Germany, Nicaragua, and the Philippines attempted to win recognition for Magen David Adom indirectly through a technical amendment, but Arab and other Third World delegates blocked the move. A year later, as the conference drew to a close, Norway and Libya (sic) co-sponsored a resolution aimed at a new universal symbol, the effect of which would be to open the way to MDA admission. The resolution failed to gain a two-thirds majority, but it saw a break in the monolithic opposition.While Syria and the Soviet Union (and Switzerland!) opposed the move, many African countries and some Arab states abstained, and a few Third World countries actually voted in favor. Whether the split was inadvertent or significant is unclear.

In any event, the diplomatic conference's main business lay elsewhere—in the extraordinarily difficult and controversial tasks of extending the Geneva Conventions (in the form of some 200 new articles) to provide protection and relief in civil wars, enlarging protection of civilian populations (by curbing strategic bombing, for example), and widening the definition of prisoners of war. Strategy on the MDA issue seems to have moved off the visible, political stage, and there are some signs of progress. For example, the head of the West German Red Cross recently delivered a detailed blueprint for recognition of the Magen David Adom which, while termed legally faulty by the ICRC, is said to have hit Geneva "like a bombshell." At the same time, the ICRC's legal authorities have in the last few months published scholarly articles on the emblem issue—a sign at least that the issue is very much on the Committee's mind and *possibly* that an initiative toward change may be in the making.

RABBI WITHOUT PORTFOLIO

Another sign is a concerted campaign of public pressure to win recognition being waged by a feisty, 62-year-old, Long Island, New York, Orthodox rabbi, Rubin R. Dobin. Dobin, who once led congregations in Newark and Texas but is now retired from the active pulpit, is the international chairman of Operation Recognition, "a worldwide effort for International Red Cross recognition of the Red Star of David," of which Senators Javits and Ribicoff are national co-chairmen.

Dobin asserts repeatedly that he is acting as an individual, representing neither the Israeli government nor any American Jewish organization, including the American Red Magen David for Israel, which raises funds through 75 chapters in the U.S.

His campaign is proceeding along classical lines: pamphleteering, use of the media, petitions, writing campaigns, enlistment of prestigious figures, resolutions by state legislatures, and appeals to other organizations.

Dobin has been at it a little over a year. His campaign occasionally suggests the work of a quixotic zealot; after all, where governments and international legal scholars have failed, why should a relatively obscure individual without diplomatic or legal background succeed? Yet he appears to be making headway.

His target is the ICRC, notwithstanding its insistence that the power to change the rules on recognized symbols lies with the diplomatic conference (governments) or with the International Red Cross Conference (123 National Societies along with governments), neither of which is immune to international *realpolitik* with respect to Israel. For several months he corresponded with the Committee, not always with kid gloves (e.g., to the deputy director of the Committee's department of principles and law: ". . . you disclaim responsibility for not recognizing the Israeli Society. It is just this kind of duplicity, deviousness, and 'half-facts' that disturbs us so much.") But, *mirable dictu*, the ICRC invited Dobin to Geneva. He attributes the overture not only to the trouble he says his campaign is giving the organization but also to its growing discomfort with the issue. Dobin was genuinely impressed by the fact that ICRC officials had him to lunch at Geneva's only kosher restaurant, and that they (including Alexandre Hay, the ICRC President) spent long hours with him.

Dobin, who is also associated with the American Action Committee for Israeli POWs and MIAs, has traveled to several European countries to press the MDA cause. The American Red Cross supports recognition, and Emanuel Celler, National Chairman of American Red Magen David, has written that the American Red Cross "made every earnest effort to have [Magen David Adom] recognized as one of the Red Cross Societies." But little support has come from the American Christian community, according to Dobin, except from fundamentalist groups. The chairman of one of these; Christians for Israel, in San Antonio, Texas, wrote, "We understand the stigma attached to the 'cross' by [the Jews]. Be it a red cross, black cross, or whatever, the use of any cross would not be acceptable by a Jewish State as an official symbol."

The State Department favors recognition, and the U.S. armed forces' most recent handbook for behavior in combat shows the red shield of David along with the red cross, crescent, and lion and sun as symbols whose neutrality must be observed. But what may in the end resolve the issue indirectly is the ICRC's worry that the red cross itself may have to yield to another symbol altogether. The issue surfaced acutely (though not for the first time) during the Lebanese civil war, when Moslem and Christian forces fired on emblems.

The ICRC is engaged in a two-year study of the emblems. The next International Red Cross Conference before which a proposal for a change could be presented is scheduled for October in Bucharest. The conference gives ample opportunity for opposition by the Soviet Union and Arab States. Indeed, a regional grouping of Arab Red Crescent and Red Cross societies, whose establishment a few years ago dismayed the good fathers in Geneva, has already passed resolutions denouncing Israel and Zionism. If the ICRC presented a new symbol for the entire movement and it carried, the legal hurdle to Magen David Adom's admission would evaporate. Some legal scholars say the ICRC could employ a more direct route, recognizing MDA under one of the provisions of the international law on treaties. That provision holds that if there is no opposition to a reservation expressed by a country when it signs a treaty, the signatory's view becomes acceptable to the others. Since Israel expressed a reservation on the three-symbol rule when it signed the Geneva Convention in 1949, and it was not challenged, the League of Red Cross Societies presumably has no grounds on which to deny MDA's recognition.

Yet adroit legal or parliamentary maneuvers do not necessarily carry the day. Recognition of a national Red Cross society, as Professor David Forsythe of the University of Nebraska, an authority on international humanitarian law, notes, "is frequently part of the game of *realpolitik* and partisan politics." (David Forsythe, *Humanitarian Politics: The International Committee of the Red Cross*. Baltimore and London: The Johns Hopkins University Press, Fall 1977.) The Kurdish minority in Iraq petitioned three years ago for recognition of a Kurdish national Red Cross society as part of an attempt to create a new Kurdish state. The ICRC ruled negatively. Since the triumph of Communism on the Chinese mainland the ICRC has recognized only the Red Cross of the People's Republic, not the Red Cross on Taiwan. The ICRC recognized neither the Red Cross of North Korea or that of South Korea during the Korean War, but now recognizes both. Closer to home, the claim of a Palestinian Red Crescent society was rejected because the Palestinians had established neither a state nor a government in exile. None of these cases is analogous to the Magen David Adom's, but they underscore the likelihood that politics are not far from the root of the matter.

"NOBODY IS PERFECT"

Since World War II, Israel's relations with the ICRC have been largely satisfactory. Among the exceptions was the Israeli recapture of a hijacked Belgian plane that terrorists had landed at Lod Airport in 1972. The Committee accused Israel of using Red Cross negotiators as camouflage and of reneging on a pledge not to use force. Israel countered that it had not asked the Red Cross to intercede with the terrorists. Sharply worded ICRC protests, however, may well have been an effort to assuage Arab sensibilities so that it could continue to work throughout the Middle East, by avoiding any impression of collusion with Israel.

In the wars of the 1960's and 1970's, MDA cooperated with the Committee in establishing communications between families in Israel and the Arab countries which refuse to maintain postal communication with Israel. During the Sinai Campaign and the Six-Day War, MDA provided mobile clinics for the care of thousands of Arab prisoners of war and provided them food, clothing, and sports equipment. It supplied ambulances and stretcher bearers for wounded Arab POWs when they were repatriated and medical services, ambulances, and food for returning Arab refugees, and helped equip Arab hospitals in territories under Israeli control. With the financial support of the West German Red Cross, Magen David Adom runs a program of physical rehabilitation for hundreds of Arab invalids from the Gaza Strip and Sinai.

Of the MDA's work in the exchange of prisoners of war following the Yom Kippur War, the International Red Cross delegation said, "The excellent collaboration between us in furthering humanitarian causes has once again been proven."

But Red Cross principles were dealt a blow in the Yom Kippur War when Syria shot large numbers of prisoners of war. ICRC reports reproached all parties for mistreatment and lack of access to POWs, but whether private protests were made to the Syrian government is not known.

The ICRC has issued sharp rebukes to Israel for destroying civilian homes on the West Bank, for expelling some Arabs from territory seized during the Six-Day War, and for certain interrogation and detention practices. Israel has defended some practices as military and security necessities, pointed out that the number of Arabs refused residence in the territories is small, and insisted that all detainees have been humanely treated. In fact, Israel points out, it has abolished capital punishment in territory where it had existed under Jordanian rule. Professor Yoram Dinstein, of Tel Aviv University, an international legal expert and chairman of Amnesty International in Israel, claims that under international law, Israel could have tried and executed the thousands of guerrillas it has captured in the Six-Day War. Allegations of torture by Israeli military authorities have also been made and investigated not only by the Red Cross but also by Amnesty International. Amnesty criticized Israel, but Professor Dinstein attributes this to the fact that "we live in the era of symmetry of justice." That is, he says, if an inspection team goes to Israel and to Syria, it feels compelled to say that both sides are at fault.

If Israel has bristled at ICRC criticism in the Middle East from time to time, the prevailing impression is that Israel regards the Red Cross positively. Its importance goes beyond its services in trying to assure improved internment conditions for captured Israeli soldiers and serving as a tracing service. The presence in Israel of the authors and guardians of the Geneva conventions demonstrates Israel's concern with world public opinion and may also serve as reminder to elements in Israel that are seeking to settle in occupied territory that the government respects, and is constrained by, international humanitarian law. "Of all the international organizations that have had anything to do with the Middle East conflict, starting with the UN and ending with the World Health Organization, the only one which has maintained a modicum of neutrality, with a few exceptions here and there—nobody is perfect—is the ICRC," says Dinstein.

That judgment would be strengthened immeasurably if somehow Magen David Adom were recognized and admitted to full membership in the Red Cross family. The Tansley report says, "the Red Cross movement itself has largely avoided the problem by hiding behind the shelter of governments. . . . Red Cross should be able to take a decision on its own symbol without reference to governments. Indeed, if it were to do so governments might well follow in terms of changes in international law." But if admission of Magen David Adom is the cart before the horse of a general Arab-Israeli settlement, even an initiative by the grave Geneva burghers might crumble under the weight of yet another Arab-Third World rebuff to Israel. We cannot know until the issue is forced.

CITIZENS LEAGUE OF BALTIMORE

Mr. BAKER. Mr. President, I ask unanimous consent to have printed in the Record a statement by the distinguished Senator from Maryland (Mr. Mathias).

The PRESIDING OFFICER. Without objection, it is so ordered.

Statement by Senator Mathias

Few issues have stimulated so many diverging opinions in the State of Maryland as how best to use and manage the Chesapeake Bay and the Port of Baltimore. There are over 50 separate local, state, federal and private groups pursuing different projects and studies. This situation has resulted in an uncoordinated approach to the Bay, Maryland's principal economic and ecological asset. But, in this patchwork quilt that blankets the Bay, there are some bright spots.

Earlier this session the Maryland Congressional Delegation was briefed by the Citizens League of Baltimore, a small citizen task force concerned with the issues of public policy that affect the quality of life throughout the Baltimore metropolitan area. Since 1975, the Citizens League has recognized and stressed the inextricable link between the Port of Baltimore and the Bay, while specifically addressing the future development and operation of the Port. Their comprehensive study of these issues prompted the group to reach several important findings and conclusions. Among these are:

(1) Technological advances in the ocean shipping industry which have generated heavy investments in the nation's harbors might be leading to the deficit financing of ports.

(2) What level of government should manage the nations' ports, and should new ports be created away from present concentrations, are questions that need to be asked . . . and answered.

(3) The economic gains to the state (of Maryland) from the shipping industry on the Bay should not outweigh the environmental value of the resource.

(4) The Port of Baltimore needs a management structure with authority to address its problems in a comprehensive manner.

(5) . . . consolidate in a single report, what is now known about the Chesapeake Bay and communicate it widely, and

(6) Hold public meetings up and down the Bay to determine the public interest in the Bay—the effects continuing fragmented manaegment of the resource will have on fish and wildlife, commercial fishing, navigation and maritime activities, air and water pollution and all of the regional needs of the present and future population of the Bay area, and

(7) Communicate, widely, their findings as they proceed . . .

The Citizens League does not aspire to be either a blue ribbon panel or a watchdog organization. But, in the exploration of the needs of this region, this group's report has gone far beyond many studies—both official and unofficial—conducted on the subject.

The cooperative approach the Citizens League offers is notable for its foresight and its flexibility.

WHERE NEXT IN THE MIDDLE EAST?

Mr. STEVENSON. Mr. President, the euphoria which has followed Mr. Sadat's bold, if unpremeditated, initiative, in the Mideast could be let down hard with unfortunate political consequences. Charles W. Yost, an authority on the region and a former diplomat of the first rank, has offered us a bit of realism.

I urge the Members to read his words and, accordingly, ask unanimous consent that his article of December 9 in the Christian Science Monitor be printed in the Record.

There being no objection, the article was ordered to be printed in the Record, as follows:

Where Next in the Middle East?

(By Charles W. Yost)

Washington.—Anyone who observes the Arab-Israeli conflict year after year, decade after decade, must harden himself against both euphoria and despair. The situation is neither as hopeful nor as desperate as it seems. The basic factors change very little.

During the past 10 months the Carter administration has mounted a skillful and farsighted effort to reconvene the Geneva conference. Its purpose has been to assemble around one table all the parties directly conerned; that is, Israel and its immediate neighbors, in order to hammer out in face-to-face negotiations a comprehensive settlement which, because it would have the agreement of all, would provide lasting security to all.

This effort had threatened to bog down over procedural differences about who should represent the Palestinians and how the conference would be conducted. President Sadat, who because of Egypt's grave economic problems has the greatest need for peace of any Arab leader, determined to break this impasse by one of the bold gestures characteristic of his style. He went to Jerusalem.

Israel and the United States were given the most tangible possible proof that at least one Arab leader not only recognizes the existence of Israel but is ready to welcome it into the Middle East community. The Israeli and American peoples were deeply stirred by this magnanimous demonstration, even though it was accompanied by a firm reassertion of Arab demands for Israeli withdrawal from all Arab territories occupied in the 1967 war.

Many other Arabs, however, who feared, despite his assurances to the countrary, that Sadat was moving toward a separate peace, reacted with deep suspicion. Prudence would have suggested, after the Jerusalem visit, a pause to allow time for the other Arabs to be convinced that Sadat was not betraying their cause, and for the Israelis to formulate a substantive response to his substantive act of recognition. Unfortunately Sadat was so fearful of losing the momentum his courageous act had generated that he immediately issued his invitation for a meeting in Cairo.

It should have been obvious that, given the Arab state of mind, only Israel and the United States were likely to attend such a meeting, thus ending to confirm rather than dispel apprehensions that a sell-out was in the making. The consequence was the Tripoli countermeeting at which quite predictably, Arab extremism has once more triumphed over moderation and conciliation.

Meanwhile United Nations Secretary-General Waldheim sought to save the situation by proposing a subsequent meeting of all concerned in a neutral spot, but Israel rejected this proposal with a precipitation reminiscent of its rejection of Sadat's offer of a "peace agreement" in 1971.

The fact is that the Begin government, despite the warmth with which it welcomed the Sadat visit, has not up till now made the slightest substantive response or concession. Begin himself in the Knesset debate last week firmly rejected intimations from other Israeli leaders, including members of his own government, that he should do so. He seemed to dispose of the Palestinian problem, which is central to a durable settlement, by saying that the word "Palestine" does not exist in Hebrew.

Last week Foreign Minister Dayan declared Israel would be prepared to sign a separate peace treaty with Egypt at any time. This is not surprising. A treaty which would remove the strongest Arab power as a potential belligerent, but which would require no concessions at all on the West Bank and Golan, would obviously please the Begin government and may be its real objective.

If so it is deeply misguided and, in my judgment, not acting in the best interests of Israel, not to mention those of the United States.

A "settlement" which left Syria, Jordan, and all the Palestinians (not just the PLO) in a state of profound resentment would be neither secure nor durable. Israel would have to remain heavily armed and would continue to be subject to guerrilla warfare. The peace its people long for and which a comprehensive settlement would bring would again be adjourned indefinitely.

Even a settlement with Sadat alone would not be solid. Should he make a separate peace, he would not only incur the bitter animosity of most other Arabs but would risk losing the subsidies from the gulf states on which the economy of Egypt depends. Neither his hold on power nor his life would be secure.

However, the situation may be neither as good nor as bad as it now might seem. The United States Government has certainly not abandoned its objectives of a comprehensive settlement and a durable peace. No doubt it will be working intensively behind the scenes in coming weeks to get the Geneva conference, with the participation of all concerned, back on the rails.

In order for it to suceed, however, it will need a far more forthcoming attitude on the part both of Israel and Syria than is being displayed today.

PROF. JAMES M. BUCHANAN ADDRESSES THE ISSUE OF TAX REFORM

Mr. HATCH. Mr. President, I would like to share with my colleagues an outstanding discussion of tax reform by a world-renowned economist who is a leading authority on the political economy of taxation, Dr. James M. Buchanan, past vice president of the American Economic Association. Dr. Buchanan points out that by continually redistributing the burden of taxation through reforms, we deny our citizens general rules of order upon which they can rely to make rational long-term plans. In effect, we destroy our fiscal constitution when we turn the tax system into an institutional means through which members of a dominant political majority secure profits at the expense of others in the community.

Continual change also reduces the predictability of tax planning, thereby reducing the overall efficiency in the use of resources—which means less growth in GNP and employment. To my mind, Professor Buchanan's discussion of tax reform clarifies the issue in a way that is seldom put to us. I am certainly greatful to the national scholastic honorary society, Beta Gamma Sigma, and to Professor Buchanan for defining for us the issue of tax reform.

I ask unanimous consent that Dr. Buchanan's essay, "Tax Reform in Constitutional Perspective: The Case for a Fiscal Constitution," be printed in the Record.

There being no objection, the essay was ordered to be printed in the Record, as follows:

Tax Reform in "Constitutional" Perspective: The Case for a Fiscal Constitution

(By James M. Buchanan)

Within modern memory there has never been general agreement that the tax system functioned even tolerably well. Year in and year out, almost continually, we find tax lawyers, tax economists, journalists, bureaucrats, and politicians talking about and agitating for "tax reform." In a sense, this is understandable and predictable. Within popular as well as political discourse, taxation is fully analogous to a never-ending zero-sum game. A decrease in the tax share of some person or group can be achieved by an offsetting increase in the tax share of some other person or group. Hence, it remains always in the interest of any person or group to agitate for "tax reform," provided only that this can be translated to mean specific change in the tax-share distribution that will redound to his or its own benefit. We should not, therefore, be very much surprised that "tax reform" becomes a blanket rubric within which the underlying political struggle over the assignment of tax shares takes place. Nor should we be shocked to observe that this struggle has become more acute as the revenue requirements of government have increased dramatically during the years since World War II.

Nonetheless, "tax reform" agitation does vary in intensity over time, and we have been riding a crescendo in the late 1970s. In 1976, Jimmy Carter traveled throughout the land castigating the United States tax structure as a "disgrace to the human race." And President Carter promised to deliver a comprehensive tax reform package to the Congress in late 1977. This package will, in its turn, insure discussion and debate into and beyond 1978.

I shall not discuss the details of Mr. Carter's, or anyone else's, tax reform proposals in this paper. I want, instead, to examine the desirability of "tax reform" itself, independently of how this might be defined. That is to say, I want to discuss the relative efficacy of changing the distribution of tax shares via a partisan political decision process and of leaving the existing distribution alone, regardless of what the latter happens to be. I shall argue that there is, indeed, something "disgraceful" to be observed, if we choose to employ such emotive rhetoric. In this context, it is "disgraceful" to subject the basic tax structure to the continuing struggle of majority-rule politics, with the accompanying wastage of untold billions in attempts either to reduce or forestall unduly discriminatory tax treatment or to initiate or to increase the favorable treatment of this or that source or use of income, this or that class, industry, region, or occupation.

More constructively, I shall argue that the tax system can only be meaningfully discussed in a constitutional perspective. By this I mean that the basic structure of taxation, the distribution of tax shares among persons and groups, should be considered to be a part of an ongoing fiscal or tax constitution, defined as a set of quasi-permanent rules or arrangements within which individuals can anticipate making appropriate behavioral adjustments, including those made over a long-term planning period. From such perspective, structural changes in the tax system should be discussed as, and treated as, changes in basic constitutional law, and hence should be potential outcomes of a categorically different process of decision-making than that which generates ordinary legislation. I shall argue further that meaningful criteria for a "good" tax system can only be derived from this constitutional perspective, which offers the only escape from the zero-sum implications of the conventional tax-reform exercise.

I shall suggest that there is no "scientifically best" or "scientifically ideal" tax structure in any objectively measurable sense that would be accepted by separate observers. More importantly, it is relatively easy to demonstrate that, even should an "ideal" tax structure exist, the vagaries of majority-rule legislative politics could not be expected to generate even an approximation to such an "ideal." We should predict that such politics would generate more or less the results that we now observe; continual changes in structure, along with unceasing clamour for still further changes.

The implications of the argument are conservative in the literal sense. Stability in the basic rules for taxation has a value in itself, and stability is not achievable through continual manipulation. While interrelationships exist, the basic structure of taxation must be conceptually distinguished from the level of taxation. "Tax reform" is relevant to the allocation or distribution of tax shares among persons and groups. It is not directly relevant to "tax reduction" or "tax increase," determined by the overall level of tax rates, within any given structure of tax sharing. The argument for stability in tax structure can be developed simultaneously with an argument that the level of taxation is excessive (or deficient). My discussion in this paper is limited to tax-share distribution.

WHAT IS A "GOOD" TAX SYSTEM?

Almost all of the traditional literature of normative tax theory could be summarized under the title of this section, extending at least as far backwards as Adam Smith's canons of taxation on the one hand and including the highly mathematical modern theories of "optimal taxation" on the other. Such a summary is not my objective here. I shall distinguish two sets of criteria for evaluating a tax structure, or any part thereof. First, there are those criteria which require resort to norms that are *external* to the preferences of potential taxpayers themselves. Second, there are those criteria that are *internal* to, and hence derivable from these preferences. With the single exception to be noted below, traditional normative tax theory falls within the first, or external criteria, category. That is to say, the orthodox procedure is to adjudge a tax structure, on a part thereof, to be "good" or "bad" in terms of its standing against externally-defined criteria. Some of the latter are such things as: allocative efficiency, redistributive potential, equal treatment for equals, taxation related to ability to pay, convenience in collection. The normative tax analyst, the lawyer, economist, or bureaucrat, looks at a tax structure, in whole or in part, and concludes that it is "good" or "bad" because it does or does not generate "least price distortion," or because it does or does not reduce sufficiently the disparities in incomes and wealth, or because it does or does not treat equally-situated persons equally, or because it does not impose sufficiently high burdens on the rich relative to those imposed on the poor, or because it is or is not progressive, etc.

It should be clear from this summary recital that the procedure cannot be expected to result in general agreement, even among the so-called expert analysts. "One man's meat is another man's poison." Separate "experts' can look at the same tax structure, either existing or hypothetical, and place it in widely differing positions or ranks in an institutional ordering of "goodness." And there are simply no instruments for the "evaluation of values" which might produce the divergent orderings here. Because fundamental norms differ, it must be expected that "experts" can usually be located to label almost any conceivable tax share system, or any part thereof, to be "inefficient," "unjust," or "inequitable," or, contrariwise, "efficient," "just," or "equitable," or several of these combined.

This sort of disagreement would emerge, with its consequent implications for "tax reform" discussion, even if all of the parties to an evaluation should be high-minded, disinterested, and charged with the pure pursuit of the public interest, defined, of course, in their own terms. But such disagreement becomes more acerbic when there exists mutual recognition that the evaluations of tax systems, or particular features of tax systems, will also be affected by the private rewards accruing to those who are most successful in the persuasive effort. Once again, the zero-sum features of the tax game must be stressed. Is it really so surprising when we find Harvard professors tending to justify the charitable-educational deduction under the income tax, or to find Brookings Institution representatives seeking ways to extend the tax base and hence the gross revenue potential for the federal government? Or to find economists for the AFL–CIO justifying the shift from payroll to income taxes for the financing of social security? Or to see the economists for the NAM arguing that the personal income tax structure is overly progressive?

The tax-reform game should be seen for what it is, an interrelated set of attempts by various parties, both those directly interested and those allegedly "disinterested," to persuade others, and especially political decision-makers, that their own private version of the "good" tax structure is, somehow, unique, and, therefore, the proper benchmark or target for institutional change. Confronted with the array of conflicting testimony from the parties adversary to one another, with arguments that appear plausibly persuasive on all sides, should we then wonder that experienced politicians who actually write the tax laws soon come to be somewhat cynical about the process of "tax reform"? There is no "best" tax system in terms of evaluation by external criteria for the simple reason that there is no single set of criteria upon which agreement exists or can exist.

To say this, however, is not equivalent to saying that one tax system is as good as another. Means of evaluating a tax structure or system can be developed on *internal* criteria, that is, on the basis of the desires of the taxpayers themselves, independently of external norms, and with no necessity of resorting to such norms. Such internal criteria can be discussed at two separate levels, the nonconstitutional and the constitutional. We shall postpone our more elaborated treatment of constitutional criteria for tax systems until a later section of this Essay. It will be useful here only to summarize the development of internal criteria in a nonconstitutional setting.

TAXATION AS ONE SIDE OF FISCAL EXCHANGE

Suppose that we simply refuse to invoke external ethical norms for evaluating a tax-sharing scheme. How can we possibly judge one tax to be better than another? An answer is found in the "fiscal exchange" approach to taxation, pioneered by Knut Wicksell, a famous Swedish economist, whose important work on taxation was published in 1896.[1] What is the ultimate purpose of taxation? Surely a primary purpose must be that of financing goods and services desired by the taxpayers themselves. In this sense, tax payments can be looked on as having most of the characteristics of prices paid for goods and services purchased in the marketplace. A person pays money for shoes because he values the product more than he does those things that he might otherwise purchase for the same money. A tax can be treated analogously. A taxpayer may value a good and service provided by government more highly than he values the alternative goods or services that he might otherwise secure with the money measured by the tax he pays. Looked at in this way, there are elements of "voluntary exchange" in many taxes.[2]

What is the "best" assignment of tax shares under this fiscal exchange conception of taxation? Since the benchmark is voluntary exchange, it follows that all persons must secure net benefits. That is to say each taxpayer must get back from governments goods and services that he values more than the tax payments made. Wickell moved quickly to the direct conclusion that any tax-sharing scheme that could be agreed on by all taxpayers is acceptable, although he also recognized that many arrangements might be possible. But through this process of looking for agreement among taxpayers themselves Wicksell was able to evaluate tax arrangements without bringing in external ethical criteria.

At a conceptual level, the Wicksellian framework for looking at taxes gets high marks indeed. But the realities of politics get in the way. We do not observe tax rules and political rules that require the consent of all persons and groups before taxes are imposed. What we do observe is governmental decisions taken by a majority coalition in a legislature with the outcomes coercively imposed on all taxpayers. In this real-world setting of politics, there is no assurance that all parties gain in their "exchange" with government. And this becomes notably true when we recognize, further, that tax revenues are not used exclusively to provide goods and services. Tax revenues are also used to finance transfers directly from taxpayers to recipients. Income and wealth redistribution is an inherent part of the fiscal process that we observe. For practical purposes, therefore, the Wicksellian criterion for evaluating tax arrangements does not work. We are back where we started; we have no apparent means of evaluating tax structures unless we are willing to invoke external ethical norms. I shall show that things are not nearly so bad as they seem here when we introduce a genuine constitutional perspective. The detour into this brief discussion of the Wicksellian approach will be helpful when this perspective is discussed in detail.

THE INSTABILITY OF MAJORITARIAN POLITICS

The fiscal exchange conception of model for taxation fails because political decisions are not made unanimously. General consent is not required before governments invoke their residual "powers to tax." Perhaps this only suggests that there are flaws in the constitution. Wicksell proposed that all taxing and spending propositions should require the unanimous or near-unanimous agreement of all members of a legislative assembly. Through this political or constitutional reform, Wicksell aimed to generate "tax reform" indirectly.

The political decision process is costly, however, and any move toward requiring that decisions on taxes be made more restrictive and inclusive might involve dramatic increases in costs. Recognition of the cost of decisionmaking itself—which includes the costs of inaction, of strategic maneuvering, of shifting coalitions, of political trades, deals, side payments—suggests that the Wicksellian route to reform would be limited in applicability.[3]

It is important to understand just why general agreement on tax arrangements would be so difficult to secure. To show this, let us suppose that a specific tax-sharing scheme, along with a proposed budgetary pattern, would, in fact, insure that *all* taxpayers gain by the "fiscal exchange" with the government. This generality of net gain would not, however, make agreement easy to obtain for the simple reason that taxpayers and taxpayer groups would still find it profitable to seek differentially advantageous shares in the total gains available. Under one sharing scheme, a taxpayer might be insured of a net fiscal gain of, say, $100. But another arrangement might promise him a net gain of $1,000. In this situation, he will never agree on the first arrangement; instead he will invest time and resources in attempts to get politicians to adopt the second.

If general agreement is too costly and time-consuming, there is some rational basis for having political decision structures that do not require general agreement. What we observe, of course, are variations on majority voting rules—in voting on candidates and/or referenda by the general electorate, in voting in legislative bodies, in voting in committees of such bodies. But the same reasons that make general agreement so difficult to reach also emerge to insure that decisions reached under majority rule institutions will tend to be highly unstable. Even if there exists a fixed number of alternatives to be voted upon, and even if individual voters' preferences are well organized, majority voting may produce a cycle.[4] There may be no single alternatives that will secure majority approval against all proposals. The outcome that finally emerges may well depend on just how the items to be voted upon are placed on the agenda and on how the rules for

---

Footnotes at end of article.

stopping the voting are made. This tendency toward instability in voting outcomes under majority rule becomes more pronounced when the range of effective alternatives may be readily modified. Clever manipulation can almost always produce amendments to agreed-on majority results that will be preferred by some other majority coalition. Furthermore, persuasive arguments, along with side deals and agreements, may modify the preferences of voters, or of legislative representatives, during the decision period.

"Tax reform" discussion, debate, and review, as we observe them to operate in the United States, exhibit all of these properties. Indeed we might say that the functional purpose of tax-reform advocacy is that of organizing new alternatives that might command majority assent in the Congress. The turnover in representatives, even if this has been severely limited in recent decades, tends to allow for shifting coalitions. And the very electoral term structure of Congress itself almost insures that "tax reform" will always be on the agenda for action.

THE CASE FOR A FISCAL CONSTITUTION

To this point my argument has been largely negative. I have argued that there is no "best" tax system in terms of any agreed-on external criterion. Further, I have suggested that the internal criterion advanced by Knut Wicksell, that criterion which utilizes the agreement among taxpayers themselves as the signal for desirability, will not work effectively. Finally, I have shown that under the politics that we see, outcomes are likely to be highly unstable, with "tax reform" being a continuous process.

From this point, I want to develop a constructive argument. I shall show that a genuine constitutional perspective on taxation can do much to mitigate the difficulties suggested. There seem to be at least three major advantages to be expected from treating taxation as a part of a genuine fiscal constitution. First of all, the value of institutional predictability could be fully captured; the efficiency gains would surely be great. Secondly, the related and obverse side of this relationship would be equally if not more productive; individuals and groups would reduce substantially the major investment in "rent-seeking" which, socially considered, is wholly wasteful. Thirdly, and most importantly, only with a constitutional perspective could something akin to the Wicksellian criterion be introduced; agreement on tax changes might become possible, both conceptually and in actuality.

These three promised advantages of a constitutional perspective all stem from the implied shift between the treatment of tax rules as ordinary, year-to-year legislation, subject necessarily to ever-changing political-ideological winds, and their treatment as permanent or quasi-permanent institutions, beyond the immediate and expedient control of ordinary legislation, as a part of the set of legal rules which are expected to remain in being for a long period. Indeed, this is the very meaning of the word, "constitutional," and "constitution." By the latter, I refer to the basic rules and institutions within which choices are made, publicly and privately, rules and institutions which are expected to remain in being for periods sufficiently long to enable behavioral plans to be made and long-term adjustments to be completed.

TAX RULES AS PUBLIC CAPITAL

The efficiency of establishing and maintaining quasi-permanence in the basic structure of taxation should be obvious. To the extent that modern levels of taxation are tolerable at all, they are so because elements of the structure are relatively immune to change. In this sense, these elements have been treated as "constitutional." Suppose that Congress should have switched, year-to-year, between the tax on corporation income and a value-added tax, as a major revenue source. These taxes would require differing adjustments on the part of firms, and the uncertainty about which tax would be levied in which year or period would produce major waste in the economy.

Tax rules or arrangements are no different in this respect from other rules and institutions of the society. The importance of some long-term predictability in the "rules of the game" within which individuals and groups are allowed to make choices can hardly be stressed too much. Consider the following simple example, which I owe to my colleague, Geoffrey Brennan. Two passengers arrive simultaneously on adjacent platforms, A and B, in a station. Both persons seek to change trains quickly, and to do so, each must run across a narrow bridgeway across the tracks. The bridgeway is just wide enough for two persons to pass while running in opposite directions, *provided* that there exists a generally recognized "rule of of road" that dictates right-side or left-side movement. If such a rule exists, and both passengers are fully informed as to its existence, both can change trains successfully during the stop. If no such rule exists, or if one or both of the passengers is badly informed, both persons may miss the connection and remain stranded on the platform. In this example, the efficiency of having a widely-known and stable rule, any rule, is clear, and here, as in many instances, it is the very existence of a stable rule rather than the particular form of the rule itself that assumes critical importance.

Predictable rules within which individuals may rationally plan their activities are part of the "public capital" of any society. Tax rules are similar to other legal rules in this respect. To change a tax rule that has long been in existence, and to which individuals have adjusted their long-term plans, is analogous to tearing down a permanent structure. Any new, or replacement, rule will necessarily require a long period before some sort of behavioral-institutional equilibrium is reestablished. The worst of all situations would be one in which basic tax rules are subject to continual modification, such that individuals and groups could neither approach some sort of equilibrium adjustment nor even make rational plans toward such adjustment. There is genuine economic content in the adage that "an old tax is a good tax."[5]

The argument suggests that "tax reform" in and of itself, is undesirable, and especially if the changes are to be made through a political game characterized by majority-rule partisan maneuver. This is not to say that taxes should never be changed, or that the distribution or assignment of tax shares should literally be permanent, as if somehow fixed in concrete. The argument implies only that the costs of changing the structure be accurately estimated, and that a tax system should not be modified merely because some other system "might have evolved" which would now seem "better." There is a positive value in "that which exists" for the simple reason of its existence, and quite independently of whether or not rational defenses can be worked out on *carte blanche* assumptions. To be rationally justified, therefore, "tax reform" must be shown to have taken the full costs of change into account, costs which must also include those involved in the transition between tax schemes.

"TAX REFORM" AND "RENT-SEEKING"

There is another side of the argument against "tax reform," which is perhaps more important than the "rules as public capital" point. The predictability of taxing arrangements can increase the productivity of the economy by making personal planning more efficient. But, also, the stability in tax rules, along with the generalized understanding that these rules are quasi-permanent, will also reduce substantially the socially wasteful investments in "rent-seeking" that continual change and discussions of change will insure. To the extent that tax arrangements can come to be considered as quasi-permanent features of the economic environment, individuals will divert resources from wasteful to productive investments.[6]

Consider, first, a setting in which particular tax-share rules are literally "up for grabs" with each congressional session. Consider the position of a particular group of persons, representing a specific industry, occupation, or region that might be favorably or unfavorably affected by specific congressional action on whether or not, say, a certain tax deduction on tax credit is allowed. There may be millions of dollars in the balance with the action of Congress meaning the difference between superior short-run profits and near-bankruptcy. In such a situation, it becomes privately rational for the group potentially affected to spend time and money in efforts to persuade members of the administration, the Congress, and notably the relevant members of the key committees, that favorable treatment is in the "public interest," and, at the least, to convince such politicians that unfavorable treatment is clearly immoral. At the appropriate margins of decision, investments of this sort may be privately more rational than comparable investments in improved technology, in research, and even in purchases of new plant and equipment.

It is clear, however, that in some overview of the situation, when the comparable activities of all those who are seeking to secure favorable tax treatment and to avoid unfavorable treatment are taken into account, the net investment in "lobbying" is wasteful. Only the group which successfully wins the tax-persuasion game finds that it earns a positive return on its investment in time and money in "politicking." Those groups that lose have invested their time and money without return; these groups end up paying higher tax shares in addition to the unproductive investment in "rent seeking."

How would the constitutional approach to tax-share arrangements modify this sort of behavior? If tax rules are generally expected to be unchangeable, there would be no gain to be secured from investment in lobbying for differentially advantageous treatment. But the constitutionalist approach does not imply an absence of change; it implies only that change be treated as quasi-permanent, and that institutions should be expected to have reasonably long lives. In this case, however, there may seem to be more profits from securing a favorable rules change than from comparable political action in a situation where any profits are anticipated to be short-lived because of shifting political coalitions. From this it seems that more rather than less lobbying effort might be forthcoming under a constitutionalist than under a legislative approach to tax reform.

Suppose, for illustration, that tax rules were changed only one time each decade, and that a particular feature of the tax system, once installed, were known to have a minimum life of ten years. The present value of a tax advantage is clearly higher than the comparable value of the same advantage without the temporal guarantee. Suppose that the differential advantage is initially worth $1000 per year. In a year-by-year legislative consideration of tax changes, the $1000 prospect will attract investment in lobbying effort each year, which may be less, equal to, or more than the $1000 in promised gain, which, in this case, will be reasonably certain to the successful "bidder." But if continued for a period of ten years, the differential gain from the same tax feature

---

Footnotes at end of article.

may be much less than $10,000 because of the mobility of resources in the economy. A tax advantage will offer differential short-run profit potential to those owners of resources employed in the "successful" industry. These differential profits will attract new investment; as investment moves in and output expands, profits are reduced. Over a ten year span, the rate of return on new investment in the industry or group affected may return to the level that would be present in the absence of the tax advantage. Those within the industry who might seek the tax advantage initially will, of course, recognize that new entrants will quickly dissipate the differential profits owing to the tax feature. They will, accordingly, reduce their efforts to secure the tax advantage in the first place. It seems clear that, for this reason alone, the overall investment in "rent-seeking" will be much less than ten times that which would be anticipated to take place in any one-year legislative consideration of the same tax feature.

Over and beyond the long-term uncertainty about differential profitability due to the attraction of new investment, there is the related, but conceptually different, uncertainty that temporal extension of the planning horizon necessarily introduces. A person may be less willing to invest in effort to secure a quasi-permanent and long-term change in tax institutions than in effort to implement short-term change, because he may be unwilling and/or unable to "identify" his own future position so well in the former case as in the latter. A diversified corporation, for example, may know pretty well just what tax gimmicks will redound to its profitability given its current product line. But what will be its product line ten years down the road, as it responds to changing tastes and technology? That particular tax arrangement which looks highly profitable in the short term may well prove to be a hindrance to expansion in the longer term. This argument from temporal uncertainty is the same that underlies the positive argument for constitutionalism in tax reform, to be discussed further in the following section. But for this as well as the first reason examined above, it seems intuitively clear that the total investment in "rent-seeking," in attempts to secure differential profits from favorable tax treatment, will be inversely related to the average length of life of particular features of the tax system. And, as noted, any reduction in this sort of investment represents pure social gain.

CONSTITUTIONALISM AND A PARTIAL VEIL OF IGNORANCE

I have stressed the zero-sum aspects of the tax-sharing game, of "tax reform" discussion as this is generally observed to take place. The argument seems to be among groups that seek to reduce their own shares in total tax burden, with each group calling down familiar and somewhat tiresome slogans about "justice," "equity," "efficiency," etc. As I suggested, agreement is not possible in such a setting because individual positions in the economy are well identified. With fixed total revenue projections, most rich men know that an increase in the allowable standard deduction accompanied by a closing up of loopholes will increase their own tax shares; most poor men know that their shares will be reduced. It is folly to expect these two groups to "agree" on any change, one way or the other.

But the prospect for general agreement, for genuine consensus, may change dramatically if we allow for some introduction of ignorance and uncertainty into the individual's calculus. Suppose that a person confronted with a prospective tax change does not really know, and cannot accurately predict, whether he will be a rich man or a poor man. Suppose that his position in the economy is not fully identified. In this setting, he may genuinely try to choose features of a tax structure, a tax-sharing scheme, that will be "fair," in the sense of acceptability under either one of the two positions.

A person who does not know what his own position will be under the rule to be chosen is behind a "veil of ignorance"; this is the construction that has been used by John Rawls in the derivation of his notion of "justice as fairness."[7] Rawls did not discuss the tax system in particular, but his construction was used to derive "principles of justice" generally, and without resort to criteria external to the evaluations of persons within the group. To the extent that a person does not know where he will be located in some final distribution, he will tend to opt for rules that are "fair," and that will be considered to be "fair," no matter just what this final position might turn out to ance must be total; any ability of a person to predict his own future position will bias his own choice of rules and make agreement difficult to achieve.

In any conceivable real-world setting, however, persons would have at least some idea as to where their own economic positions might be in any future operation of the economic environment. If the Rawlsian criterion is to be applied directly to any practical problem, something less than the idealized setting must be introduced.[8] A partial rather than a complete veil of ignorance is the best to be expected. It is precisely at this point, however, that the distinction between the constitutional and the nonconstitutional approach becomes critically important. In the here and now, in 1977 or 1978, individuals may be able more or less fully to identify their own economic positions, and, because of this, may be able to translate the direct effects of any proposed tax-share change on their own pocketbooks. The current tax game is strictly zero sum; agreement remains impossible. But this conclusion must be modified if a proposed change in tax shares is lagged in effect so that it will be implemented only after a period of, say, ten years, twenty years, or even fifty years. The increased difficulty in making any accurate prediction about one's own economic status over such a long period is evident. Think of the poor but bright young man with confidence in himself. Increased rates of progression in the income tax may be beneficial to him in the immediate future, but such increases in rate of progression may prove harmful if the rate structure remains frozen, say, until 1990. The young man, if he knows that the change being discussed is to be quasi-permanent, may be very reluctant to support measures designed to impose punitive rates on the currently rich. In similar fashion, the person who is now rich may consider the prospects of his family's own lapse into poverty. He may be willing to raise personal exemption levels, despite the fact that such change will increase his current tax share.

The prospects of general agreement, for consensus, on change in the tax-sharing scheme will be directly related to the predicted length of life of tax rules. To the extent that the tax structure is "constitutional," in the sense that we have used the term, there are opportunities for agreement that simply do not exist when the structure is known to be "up for grabs" with each congressional session. And, if there can be no external ethical criteria upon which agreement might be reached, the demonstration of internal agreement among potential taxpayers or their representatives in a legislative assembly becomes the only test of "improvement" in tax structure, the only proof that a shift in tax shares does, in fact, reflect genuine "reform."

"TAX REFORM" IN THE LATE 1970'S

What about the current discussion of tax reform? What does the constitutionalist argument imply for President Carter's proposals for changes in tax structure? To the extent that the proposals are treated as "President Carter's" or as "the administration's," or as the "Democratic Party's platform obligations," they should be categorically rejected. A tax measure was enacted in 1976, and the tax structure that exists in 1977 has surely not been around long enough for individuals and firms to make adjustments to it. To open up the whole structure for reconsideration in 1978 must be counterproductive in many respects.

This is not to suggest that the tax-sharing scheme which exists in 1977 or 1978 is "ideal," and that changes should never be considered. There is room for "tax reform," properly interpreted. But for any set of proposals to qualify for evaluation under this rubric, it must emerge from a nonpartisan dialogue and it must be discussed as if it were designed to effect long-term institutional change. If "tax reform" is to be meaningful, if this term is other than empty rhetoric, the designers must think of changes, if adopted, that will remain in being for ten, twenty, or thirty years.

The question to be asked is: What "should" the tax structure of the United States be over the remaining years of this century? As the alternative schemes are examined in the light of this meaningful "constitutional" question, some approach to general agreement is within the realm of the possible. The question to be avoided is: What "should" the tax structure of the United States be over the years of the Carter administration, when the Democratic Party retains control over both the executive and the legislative branches of government? To the extent that this latter question informs those who advocate "tax reform," the scope for meaningful improvement in the tax system is necessarily eliminated.

Our society faces a critical choice. The tax system can be treated as a part of the general rules of order within which we live, rules that allow us to make rational long-term plans, or the tax system can be used as the institutional means through which members of a dominant political majority secure profits at the expense of others in the community. If we observe the current political discussion, it may seem that the second of these images dominates the scene. But if we value the liberties of persons, interacting with one another in a free society bound only by general rules of order, we must retain some faith that the current confusion will soon be dispelled, and that Americans will yet recover some of the wisdom of their Founding Fathers.

[7] Rawls developed his analysis in a series of papers published in the late 1950s, but the analysis has been very widely discussed only after the publication of his major work in 1971. See, John Rawls, *A Theory of Justice* (Cambridge: Harvard University Press, 1971).

[8] I have found it useful to present the central idea here in terms of an analogy with ordinary games. Consider a group of persons planning an evening's poker. They must first decide on the rules for the evening's play Since there is no means of predicting just how the cards might fall on particular rounds of play, each person will be motivated, in his choice among rules, to select rules that will generally be "fair." Furthermore, it seems clear that *agreement* among all potential players on a set of rules will be much easier in this setting than in one where the precise run of cards should be predictable.

[9] A less-than-idealized setting was used to evaluate rules for political decision making in James M. Buchanan and Gordon Tullock, *The Calculus of Consent* (Ann Arbor: University of Michigan Press, 1962).

INTERGOVERNMENTAL COOPERATION IN SCIENCE

Mr. STEVENSON. Mr. President, I call to the attention of my colleagues an editorial by William D. Carey which appeared in Science magazine entitled, "Intergovernmental Cooperation in Science." Mr. Carey is both publisher of Science magazine and executive secretary of the American Association for the Advancement of Science.

Mr. Carey emphasizes the need to involve State and local governments more fully in national science and technology decisions. The application of Federal R. & D. efforts to State and local problems, and the process of technology transfer, is a complex and difficult task. However, there is need for such activities and Mr. Carey identifies certain efforts initiated in this area, one of which is particularly important to the Congress.

Under the National Science and Technology Policy, Organization and Priorities Act, an Intergovernmental Science, Engineering and Technology Advisory Panel was established to provide State and local participation in Federal science and technology decisions. Under the President's reorganization plan, this panel technically was abolished and its functions transferred to the President. As indicated in a letter to the editor of Science magazine from Dr. Frank Press, Director of the Office of Science and Technology Policy, the panel's functions have been transferred to the Office of Management and Budget and the panel will continue to function.

The Subcommittee on Science, Technology and Space, which I chair, will be reviewing this transfer of authority to be assured that the panel is carrying out its responsibilities specified in the Science and Technology Policy Act. The subcommittee plans oversight hearings on the implementation of the act, including the operation of the intergovernmental panel, beginning in February of next year.

Mr. President, I ask unanimous consent that Mr. Carey's editorial and Dr. Press' letter, which both appeared in Science magazine, be printed at this point in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

INTERGOVERNMENTAL COOPERATION IN SCIENCE

(By William D. Carey)

One of the uncomfortable truths about the postwar arrangements for science and technology in the United States has been the small role of state and local government. A trilateral relationship took form, linking the federal government with private industry and universities. Only in the last decade, mainly through the initiative of the National Science Foundation, have the states and cities been invited to the table. In President Carter's reorganization of the White House offices, the short and happy life of the Intergovernmental Science, Engineering and Technology Panel came to a premature close when it was abolished and its functions "transferred to the President."

With chronically slim resources, the National Science Foundation has supported a versatile array of experimental projects aimed at linking state and local governments with scientific research and technology. Among other things, NSF is nourishing a network of cities and science advisers to match needs with available know-how. In another experiment, it is testing linkages between local governments and industrial firms. And a third experiment connects state governments with a supportive federal laboratory consortium. In the face of skepticism, NSF has hung tough in its belief that modest but strategic investment in intergovernmental science will yield benefits in terms of productivity and service delivery. It is a refreshing glimpse of the better side of government.

Inflated expectations of a blessed union between science and state and local government, on the other hand, are not helpful. Enough has been learned to tell us that progress will be slower than we might like. True, state and local governments are fighting a storm of dilemmas of urban decay, modernization, law enforcement, air and water management, energy conservation, and human services. But defining needs in terms that science or technology can address is a thorny business. Simplistic jargons of technology transfer are not helpful. Applications of sophisticated technology often are not affordable within tight budgets. Problems of uncertainty, in many ways, are more intransigent at these levels of government than at the national level. The Balkanized state of power centers and the mixture of "strong" and "weak" governors and other elected officials are barriers to introducing change with economies of scale.

Still, with all of these problems, governors and mayors and legislators are reaching for scientific and technical advice, and the profile of state and local government is changing. Public interest groups such as the National Governors Conference, the National Conference of State Legislators, the Conference of Mayors, the National Association of County Officials, the National Municipal League, and the International City Managers Association are all converging in the sponsorship of new arrangements to bring science and technology into the act. A National Conference on Earthquake and Related Hazards, arranged by the Council of State Governments and the University of Colorado, will inform state government officials about risk assessment, hazard reduction, and earthquake prediction.

An important dimension is being added to the commonly perceived agenda of science and technology. Although it comes tardily, its value should not be underestimated. If science and technology can offer a brighter future to federalism, a new measure of utility can emerge where public and private investment in research and development is argued. But there is a great deal still to be done to test and develop a better match between state and local needs and federal research and development priorities. This will not be accomplished by arm's length relationships, and certainly not if the states and cities are viewed simply as passive markets for the end products of federally oriented research and development. Congress knew what it was doing when it legislated entrée for the states and cities to the science policy staff of the President. If that opening is not somehow assured, a useful initiative will have been checkmated.

[LETTERS]

INTERGOVERNMENTAL SCIENCE PANEL

William D. Carey (Editorial, 25 Nov., p. 785) is incorrect in stating that, as a result of President Carter's reorganization of the White House, "the Intergovernmental Science, Engineering and Technology Advisory Panel [ISETAP] came to a premature close when it was abolished and its functions 'transferred to the President.'" ISETAP is active and, in fact, the reorganization is designed to strengthen it. The Carter Administration is committed to maintaining and supporting this link with state and local governments concerning science and technology matters.

ISETAP is being rechartered as an advisory committee by Executive Order. Responsibilities for the central staffing are being transferred to the Office of Management and Budget (OMB), primarily to strengthen ties between ISETAP and OMB. The acting director of OMB voiced his strong support for ISETAP in a letter to the heads of eight of the major federal departments and agencies with extensive domestic research programs. He requested that the agencies submit their plans to him for how they intended to work with ISETAP. Federal agencies are cooperating with five ISETAP task forces and are providing staff support to the panel.

The task forces are working with the agencies to strengthen ties between the federal government and the state and local government community. They are also holding briefings at which senior officials from various federal agencies are describing their R & D and technology transfer programs and the ways in which they involve state and local governments in setting R & D agendas. Briefings have been received from the Department of Housing and Urban Development and the Department of Health, Education, and Welfare. Others are scheduled to be received from the National Science Foundation (in December) and from the Department of Transportation and the Environmental Protection Agency (early next year).

ISETAP now has a staff of five full-time professionals, all with extensive state or local government backgrounds, and I expect there will be at least two more by the end of the year. Staff members currently include a former mayor, city manager, director of research for a regional government, director of research for a county human services agency, and an administrative assistant to a governor.

ISETAP is alive and well, I look forward to my continued role as chairman of ISETAP and to working with state and local government officials through ISETAP to help bring the benefits of science and technology to bear on the problems of states, counties, and cities.

FRANK PRESS,
Office of Science and Technology Policy,
Executive Office of the President,
Washington, D.C.

The panel was in fact abolished by the reorganization plan as a congressionally mandated arm of the Office of Science and Technology Policy. Its reappearance in another form is reassuring. What counts is that Press evidently intends to seek results.—W.D.C.

TRIBUTE TO BERNARD GOLDHAMMER

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent to have printed in the RECORD a statement by the distinguished Senator from Washington (Mr. MAGNUSON), and the material attached thereto.

The PRESIDING OFFICER. Without objection, it is so ordered.

STATEMENT BY SENATOR MAGNUSON

The people of the Pacific Northwest are deeply indebted to the late Bernie Goldhammer, the former power manager for the Bonneville Power Administration for his invaluable contributions during his long public power career. The region is very fortunate to have benefited from the knowledge of this unique man. He will indeed be greatly missed. I attach an editorial paying tribute to Bernard Goldhammer.

The editorial ordered to be printed in the RECORD is as follows:

[From the Pasco Tri-City Herald, Nov. 11, 1977]

HE WILL BE MISSED

Newsmen and others who often need simple and quick answers to the complex problems arising out of the Bonneville Power Administration's operations in the Pacific Northwest will miss Bernard Goldhammer, who died Monday of cancer at age 62.

But more than individuals, the region and the nation will miss his unique talents and activities. These ranged across the spectrum of electrical power management and included everything from interest in long-range weather forecasting to the negotiation of treaties with governments and complex contracts with giant power producers. Bernie Goldhammer was an authority's authority.

He was never too busy, even when carrying heavy BPA administration duties, to deal with the innocent, stupid question. Nor did his patience ever seem exhausted. For those who had an interest in electrical energy, whether from a technical or economic point, Goldhammer proved a patient and fine teacher.

Sometimes he was explaining the Canadian treaty for the development of the Columbia River hydro power that he helped negotiate as a technical advisor and coordinator; at other times, he was talking about his efforts to pull the region together into a comprehensive energy grid, marked by complex arrangements between public and private utilities. But at all times, he proved capable of giving deep thought to vexing problems.

He received many honors during his public power career, which began in 1943 when he joined BPA. Goldhammer received the Distinguished Service Award of the Department of the Interior, the Federal Man of the Year Award for Portland and the Distinguished Service Award from the Northwest Public Power Association.

But Goldhammer's contribution to his community and region made a difference so great that it is not easily measured by awards. Those fortunate enough to have benefited from his wisdom and knowledge will understand the depth of their loss.—The Oregonian.

NEEDED: A COMMON CONCEPT OF MENTAL HEALTH

Mr. BROOKE. Mr. President, at the recent annual meeting of the American Association of Psychiatric Services for Children, where the theme of the conference was "developing new ways of meeting the needs of children and their families," the keynote address was made by Senator JACOB K. JAVITS of New York.

Senator JAVITS focused the audience's attention on our bill, National Health Insurance for Mothers and Children Act (S. 370) as the strategy: First as a logical incremental step toward universal health benefits coverage that can be acted on now, and second highlight preventive rather than curative medicine and promote health policies that go beyond the limits of medicine.

Senator JAVITS and I have long been advocates of ending the stigma, fear, and misunderstanding of mental illness—a tragedy perpetuated by books, the media, and the conduct of everyday life itself—and we have urged encouragement and incentives for the public to use preventive services such as crisis intervention and early diagnosis. We are both most sympathetic to the vast, pervasive and ever-increasing needs and problems of mental illness. We both believe that as we develop national health insurance legislation we should include coverage for the 20 million or more persons in this Nation who are in need of some form of mental health care. Yet it is urgent that as we begin the creative process for a comprehensive health program for all of our citizens we must be compassionate but realistic.

As a friend of the mental health caring community, I want them to know that I support fully Senator JAVITS' challenge to them that mental health professionals begin to define what procedures should be in the hands of medical professionals, best trained to carry them out, and where others of the mental health disciplines may more appropriately be used—for example, social and peer intervention.

In addition, we must end concerns about reimbursement for nonmedical health professional reimbursement and reach an accord regarding the division of roles and responsibilities. I share his concern that if we fail to establish boundaries of treatments and carefully articulated and defined psychiatric services, it will all ultimately work to the disadvantage of mentally ill patients.

Also, I agree with Senator JAVITS that there is "a congressional consensus, that our existing mental health care delivery system does not provide clear lines of clinical accountability for the various mental health disciplines, and for their relationships with each other."

I commend to the attention of my colleagues the full text of that portion of the Senator's speech entitled: "Needed: A Common Concept of Mental Health," and ask unanimous consensus that it be printed in the RECORD.

There being no objection, the speech was ordered to be printed in the RECORD, as follows:

NEEDED: A COMMON CONCEPT OF MENTAL HEALTH

I understand your concern that as we develop national health insurance legislation we should include coverage for the 20 million or more persons in this nation who are in need of some form of mental health care. Yet is it urgent that as we begin the creative process for a comprehensive health program for all of our citizens we must be compassionate but realistic

As you know, I have long been an advocate of ending the stigma, fear and misunderstanding of mental illness—a tragedy perpetuated by books, the media and the conduct of everyday life itself—and I have urged encouragement and incentives for the public to use preventive services such as crisis intervention and early diagnosis. I am particularly pleased to note in your program that among the main purposes of the American Association of Psychiatric Services for Children is to "foster prevention of mental and emotional disorders of the young." To "foster prevention of mental and emotional illness among children is the first line of prevention, inasmuch as mental health is a primary determinant of the quality of life for individuals.

According to recent estimates, close to 9 million of the 54 million children and youth of school age, or 15 per cent of that population, need help for psychological disorders. One of every 3,000 children has an autistic disorder; between one and two million have learning disabilities. There are 200,000 cases of child abuse reported every year, although evidence exists that the number may be at least ten times greater. Among adolescents there has been a frightening increase in suicide, depression, and alcohol and drug abuse. And yet only about 10 per cent of these children receive any treatment at all. This neglect is unconscionable.

The annual cost of mental illness, taking into account such factors as the loss of earnings and cost of care both in and out of institutions, is estimated at about $21 billion. That is almost one-fourth of the national defense budget. Yet even this astounding estimate could be low, as the economic cost of alcoholism alone has been put at $15 billion annually, and the cost of drug abuse at $10 billion.

The needs and the problems are vast, pervasive, and everincreasing.

Unfortunately, I share a congressional consensus, that our existing mental health care delivery system does not provide clear lines of clinical accountability for the various mental health disciplines, and for their relationships with each other, hence the needs especially of the poor are not being met and the Congress is unlikely to be willing to meet these needs in the absence of reform.

I believe it is essential that mental health professionals begin to define what procedures should be in the hands of medical professionals, best trained to carry them out, and where others of the mental health disciplines may more appropriately be used for example, social and peer intervention.

In addition, we must end concerns about reimbursement for nonmedical health professionals and reach an accord regarding the division of roles and responsibilities. Without such an accord tensions are created among professions and between professionals, and other mental health workers, which all ultimately work to the disadvantage of the mentally ill patient.

It is because of this failure to establish boundaries of treatments and carefully articulated and defined psychiatric services that my bill, the National Health Insurance for Mothers and Children Act, continues strict limitations on mental health benefits. The lack of clarity on concepts of mental illness is reflected in this national health insurance bill as it is in all other such bills pending before the Congress of the United States.

Unless we can begin to work together in this fashion, congressional uncertainty about the quality of services, their cost effectiveness, and efficiency outcomes in the improvement of community mental health will continue.

I feel that when the mental health care community establishes a common concept of mental health—making clear what each of the disciplines should be doing, how they should be doing it, and how they should be reimbursed—I will be receptive to providing a full range of mental health benefits in the legislation.

MARINES PROTECT ENVIRONMENT

Mr. INOUYE. Mr. President, it has recently come to my attention that the staff and command of the Kaneohe Marine Corps Air Station in Hawaii have been awarded the Secretary of Defense Quality Award for 1976 for their truly outstanding efforts on behalf of Hawaii's precious environment. To my knowledge this is the first time in the history of the award that the Marine Corps has been selected for this distinguished honor. All of us in Hawaii are truly proud of Col. John Miller's extraordinary accomplishment and, accordingly, I ask unanimous consent that the text of the Environmental Protection Agency article which describes their efforts be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

MARINES PROTECT ENVIRONMENT

On a lava outcrop off the shores of Oahu, Hawaii, a young wedge-tailed shearwater waits in the warm sun. Almost grown, the bird has been abandoned by its parents. Plentiful fat reserves will keep it from going hungry for a while. It tries its wings. In a few flaps it is airborne, but the new and awkward muscles are no match for the trade winds. Blown toward shore, it makes an ungainly landing on the sands of Mokapu Peninsula. Left on the beach the shearwater would not survive, for it is easily preyed upon by Hawaii's voracious cats, dogs, and mongosses. A young Marine picks up the bird and reminds it how to fly by throwing it into the air. First five feet, then ten, and at twenty feet the fear of falling triggers an instinct. The wings flap and the shearwater takes flight to finally join the rest of its kind. This rescue is only one that has helped make the Marine Corps Air Base at Kaneohe Bay, Oahu, the recipient of the 1976 Secretary of Defense Environmental Quality Award.

The selection committee, under the sponsorship of Dr. John White, Assistant Secretary of Defense for Manpower Reserve Affairs and Logistics, met on June 16, 1977 to decide which Defense installation had the most exemplary environmental program in 1976. Other members of the committee were Rebecca Hanmer, Director of EPA's Office of Federal Activities; Harold O'Connor, Deputy Associate Director of the U.S. Fish and Wildlife Service; and Rob Robson, Budget Examiner of the Environmental Branch of the Office of Management and Budget. The Department of Defense began the Awards program in 1973 to encourage environmental programs on its 243 installation that embrace more than 19.5 million acres.

Initially, each of the armed services submitted an area for consideration in the competition. The nominees were evaluated by the committee using criteria based upon the successful implementation of pollution control requirements and the National Policy Act (NEPA). Does the installation's program comply with EPA? Was a viable environmental organization set up? Are unquantifiable ecological and human values being considered in the planning process? Has the public had a chance for input? Is ecological diversity being maintained? These were just a few of the questions each facility had to answer.

Additionally, the committee had to weigh in the military mission and constraints that go with it.

By a unanimous decision, the winner of this year's award was the Marine Corps Air Station at Kaneohe Bay.

"We found it necessary," said the judges letter of recommendation, "to identify the one installation that went the extra mile to meet the spirit . . . of our national environmental policies. It was this additional criterion that set the 1976 Kaneohe Bay program apart . . . With very limited resources, the Command at Kaneohe Bay went the extra mile to imbue its personnel with special concern for the environment and a desire to work with State and local officials to enhance and protect it. This special concern and desire and we found in the program . . . and its innovative use of limited resources was unique."

Three other military bases received recognition for outstanding programs in this year's competition. Point Mugu Naval Test Center in California, Vandenberg Air Force Base, also in California, and Fort Sill in Oklahoma all had notable environmental programs. "The programs of these four installations establish a standard of excellence for other Defense installations to emulate," the Committee said.

The Marine Corps Air Station at Kaneohe Bay is situated on 4.6 square miles of the Mokapu Peninsula on the island of Oahu. About 16,000 persons either live or work on the station. Because an island is relatively small and isolated to begin with, resources are sharply limited and the environment far less resilient than on a mainland. The disposal of solid wastes and toxic substances, and the pollution of fresh water can present acute problems demanding innovative approaches. The Marine Air Station is faced with problems common to islands throughout the world, as well as in cities in general. Bounded by military constraints and budget limitations, the Marines have managed to generate an imaginative array of programs that save resources and encourage on-base lifestyles to be more ecological.

For instance, the supply of fresh water on Oahu is limited. Occasionally, there are times when water hours, or conservation hours, are mandatory. The use of water on the base was found to be increasing. In response, the Marines undertook an extensive conservation project. Loudspeakers on cars announced the program, violation notices were issued for misuse, and wastewater from the on-base sewage treatment plant was substituted for fresh water in irrigation. As a result, the station's overall consumption went down even though its population had grown.

The recycling of wastes and toxic substances is an important facet of Kaneohe environmental activity. Old oil from vehicles is used to power the station's boiler plants. Plant engines are kept well-tuned by experts, thus eliminating bad emissions. Waste oil is also used to subdue dust on roads, and is mixed with jet fuel for firefighting practice.

Asphalt is extremely costly in Hawaii. When the airfield needed repaving the Marines decided to try something new, the heater-scarifier method. A large machine looking like something out of a science fiction movie was used to plow up the old asphalt. This material was then mixed with a binder and re-used for paving. According to Tom Cajski, the station's environmental affairs officer, the materials and energy used were one-third of those normally used in a repaving project. Kaneohe Air Base was the first in the tropics to use this method, he said.

All sewage on the base receives secondary treatment. In an experiment at the digester of the treatment plant, methane gas is trapped as it's being given off, and is burned as fuel to heat the digesting bacteria, which then work faster.

Other environmental quality programs on the station include the installation of sound-suppression facilities and a special test cell that filters emissions from F-4 Phantom jet engines, taking part in a community-sponsored recycling center, school tours, plantings by Youth Conservation Corps members, and a joint archaeological preservation program with Honolulu's Bishop Museum.

The Mokapu Peninsula was long the home of Hawaiian chiefs. It had a reliable supply of fresh water, suitable farming land, and access to the sea. The word "mokapu" actually means "sacred land" in Hawaiian. One of the most important archaeological sites on the Marine station is the Nuupia Ponds area, man-made ponds in which the ancient Hawaiians cultivated food fishes. It is also the place that the rare and endangered Hawaiian stilt, a black and white bird with long red legs, chooses to call home.

Today the ponds are officially the Nuupia Ponds Wildlife Refuge Complex. They illustrate yet another dimension of the Kaneohe Bay air station environmental program. The Marines cooperate closely with the National Fish and Wildlife Service and the Fish and Game Department of Hawaii to monitor and maintain species in this important area. Amtraks, large amphibious tanks, are run back and forth across the mud flats to help make raised nesting sites for the stilts. Worn-out tires filled with construction rubble are then placed on the sites, creating small, raised islands. The stilts readily occupy these pre-fabricated nests. The creation of these special nesting areas is necessary to protect the stilts from cats, dogs, and mongooses. The station has an active live trapping program for mongoose. Once captured, the animals are donated to the University of Hawaii for medical research.

Marines are also working with the Fish and Wildlife Service to maintain two breeding colonies of red-footed boobies, teaching stranded young shearwaters to fly, controlling the growth of the introduced mangrove trees to keep them from choking the Ponds area, planting rare and endangered plants, cultivating a garden of ancient Hawaiian herbs, and placing old car bodies in Kaneohe Bay to act as habitat for reef organisms.

All of these programs illustrate the degree to which the Marine Corps Air Station at Kaneohe Bay has incorporated environmental thinking into as many aspects of the station's lifestyle as possible. Moreover, most of the programs have been voluntary.

Says Col. John H. Miller, commanding officer of the station, "We like to think enhancement comes through the attitudes of the people who live and work on the Air Station, and not enforced directives."

The Corps has made a sincere effort to reach into the community. It is active in several community organizations. Civilian suggestions are encouraged. "Sure, we're Marines running a military operation which can't always be environmentally kind," said Tom Cajski, "But we're also a group of citizens equivalent in size to a city, living on an island, a vulnerable part of the ecological world. We try to live up to the Hawaiian tradition of 'aloha aina'—I guess you could call it an awareness, a love, of the land."

This fall young wedge-tailed shear waters are again launching into the winds that will carry them toward the beach. Marines will pick them up and help them fly. The ancient Hawaiians, now buried under the Oahu earth, would be happy to know that even in the midst of military maneuvers, the spirit of "alona aina" is still found on the Mokapu Peninsula.

ACCIDENTAL HYPOTHERMIA: A WINTER HAZARD FOR THE OLD

Mr. DOMENICI. Mr. President, last winter's bitter cold is still fresh in our minds, especially since we have already begun to experience similar weather this year. Freezing and subfreezing temperatures are hard on all Americans, but particularly on older Americans.

Early this week, representatives of the National Institute on Aging held a briefing at HEW to describe the condition of hypothermia, its warning signs and preventative measures. Dr. Robert Butler, Director of the NIA, and Dr. Richard Besdine, of the Harvard Medical School, explained hypothermia and its serious implications for elderly people in particular. As the ranking minority member of the Senate Special Committee on Aging, I join with Senator CHURCH in making my colleagues and others aware of this potentially harmful condition and the information and advice given by the NIA. Accidental hypothermia is a condition everyone should be aware of. I ask unanimous consent that the NIA's description of hypothermia, with protective measures which can be taken, be printed in the RECORD.

There being no objection, the paper was ordered to be printed in the RECORD, as follows:

ACCIDENTAL HYPOTHERMIA: A WINTER HAZARD FOR THE OLD

Winter and cold weather bring many health hazards. These range from broken bones due to falls to heart attacks, frostbite, and asthma. While everyone's health is endangered by lengthy exposure to very cold temperatures, the old are particularly vulnerable. Even mildly cool temperatures of 60°F (15.5°C) to 65°F (18.3°C) can trigger a condition known as accidental hypothermia, a drop in deep body temperature that can be fatal if it is not detected and treated properly. Diseases of the veins and arteries and treatment with certain drugs make a person more susceptible to this condition.

Accidental hypothermia is not a new condition, but recognition of it is recent. Credit for describing it goes largely to research done in Great Britain over the past 25 years. About 10 percent of a random population of British 65 and over were classified as potential victims. Their risk depended on several factors:

If they were alone and therefore could not get help if they had an accident.

If they did not shiver or become pale because their body's warming system did not work properly.

If they were taking drugs which hampered their body's ability to regulate temperature, such as phenothiazines (drugs commonly used to treat anxiety, depression, nausea, and other conditions).

WHAT IS HYPOTHERMIA?

Hypothermia is an abnormally low body temperature—typically 95°F (35°C) and under. While a person's skin temperature may frequently drop, this is not hypothermia because it does not necessary reflect the internal body temperature.

Hypothermia can be induced deliberately, as in some types of surgery in which the patient is chilled to slow metabolism, breathing, heartbeat, and other physiological processes. Accidental hypothermia may occur in individuals of any age who are exposed to brutally cold temperatures without any protection. However, significant numbers of elderly become victims of accidental hypothermia after exposure to relatively mild cold.

WHO IS AT RISK?

The elderly probably account for nearly half of all victims of accidental hypothermia. Infants under one are also susceptible, as are a few adults between 35 and 64 years old. Immature temperature control is thought to be the reason for the occurrence of the condition in infants. The cause in middle-aged adults is still not understood.

Among the elderly, the likeliest victims of accidental hypothermia are the very old, the poor unable to afford adequate heating, and those whose bodies do not respond to cold normally. The greatest risk is to those aged whose temperature regulation is defective; they do not shiver and therefore cannot conserve body heat when they need it most.

HOW MANY PEOPLE ARE AFFECTED?

Accidental hypothermia is believed to kill thousands of people every year in Great Britain. The actual fatalities may be much higher, since the symptoms of the condition imitate those of many other illnesses, and even an autopsy will not definitely indicate if a person died from accidental hypothermia.

The number of deaths from accidental hypothermia among the elderly in the United States is not known, but it may well be higher than in Great Britain because there are more elderly in the U.S., and larger areas with harsh winter weather. In addition, a greater number of our older population is taking drugs that reduce the body's ability to protect itself against cold. Based on British studies that found that 10 percent of the aged in Great Britain were susceptible to accidental hypothermia, at least 2.3 million elderly in the United States could be vulnerable.

WHY ARE THE AGED ESPECIALLY VULNERABLE TO ACCIDENTAL HYPOTHERMIA?

No one is sure why, but with advancing age most people experience a general reduction of resistance to and ability to recover from stresses such as prolonged exposure to cold. In addition there is thought to be a defect in either the portion of the nervous system which transmits the signals for the control of body temperature (the autonomic nervous system) or, more likely the part of the brain in which the body's thermostat is housed (the hypothalmus).

WHAT PROTECTIVE MEASURES CAN THE OLD TAKE AGAINST ACCIDENTAL HYPOTHERMIA?

All aged, and especialy those over 75 years old, should avoid prolonged exposure to even mild cold without taking care to keep warm. Because many aged are particularly vulnerable, they should consider keeping their rooms at temperatures of at least 70°F (21°C); avoiding any prolonged exposure to cold; wearing adequate clothing, including sweaters, robes, a cap or hat, and thick socks; and having enough blankets for their beds. Those who are taking medication to treat anxiety, depression, nervousness, or nausea should consult with their physician to determine if the drug is a phenothiazine Since these drugs can impair the body's response to cold, the physician may want to use a different medication. If possible, susceptible individuals should try not to be alone for very long or should ask friends or neighbors to look in on them once or twice a day, particularly after a cold night.

HOW ARE POTENTIAL VICTIMS IDENTIFIED?

Medical and social clues can be used as an aid in identifying possible victims. Not all of the signs will be present in all vulnerable individuals. However, being on the lookout for them will help identify those susceptible to accidental hypothermia and help prevent its occurrence.

MEDICAL CLUES

The normal response when the body is chilled is for the blood vessels near the surface of the body to constrict to reduce heat losses. Muscles also begin to contract rapidly to generate metabolic heat. The result is pale skin and shivering. Most victims of accidential hypothermia neither shiver nor turn pale, a very clear indication that something is wrong with their temperature responses.

An elderly person may seem unaware of the cold. While others shiver and put on sweaters, an older person may insist that he or she is comfortable.

Dizziness or vertigo, even momentary blackouts when changing position—getting out of bed, standing, and so on. If these problems are diagnosed as postural hypotension (low blood pressure due to a sudden change in position), then hypothermia must be guarded against, since both conditions involve a failure of the blood vessels to constrict in response to certain stimuli—either a change in position or cold temperatures.

Various medications that may increase vulnerability to accidental hypothermia, particularly chlorpromazine and other phenothiazines given for various psychiatric disorders (anxiety, depression, etc.), nausea, and sedation.

Any condition that blunts the body's response to cold. These include:

Disorders of the body's hormone system, especially hypothyroidism ("slow" thyroid), that reduce the rate of metabolism;

Head injuries, strokes, and similar neurological conditions that cause paralysis and reduce muscular contraction and heat production;

Immobilizing illnesses, such as severe arthritis and Parkinson's disease;

Any other condition that impairs the normal constriction of blood vessels, such as coronary thrombosis (a blood clot in the arteries leading to the heart) and atherosclerosis (hardening of the arteries).

The dulling of awareness and response, whether due to mental illness or medication.

A previous bout with accidental hypothermia, since a defect in temperature regulation may well lead to a recurrence with subsequent exposure to the cold.

SOCIAL CLUES

A person living alone who receives few visitors, thereby raising the risk of extended exposure to the cold.

Anything that raises the chances of nighttime accidents—visual impairments, insomnia, confusion, nocturia (frequent urination at night), or incontinence (uncontrollable bowel movements or urination).

Low income and little savings, making it difficult to afford adequate heat. That warning applies not only to people but also to institutions caring for the elderly, such as nursing homes.

Substandard housing, without adequate insulation from the cold. It has been estimated that 30 percent of older Americans live in substandard housing.

HOW CAN HYPOTHERMIA BE DETECTED?

The only sure way to detect hypothermia is to take the suspected victims's temperature using a special low-reading clinical thermometer whose scale goes below the usual low point of 95°F (34°C). These thermometers are not readily obtainable in U.S. drug stores, but if one is available, and depending on the state of the victim, the preferred temperature reading is first that of freshly-voided urine, then rectal, and then oral. A less reliable method is to feel if the abdomen is noticeably cold. However, skin temperatures (thermometer under the arm and the like) are not accurate in detecting or ruling out accidental hypothermia.

Hypothermia should be *suspected* if any of these signs are evident:

Bloated face; skin color pale and waxy, at other times oddly pink.

Trembling on one side of the body or in one arm or leg, but no shivering.

Irregular and slowed heartbeat; slurred speech; shallow, very slow breathing that may be barely discernible.

Low blood pressure.

Drowsiness, perhaps lapsing into a coma. The lower the body temperature, the more likely that the victim will be unconscious. Coma is very probable with body temperatures of 90°F (32.2°C) and under.

WHY IS ACCIDENTAL HYPOTHERMIA SUCH A THREAT IF THERE ARE SO MANY SIGNS OF ITS PRESENCE?

Unfortunately, these signs, other than the drop in body temperature at 95°F (35°C) or below, can be confused with a stroke, diabetic coma, or a heart condition. The victim may also be an unreliable reporter of what is happening to him or her, since there may be no complaints of feeling cold. However, hypothermia should be immediately suspected if any of these signs are present, especially if there is evidence that the victim has had an extensive exposure to temperatures of 65°F (18.3°C) or below.

HOW IS THE CONDITION TREATED?

Two principles apply in treating accidental hypothermia: the condition is persistent, so a victim will stay chilled unless rewarmed; and, whatever the apparent severity of the condition, the victim must be seen by a physician.

If body temperture did not go below 90°F (32.2°C), the victim can generally be treated in the home or caring institution. This is directly dependent on the individual's health prior to the incident.

A lowered body temperature, with its consequent slowing of body functions, may transform a manageable condition into a serious, even critical one. Various metabolic disorders may worsen because the liver does not function normally; or already faulty blood circulation, such as in atherosclerosis, may be pushed to the point of gangrene.

A body temperature under 90° F. (32.2° C.) must be treated as a medical emergency and the victim must be hospitalized, not only to treat the immediate problem but also to remove him or her from the environment in which the accidental hypothermia occurred.

Rewarming must be done slowly—no more than one degree per hour, and blood pressure must be held steady. Rapid rewarming can be fatal—the weakened response to stress that helped precipitate accidental hypothermia is also compromised by rapidly rising temperatures.

Rapid rewarming may dilate the blood vessels in the skin, further lowering blood pressure, and also force relatively cold blood from the skin into the body's core, worsening the deep body hypothermia. Rewarming should be supervised by a physician, preferably one familiar with accidental hypothermia and preferably in a hospital setting.

WHAT ARE THE CHANCES FOR RECOVERY?

Recovery depends on the severity and duration of the exposure to cold, as well as general health before the incident. If body temperature does not drop below 90° F. (32.2° C.), chances for a normal recovery are good, barring other complications. If the temperature falls to between 80° F. (26.6° C.) and 90° F. (32.2° C.), most victims will recover but some sort of lasting damage is more likely. If the temperature goes to under 80° F. (26.6° C.), most victims, especially the very old, will not survive. The overall mortality rate is high.

WHAT ARE THE POSSIBLE COMPLICATIONS?

Pre-existing conditions, such as heart disease and diabetes, may be worsened by hypothermia. Severe and prolonged hypothermia, in which the body temperature drops below 90° F. (32.2° C.), usually leads to a host of complications because vital organs are damaged or body functions such as metabolism are disrupted. Serious hypothermia often leads to problems with the kidney, liver, and pancreas. Permanent brain damage can also result. The most severe complication is a form of irregular heartbeat, ventricular fibrillation, which leads quickly to death if it is not treated.

WHAT CAN BE DONE TO REDUCE THE THREAT OF ACCIDENTAL HYPOTHERMIA?

While we recognize that continued exposure to even mild cold can be a lethal threat to many elderly, we still do not understand hypothermia itself. We do not know what proportion of the aged in the United States are vulnerable, and can only guess at the number using British data. We have no sure way to identify those who are susceptible. We do not understand the defects that are responsible for accidental hypothermia, particularly in victims who appear well protected. And we still need to determine the best way to treat accidental hypothermia in the elderly and disseminate this information to physicians.

At present, the most effective way to protect the old from accidental hypothermia is to educate physicians in the signs and treatment of the condition and encourage the elderly themselves to find out if they are vulnerable and be careful to keep themselves warm in even mildly cold environments. Future advances in our understanding, treatment, and ultimately prevention of accidental hypothermia will derive from scientific research on this condition as well as other special health problems of the old.

MEXICAN NATURAL GAS

Mr. STEVENSON. Mr. President, the Export-Import Bank is preliminarily committing almost $600 million in subsidized credits to PEMEX, Mexico's government-owned oil and gas company, to assist in the purchase of U.S. goods and services to be used in PEMEX operations and the construction of a natural gas pipeline that would deliver gas to the U.S. border. This financing could benefit U.S. exporters, particularly in the steel industry, at a time when our trade deficit is reaching $30 billion on an annual basis, caused mostly by continuing dependence on expensive oil imports. We should not let this attractive short-term possibility obscure the serious inflationary impact which the price of gas imported from Mexico could have. I do not intend to object to this Export-Import Bank commitment, because I am assured that no loan disbursements will be made until agreement has been reached on a satisfactory price approved by the Department of Energy for the gas.

As the energy industry and the Carter administration recognize, an objective of public policy should be to price natural gas on a Btu equivalent basis with oil. But the price suggested by industry and Mexico for the Mexican gas is the price of No. 2 fuel oil delivered at New York. At present, this formula yields a price at the Mexican border of approximately $2.60 per thousand cubic feet.

When the costs required to integrate this gas into the pipeline system and transport it are added, the cost of Mexican gas in New York would be about $3.60. The production costs for Mexican gas and the costs of transportation from well to border are relatively low. Yet, the proposed price of $2.60 at the border would be 17 percent higher than the price paid for Canadian gas at the border. It would be far in excess of the 39 cents per thousand cubic feet paid for Algerian gas at the border. It would be far in excess of the $1.75 proposed by President Carter as the well head price for newly discovered gas in the United States. That price of $1.75 is the Btu equivalent of the average price for domestic crude oil. The $2.60 price is even higher than the OPEC price for crude oil.

At $1.75 per Mcf PEMEX would have ample funds to cover operating costs of the pipeline and principal and interest payments on the proposed ExIm Bank loan and still make a handsome profit. The difference between $2.60 and $1.75—85 cents per Mcf—is pure windfall to PEMEX and would add $620 million per year to our gas import bill. And that amount is small by comparison with the costs of other fuels, including Canadian gas, that would rise with the cost of Mexican gas.

Mexico is wise to seek the best possible price for its product; we would be wise to seek the lowest possible price. This, therefore, should be a matter of bargaining between equals. Mexico has the gas and it should be developed for its and the world's benefit. The United States is the best, probably the only, market for most of the gas. We should approach the negotiations in a spirit of mutual interest and from an equal bargaining position. That has not been the case so far because the interests involved on the U.S. side, including banks, exporters, pipeline companies, and oil producers, are biased toward higher fuel prices.

Instead of approving natural gas prices in excess of OPEC oil prices the Department of Energy should insist upon a reasonable price and recognize, as Saudi Arabia, Iran, and Algeria have already discovered, that the market for exported natural gas is a buyers' market. Indeed, if the Mexicans were left to the mercies of the market they would be forced to make a large investment in liquefaction and transportation facilities for their surplus gas which would then be sold at distress prices. There is no way this gas can be substituted in large quantities for oil and absorbed in the Mexican economy. Whether the Mexicans could ever find financing for liquefaction and petrochemical plants on IMF approved terms is doubtful.

The $1.75 represents a substantial price increase for high cost U.S. producers. It would be a generous price for PEMEX, a low-cost producer with no other markets. Natural gas prices in excess of $1.75 at the wellhead produce no more natural gas. They do produce inflation, recession, and windfall profits.

I urge the Department of Energy and the State Department to resist the pressures of U.S. industry. If the Mexican Government then resists the political pressures in Mexico, it will be possible for both governments to reach an agreement upon terms which are reasonable and mutually advantageous. The Mexicans would be right to demand a fair price for their commodity, even if it is higher than the world market could bear; they are wrong to demand foreign aid in the guise of gas prices.

PRELIMINARY NOTIFICATION PROPOSED ARMS SALES

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent to have printed in the Record as statement by the distinguished Senator from Alabama (Mr. Sparkman), and the material attached thereto.

The PRESIDING OFFICER. Without objection, it is so ordered.

STATEMENT BY SENATOR SPARKMAN

Section 36(b) of the Arms Export Control Act requires that Congress receive advance notification of proposed arms sales under that Act in excess of $25 million, or in the case of major defense equipment as defined in the Act, those in excess of $7 million. Upon receipt of such notification, the Congress has 30 calendar days during which the sale may be prohibited by means of a concurrent resolution. The provision stipulates that, in the Senate, the notification of proposed sale shall be sent to the Chairman of the Foreign Relations Committee.

Pursuant to an informal understanding, the Department of Defense has agreed to provide the Committee with a preliminary notification 20 days before transmittal of the official notification. The official notification will be printed in the record in accordance with previous practice.

I wish to inform Members of the Senate that 2 such notifications were received on November 29 and December 13, 1977.

Interested Senators may inquire as to the details of these preliminary notifications at the offices of the Committee on Foreign Relations, Room S–116 in the Capitol.

The attachment ordered to be printed in the Record is as follows:

Washington, D.C.,
November 29, 1977.

In reply refer to: I–11577/77ct.
Mr. William Richardson,
Professional Staff Member, Subcommittee on Foreign Assistance, Committee on Foreign Relations, U.S. Senate, Washington, D.C.

Dear Mr. Richardson: My letter dated 18 February 1976 indicated that you would be advised of possible transmittals to Congress of information as required by Section 36(b) of the Arms Export Control Act. At the instruction of the Department of State, I wish to provide the following advance notification.

The Department of State is considering an offer to a NATO country for major defense equipment tentatively estimated to cost in excess of $7 million.

Sincerely,

H. M. Fish,
Lieutenant General, USAF, Director, Defense Security Assistance Agency and Deputy Assistant Secretary (ISA), Security Assistance.

Washington, D.C.,
December 13, 1977.

In reply refer to: I–13423/77ct.
Mr. William Richardson,
Professional Staff Member, Subcommittee on Foreign Assistance. Committee on Foreign Relations, U.S. Senate. Washington, D.C.

Dear Mr. Richardson: My letter dated 18 February 1976 indicated that you would be advised of possible transmittals to Congress of information as required by Section 36(b) of the Arms Export Control Act. At the instruction of the Department of State, I wish to provide the following advance notification.

The Department of State is considering an offer to a NATO country tentatively estimated to cost in excess of $25 million.

Sincerely,

H. M. Fish,
Lieutenant General, USAF, Director, Defense Security Assistance Agency and Deputy Assistant Secretary (ISA), Security Assistance.

ACTIVITIES OF THE SENATE SUBCOMMITTEE ON THE HANDICAPPED DURING THE 1ST SESSION OF THE 95TH CONGRESS OUTLINED BY SENATOR RANDOLPH

Mr. RANDOLPH. Mr. President, as we review the accomplishments of the first session of the 95th Congress, I again stress the commitment of the Subcommittee on the Handicapped to the goal of equal rights for handicapped Americans and to legislation which will enrich their lives. As in past Congresses, it has been my privilege and responsibility to chair the Subcommittee on the Handicapped and to work toward this goal with the able members of the subcommittee: Senators Harrison A. Williams of New Jersey; Thomas F. Eagleton of Missouri; Robert T. Stafford of Vermont; and Orrin G. Hatch of Utah. Senator Jacob Javits of New York is not a member of the subcommittee. but as ranking minority member on the full Committee on Human Resources he works helpfully with our members and staff.

As Senators know, the Subcommittee on the Handicapped is a standing subcommittee of the parent Committee on Human Resources. It was established in the final months of the 92d Congress. Its existence as a permanent subcommittee is an indication of the importance which the Congress has attached to legislation affecting handicapped individuals. It was established in order to have a focal point for and to coordinate such legislation. Our subcommittee is charged not only with developing legislation, but also formulating national policy on such issues as education, vocational rehabilitation, employment, architectural, transportation and communications barriers, and adequate housing.

The subcommittee has specific jurisdiction over the Education of the Handicapped Act, including the Education for All Handicapped Children Act of 1975; the Rehabilitation Act of 1973, as amended; the Developmentally Disabled Assistance and Bill of Rights Act; the Randolph-Sheppard Act; the Architectural Barriers Act of 1968, as amended; and the Javits-Wagner-O'Day Act. In addition, the members and staff of the subcommittee work closely with other committees on matters relating to handicapped persons, but over which the subcommittee has no direct jurisdiction.

The subcommittee has cooperated with the Subcommittee on Education, Arts and Humanities of the Committee on Human Resources to assure a maintenance of efforts by States for library services to the handicapped and institutionalized, and to include in amendments to the Library Service and Construction Act remodeling provisions specifying removal of architectural barriers in library structures. The Subcommittee on Aging in its effort to include handicapped persons in the Meals on Wheels legislation has had our cooperation. The Commerce Committee has had our aid to provide reduced rate transportation on a space available basis to handicapped persons. We have worked with the Judiciary Committee on providing court interpreters for hearing impaired persons. Our cooperation has been given to the Environment and Public Works Committee to insure that construction funded through the Public Works Employment Act of 1977 be barrier free. And we have cooperated with the Subcommittee on Child and Human Development of the Committee on Human Resources and with the Committee on Finance to remove the social and jurisdictional barriers which so often prevent adoption of handicapped or otherwise special children. It has been our privilege to work with the Appropriations Committee to secure the maximum possible funding for the programs authorized by the subcommittee.

During the first session of the 95th Congress, the primary activity of the subcommittee has been to exercise its oversight responsibility on the Education for All Handicapped Children Act of 1975 (Public Law 94–142); the Developmentally Disabled Assistance and Bill of Rights Act (Public Law 94–103); and the Rehabilitation Act of 1973 (Public Law 93–113), as amended by the Rehabilitation Act Amendments of 1974 (Public Law 93–516). To this end, the subcommittee held 16 days of hearings: 9 of these were to review all programs for the handicapped; 1 was to specifically review the Developmentally Disabled Assistance and Bill of Rights Act; 4 days were for the purpose of receiving testimony on extension of the Rehabilitation Act of 1973, as amended, and related bills; 2 days were used to hear testimony on the various problems concerning the implementation of Public Law 94–142, the Education for All Handicapped Children Act; and 1 day of hearings was to receive testimony from the administration and other interested parties on the proposed reorganization of the Office of Human Development in the Department of Health, Education and Welfare.

The subcommittee members wish to express appreciation for the active participation of the many Members of the Congress who appeared personally before the subcommittee to provide us with the benefit of their views on various proposals relating to the handicapped. Included are Senators Lloyd Bentsen of Texas, Joseph R. Biden, Jr. of Delaware, John C. Culver of Iowa, Robert Dole of Kansas, Pete V. Domenici of New Mexico, Hubert H. Humphrey of Minnesota, Charles McC. Mathias, Jr. of Maryland, and Representative James C. Corman of California.

EDUCATION

During the first session, S. 725, to extend certain programs under the Education of the Handicapped Act, was introduced by me with the cosponsorship of Senators Williams, Stafford, Javits, Kennedy, Pell, Schweiker, Magnuson, Humphrey, Durkin, Dole, and McGovern. The purpose of this legislation is to extend for 5 years, through 1982, and authorize appropriations for, certain discretionary programs authorized by the Education of the Handicapped Act, namely, the programs authorized under part C, Centers and Services to Meet Special Needs of the Handicapped; part D, Training Personnel for the Education of the Handicapped; part E, Research in the Education of the Handicapped; and part F, Instructional Media for the Handicapped. The subcommittee heard testimony on the need for this legislation and on March 23 approved the bill for action by the full committee. On May 6, the Committee on Human Resources reported the bill to the Senate, and on May 23, H.R. 6692, a companion bill, was passed by the Senate, with an amendment, in lieu of S. 725. On June 7, the House of Representatives concurred in the Senate amendment and on June 17, 1977 President Carter signed the bill into law (Public Law 95-49).

DEVELOPMENTALLY DISABLED

One of the major thrusts of the Developmentally Disabled Assistance and Bill of Rights Act of 1977 (Public Law 94-103) is the development of a system for the delivery of services for developmentally disabled persons. On March 31, 1977, the subcommittee held an oversight hearing on this law to seek information as to whether this is being accomplished, and received testimony from several organizations and individuals involved with this area.

REHABILITATION

On June 17, 1977, I introduced S. 1712, a bill to amend the Rehabilitation Act of 1973 to extend certain programs established in such act, and for other purposes, with the cosponsorship of Senators Williams, Pell, Riegle, Humphrey, Magnuson, Brooke, and Dole. During our hearings on June 20, July 21, 24, and 25, the subcommittee heard testimony on this and related bills from 28 witnesses and received additional written statements of support. The subcommittee expects to complete action on this bill early in the next session of the 95th Congress.

SECTION 504 REGULATIONS

As my colleagues know, regulations to implement section 504 were not published until May 4 of this year. These regulations require that programs, or activities, receiving Federal financial assistance be accessible to handicapped persons, that construction of new facilities must be barrier-free and that structural changes must be made when there is no other method to make programs and services accessible. Because of varying estimates on the cost of achieving accessibility to educational programs, there is a need for studies to accurately determine what the actual costs will be. To this effect, on November 4, together with Senators Stafford, Eagleton, Magnuson, Mathias, and Hatch, I introduced S. 2302, the Rehabilitation Cost Assistance Act of 1977. This bill provides funding for States to conduct independent studies on the cost of achieving program accessibility in educational facilities. It also authorizes the appropriation of funds to achieve program accessibility in accordance with section 504 of the Rehabilitation Act.

OTHER LEGISLATION REFERRED TO SUBCOMMITTEE

Also pending before the subcommittee are the following bills:

S. 89, to amend the Older Americans Act of 1965 to provide nutrition programs for handicapped dependents of older Americans, introduced by Senator Stone; S. 1596, a bill to establish a National Center for the Handicapped, introduced by me and Senators Stafford, Javits, Williams, Sparkman, Riegle, Huddleston, Leahy, Matsunaga, Moynihan, Ribicoff, Thurmond, Gravel, and Heinz; S. 506, to amend the Rehabilitation Act of 1973 to provide for a program of wage supplements for handicapped individuals, introduced by Senator Humphrey, for himself and Senators Riegle, Leahy, Huddleston, Anderson, Magnuson, Gravel, and Hatch; S. 906, to prohibit discriminatory practices with respect to physically handicapped persons, introduced by Senator Pell, for himself, and Senators Anderson and Humphrey.

S. 1120, to amend the Rehabilitation Act of 1973 to expand the comprehensive system approach to treatment of spinal cord injuries, and for other purposes, introduced by Senator Humphrey, for himself and Senators Melcher, Burdick and Riegle; S. 1477, to amend the Civil Rights Act of 1964 to make it an unlawful practice to discriminate against individuals who are physically handicapped because of that handicap, introduced by Senator Weicker; S. 1905, to authorize Federal assistance to private, profitmaking agencies and organizations under title II of the Rehabilitation Act of 1973, introduced by Senator Dole, for himself and Senators Javits and Stafford; S. 2042, to amend the Rehabilitation Act of 1973 to change the formula for State allotments under part B of that Act, and for other purposes, introduced by Senator Javits, for himself and Senators Williams, Hayakawa, Kennedy, Percy, Riegle, and Schweiker; and S. 2139, to reestablish the Advisory Committee on Sheltered Workshops to the Department of Labor, introduced by Senator Riegle, for himself and Senators Randolph, Williams, and Javits. During the oversight hearings of the subcommittee, a number of witnesses offered comments on many of these bills.

WHITE HOUSE CONFERENCE ON HANDICAPPED INDIVIDUALS

The White House Conference on Handicapped Individuals, authorized by the Rehabilitation Act Amendments of 1974 (Public Law 93-516), was held in May of 1977. Delegates from every State and Territory met to develop recommendations, and to stimulate a national assessment of problems, and solutions to the problems, facing handicapped individuals. The subcommittee is awaiting the report of this conference in the near future and expects that it will form the basis of important legislative action.

We are grateful to Dr. Henry Viscardi of the Human Resources Center in New York, who served as chairman of the National Planning and Advisory Council, for giving so much of his time to the development and organization of the Conference. One of the more significant activities which Dr. Viscardi organized was the Labor-Industry Council, cochaired by George Meany, President of the AFL-CIO, and John Opel, president and chairman of the Board of IBM. With the cooperation of international presidents of labor unions and the executives of major corporations, the Labor-Industry Council held six meetings in different regions of the country, at no expense to the Federal Government.

The purpose of these meetings was to bring together representatives of labor and industry with handicapped individuals to identify issues which are barriers to the employment of handicapped persons.

I am gratified that although the White House conference was concluded in May, the Labor-Industry Council intends to continue their activities until solutions are found for the elimination of such barriers.

LEGISLATION INVOLVING OTHER COMMITTEES

S. 602, the Library Services and Construction Act Amendments of 1977, was amended in committee to assure a maintenance of effort by States for library services to the handicapped and institutionalized, and also contains remodeling provisions specifying removal of architectural barriers in library structures. This legislation became Public Law 95-123 on October 7, 1977.

Additionally, H.R. 6010, amending title XIII of the Federal Aviation Act of 1958, was amended to provide reduced rate transportation on a space available basis to handicapped persons. On November 10, President Carter signed this legislation into law (Public Law 95-163).

The Senate has also passed a bill, S. 1315, to insure that all participants in our Federal courts can meaningfully take part by assuring that if the participant has a hearing or speech impairment, he will have access to qualified interpreters.

On October 27, the Adoption Reform Act of 1977 was passed by the Senate as title I of H.R. 6693. The purpose of this legislation is to facilitate the placement in permanent adoptive homes of children with handicaps or other special needs. Additionally, the Senate Finance Committee has reported to the Senate a bill, H.R. 7200, with amendments, relating to adoption assistance payments for hard-to-place children, including those with handicaps.

Mr. President, as I indicated, the Subcommittee on the Handicapped has devoted most of its time during this session of the Congress to holding oversight hearings. We have done so that we would have a greater understanding of what further needs to be done legislatively. We expect to be even busier during the next session and we will continue to rely on the support and cooperation of our colleagues in the Senate as well as that of handicapped individuals and the organizations that serve the handicapped. Those persons and organizations are our most valuable asset as we continue to work together to achieve equal opportunity for the handicapped citizens of our Nation.

A DANGEROUS PRECEDENT

Mr. WALLOP. Mr. President, Mr. James McIntyre has been serving as Acting Director of the Office of Management and Budget for a period approaching 90 days, and as of yet, neither his name nor any other has been sent to this body for confirmation. With the administration in the midst of preparing its budget for the upcoming year, I feel obligated to voice my concern that this important process is being directed by a gentleman who has not been confirmed for his post by the Senate. This is certainly a violation of the spirit of our laws.

It would appear that the President's continued procrastination in this matter represents an attempt to evade the constitutional provisions outlined in article II, section 2 which give the Senate the right to advise and consent to all executive appointments. Buckley against Valeo affirmed the fact that article II has substantive content, and in fact provides the only means by which appointments can be effectuated.

The provisions for succession within OMB as defined in 31 U.S.C. 16 make it clear that the Deputy Director has no authority except that given him by the Director, and that in the case of a vacancy, the Deputy Director shall only act as Director. It is significant that the statute does not provide for the automatic succession of the Deputy Director to the post of Director. This fact, taken in conjunction with the legislative history of OMB, and the enormous power that has been given to its Director under numerous public laws, makes it clear that the intent of the Congress was to have the opportunity to advise and consent to the nomination of any new Director of OMB.

Williams against Phillips has established that, even in cases where the Vacancy Act does not apply, it would be an attempt to evade the Constitution if an acting officer were allowed to serve for an unreasonable period of time. In that case, the Court of Appeals suggested 30 days as a reasonable period.

With these considerations in mind, I have sent a letter to the Comptroller General of the United States requesting an opinion on the legality of Mr. McIntyre's continued service and his authority to exercise the power vested in him as an officer of the United States.

Mr. President, I do not mean to impugn Mr. McIntyre's integrity or qualifications; I am concerned only with what I view as a dangerous precedent being set here by allowing an acting director to go on serving indefinitely. It is the principle involved rather than the personality which is important. I must emphasize that it was clearly the plan of the Congress to have the right to confirm all directors of OMB for their service in that post.

Something must be done to rectify this situation immediately. At this time, a court case may be the only alternative. To prevent this from happening in the future, I am exploring legislation to amend title V and eliminate any technicalities in the law that allow situations like this to go unchallenged.

I understand that my colleague, the senior Senator from Wisconsin has been pursuing this same problem. I welcome his efforts and offer him my support. It is imperative that the Senate act immediately to correct this problem.

DEVELOPMENT ASSISTANCE—II

Mr. HUMPHREY. Mr. President, one of the most important tasks the Foreign Assistance Subcommittee will face in rewriting the Foreign Assistance Act will be to evaluate the development experience of recent years in order to determine how the United States can increase the effectiveness of its aid. An excellent book, "Twenty-five Years of Economic Development" by David Morowitz, traces the changing objectives of development and contains a very useful analysis of growth in the developing countries.

Mr. Morowitz discusses the shift in emphasis from the narrow focus on maximization of GNP growth per capita, to additional objectives of improving income distribution, increasing employment and fulfilling basic needs. In the longer view of development, this is a return to the wider objectives before the preoccupation of the late 1950s and 1960s with per capita GNP growth. We have come to recognize that rapid income growth may also be accompanied by increasing personal income inequalities in some countries. Congressional awareness of this trend led to the refocusing of U.S. foreign assistance efforts in 1973 on the poorest people in the developing countries, especially those in the rural areas.

I think this direction is the right one. Our limited resources make it necessary to target our programs on those groups which are in greatest need. But this approach is also highly functional in that it conserves scarce resources for use where they will do the most good—in increasing agricultural production, assisting family planning, and laying the groundwork in health and education for the poor to become more productive and able to stand on their own feet.

The great performance of the developing countries since 1950 has been marked by three major characteristics: A rapid average growth rate, wide diversity of experience, and the increasing disparity between richer and poorer developing countries. The latter point is particularly important because it helps us pinpoint where our official development assistance should be directed—to the poorest developing countries.

We recognize that there are very large groups of poor people in the middle income developing countries and that these people have basic human needs that are inadequately satisfied. But we also recognize that most of the middle income developing countries have access to international capital markets and especially to the World Bank and other regional development banks. These countries as a group are more capable than the poorest countries of generating their own growth and distributing the benefits more equitably internally.

Many of these countries are becoming important regional economic and political powers. They are important and potentially rapidly expanding export and investment markets. Thus we should try particularly to develop assistance programs suitable to their condition, without drawing away limited bilateral resources from the poorest countries. We need to pay special attention to such matters as trade and investment policy and methods of transferring technology so that they can achieve equitable growth through full integration in the world economic system. In our concern to protect American jobs we should not lose sight of the thousands of jobs created by trade with these countries, and the major potential for expanding domestic employment if these countries are allowed to grow and prosper.

Our development policy must be based on a truly global view of the world economy. Inward looking measures will overlook our own best potential for long-term growth leading to a less dynamic world economy and slower growth for everyone.

Mr. President, I ask unanimous consent that portions of Mr. Morowitz' book be printed in the RECORD.

There being no objection, the excerpts were ordered to be printed in the RECORD, as follows:

THE CHANGING OBJECTIVES OF DEVELOPMENT

An attempt to evaluate the development experience since 1950 needs first to examine the objectives to which development efforts have been directed. Largely as a result of changes in perceptions in the developing countries themselves, since the early 1970s there has been a sharp shift in these objectives. It is now considered that maximization of GNP per capita is too narrow an aim and that other aims related to poverty reduction need to be considered as well: improving income distribution, increasing employment, fulfilling "basic needs."

Some observers have tended to regard this movement as just one more fashion in a fashion-prone discipline. I would argue, however, that the discovery of these additional objectives is in fact a rediscovery of issues that were quite central in the writing on economic development just after World War II. Seen in this historical context, the recent heightened concern with eradication of poverty is not likely, it seems to me, to be just another fad. On the contrary, in the long term it is the narrow preoccupation of the late 1950s and 1960s with growth in average per capita income that, although it had its reasons and even its benefits, may turn out to be the passing fashion.

The early postwar concern with wider objectives than simply growth is not difficult to document, since most of the literature of that time, both practical and theoretical, states the objectives of development in terms remarkably similar to those used today. The first plan in a developing country—that of India in 1952—aimed at "maximum production full employment, the attainment of economic equality and social justice." The first World Bank mission to a developing country—to Colombia in 1950—stated its objectives in terms of fulfillment of "basic human needs." Much of the early economic literature of the United Nations was devoted to the subject of unemployment. And in 1954, Kuznets [1955] devoted his presidential address to the American Economic Association to the subject "Economic Growth and Income Inequality."

The problem in these early days was that it was difficult to make any headway in solving development problems in the face of multiple objectives and interlocking "vicious circles." What was needed was a grand simplification that would break the impasse; it was Lewis [1954 and 1955] who provided it. In *The Theory of Economic Growth*, Lewis set the tone for the next fifteen years when he began: "First it should be noted that our subject matter is growth, and not distribution" [1955, p. 9]. To be sure, there were still governments and theorists who were concerned about objectives other than growth during this period. But the view that prevailed during most of the late 1950s and 1960s was that the "trickle-down" mechanism would solve the poverty and income distribution problems if only growth were fast enough

By the early 1970s a number of factors converged to dampen this optimism about growth. It became clear that rapid growth had been accompanied by increased regional or personal income inequalities in some countries (Pakistan, Nigeria, and Brazil, for example), and possibly by increased absolute poverty in some cases. The tolerance for poverty and inequality seemed to be decreasing as the raised expectations of and for the poor remained unfulfilled. And the evidence of China's remarkable success in development began to filter out to the rest of the world. As a result, governments and theoreticians relearned what they had known earlier—that economic development must surely mean not only growth in average per capita income but also reduction of poverty.

GROWTH

(NOTE.—Tables referred to in text printed at end of text.)

How rapidly were GNP per capita and population expected to grow in 1950, and how has their actual growth compared with these expectations?

GROWTH IN GNP PER CAPITA

Until 1950 there had been little serious thinking on the growth prospects of "backward areas." The industrialized countries were just getting over their concern with recovery from the war, and the IBRD was still occupied with R (reconstruction) in Europe rather than D (development) in Africa, Asia, and Latin America. There was as yet probably no university course on economic development, there was no development journal, and only a handful of scholarly works and had been devoted to the subject.

The few people who had thought about the prospects for what were soon to be called "underdeveloped countries" did not hold out high hopes for the short- to medium-term future. After all, the industrialized nations, in their long period of economic growth unparalleled in world history, had managed to increase per capita income by only about 2 percent a year [Kuznets 1967]. There was no reason to expect that the underdeveloped countries, many of which had experienced no growth for millennia, would do any better. On the contrary, in the face of significant advances in disease eradication and with many of the cultural, institutional, and economic preconditions for growth missing, economists were concerned whether these countries could make the minimum critical effort needed for economic growth to exceed population growth. It is against this background of low historical growth rates and low expectations for the future that the actual growth performance of developing countries since 1950 needs to be seen.

The growth performance of developing countries during 1950–75 is marked by three outstanding characteristics: the rapid average growth rate, the wide diversity of experience, and the increasing disparity between richer and poorer developing countries.

The GNP per capita of the developing countries as a group grew at an average rate of 3.4 percent a year during 1950–75 (see Table 1). This was faster than either the developing countries (Table 2) or the developed nations [Kuznets 1971] had grown in any comparable period before 1950 and exceeded both official goals and private expectations.

The high average growth rate masks a wide diversity of performance. On one hand nine countries, with a combined population of 930 million people in 1975, grew at an average annual rate of 4.2 percent or better for the full period (Table 3), and a second group of nine countries, with 220 million people, grew at between 3 and 4 percent. On the other hand, the large, poor countries of South Asia and many countries in Africa, with a total of some 1.1 billion people, grew in per capita income by less than 2 percent a year between 1950 and 1975. Thus, although it is true that per capita income has roughly trebled for some 33 percent of the people of the developing world during the past twenty-five years, it is also true that for another 40 percent the increase in per capita income has been only one or two dollars a year.

The disparity between richer and poorer developing countries has increased significantly since 1950, but it is not true at the aggregate level that the initially rich have got richer while the initially poor have got poorer. These twin facts may be seen from several different perspectives. At the regional level, in 1950 the average per capita income of the richest regions (Latin America and the Middle East) was five or six times that of the poorest (South Asia), whereas by 1975 the multiple for the Middle East over South Asia had risen to thirteen, and that for Latin America was seven. But the relation between initial regional per capita income and subsequent regional growth rate is by no means uniform: initially rich Latin America grew relatively slowly, whereas initially poor China and East Asia grew more rapidly (Table 1).

If countries are divided into income groups on the basis of 1975 per capita income, the relation between income level and growth rate is almost uniform. On average, today's highest-income developing countries grew fastest, whereas the lower-income countries grew more slowly (Table 4). But it is not surprising that there should be a positive correlation between terminal income and growth rates: over an extended period of time the relation is tautological.

Finally, at the level of the individual country, the ranking of eighty developing countries by GNP per capita remained remarkably stable between 1950 and 1975, while at the same time the absolute disparity between the richest and the poorest developing nations increased by a factor of about three (Table 5). As was true at the regional level, there seems to be no clear relation between initial income level and subsequent growth rate; the correlation between the two, though positive (0.17), is not significantly different from zero (see Figure 1).

The way in which this growth performance measures up to private and official expectations may be gauged from a retrospective analysis of two projection exercises carried out some fifteen years ago. In 1960, Rosenstein-Rodan [1961] forecast the 1961–76 growth rates of GNP per capita and 1976 per capita income levels for sixty-six of today's developing countries. He expected that no country would grow as fast as 3 percent a year during the full fifteen-year period; in fact, eighteen did so. Further, in two-thirds of his cases, the actual GNP per capita figure for 1975 turned out to be at least 10 percent higher than his (inflation-adjusted) projection for 1976 (Table 6).

The list of countries that Rosenstein-Rodan expected to be fast growers was rather different from what it would be today. Of the four nations that were expected to grow as fast as 3 percent a year during any five-year period, one was Indian, which was "in a take-off stage" and was expected to achieve self-sustaining growth "where aid is not required any more" by 1976 [pp. 113 and 116]. The other three were Burma, Argentina, and Hong Kong.

In another exercise carried out a few years later, Chenery and Strout [1966] projected 1962–75 growth rates of GNP—not GNP per capita—for forty-five developing countries. Their "plan-based" projections were described as being based on the development plans of the major countries, and as "achievable with moderate improvements in development policies" [p. 711]. A second set of "upper-limit" projections was described as implying "a probability of perhaps one in four that the given growth target and performance could be attained" [p. 714]. In any event, plan-based projections were attained or surpassed in three quarters of the forty-five cases, while even upper-limit projections were attained or surpassed more than half of the time (Table 6). The list of biggest disappointments—defined relative to the size of the disparity between projected and actual performance—again included India; it also included Chile, Egypt, Ghana, and Jordan. The biggest surprise successes included the oil-exporting countries, as well as Brazil, Kenya, Korea (which achieved double its projected 5 percent growth rate during the period), and Taiwan.

GROWTH IN POPULATION

Growth in GNP per capita is affected by growth in population as well as growth in GNP itself. Between 1950 and 1975 the population of the developing countries increased by 70 percent, or by more than 80 percent if China is excluded. Beginning in 1950 at 1.6 billion, it grew at an average annual rate of 2.1 percent during the 25 years (2.4 without China), reaching 2.7 billion by 1975. The annual rate of population growth was between 2 and 3 percent in all regions except China, where it was 1.5 percent (Table 7).

Twenty-five years ago it was expected that population growth would become such a large problem in developing countries. As late as 1951 a U.N. projection assumed that between 1950 and 1980 the populations of Africa and Asia would grow at an annual rate of 0.7 to 1.3 percent. The sharp surge was caused by the remarkable and largely unexpected success in reducing mortality, which, in turn, was brought about by higher standards of living, increased control of communicable diseases, and improved distribution of food in times of famine.

Whereas mortality rates have continued to decline in recent years, there are now signs that, following past experience in developed countries, fertility rates may be beginning to decline as well (Table 7). Nevertheless, because of current young age structures, even if fertility rates in the eight largest developing countries were to drop to replacement level tomorrow—in fact, they are not likely to reach that level for some years—their combined population would still be about 60 percent greater seventy years from now. Although a number of countries have recently shown an increased awareness of, and willingness to deal with, the problem, the process of reducing population growth is likely to continue to be a long, slow one.

THE GAP BETWEEN RICH AND POOR COUNTRIES

> The widening gap between the developed and developing countries has become a central issue of our time.—Pearson Report [1969, p. 1]

The caution concerning the doubtful validity of conventional GNP statistics for intercountry comparisons is particularly relevant in an examination of the gap between rich and poor nations. Once historical data on purchasing-power parity GNPs become available, the trend in the gap may appear to be quite different from that discussed below.

Although during 1950–75 the per capita incomes (as conventionally measured) of the developing countries were growing faster than ever before, so too were those of the developed countries. As a result, the gap between the rich and the poor nations, which had been increasing for 100 to 150 years [Kuznets 1965], continued to widen.

The relative gap

Since the developing and developed countries grew in per capita income at almost identical rates during 1950–75 (Table 1), the per capita income of the developing countries as a proportion of that of the developed countries stayed fairly constant, at around 7 to 8 percent. In China, East Asia, and particularly in the Middle East, the relative gap narrowed somewhat, whereas in South Asia, Africa, and Latin America it widened.

The absolute gap

In 1950 the average GNP per capita of the OECD countries (in conventional 1974 dollars) was $2,191 greater than that of the developing countries. By 1975 this difference had more than doubled, to $4.839 (Table 8). There is no single region in which the absolute gap did not at least double. Furthermore, apart from oil-rich Libya, not a single developing country for which data are available for 1950 managed to narrow the absolute gap even slightly during the full twenty-five-year period. Even in fast-growing Korea and Taiwan the absolute gap doubled.

This remarkable situation is the result of the simple algebra of gaps. In brief, a poor country growing faster than a rich one will not even begin to reduce the absolute gap between them until the ratio of their per capita incomes is equal to the inverse ratio of their growth rates. For example, even though Korea has been growing twice as fast as the OECD countries for the past fifteen years, the absolute gap between them will continue to widen until the per capita GNP of Korea reaches half that of the OECD countries for the past fifteen years, the absolute gap between them will continue to widen until the per capita GNP of Korea reaches half that of the OECD countries. The proportion is currently not one-half but one-tenth.

Assuming for a moment that historical growth rates continue into the future and ignoring the fact that cross-country comparisons of conventional GNP per capita statistics are misleading, it is possible to calculate for each developing country the number of years that it would take until the absolute gap between it and the OECD countries would be closed (Table 9). For the large majority of developing countries, containing most of the developing world's population, the gap would never be closed, for their measured rate of growth of per capita GNP has historically been slower than that of the OECD countries. Even among the fastest-growing developing countries, only eight would close the gap within 100 years, and only sixteen would close it within 1,000 years.

Welfare implications of the gaps

It is not clear that "narrowing the relative gap" makes much sense as a development objective. To take a simple example, if the per capita income of Bangladesh as conventionally measured rises by $2 while that of the United States rises by $65, the relative gap would be narrowing—yet this hardly seems like a shining goal worth striving toward. "Narrowing the absolute gap" appears to make more intuitive sense in welfare terms. But since it may take centuries before the absolute gap is narrowed—if it is ever narrowed—in most developing countries, to use this as a central goal of development is to guarantee long-term frustration.

Fortunately, there are compelling reasons to believe that most developing countries will not place the closing of the gap at the center of their aspirations. First, not all of them regard the resource-wasting life style of the developed countries as an end toward which it is worth striving; at least some seem to prefer to create their own development patterns based on their own resources, and needs, and traditions.

Second, when thinking of the per capita income that they would like to attain, most people (and governments) tend to think of the income of a close-up reference group. Thus, for example, despite the fact that within most countries there is a clear positive association between income and self-rated happiness, there is no observable tendency for people in poor countries to rate themselves as less happy on average than people in rich countries rate themselves [Easterlin 1974]. There are several possible explanations of this apparent paradox [Abramovitz 1975]. One of them is simply that most people in poor countries do not regard the rich foreigners as part of their reference group and hence are not overconcerned with the gap. They are more concerned, it seems with their own internal income distributions and their own place within them.

TABLE 1.—GNP PER CAPITA AND ITS ANNUAL GROWTH RATE, BY REGION, 1950-75

Region	Population, 1975 (millions) (1)	GNP per capita: 1974 U.S. dollars, 1950 (2)	GNP per capita: 1974 U.S. dollars, 1975 (3)	GNP per capita: Annual growth rate, 1950–75 (percent) (4)
South Asia	830	85	132	1.7
Africa	384	170	308	2.4
Latin America	304	495	944	2.6

IN TRIBUTE TO THE LATE SENATOR JOHN L. McCLELLAN

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent to have printed in the RECORD a statement by the distinguished Senator from Missouri (Mr. EAGLETON).

The PRESIDING OFFICER. Without objection, it is so ordered.

STATEMENT BY SENATOR EAGLETON

The death of our distinguished colleague, John L. McClellan, has saddened us all.

Senator McClellan compiled a record of more than 50 years of public service, and it was a record of distinction and superior achievement. As Chairman of the Permanent Investigations Subcommittee and the Labor Rackets Committee from 1955 until 1973, he tackled malfeasance, mismanagement and extravagance in government, looked into organized and syndicated crime, and exposed racketeering and improper practices in labor-management relations. He was a distinguished chairman of the Government Operations Committee.

Senator McClellan's service on the Judiciary Committee also yielded notable achievements. These included passage of the Omnibus Crime Control and Safe Streets Act of 1968, the Organized Crime Control Act of 1970, and other measures. His work in drafting a complete overhaul of the Federal Criminal Code, legislation which now is pending before Congress, marks an appropriate climax to a distinguished legal career.

I personally came to know Senator McClellan and his legislative style through our service together on the Appropriations Committee. Senator McClellan assumed the chairmanship of that important committee three months before I joined it in 1973. Senator McClellan's service as chairman was marked by his thoughtfulness and fairness. Every member of the Committee knew that the Chairman was willing to listen to diverse views, whether or not he agreed with them. I think I can speak for the other Committee members when I say that under Senator McClellan, each of us was afforded important opportunities to exert a meaningful influence on federal spending.

Senator McClellan's career was one of keen insight into problems and potential legislative solutions, a strong devotion to the institutions and processes which make our government work, and great fairness, dignity and integrity. He was, for example, a great champion of a strong national defense. But he was no captive of the military establishment; he subjected the military budget to continual, hard scrutiny, and he was never afraid to cut spending when waste and inefficiency were found.

Senator McClellan's hard work and his significant contributions will be missed in this chamber. He was a great Senator, and a great Arkansan. It is with pleasure, therefore, that I join with his colleague from Arkansas, Senator Bumpers, as a cosponsor of S. 2351, a bill to dedicate the new Veterans' Administration hospital in Little Rock to the memory of John L. McClellan.

HARD TIMES FOR THE FARMER

Mr. WALLOP. Mr. President, it has always troubled me that both the media and Government agencies when reporting a rise in food prices, invariably refer to this as "bad news for consumers." An announcement that food prices have declined, however, is heralded as "good news for consumers." Scarcely a thought is given to the fact that this so-called good news for consumers might mean financial ruin for farmers.

Perhaps there is hope for changing some of these lopsided views with the strike by the American agriculture movement. The strike is focusing public attention on the plight of the American farmer, and should help the public understand the disastrous economic conditions which the farmer faces.

The farm situation is deteriorating among all producers, as Wyoming figures indicate. In my home State, the total net income from farming has plummeted from $121.2 million in 1973 to $1.9 million in 1976. During the same period, farm production expenses have climbed from $333.9 million to $429.3 million. When scaled down to represent individual farm income, the figures become even more dramatic. The U.S. Department of Agriculture reported in 1973 that the net income per farm in Wyoming was $14,788. By 1976 that net income dropped to $241.

These figures explain why farmers from Wyoming and across the country are here in Washington asking for understanding and assistance from their Government. These figures tell a story of economic ruin across a sector of the economy that supplies millions of jobs, pays for our mounting oil imports and gives Americans the best food in the world. The American farmer is being asked to subsidize inflation in America.

Tuesday, I met with two young men from Wyoming, Bob Oaks of Veteran and Jeff Marlatt of Yoder, who told me a story of economic hardship heard across the Nation by those who take the time to listen. They believe, as I do, that American farmers deserve a better deal. These two men, and others like them who traveled to Washington, are seeking the Nation's interest and understanding. They stress that the agriculture strike must be a peaceful demonstration. It is essential that other members of the American agriculture movement share Bob Oaks' and Jeff Marlatt's commitment to a peaceful movement and their opposition to any form of violence. They realize that if violence occurs, it will destroy any hope of achieving their goals.

Much of what they are asking for I am in sympathy with, although I believe a demand for guaranteed 100-percent parity is politically unachievable. The call for a more aggressive agricultural export policy has my complete support. There are export opportunities to developing countries which have not been fully explored. Our food for peace shipments have in some cases been curtailed by administration officials who confuse human rights with the need to help starving people. In our trade talks with Europe and Japan, our negotiators must assume a more aggressive posture if we are to gain our fair share of these markets.

The American agriculture movement has brought these issues and other problems to the attention of the public. That in itself is a formidable accomplishment. They now desperately need Government policies that reflect a better understanding of the American farmer. They do not need a handout. They need an opportunity to survive.

LAURENCE N. WOODWORTH

Mr. RIBICOFF. Mr. President, Laurence N. Woodworth, who died December 7, 1977, at the age of 59, was a dedicated and effective public servant.

As a member of the staff of the Joint Committee on Internal Revenue Taxation for 32 years, as the committee's staff director for 14 of those years, and most recently as Assistant Secretary of the Treasury for tax policy, Larry Woodworth knew more about this Nation's system of taxation than anyone else.

Serving on the Senate Finance Committee for the last 14 years, I had the pleasure of working closely with Larry on tax matters. I never ceased to be impressed with his knowledge, his professionalism, his sense of fairness and his willingness and ability to translate congressional intent into workable and equitable law.

Our tax system is in need of reform. No tax structure has ever been or ever will be perfect. But our system, inadequate in some ways as it is, is nonetheless intended to achieve equity and to a large extent it succeeds. In turn, much that is good and fair in our tax laws is a result of the extraordinary skill and intelligence Larry Woodworth brought to this pursuit.

When he took his new position at the Treasury Department earlier this year, Larry knew very well that he would be facing a difficult challenge.

Serving a President strongly committed to tax reform, Larry Woodworth was of inordinate value to this administration—and to the Congress as well. Having been a participant in the writing of tax law for more than a quarter of a century, he understood the law as no one else did, he was intimately familiar with the process of changing that law and he was uniquely qualified to serve both the executive branch and the legislative in achieving reform.

Without Larry Woodworth, reform is, of course, still possible. But it will be a more challenging goal to reach.

Moreover, Larry's death is a deep personal loss to all of us who knew him. He was brilliant. He was a hard worker. He was a decent and fair person.

Mr. President, the Washington Post of December 12, 1977 printed an editorial about Larry Woodworth's many important contributions to his country. I ask unanimous consent that the editorial be printed in the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

LAURENCE NEAL WOODWORTH

For all of its infinite and tedious complexity, the federal tax code maintains a sense of decency and reason. It has a coherent architecture. You might wonder how that happens since, notoriously every major tax bill is finally enacted in an atmosphere of extreme confusion, haste, passion and anxiety. For the past 15 years one leading reason for the tax system's integrity was the vigilance of Laurence Neal Woodworth, who died this week. He had joined the Carter administration earlier this year, as Assistant Secretary of the Treasury for tax policy, but previously he had been the staff director of the joint Committee on Taxation.

A tax system is a nation's definition of social equity—its answer to the great question of what's fair. In taxation, the large philosophic issues never lie far behind the niggling legalistic details. The role of the congressional staff experts on taxation is not a comfortable one. The tax committes are generally led by tough and strong-willed men; stakes run high, and no bills are more fiercely lobbied. Under weak leadership, the Joint Committee's staff would have been ground to powder long ago between its two masters in the House and Senate. Under Mr. Woodworth, it built a monumental reputation for impartial and authoritative judgment. When, for example, Congress needed an unimpeachable expert for the ugly job of auditing Mr. Nixon's tax returns, it turned automatically to Mr. Woodworth.

To work effectively, the congressional system requires enormous talent and industry among its staffs. Those qualities are very unevenly distributed through the labyrinths of the congressional offices. But the staff of the Joint Committee on Taxation has become an acknowledged model. Mr. Woodworth always left the political decisions to the politicians, and never tried to undercut them with technical obfuscation. But he worked long into the nights after the committee meetings to ensure that the politicians understood the consequences of their votes. Even the most flamboyant of senators was unlikely to press an idea in the face of Mr. Woodworth's warning that it wouldn't work. His death now is a double misfortune to the Carter administration. He was the key figure in the drafting of the President's tax-revision bills. But he was also the administration's principal ambassador to Congress on this delicate subject, and he had earned a degree of trust and respect there that no other person at the Treasury enjoys.

He was a remarkable example of a certain style of public servant—one who is rarely a noted public figure, but who acquires a profound influence through sheer intellectual force and honesty. His subject was one that touches all of us every day. It is an American custom to complain about the tax system's vices while taking its virtues for granted. They are not accidental, but were written into law by a small number of people—among whom Mr. Woodworth was eminent—who labored with learning and skill in pursuit of the just balance between public and private interests.

THE LURE OF GOLD

Mr. STEVENS. Mr. President, down through the ages the lure of gold has always drawn men and women and the rush of 1898 was no exception. They came from eastern Canada, the United States, and even as far away as England and Continental Europe. For when the gold fever struck, many men lost all sense of time and distance, their only concern being the wealth that lay at the end of their journey. And this journey was one of the most unique travels ever undertaken by people in search of gold and glory.

They came in what they could buy, build, or invent over hundreds of miles through thick forests and muddy swamps, over treacherous mountain passes, and across formidable lakes and rivers to the gold-laden area in the Yukon. The trails saw every type and mode of transportation available, from pack horses and ox teams to sleds and burros; and, since the routes led the prospectors through both land and water, river scows, sail boats and steamers played an important part in the story of transportation to the Klondike.

What brought about this frantic migration to the Klondike? Before the summer of 1896, the Klondike was just another tributary of the Yukon River in the rugged far Northwest, a land known only to the Indians and a handful of hardy explorers and trappers.

But on August 17, 1896, George Washington Carmack and his two Indian companions discovered gold on a tributary of the Klondike River then known as Rabbit Creek, but soon renamed Bonanza. Carmack's discovery triggered a mad gold rush that saw 100,000 stampeders set out for the Klondike using two main routes. The bulk of the Klondikers chose the Canadian west coast route and reached the Yukon by way of steamers and inland trails. The alternative was the trail east of the Rocky Mountains through Edmonton, known originally as the "back door route" and later officially as the "all Canadian route."

How much gold was found? Ironically, some of the richest strikes were made by the large mining companies after the Klondike was all but deserted. Of the 100,000 stampeders who set out on the trails, it is estimated that only 4,000 found gold, and that of these, only a few hundred made enough to be called wealthy. It was the merchants, however, who acquired most of the benefits from the gold rush. In 1898 alone, stampeders spent about $60 million on equipment and transportation.

The Klondike gold rush is an important part of Alaska's history. The Congress recognized this last year when it established the Klondike Gold Rush National Historical Park. Combining park units in Seattle and Alaska as well as planned units in Canada, the park is a unique effort to protect all of this important history. I was pleased to be the sponsor of legislation creating the park and to speak this summer at the dedication in Skagway.

On Monday, December 5, in the premiere documentary of the new season of National Geographic Specials on public television, four young Alaskans—Keith Tryck, Bob Clark, Paul Crews, and Jerry Wallace—challenged the Yukon in a manner reminiscent of the old prospectors of 1898. Hiking over the Chilkoot Pass down to Lake Bennett, across the lake then down the Yukon River, they retraced the path of the gold rush. For Keith Tryck, whom I know, it was a special trip. His grandfather, one of the 98'ers, followed the same route to reach Alaska's gold fields.

Alaskans salute these modern day adventurers and thank their sponsors for providing the Nation with a unique opportunity to relive the time and spirit of a colorful era along the Yukon Passage.

On Saturday, December 10, the Anchorage Times ran an editorial concerning this trip down the Yukon Passage. I ask unanimous consent that it printed in the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

SUCCESS STORY

Several million Americans sat back in their easy chairs last Monday and were taken by television on an adventure that carried them over the Chilkoot Pass and down the Yukon River to Dawson, then by raft and dog team down the mighty river to St. Mary's.

It was an exciting voyage, presented by the National Geographic magazine and aired nationally on the public television network.

Most notable for the Alaska audience was the fact that two of the four principals, Keith Tryck and Paul Crews, are products of Our Fair City, having been reared here in the local institutions, social groups and environment. The venture was their brainchild and their success exceeded all expectations.

Tryck and Crews cooked up the idea of the trip. They survived the arduous experience of enlisting enough local financial support to breathe life into their unusual project. And they convinced the National Geographic it was a trip that was worth that organization's attention.

Each one of those achievements was a notable success in itself.

Then they proceeded to do exactly what they said they were going to do.

They invited two Outside friends to join them and the four climbed the old stampede trail over the Chilkoot Pass near Skagway, just as Tryck's grandfather had done in the gold rush of 1898.

At Lake Bennett they chopped trees, built a raft and floated to Dawson, thence down the Yukon nearly to its mouth in the Bering Strait, just as Tryck's granddad did.

The National Geographic carried a splendid narrative of the trip, with some of the most beautiful pictures of interior Alaska that have been seen recently.

The story proved so fascinating that the magazine plunged further into it by proposing that the four young men do the trip a second time so the documentary for television could be made.

Thus the young men not only did what they said they would do, and their achievement was not only just as fascinating as they said it would be, but it was so great that they were requested to do it again for the benefit of the world of television.

Their success provides Alaskans with a spiritual uplift and a fraternal spirit of brotherly love. Those young men did what almost all Alaskans would like to do.

There must be thousands of oldsters who watched it with fond memories of days of yore, and the comment, "Oh, to be young again."

And thousands of young people who viewed it enviously, with the comment, "Why didn't I think of that?"

The venture was inspired by the family ties that stirred up familial loyalty so that the younger Tryck wanted to follow the footsteps of his grandfather over the Chilkoot Pass and down the river.

It proved that the spirit of adventure, and the courage to face the unknown and the unexpected, is still alive and doing well.

The thirst for freedom is unquenched.

Perhaps the overshadowing message for the community is that, despite the frequency of bad things that concern us every day, there is much good around us.

This unusual adventure tested young men who are products of local educational programs, local customs, neighborly relationships, family ties and local lifestyle.

It was the local environment that produced young men with vigor and imagination and an appreciation of the magnificence of the land they live in.

The community can take credit as partners in this success, but it must also be remembered that parents, who often get the blame for what goes wrong, had an important role in laying the foundations upon which this success was built.

TRIBUTE TO SENATOR McCLELLAN

Mr. DURKIN. Mr. President, it is with a great deal of personal sadness that I note the passing of our friend and respected colleague, Senator John McClellan of Arkansas. Although I have been privileged to serve with him for only 2 short years, I had come to know and respect Senator McClellan as a man with a deep personal commitment to public service.

Many of my colleagues have already mentioned the distinguished career of public service, spanning more than 5 decades, for which John McClellan will be remembered. It is a career rich in accomplishments which will not be soon forgotten nor soon equalled. It is also a career distinguished by what I consider to be one of the finest virtues a politician can have—a deep and unwaivering commitment to principle.

John McClellan was a man deeply rooted in principle, a man whose political views were shaped by principle rather than whose principles were shaped by his political views.

In a career witnessing tremendous change in this Nation, John McClellan remained dedicated to the principles and philosophy which first brought him to the Senate in 1942. Above all else, John McClellan was a man dedicated to the principle that no man and no group is or should ever be above the law.

His role as chairman of the Permanent Subcommittee on Investigations is a legendary example of commitment to that principle. Whether it was investigating illegality in organized crime, labor-management relations, the Government, the banking industry, securities sales, or defense contracts, John McClellan vigorously pursued illegal activities and exposed them to public scrutiny. The McClellan committee, as it was known nationally, was a symbol that lawlessness would not and could not be tolerated, and it was perhaps the harbinger of the Federal Government's attack on "white collar" crime.

His commitment to the letter and spirit of the law was also reflected in his activist role as chairman of the Subcommittee on Criminal Laws and Procedures. In this capacity he left his imprint on every significant criminal law enforcement measure in the last 10 years.

Mr. President, despite Senator McClellan's distinguished record, I do not believe it does justice to the man to say he was defined by his numerous accomplishments, for his real legacy is his great integrity in remaining unswervingly committed to principle. Those who understand politics know that to remain so steadfastly committed to principle in the face of the often intense pressures generated by political life is one of the truest tests of a man's integrity. Senator McClellan weathered this test admirably for more than a half century of public service, and no man could have a finer epitaph.

Senator John McClellan will indeed be missed not only by this chamber, which he graced for so many years, but throughout the Nation as well.

WYOMING'S WINDOW ON THE UNIVERSE

Mr. WALLOP. Mr. President, through the ages man has had an insatiable hunger to search and resolve the mysteries of the heavens. Technological advances of various sciences have enabled man to make great headway in the attempt to satisfy this hunger. Upon the completion of the University of Wyoming's new $1.6 million infrared telescope-observatory I feel man will come a step closer to unraveling some of the mysteries.

In 1975, the Wyoming State Legislature and the National Science Foundation were approached by a couple of enterprising young men from the University of Wyoming physics department who realized that the low concentration of water vapor in the surrounding atmosphere of Wyoming was ideal for the placement of an infrared telescope. Today, these two men, Prof. Bob Gehrz and Prof. John Hackwell, are working on top of Jelm Mountain, 35 miles southwest of Laramie, Wyo., with an infrared telescope capable of seeing objects halfway across the universe. Acting as a heat sensing device the telescope with its 92-inch mirror, the largest in the world, will be capable of gathering infrared rays given off by stars and planets throughout the year night and day.

Mr. President, I am impressed with the work of these two men and with the financial backing and support they have received from the State of Wyoming and the National Science Foundation. With further financial assistance from the University of Wyoming and NFS the Nation will have a facility that is open to all astronomers to study the creation and destruction of planets and stars, possibly solving some of the mysteries we have all pondered. I am sure that my colleagues would join with me to extend best wishes to these astrophysicists, and others like them, in their investigation of the heavens.

TRIBUTE TO SENATOR McCLELLAN

Mr. CANNON. Mr. President, I share with my colleagues the sense of loss occasioned by the recent death of one of the Senate's outstanding Members, John L. McClellan.

In Senator McClellan the Senate had a man who was the very symbol of anticriminality. From the organized crime control legislation he sponsored years ago to the revision of Federal criminal laws underway at his death, his career was a model of adherence to and respect for the law.

Indeed, "law and order" was not merely a political slogan to Senator McClellan, but a rule of life.

When the American public had been given reason to believe that a Senate committee was better suited to browbeating than investigating, Senator McClellan showed that the Senate could stand up to the most hardened criminals and expose their evil deeds.

He accomplished much more, of course, in his 35 years in the Senate and others have cataloged his achievements in great detail. I was struck by the eulogy delivered at his funeral services last week in Little Rock, however, as it emphasized a side of John McClellan that the public may not know.

"He came right out of the life of our common humanity," said Rev. Edward Elson, chaplain of the U.S. Senate. Bishop Paul V. Galloway, a neighbor of the McClellans, said the Senator was "conscious of the needs of people and threw himself into his work to help them."

That love for people was returned as his casket lay in state in the Capitol rotunda preceding his funeral. Thousands of people, most of them just average, everyday citizens, paid tribute to Senator McClellan on a cold and rainy day and hundreds more crowded into the church or stood on its steps during the funeral service.

John McClellan was a tower of integrity and a model of senatorial fairness and respect. Although his life was marked by personal tragedy, his belief in God and his work helped him overcome it.

Since he had been here throughout my Senate career I will miss John McClellan as a colleague. The people of Arkansas and the country will miss his dedication as a Senator.

My wife and I have lost a friend and we join in extending to Mrs. McClellan and her family our deepest sympathy.

MINOT E. POWERS, JR.

Mr. DURKIN. Mr. President, I would like to call to the attention of all my colleagues one of New Hampshire's most distinguished citizens, Minot E. Powers, Jr., who, for over 30 years, has helped innumerable working men and women by bringing fairness and understanding to the labor bargaining table.

At the end of this month, Minot will retire as secretary-treasurer and business representative of the Food Workers District 10, Amalgamated Meat Cutters and Butcher Workers of North America. He has served in this capacity for 33½ years and, at the same time, has also been secretary of the Manchester Labor Council, an active member of the New Hampshire Labor Council, and secretary at the last three international organization conventions.

In 1972 Minot Powers' tireless efforts and successful leadership in the labor movement and his Christian stewardship brought him the first New England Methodists Award for Excellence in Social Justice Action.

The accomplishments of Minot Powers extend beyond the boundaries of New Hampshire. They serve as a model for those just entering the field he is about to leave and, as an example of outstanding public service to all.

A COMMENDABLE LOCAL TRADITION IS NOW THREESCORE YEARS OLD

Mr. ROBERT C. BYRD. Mr. President, from the days of the earliest settlements on our shores, the American people have been practitioners of the principle of voluntarism. In the wilderness, the very survival of individual pioneers, families, and new communities often depended on the help that was freely given by neighbors, friends, and even random passersby. Later, in settled farming communities, barn-raisings commonly brought large groups of people together in a spirit of mutual services and neighborliness; churches and civic organizations established continuing programs to aid the needy and destitute in towns and cities all across the country.

The spirit of voluntarism—a willingness and eagerness to contribute freely of one's time, talents, and resources to a worthy cause—has characterized the citizens of this Nation more than any people in the world. It is estimated that today, more than $25 billion annually is contributed by Americans to support charities, churches, medical crusades, private educational endeavors, and other nonprofit community services, excluding all government support. The work of the March of Dimes, the United Fund, the Red Cross, and other such organizations has become a vital and essential part of American life.

There are hundreds of local charitable causes throughout the United States, as well. But one of the longest continuous examples of these efforts is the Community Christmas Tree fund drive of Bluefield, W.Va. This year marks its 60th anniversary. Launched in Bluefield in November, 1917, by the local rotary club, in cooperation with church and business leaders, the Community Christmas Tree drive soon became the responsibility primarily of the Bluefield Daily Telegraph, which has given generously of its resources to this annual cause for nearly six decades.

The purpose of the Community Christmas Tree campaign is to provide Christmas gifts for hundreds of underprivileged children in the Bluefield area, who would otherwise receive no Christmas presents. Over the years, countless thousands of boys and girls have benefited from this program, and, after reaching adulthood, whatever their financial circumstances, many have become faithful contributors to the fund drive themselves.

One unique feature of this program is that, over the many years of its operation, every cent of the money contributed to the Community Christmas Tree fund drive has been spent to buy presents for needy children, and not for administration or logistics. All of the work, skills, facilities, and auxiliary supplies necessary to the success of the campaign are contributed without remuneration by people from the Bluefield area. For many years, an annual all-day "radiothon," featuring the donated talents of local artists, performers, and musical groups, was a highlight of the fund effort. This year, many of the individuals responsible for actually preparing or presenting the Christmas gifts to more than 1,000 children, represent the third or fourth generations of their families to take part in this effort.

Mr. President, I commend the Bluefield Daily Telegraph and the citizens of the Bluefield area for preserving and continuing this historic display of compassion for so many decades. This is a unique American tradition worth maintaining, for it features an expression of good will and services that was inspired within the local community and has been maintained throughout its history without any outside resources or direction. By itself, the Community Christmas Tree campaign of Bluefield has been an inspiration for other communities to initiate similar efforts. Moreover, it is further evidence of the ingenuity and responsibility that can be found in so many American towns and cities, and which are fundamental characteristics of the American heritage.

BOSWELL IN SEARCH OF MATCHING FUNDS

Mr. MATHIAS. Mr. President, today as the 1st session of the 95th Congress ends and as another year draws to a close, I would like to take a moment to reflect on the immutable aspects of our lives as politicians—to explore the rewards and satisfactions of political life that don't alter from session to session, or from year to year, or even for that matter from century to century.

Recently, I reread a passage from "Boswell for the Defence" in which Boswell describes making a visit to a Scottish member of Parliament living in London. The visit took place on March 22, 1772, and yet, across a span of more than 200 years and 3,600 miles of water, it is remarkable to see how little the pleasures and pains of political life have changed.

James Boswell writes:

> "I breakfasted with Dempster, whom I found as agreeable and as friendly as ever, improved much in speaking English, and appearing to be as happy as I could wish him. Parliament . . . had accustomed him to manly employment and I could see he was really satisfied with his situation. He is conscious of acting with honour and fidelity and spirit, and he feels himself happy in having a share in the great deliberations both as to this nation and the Empire of India. He said he would not give up the enjoyment of the two sessions which he had sat in Parliament for any consideration . . . He kept out all company till we had taken a hearty draught of free and friendly conversation. But then I saw a specimen of his inconveniences; for in came Angus Lairds, speaking with a most uncouth tone, and beings of other disagreeable kinds, to all of whom he was obliged to be very courteous."

Like Dempster, despite occasional "inconveniences," I too am "happy to have a share in the great deliberations * * * as to this nation."

A special element of my satisfaction as a politician derives from the knowledge that, as popularly elected legislators, we are all part of a continuum—we are participants in the process that produced our democratic institutions and which still refines them.

Without such chroniclers of their times as James Boswell, however, our pleasure in the practice of politics would be infinitely less informed. Boswell's little vignette of the life of an 18th Century parliamentarian is a delightful reminder of the eternal verities of political life.

Boswell's witty political observations are, of course, barely the tip of the iceberg of the Boswell Papers. The collection contains documents that span three centuries and provides a rich and variegated guide to Scottish feudal life. These papers are a treasuretrove not just for literary historians, although they are certainly that, but for scholars in many other disciplines as well. And, for the likes of me, the 10 volumes of Boswell's journal that scholars engaged in The Yale Editions of the Private Papers of James Boswell have edited are a source of continuing pleasure and enlightenment.

It is, therefore, extremely gratifying to learn that the National Endowment for the Humanities—NEH—has provided a new grant to the Yale editions of the private papers of James Boswell which should enable the project to complete the catalog of the Boswell papers and the final volumes in the trade edition of the Journal.

This second award from NEH provides

an outright grant of $143,657 which will support the project for another year-and-a-half. In addition to this grant, NEH has also offered $75,000 to match gifts to the project on a one-to-one basis, and has given the project 3 years in which to raise its $75,000.

NEH's earlier award to the project was for $110,408. Made in January 1975, it was intended to help support the project until April of this year. But, because project director Frederick A. Pottle, sterling professor of English emeritus, and his dedicated associates are as meticulous in their budget management as they are in their scholarship, the initial NEH grant was husbanded so skillfully that it lasted until August.

The National Endowment for the Humanities deserves great credit for making these grants. They are a major contribution to one of the most important scholarly endeavors of any age. The Yale editions of the private papers of James Boswell have more than justified the confidence these grants imply. I am sure that every Member of the U.S. Senate believes, as I do, that these NEH grants are money well and wisely spent. I am confident that the project will have no trouble raising the $75,000 it needs to qualify for matching NEH funds. It is afterall a very small investment measured against the dividends it will pay.

In his "Life of Johnson," Boswell reports that Dr. Johnson used to quote "with great warmth" these words of Aristotle: "Educated men are as much superior to uneducated men as the living are to the dead."

Publication of the catalog of the Boswell papers and the final volumes of the Journal will be a significant contribution to the education of mankind. I am grateful to the National Endowment for the Humanities for making this possible. I am grateful to the small band of dedicated scholars at Yale for making this possible. And I am grateful to those educated men and women who will surely come forward now to insure the matching funds necessary to bring this great undertaking to fruition.

Mr. President, I ask unanimous consent to have printed in the Record, an article by Israel Shenker, which appeared in the New York Times on July 15, 1975, which conveys the flavor of this remarkable scholarly project far better than anything I can say.

There being no objection, the material was ordered to be printed in the Record as follows:

[From the New York Times, July 25, 1975]

Boswell's Life a Thriving Industry at Yale

(By Israel Shenker)

(The Yale editions of the private papers of James Boswell, "The Boswell Factory," Frederick A. Pottle, chairman; Frank Brady, F. W. Hilles, H. W. Liebert, Thos. Quinn, Irma S. Lustig, Harriet Childester, Rachel McClellan.)

New Haven, July 24.—In the Boswell Factory—room 331-A or Yale's Sterling Memorial Library—the casement windows are flung open to catch the breeze. A sudden gust lifts a batch of handwritten notes which are to be used in a forthcoming installment of the chronicle of James Boswell, the great 18th century biographer.

The papers swirl in disarray, then settle slowly to the floor. Another gust lifts a final sheet and it floats majestically before fluttering to rest. "Irma," Prof. Frank Brady calls, "It's just under your foot."

This project has long been down-at-heel, limping along on $10,000 a year, and about four years ago the factory almost closed. Then Dr. Irma S. Lustig decided to apply for a grant from the National Endowment for the Humanities. She drafted an application and called Yale's Professor Emeritus Frederick A. Pottle, the factory's boss, for his approval.

"I told you I'm going up to Maine," he said. "I have to plant peas. Besides, it's humiliating to ask for money."

He finally agreed to have a look, then to lend a hand and the National Endowment for the Humanities has now given the Yale Boswell Editions $110,408 to support operation until March 31, 1977.

"But we're still a shoe-string edition," said Professor Brady, "every piece of paper used twice, every pencil counted."

He spends his summers at the factory, and the rest of the year teaching at City University of New York, Professors Brady and Pottle are collaborating on the second volume of a biography of Boswell. Professor Pottle—who is 77 years old—having written the first.

"Boswell was like all the rest of us, only more so," said Professor Brady. "He drank a lot, but so did everybody else in the 18th century. He ran around with women, but so have others since the 18th century. I'm rather fond of him." "Of course Boswell's drinking and his sexual excesses show considerable weakness," noted Professor Pottle. "Fundamentally he's a good man—his morals were generally very good, but his behavior was very bad. One of the things that pleases me most and impresses me most is his complete truthfulness. He seems unable to tell a lie and he can't even deceive himself."

Boswell's "Life of Johnson" was the biographer's monument to honesty and art, and Christopher Morley, the late essayist, called its author "the greatest biographer who ever lived . . . the greatest of all self biographers."

"We probably know more about Boswell than we know about any other 18th century figure," said Professor Brady, "He is very much like Norman Mailer in some ways—a man who swims in print. The two men have the same acuity of perception—you get a very sharp idea of what people are like."

Boswell was born in Edinburgh in 1740 and died in 1795. His passions were literary, bibulous and libidinous, and he wavered firmly between principles and debauchery, new resolve and renewed debauchery.

Friendship with Samuel Johnson was the great event of his life, but his superb reporting also delivered great portraits of other central figures such as Voltaire, Rousseau, Oliver Goldsmith, and Sir Joshua Reynolds.

He was a compulsive keeper of records—journals, memoranda, register of letters, record of books sold, book of company, guests received), book of liquors (drinks dispensed), and expense accounts ("Maid for sitting up for me"—1 shilling, "dancing pumps"—8 shillings 6 pence). Even when Boswell wrote to give his own heart away, he asked for the letter back.

His heirs were scandalized by his confessions, and led the world to believe that nothing survived. And yet a question remained: did Boswell's executor write that material "had been burned in a mass of papers" or "buried in a mass of papers"?

LETTERS SOUGHT

In 1920, Yale's Prof. Chauncey B. Tinker asked publicly if anyone knew of Boswell letters in private hands. He received an anonymous note: "Try Malahide Castle." There—guarded by a Boswell descendant—he found what he described, in heady frustration, as "the Valley of Rubies."

But he failed to get the gems. Then a Lt. Col. Ralph Heyward Isham set patiently to work, and finaly—for a good sum—winkled the great Boswell collection from the hands of Malahide's master. Boswell's great-great grandson, Lord Talbot.

More manuscripts turned up in a box that was supposed to contain croquet equipment, and two chests of Boswelliana were discovered in a Malahide outbuilding. Then a Scottish professor, searching the estate of one of Boswell's executors, found—in sacks, bundles and bags—over 1,600 more letters.

Eventually Colonel Isham took title to everything, and when he ran short of funds he sold out to Yale, which paid $500,000 with money from Paul W. Mellon, and from McGraw-Hill as an advance against royalties.

The publishing company—awarded rights to publish the Boswell works—pays Yale a royalty of only three per cent, which is less than the office costs of producing the printer's copy and reading proofs.

MILLIONS VOLUMES SOLD

The world sale of the trade edition has been well over a million volumes. What gave the books "larger" circulation, as Professor Pottle noted, may have been prurience about Boswell's confessions and publicity about the discoveries.

But what gave them "large" circulation was that Boswell was a great literary artist, a distinctly modern writer. To edit his work said Professor Pottle, "is to be connected with a new or emergent work of literature."

Boswell's descendants censored his frankness with India ink and the factory has been assiduously deciphering the original state. Infrared light was no help, but sometimes pristine Boswell beckoned through when the manuscript was held up to less exotic illumination.

By extrapolating from peaks and valleys protruding beyond obliterations, much has been reconstituted. "The deleting strokes are generally pretty symmetrical," said Professor Pottle. "They go up and down like a wave." He often finds Boswell bobbing unscathed, brown ink beneath the carbon spume.

"N's and r's are impossible," said Professor Brady. "You never know whether it's 'ever' or 'even.' "

CODE WORDS USED

Boswell often crowded words into illegible propinquity, and he sought translucence behind a screen of primitive code: Latin words that even mediocre scholars could grasp, a V standing for the Latin "voluptas," and Greek letters as well.

The letter π, which is usually used in other circles, stood for "pleasure," and Boswell wrote that he had shared π with Ysteb Htims—a prostitute whose name can be recovered by reading it backward.

For a time he kept notes in rudimentary Italian, inventing words such as "solitariamente" (for single or only) and "armeo" (instead of "esercito," for army).

Marion S. Pottle, the professor's wife, is the principal specialist at cryptanalysis, and she works in the Beinecke library on the definitive Boswell catalogue. Some of her treasures are tiny scraps of script, mounted on gauze, which she tries to fit together like a jigsaw puzzle.

Originals are stored at the Beinecke. Photostats of the entire Boswell collection—except locks of hair—are in the factory and in Room 331-C, which is shared with the [Horace] Walpole Factory and is therefore known as the Bospole room.

No book is published without Professor Pottle's intense, almost anguished, scrutiny. He is a perfectly gentle tyrant, taming the smallest clue into relevance, and showing the hand of the master in writing the narrative large.

One series of volumes—the annotated Boswell journals—has been emerging since 1950. Ten have come out. Four to go.

They all have individual scholars as editors, and Professor Pottle as final authority and co-editor.

Volume 12 will include the text of what the factory calls "The Extraordinary Johnsonian Tacenda" (a Latin word meaning "things not uttered"), an account of Boswell's interview with Mrs. Desmoulins, who lodged in Johnson's house, about Johnson's sexual life.

JOHNSON'S BRINKMANSHIP

Mrs. Desmoulins tells how Mrs. Johnson repelled Dr. Johnson's advances, and how Mrs. Desmoulins responded to them. Never in history, she said, was there anyone

* * * * *

Dr. Johnson—but he mastered them with consummate brinkmanship.

There is also a research edition blossoming with scholarly minutiae, and Professor Pottle estimates that the two volumes thus far published will be joined by about 38 more.

He has worked on Boswell for 52 years, and thinks the factory could wrap up the great Scot in another 20 years—given sufficient money.

Dr. Lustig: "The reason it takes so long is that it's a scrupulous operation."

Professor Brady: "It has to funnel through Pottle."

Dr. Lustig: "He won't relent."

Professor Brady: "He says he never wants to publish anything he doesn't understand, and lots of scholars pass over things."

UNFINISHED ESSAYS

"There's nothing I'd rather do than Boswell," said Professor Pottle. "I have a number of unfinished essays on Shelley, but these things in Boswell are more absorbing."

Stray material is still turning up, and the factory is of two minds about it. "If any more comes I'm going to burn it," said Professor Brady in jest. "We already have too much."

He and his associates hope that one day the great Mountain of Rubies—the Johnson-Boswell letters—will be discovered.

There would be a celebration in the factory (which has outlived an attempt to dignify it as the Boswell Scriptorium—a copying room in a medieval monastery). "I'd stay drunk for a week," said Professor Brady.

Noted Dr. Lustig: "Mr. Pottle would say 'Great,' and keep on working."

That would be in character, quite unlike the outrageous suggestion he once made when he looked up from behind his green eye shade and suggested—with the tone of a man who could not believe what he was saying: "Let's make up a footnote. Nobody will ever know."

(This concludes morning business transacted and additional statements submitted today.)

LEGISLATIVE ACHIEVEMENTS

Mr. ROBERT C. BYRD. Mr. President, the first session of the 95th Congress has been marked by achievements in many areas. We enacted an economic stimulus package which created thousands of jobs and cut the taxes of individuals and businesses by $34 billion. We authorized $14 billion for multiyear housing assistance to the poor, the elderly, and the handicapped with a special new focus on distressed urban areas. We enacted a 4-year farm price support program and made needed reforms to the food stamp program. We revised the social security tax system to assure American workers of the soundness of social security retirement benefits for the next 50 years. We increased the minimum wage to $3.35 over the next 4 years.

Important environmental provisions left unresolved from the last Congress have been enacted by the 95th Congress. The Strip Mining Reclamation Act, which was thrice vetoed by Republican Presidents, finally became law. Its provisions will minimize degradation of the environment done by stripping by requiring uniform standards for mining and reclamation. We enacted revisions to the law to protect the quality of our air and to require auto manufacturers to meet final emission standards by 1980. We have also sent the President a clean water measure providing Federal grants for construction of municipal sewage treatment plants and other means of controlling water pollution.

Aside from these achievements on national issues, the Senate adopted major internal changes which have resulted in greater efficiency of the Senate and greater effectiveness of Senators. At the outset of the year, we reordered committee jurisdictions along more rational lines and further amended the rules to distribute responsibilities more equally among all Senators.

In keeping with these changes, the leadership sought to lessen conflicts between committee and floor activity by setting convening times of the Senate later in the day, by publicizing the legislative agenda, and by scheduling rollcall votes late in the afternoon.

With regard to other internal reforms, the Senate adopted a stiff ethics code which requires extensive financial disclosure by Senators and staff.

Energy, however, has been the issue of primary concern of the 95th Congress. It has dominated the agenda in committee and on the floor. Almost 30 percent of the total days in session this year were devoted to debate on energy legislation and over 40 percent of all rollcall votes cast by Senators were on energy matters.

The major elements of a national energy program were debated at length by the Senate during September and October. We agreed that new electric utility and major industrial plants must burn coal, which is an abundant supply domestically, instead of natural gas or oil which must be imported. We also passed voluntary and mandatory energy conservation provisions as a means of significantly reducing the rate of growth in energy consumption. For 2 weeks, we debated natural gas pricing policy which would protect consumers and yet give an incentive for increasing supplies of natural gas. The Senate finally agreed that natural gas prices should be deregulated in 2 years for new onshore wells and in 5 years for new offshore wells, while old gas prices would continue under the present system. The Senate also agreed to provisions which seek to terminate public utility pricing policies which discourage conservation, such as block pricing, without infringing upon the authority of State public utility commissions. In this bill, the Senate recognized the special needs of the elderly living on fixed incomes by requiring that public utilities supply older citizens with electricity at the lowest cost afforded any other class of consumer. Late in October, the Senate passed a tax on industrial and utility use of oil and natural gas as well as tax incentives to encourage energy conservation by individuals and businesses. We agreed to strong tax incentives for corporations as a means of increasing production of oil, natural gas and other, more exotic, domestic supplies of energy.

These provisions have been the subject of debate by Senate-House conferees for the past month. Although conferees have reached agreement on many divergent provisions, agreement has evaded them on the natural gas and tax provisions. However disappointing it may be, final action must await the second session.

With regard to other energy-related matters, the 95th Congress has enacted 13 laws. During last winter's record cold, we gave the President special temporary authority to allocate natural gas supplies to priority users such as schools and hospitals. We established a Cabinet level Department of Energy by merging 50 energy-related functions of Federal agencies, including FEA, ERDA, and the FPC, to permit a coherent administration of a national energy policy. We appropriated $6 billion for energy research and development. We concurred with the President's decision to authorize private construction of an overland transportation system to carry Alaskan natural gas through Canada to the lower 48 States.

Awaiting action by the House are Senate-passed provisions making it a Federal crime to destroy the TransAlaska pipeline or any interstate pipeline transporting gas or oil. Also awaiting House action is a Senate bill which will facilitate the environmentally safe development of oil and other resources on the Outer Continental Shelf.

The Senate has long recognized the need for a comprehensive national energy policy. In 1961, at the urging of my distinguished colleague from West Virginia, Senator Randolph, the Senate established a National Fuels and Energy Study Group to focus on energy issues—an action that predated by 10 years the first Presidential message on energy. Since that time, the Congress has enacted 91 energy-related public laws even though Republican Presidents felt compelled to veto 12 measures important to energy policy. The following list of public laws enacted since 1969 indicates the extent of our concern with the issue:

91ST CONGRESS (1969–1970) (5)

1. Public Law 91–158, Interstate Oil Compact Commission, 2-Year Extension, S.J. Res. 54.

2. Public Law 91–173, Coal Mine Health and Safety Act of 1939, S. 2917.

3. Public Law 91-245, Oil and Gas Leases, S. 1193.

4. Public Law 91-581, Geothermal Steam Act of 1970, S. 368.

5. Public Law 91-631, National Mines and Minerals Policy Act, S. 719.

92ND CONGRESS, (1971-1972) (7)

6. Public Law 92-84, Atomic Energy Commission Authorization, 1972, H.R. 9388.

7. Public Law 92-307, Temporary Operating Licenses for Nuclear Powerplants, H.R. 14655.

8. Public Law 92-314, Atomic Energy Commission Appropriations, 1973, S. 3607.

9. Public Law 92-401, Natural Gas Pipeline Safety Act of 1968, H.R. 5065.

10. Public Law 92-500, Federal Water Pollution Control Act Amendments of 1972, S. 2770.

11. Public Law 92-583, Coastal Zone Management Act of 1972, S. 3507.

12. S. Res. 45, to establish the Senate National Fuels and Energy Policy Study Group.

93D CONGRESS (1973-1974) (43)

13. Public Law 93-28, Economic Stabilization Act Amendments of 1973; Voluntary Petroleum Allocation, S. 398.

14. Public Law 93-60, AEC Authorization, S. 1994.

15. Public Law 93-74, NASA Authorization, H.R. 7528.

16. Public Law 93-87, Federal-Aid Highway Act, S. 502.

17. Public Law 93-88, Euratom Corporation Act of 1948 Amendments, S. 1993.

18. Public Law 93-119, Oil Pollution Act Amendments, H.R. 5451.

19. Public Law 93-153, Mineral Leasing Act of 1920, Amendments, and Trans-Alaska Oil Pipeline Authorization, S. 1081.

20. Public Law 93-159, Emergency Petroleum Allocation Act of 1973, S. 1570.

21. Public Law 93-182, Emergency Daylight Saving Time Energy Conservation Act of 1973, H.R. 11324.

22. Public Law 93-208, G.I. Bill Benefits During Energy Crisis, S. 2794.

23. Public Law 93-239, Highway Speed Limit Reduction, H.R. 11372.

24. Public Law 93-245, Supplemental Appropriations; Naval Petroleum Reserves, H.R. 11576.

25. Public Law 93-248, Intervention on the High Seas Act, S. 1070.

26. Public Law 93-249, Fuel Cost Pass-Through for Truckers, S.J. Res. 185.

27. Public Law 93-275, Federal Energy Administration, H.R. 11793.

28. Public Law 93-276, AEC Authorization Act, S. 3292.

29. Public Law 93-316, NASA Authorization Act, H.R. 13998.

30. Public Law 93-319, Energy Supply and Environmental Coordination Act of 1974, H.R. 14368.

31. Public Law 93-322, Special Energy Research and Development Appropriations for 1975, H.R. 14434.

32. Public Law 93-377, AEC Omnibus Legislation of 1974, S. 3669.

33. Public Law 93-383, Housing and Community Development Act, S. 3066.

34. Public Law 93-386, Aid to Energy Affected Small Businesses, S. 3331.

35. Public Law 93-403, Natural Gas Pipeline Safety Act, as Amended, Additional Appropriations, H.R. 15205.

36. Public Law 93-409, Solar Heating and Cooling Demonstration Act of 1974, H.R. 11864.

37. Public Law 93-410, Geothermal Energy Research, Development, and Demonstration Act, H.R. 14920.

38. Public Law 93-426, Defense Production Act of 1950, 2-year extension, S. 3270.

39. Public Law 93-434, Emergency Daylight Saving Time Energy Conservation Act of 1973, Amendments, H.R. 16102.

90. Public Law 95-164, Mine Safety, S. 717.

91. Public Law 95-183, ERDA Nuclear Authorization, S. 1339.

In all, the Senate has dealt effectively with issues vital to all Americans and issues essential to an effectively functioning Senate. This record of achievement could not have been possible without the dedication and hard work of Senators on both sides of the aisle. I take this opportunity to express my appreciation to the distinguished minority leader, Mr. Baker, and the assistant minority leader, Mr. Stevens, for their cooperation and assistance.

I extend a special thanks to the assistant majority leader, Mr. Cranston, for his able assistance in making the Senate operate efficiently. I would also like to express my gratitude to Mr. Inouye, secretary of the majority conference, to Mr. Eastland, President pro tempore of the Senate, and to Mr. Humphrey, Deputy President pro tempore, for their good counsel and friendship.

I thank all my colleagues for their devotion to their responsibilities, their friendship and their sense of accommodation. I look forward to an equally productive second session of the 95th Congress.

A more complete listing of the legislative accomplishments of the Senate is contained in a report prepared by the Democratic Policy Committee. I ask unanimous consent that this report, a legislative digest of major accomplishments, and supporting data be inserted at this point in the Congressional Record.

There being no objection, the material was ordered to be printed in the Record, as follows:

Legislative Digest (January 4—December 15, 1977)

ENERGY—ENVIRONMENT

Emergency natural gas.—Congress enacted early this year a measure giving the President special emergency authority to deal with the natural gas shortage during the winter months.

Department of Energy.—Congress has enacted the cornerstone of the President's energy program by creating a cabinet-level

Department of Energy which incorporates some 50 energy-related agencies including FEA, ERDA and the FPC.

Coal conversion.—Senate and House conferees have tentatively worked out the differences between the Senate and House provisions which require new electric utility and major industrial plants to burn coal instead of oil or natural gas.

Energy conservation.—Senate and House conferees have considered the Senate- and House-passed provisions to establish both mandatory and voluntary programs to conserve energy and significantly reduce the rate of growth in domestic energy consumption. Conferees have tentatively resolved the major differences.

Natural gas policy.—Senate and House conferees have spent many hours toward a compromise on the differences concerning the regulation of the price of natural gas, an important element in the President's energy program.

Public utility rates.—Senate and House conferees have considered and tentatively resolved differences in the Senate and House bills written to encourage energy conservation in electric and gas utility supplies and to encourage equitable rates for consumers.

Energy taxation.—The Senate and House conferees have worked on tax incentives and credits as a means of encouraging production, exploration and development of new energy sources and of reducing energy consumption as well as the House-passed crude oil equalization tax. They have tentatively agreed to a gas guzzler tax.

Export Control—Alaskan Oil.—The Congress has enacted a measure prohibiting the export of Alaskan oil except for mutually beneficial exchanges or for national security reasons.

Public Works—Energy Research Appropriations.—We have appropriated $10.4 billion of which $5.9 billion is for energy research.

Outer Continental Shelf.—The Senate has passed a measure which will facilitate the environmentally-safe development of oil and other resources on the Outer Continental Shelf.

Strip Mining.—We have enacted a measure to minimize the degradation of the environment by requiring minimum uniform standards for mining and reclamation.

Clean Air.—We have written into law provisions setting final auto emission standards in 1980 and requiring other measures to improve air quality.

Clean Water.—Senate and House conferees have filed a report on a measure providing local governments with Federal grants for construction of municipal sewage treatment plants and improved means of controlling water pollution.

Energy Saving Grants for Schools.—The Senate has authorized matching grants to schools to help them meet the high costs of fuel and to encourage energy conservation measures. House and Senate conferees have agreed to these provisions as part of the national conservation program.

Pipeline Destruction.—The Senate has passed provisions making it a Federal crime to willfully destroy the Trans Alaska pipeline or any interstate pipeline systems transporting gas or oil.

Alaska Pipeline Treaty.—The Senate voted to ratify a treaty with Canada to insure that present and future pipelines across Canadian territory will be free from discretionary taxation and has sent the House a measure implementing these treaties.

Alaska Pipeline (ALCAN).—Congress has concurred with the President's decision to authorize private construction of an overland transportation system to carry Alaskan natural gas through Canada to the lower forty-eight States.

ECONOMY-UNEMPLOYMENT

Tax Cut.—Congress has enacted a 3-year $34 billion tax cut. Forty-six million Americans—90 percent with incomes less than $20,000—will pay less taxes. Corporations will be allowed a tax credit on hiring new employees. Ninety-six percent of all taxpayers will have a simpler method of computing their taxes.

Economic Stimulus Appropriations.—Congress has enacted a measure providing $20.1 billion to create 415,000 new CETA jobs in implementing the President's economic stimulus proposals. This act includes funds for public works projects, public service employment, and countercyclical revenue-sharing to help State and local governments continue their basic services and to target employment and training programs to youth, veterans and unskilled workers.

Public Works Employment.—Congress has enacted a measure authorizing $6 billion for local public works projects which provide jobs through construction in places with the most distressing levels of unemployment.

Unemployment Compensation.—Congress has extended the unemployment compensation program until October 31 to aid those temporarily unemployed with an income to meet their day-to-day living expenses.

Youth Employment.—We have enacted a new title to CETA to put 200,000 unemployed youths to work on neighborhood improvement, public facilities, parks and other projects in an effort to enhance job prospects and career opportunities for youths.

Housing and Community Development.—Congress has enacted a $14.6 billion multiyear authorization for housing assistance and community development.

INTERNATIONAL

Arab Boycott.—We have enacted provisions attacking the most repugnant aspects of the Arab boycott against Israel and generally improving export administration.

Rhodesian Chrome.—Congress acted early this year to halt the importation of chrome from Rhodesia which was in violation of U.N. sanctions against trade with that country.

Foreign Corporate Bribes.—We have cleared for the President's signature a measure to make it a crime for U.S. companies to bribe foreign officials and to remove the means of concealing bribes by falsification of corporate records.

Intelligence Activities.—For the first time in history, the Senate voted on a separate bill authorizing the budget for the intelligence activities of the U.S. Government including specific amounts for the CIA and the DIA.

Transfer of Prisoners in Mexican/Canadian Jails.—The Senate has agreed to a resolution of ratification of treaties with Mexico and Canada to allow American convicted prisoners in those countries to return to the U.S. to serve out their prison terms and has enacted provisions implementing the treaties. Americans in prisons in Mexico have already been returned to the U.S. in exchange for Mexicans in American prisons.

HEALTH

Black Lung.—The Senate has agreed to the conference report on legislation to improve the benefits program to miners disabled from Black Lung disease.

Clinical Laboratories.—The Senate has voted to expand the program of mandatory licensure to all laboratories except military and veterans hospitals.

Health Research.—Congress enacted a $3.3 billion authorization for the major public health programs.

Medicare-Medicaid Anti-Fraud.—We have written into law provisions to strengthen the capability of the government to detect, prosecute, and punish fraud under the Medicare-Medicaid programs.

Mine Safety.—The President has signed a bill to strengthen the national mine safety and health program by providing uniform administration and enforcement for the entire mining industry under a single Act administered by the Department of Labor.

OTHER

Social Security Financing.—We have sent the President a measure designed to insure the solvency of the social security system for the next 50 years so that American workers or retirees will not have their present or future retirement benefits jeopardized.

Omnibus Farm Bill—Food Stamps.—We have enacted a 4-year extension of the basic price support programs for major commodities and the Food for Peace (P.L. 480) program. This bill also makes important revisions in these programs as well as needed reform to the Food Stamp program.

Age Discrimination in Employment.—In conference is a measure which raises from 65 to 70 years the maximum age limit protected under the Age Discrimination in Employment Act.

Senate Committee Reorganization and Code of Ethics.—At the beginning of the session, the Senate reduced the number of Senate committees and realigned jurisdictions into a more rational order. It agreed to numerous other changes to spread legislative responsibilities more equally among all Senators. The Senate also adopted an official code of conduct for Senators and staff which requires extensive financial disclosure.

Ethics in Government.—The Senate has passed a bill requiring extensive financial disclosure by top officials and employees throughout the Federal government and providing for the appointment of a special prosecutor who would be responsible for investigating any wrongdoing of top government officials.

Presidential Reorganization Authority.—Congress has enacted a 3-year extension of the President's authority to submit to Congress plans to reorganize Executive Branch agencies.

Defense Funds.—We have appropriated $109 billion for the Department of Defense and have omitted funding for procurement of the B–1 bomber.

Insecticides (FIFRA).—Under Senate-House conference consideration is a measure designed to improve the operation of the Federal pesticide registration program and to protect the public against health and environmental hazards from pesticides.

Omnibus Judgeships.—The Senate passed a bill providing for the appointment of 110 additional permanent district court judges to permit the judicial system to keep pace with increased cases.

Campaign Financing.—The Senate has passed a measure simplifying the reporting requirements for candidates and generally improving the administration of the present law.

Minimum Wage Increase.—We have enacted an increase in the minimum wage to $3.35 over the next four years.

Child Abuse and Pornography.—The Congress has sent the President provisions to fund a program to prevent and treat sexual abuse of children. Awaiting final action by the House is a conference report making it a Federal offense to use children under 16 in the production of pornographic materials.

STATUS OF MAJOR MESSAGES AND COMMUNICATIONS OF THE PRESIDENT, 95TH CONG., 1ST SESS., BY SENATE DEMOCRATIC POLICY COMMITTEE, ROBERT C. BYRD, CHAIRMAN
DEC. 15, 1977

Message or communication title, bill No.	Senate action	House action	Conference or other action	Date approved	Public Law No.
Presidential Message No. 21 (Jan. 17, 1977), budget rescission ($452,600,000 for Nimitz-class nuclear carrier and Aegis), H.R. 3839.	Passed Senate Mar. 15, 1977	Passed House Mar. 3, 1977		Mar. 25, 1977	95–15
Presidential Message No. 22 (Jan. 17, 1977):					
Top level executive, legislative, and judicial salary increases.	Senate tabled Allen, et al., amendment to S. Res. 4 disapproving pay recommendation Feb. 2, 1977; voted Mar. 3, 1977 against repealing increase.	House twice objected to request to consider disapproval resolution, H. Res. 115, Feb. 16, 17; voted June 29, 1977, to reject amendment to H.R. 7932, 1978 legislative branch appropriations, delaying funds for Mar. 1 increase.		(1)	(1)
Ethics code	S. Res. 110 (Senate ethics code), passed Senate Apr. 1, 1977.	H. Res. 287 (House ethics code), passed House Mar. 2, 1977.		(2)	(2)
Executive Communication No. 441 (Jan. 26, 1977), Emergency Natural Gas Act, S. 474 (administration bill).	Passed Senate Jan. 31, 1977	Passed House, amended Feb. 2, 1977	Conference report agreed to Feb. 2, 1977, in Senate; Feb. 2, 1977, in House.	Feb. 16, 1977	95–2
Presidential Message No. 32 (Jan. 31, 1977), economic recovery:					
(a) Economic stimulus appropriations (public works jobs, revenue sharing, and public service employment), H.R. 4876.	Passed Senate, amended May 2, 1977	Passed House Mar. 15, 1977	Conference report agreed to May 4, 1977, in House; May 5, 1977 in Senate.	May 13, 1977	95–29
(b) Public works jobs ($4,000,000,000 increase), H.R. 11.	Passed Senate, amended Mar. 10, 1977	Passed House Feb. 24, 1977	Conference report agreed to Apr. 29, 1977, in Senate; May 3, 1977, in House.		95–28
(c) Countercyclical revenue sharing	Passed Senate as amendment to H.R. 3477 Apr. 29, 1977.	H.R. 6810, passed House Apr. 13, 1977	Conference report contained 1-yr extension of program instead of 5 yr as requested by President.	May 23, 1977	95–30
(d) Tax reform and simplification for individuals and business (tax rebate withdrawn), H.R. 3477.	Passed Senate Apr. 29, 1977	Passed House Mar. 8, 1977	Conference report agreed to May 17, 1977, in House and Senate.	do	95–30
Presidential Message No. 33 (Feb. 4, 1977), Presidential organization authority, S. 626.	Passed Senate Mar. 3, 1977	Passed House, amended Mar. 29, 1977	Senate agreed to House amendments Mar. 31, 1977.	Apr. 6, 1977	95–17
Presidential Message Nos. 40 (Feb. 21, 1977) and 57 (Mar. 24, 1977), water development projects:					
H.R. 11 (public works jobs)	Senate adopted Johnston amendment expressing sense of Congress to continue funding for water projects.			May 13, 1977	95–28
H.R. 7553 (public works appropriations, 1977).	Passed Senate amended July 13, 1977 (Senate bill funds 9 of 18 water projects opposed by President).	Passed House June 14, 1977 (House bill funds 17 of 18 opposed by President).	Conference report agreed to July 25, 1977 in House and Senate funding 9 of 18 water projects.	Aug 7, 1977	95-96
Presidential Message No. 41 (Feb. 22, 1977):					
1978 Budget Revisions, S. Con. Res. 19	Passed Senate May 4, 1977	Passed House, amended May 5, 1977	Conference report agreed with to amendment May 16, 1977 in Senate; House agreed to Senate amendment May 17, 1977.	(3)	(3)
Presidential Message No. 42 (Mar. 1, 1977):					
Creates Cabinet Department of Energy, S. 826.	Passed Senate May 18, 1977	Passed House amended June 3, 1977	Conference report agreed to Aug. 2, 1977 in House and Senate.	Aug 4, 1977	95-91
Presidential Message No. 45 (Mar. 4, 1977):					
Airline deregulation	Commerce Committee ordered an original bill which combines S. 292 and S. 689, reported Oct. 27.	Public Works Subcommittee on Aviation hearings on H.R. 8813 completed Oct. 19; committee not expected to schedule markup until 2d sess.			
Presidential Message No. 47 (Mar 9, 1977), youth unemployment:					
(a) $342, increase for Job Corps.				(4)	(4)
(b) New Youth title to CETA, H.R. 6138.	Passed Senate, amended May 26, 1977	Passed House May 17, 1977	Conference report agreed to July 19, 1977, in House; July 21, 1977 in Senate.	Aug .5, 1977	95-93
(c) 1-yr extension of CETA, H.R. 2992.	Passed Senate, amended May 25, 1977	Passed House March 29, 1977	House agreed to Senate amendment June 3, 1977.	June 15, 1977	95–44
Presidentail Message No. 51. (February 17, 1977), Foreign aid.					
(a) Multilateral development assistance (financial institutions), H.R. 5262.	Passed Senate, amended June 14, 1977	Passed House April 6, 1977	Conference report agreed to July 27, 1977 in Senate; House rejected September 16, 1977, and agreed to Senate amendments with amendments; Senate amendments with amendments; Senate agreed to House amendments September 21, 1977.	Oct. 3, 1977	95–118
(b) Bilateral development assistance ($1,300,000,000) Public Law 480 program changes, H.R. 6714.	Passed Senate, amended June 15, 1977	Passed House May 12, 1977	Conference report agreed to July 21, 1977, in House; July 22, 1977 in Senate.	Aug. 3, 1977	95–88
(c) Public Law 480 program extension, S. 275.	Passed Senate May 24, 1977	Passed House, amended July 28, 1977	Conference report agreed to September 9, 1977, in Senate; September 16, 1977, in House.	Sept. 29, 1977	95–113
(d) Security assistance, H.R. 6884.	Passed Senate, amended June 15, 1977	Passed House May 24, 1977	Conference report agreed to July 21, 1977, in House; July 22, 1977 in Senate.	Aug. 5, 1977	95–92
Presidential Message No. 52 (Feb. 17, 1977), oil tanker spills.	S. 682 (tanker safety), passed Senate May 26, 1977.	H.R. 6803, passed House Sept. 12, 1977			
	S. 2083 (oil pollution), reported by Commerce Committee Sept. 12, 1977; referred to Environment and Public Works Committee Sept. 12, 1977. No further action scheduled this session.	do			

Footnotes at end of table.

STATUS OF MAJOR MESSAGES AND COMMUNICATIONS OF THE PRESIDENT, 95TH CONG., 1ST SESS., BY SENATE DEMOCRATIC POLICY COMMITTEE, ROBERT C. BYRD, CHAIRMAN, DEC. 15, 1977—Continued

Message or communication title, bill No.	Senate action	House action	Conference or other action	Date approved	Public Law No.
Presidential Message No. 55 (Mar. 22, 1977), election reform:					
(a) Voter registration	S. 1072 reported by Rules Committee May 16, 1977; tabled Oct. 5, 1977.	H.R. 5400 on Union Calendar (Cal. No. 162).			
(b) Public financing	Senate agreed to Allen amendment to S. 926 deleting public financing for Senators elections Aug. 2.	Administration Committee hearings on campaign reform completed July 12: in meeting of Oct. 25, committee deferred markup until 2d sess.			
(c) Campaign Act Amendments	S. 926, passed Senate Aug. 3, 1977	do			
(d) Direct election of President	S.J. Res. 1 on Senate calendar (Calendar No. 557).	H.J. Res. 33, 39, 45, 118, 144, 168, 217, 350, and 434 pending in Judiciary Subcommittee on Monopolies and Commercial Law—no action scheduled.			
(e) Hatch Act changes	Government Affairs Committee completed hearings on S. 80 Sept. 26; no further action scheduled this session.	H.R. 10, passed House June 7, 1977			
Presidential Message No. 56 (Mar. 23, 1977), drought assistance:					
(a) EDA emergency water system improvement S. 1279.	Passed Senate May 11, 1977	Passed House May 17, 1977		May 23, 1977	95–31
(b) FHA emergency water system improvement and southwestern power assistance to irrigators on Federal Reclamation Bureau projects.				(5)	(5)
(c) SBA drought assistance loan program.	S. 1306, passed Senate Aug. 5, 1977	Small Business hearings on H.R. 6047 (administration bill) and 11 related bills, Apr. 19, 22, June 9, 13, 17—no further action is planned.			
(d) H.R. 692 (contains similar objectives).	Passed Senate, amended May 19, 1977	Passed House Feb. 9, 1977	Conference report agreed to July 26, 1977 in House; July 27, 1977 in Senate.	Aug. 4, 1977	95–89
(e) Water bank objectives, S. 925	Passed Senate Mar. 15, 1977	Passed House, amended Apr. 4, 1977	Senate agreed to House amendments Apr. 4, 1977.	Apr. 7, 1977	95–18
(f) Transfer of emergency livestock feed program.	Senate agreed to Humphrey amendment to S. 275 (Farm bill) which passed Senate May 24, 1977.	H.R. 4295 in full committee (President no longer supports because of subcommittee amendments.	Conference report on S. 275 agreed to Sept. 9, 1977 in Senate; Sept. 16, 1977 in House.	Sept. 29, 1977	95–113
Presidential Message No. 64 (Apr. 6, 1977), Agency for Consumer Advocacy.	S. 1262 transferred to calendar under subjects on the table.	H.R. 6805 on Union Calendar (Calendar No. 183).			
Presidential Message No. 71 (Apr. 25, 1977), Health care system improvements:					
(a) Hospital Cost Containment Act	Human Resources Committee ordered S. 1391 (administration bill) reported Aug. 2; Finance Subcommittee on Health plans to expand S. 1470 to include provisions of S. 1391; hearings completed Oct. 21; no further action scheduled this session.	Ways and Means and Interstate and Foreign Commerce Subcommittees on Health joint hearings on H.R. 6575 complete; Ways and Means markup, July 20, 27-28; Interstate and Foreign Commerce Subcommittee markup complete; pending in full committee; no further action scheduled this session.			
(b) Child Health Assessment program	S. 1392 pending in Finance Committee—no action scheduled.	Interstate and Foreign Commerce Subcommittee on Health and Environment hearings on H.R. 6706 complete; markup deferred until 2d sess.			
Presidential Message No 74 (Apr. 27, 1977), nuclear nonproliferation policy.	S. 897 on Senate Calendar (Calendar No. 432).	H.R. 8638, Passed House Sept. 28, 1977			
Executive Communication No. 1246, Energy policy.		H.R. 8444—Passed House August 5, 1977, allows continued control of natural gas pricing, but broadens the definition of "new gas"; approves an oil equalization tax; contains a modified gas-guzzler tax; and does not allow the administration's proposed gas tax hike.			
(1) Pricing, regulatory and nontax:					
H.R. 5146 (S. 977)	(1) Coal conversion—Passed Senate, amended Sept. 8, 1977.	Passed House July 18, 1977	House agreed to Senate amendments with amendments Oct. 13, 1977, incorporating relevant provisions of H.R. 8444 as passed House; in conference.		
H.R. 5037 (S. 2057, S. 701, S. 7893)	(2) Conservation—Energy Conservation Act, passed Senate, amended Sept. 13, 1977.	do	do		
H.R. 5289 (S. 2104)	(3) Natural gas—Passed Senate, amended Oct. 4, 1977.	do	do		
H.R. 4018 (S. 2114)	(4) Utility rates—Passed Senate, amended Oct. 6, 1977.	do	do		
(2) Tax provisions, (H.R. 5263)	Passed Senate, amended Oct. 31, 1977	do	In conference		
Presidential Message No. 78 (May 3, 1977), ethics in government.	S. 555, passed Senate June 27, 1977	H.R. 7401 dealing with legislative branch on Union Calendar (Calendar No. 293); Judiciary Committee ordered H.R. 1 dealing with executive and judicial branches on Union Calendar (Calendar No. 418); Post Office and Civil Service Committee reported H.R. 6954, Sept. 28 (H. Rept. 95–642, pt. I); Armed Services reported H.R. 6954, Oct. 17 (H. Rept. 95–642, pt. II).			
Presidential Message No. 79 (May 9, 1977), social security trust funds, H.R. 9346.	Passed Senate, amended Nov. 4, 1977	Passed House Oct. 27, 1977	Conference Report agreed to in House and Senate Dec. 15, 1977.		95–
Message (May 23, 1977), Genocide Convention ratification.	Foreign Relations hearings May 24, 26; no further action scheduled this session.	No House action needed			
Presidential Message No. 83 (May 23, 1977), environmental protection:					
(a) Clean air, H.R. 6161	Passed Senate, amended June 10, 1977	Passed House May 26, 1977	Conference report agreed to in House and Senate Aug. 4, 1977.	Aug. 7, 1977	95-95
(b) Clean water H.R. 3199	Passed Senate, amended Aug. 4, 1977	Passed House Apr. 5, 1977	Conference report filed		
(c) FIFRA, S. 1678	Passed Senate July 29, 1977	Passed House, amended Oct. 31, 1977	In conference		
(d) Outer Continental Shelf	S. 9, passed Senate July 15, 1977	H.R. 1614 on Union Calendar (Calendar No. 306).			
(e) Strip mining, H.R. 2	Passed Senate amended May 20, 1977	Passed House Apr. 29, 1977	Conference report agreed to July 20. 1977 in Senate; July 21, 1977 in House.	Aug. 3, 1977	95-87
(f) Mining on public lands	S. 1248 and S. 2133 (administration bill) pending in Energy Subcommittee on Public Lands—no further action this sessions.	Interior and Insular Affairs subcommittee on Mines and Mining hearings on H.R. 9292 and 5831 Oct. 13, 14, 17, 18; field hearings will begin after adjournment of 1st sess.			
(g) Urban homesteading provisions in H.R. 6655.	Passed Senate, amended June 7, 1977	Passed House May 11, 1977	Conference report agreed to Oct. 1, 1977 in Senate; Oct. 4, 1977 in House.	Oct. 12, 1977	95-128
(h) Alaska wilderness	Energy Committee hearings on S. 499, 500 and 1500 June 17, 20—no further action scheduled this session.	Interior and Insular Affairs Subcommittee on General Oversight and Alaska Lands completed hearings on H.R. 39; staff proposal briefing completed Oct. 28; general oversight and Alaskan Lands Subcommittee markup scheduled, Jan. 11, 12, and B.			

Message or communication title, bill No.	Senate action	House action	Conference or other action	Date approved	Public Law No.
(i) Wild and scenic rivers (8 new; 20 proposed).	Referred to Energy and Natural Resources Subcommittee on Parks and Recreation. Nothing further scheduled this session.	Interior and Insular Affairs Subcommittee on National Parks and Insular Affairs—No action scheduled this session.			
(j) Scenic trails (2 new).	do	do			
(k) Redwood National Park extension	S. 1976 on Senate calendar (Calendar No. No. 532).	H.R. 3813 on Union Calendar (Calendar (Calendar No. 333).			
(l) Convention of migratory birds	Extension K, 95th Cong., 1st sess., pending in Foreign Relations Committee—No action scheduled this session.	No House action needed			
Presidential Message No. 86 (June 2, 1977), Extension of most-favored-nation status of Romania.	Finance Subcommittee on International Trade hearing complete—No further action scheduled.	H. Res. 653 (disapproval resolution) indefinitely postponed Aug. 3, 1977.		(6)	(6)
Presidential Message No. 95 (July 15, 1977), Reorganization Plan No. 1—Executive branch, as amended by Presidential Message No. 113 (Sept. 15, 1977).	Senate indefinitely postponed S. Res. 222 (disapproval resolution), Oct. 20, 1977.	House rejected H. Res. 688 (disapproval resolution), Oct. 14, 1977.			
Presidential Message No. 96 (July 18, 1977), labor-management relations.	Human Resources Committee hearings on S. 1883 completed Nov. 4; markup to be scheduled in 2d sess.	H.R. 8410, passed House Oct. 6, 1977			
Presidential Message No. 97 (July 19, 1977), rescission of $642,000,000 for B–1 bomber and $1,400,000 for SCRAM–B.	H.R. 9375, the 1978 Supplemental Appropriation bill, passed Senate Nov. 1, 1977 with a committee amendment to rescind funds for the B–1 bomber and SCRAM–B.	H.R. 9375, passed House Oct. 25, 1977 without rescinding funds for the B–1 bomber and SCRAM–B.	House agreed to conference report Dec. 6, 1977, insisting on its amendment deleting the rescission; Senate agreed to conference report Dec. 7, 1977 but took no action on the rescission provisions. Further floor action scheduled Dec. 15, 1977.		
Presidential Message No. 103 (Aug. 2, 1977), drug abuse (marihuana decriminalization and FDA standards).	Referred to Foreign Relations Committee; S. 1437 (containing provisions related to marihuana) on Senate Calendar No. 555).	Interstate and Foreign Commerce Subcommittee on Health—no action scheduled this session.			
Presidential Message No. 104 (Aug. 4, 1977), illegal aliens.	S. 2252, referred to Judiciary Subcommittee on Immigration—no action scheduled this session.	H.R. 9531, referred to Judiciary Subcommittee on Immigration—no action scheduled this session.			
Presidential Message No. 105 (Aug. 6, 1977), welfare reform.	S. 2084 (administration bill), referred to Finance Committee (no action scheduled), and Human Resources Commitntee (no action scheduled); H.R. 7200 (another reform bill) on Senate Calendar (Calendar No. 527); H.R. 3387 extending through fiscal year 1978 certain provisions relating to title XX of the Social Security Act became Public Law 95–171.	Ad hoc Committee on Welfare Reform with members from Ways and Means, Education and Labor, and Agriculture Committees hearings on H.R. 9030 Sept. 19–21, 29, 30, Oct. 11, 12, 14, 31, Nov. 1–3; markup in progress.			
Presidential Message No. 114 (Sept. 22, 1977), Alaska Natural Gas Transportation System "Alcon Proposal," H.J. Res. 621.	Passed Senate Nov. 2, 1977	Passed House Nov. 2, 1977		Nov. 8, 1977	95–158
Presidential Message No. 120 (Oct. 6, 1977), public broadcasting.	S. 2235 (Administration bill), referred to Commerce Subcommittee on Communications—no action scheduled this session.	H.R. 9640 pending in Interstate and Foreign Commerce Subcommittee on Communications—subcommittee had full briefing by administration Oct. 19—no further legislative action scheduled this session.			
Presidential Message No. 123 (Oct. 11, 1977), Reorganization Plan No. 2, U.S. broadcasting consolidation, as amended by Presidential Message No. 128 (Nov. 1, 1977).	S. Res. 293 (disapproval resolution) indefinitely postponed, Dec. 15, 1977.	House rejected H. Res. 827 (disapproval resolution) Nov. 29, 1977.			

---

[1] Became effective Feb. 20, 1977.

[2] House code became effective Mar. 2 1977; Senate code became effective Apr. 1, 1977.

[3] Action complete.

[4] In H.R. 4876, Economic Stimulus Appropriations, Public Law 95–29.

[5] In H.R. 4877, Supplemental Appropriations, 1977, Public Law 95–26.

[6] Will continue in force for additional year.

SENATE LEGISLATIVE ACHIEVEMENTS

95th Congress, 1st Session

January 4, 1977 to December 15, 1977

(Prepared by Senate Democratic Policy Committee, ROBERT C. BYRD, Chairman)

SENATE ACTIVITY

Days in session	178
Hours in session	1142:42
Total measures passed	704
Private laws	25
Public laws	210
Treaties	5
Confirmations	66,531
Record votes	636

Symbols: (VV)—Passed by Voice Vote; numbers in parenthesis indicate number of record vote on passage, conference report, or reconsideration.

AGRICULTURE

Disaster loan exemptions.—Exempts disaster payments made in connection with the 1977 crops of wheat, feed grains, upland cotton, and rice from the payment limitations in the Agricultural Acts of 1970 and 1949 of $20,000 each for wheat, feed grains, and upland cotton, and of $55,000 for rice. H.R. 9090—Public Law 95–156, approved November 8, 1977. (575)

Federal crop insurance.—Amends the Federal Crop Insurance Act to increase from $150 million to $200 million the capital stock of the Federal Crop Insurance Corporation; provides that capital stock would be available for purchase by the United States subject to the call of the Board of Directors of the Corporation with the approval of the Secretary of Agriculture; and requires the Secretary to study alternate programs which could be established for an all-risk, all-crop insurance program to protect those suffering crop losses due to natural disasters and report his findings to the President for transmission to the Congress by March 1, 1978. H.R. 9704—Public Law 95–181, approved November 15, 1977. (VV)

Federal crop insurance corporation capital.—Amends the Federal Crop Insurance Act to increase the authorized capital stock of the Federal Crop Insurance Corporation from $100 million to $150 million in order to replenish its operating capital which was nearly exhausted as a result of indemnity payments to insured farmers for crop losses during the 1976 drought and harsh winter of 1977. S. 955—Public Law 95–47, approved June 16, 1977. (VV)

FIFRA.—Extends through fiscal year 1979 the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) and authorizes therefor $54.5 million for fiscal 1978 and such sums as necessary but not to exceed $70 million for fiscal 1979; limits the scope of the prohibition against the use of a pesticide in a manner inconsistent with its labeling by providing four specific exceptions; amends the provision relating to the use of data submitted by an applicant for registration of a pesticide which relies on the test data submitted by another applicant by extending to the data owner a right to compensation for use of the data for 7 years after its original submission and establishes a procedure for settling compensation disputes by binding arbitration; eliminates the prohibition against the use of data submitted to the Environmental Protection Agency in order to obtain registration which contains "trade secret" information in processing the application of another person for the registration of a similar pesticide; establishes procedures governing the generation of data needed to maintain existing pesticide registration, including provisions requiring all registrants of a pesticide to take appropriate steps to secure the necessary additional data, arrangements by which the necessary data can be submitted jointly by the registrants to avoid the waste involved in duplicative testing, and the settling of disputes over cost-sharing arrangements by binding abitration;

Authorizes "generic" registration of pesticides; directs the Administrator to establish a simplified system for registering pesticides and exempts applicants who purchase registered technical-grade or manufacturing-use pesticides for formulation into end-use products from requirements pertaining to the submission of data to determine safety and from the obligation to pay compensation for use of the data; authorizes the Administrator of EPA to waive registration requirements pertaining to the submission of data relating to the efficacy of pesticides in considering an application for registration; authorizes the conditional registration of pesticides during the period in which data need for complete registration are being generated if the conditional registration would not significantly increase the risk of any unreasonable adverse effect on health or the environment; permits the Administrator to classify all pesticides prior to the completion of the registration required by the 1972 amendment, in order that States may proceed with programs for the training and certification of applicators; permits the Administrator to conduct programs for the certification of applicators of pesticides in States which do not have an approved State plan by October 20, 1977; directs the Administrator to consider restricting a pesticide's use or uses as an alternative to cancelling a registration; requires the Administrator to issue a notice of intent to cancel a conditional registration if the condition upon which the registration was based had not been satisfied within the time provided; requires the Administrator to submit an annual report by February 15 of each year beginning with fiscal 1979 on the total number of applications for conditional registration, those approved, and the conditions upon which they were approved; limits the prohibition against public disclosure of "trade secret" information only to data relating to the manufacturing process or the identify or percentage quantity of inert ingredients which data could nontheless be made public if necessary to protect against an unreasonable risk of injury to health or the environment;

Modifies the civil penalty provisions of the act and authorizes the Administrator to issue a warning in lieu of a civil penalty in certain cases; gives the States primary enforcement responsibility with Federal enforcement permitted only if the State is not carrying out regulation and enforcement provisions in accordance with the act; authorizes cooperative agreements with Indian tribes and clarifies the provision relating to the use of the services of the Cooperative State Extension services to inform and educate all pesticide users of the provisions of the Act; extends to January 1, 1981, the Scientific Advisory Panel; establishes "professional applicators" as a class to which provisions of the Act apply and defines the term as an applicator who applies pesticies for hire; requires applicators to keep certain records and includes their business premises among the establishments subject to inspection by designated agents of the Administrator; provides that a non-registered pesticide or device intended for export would be misbranded if the label did not contain the phrase "Not Registered for Use in the United States"; requires the registration of establishments that produce pesticides or active ingredients from which they are produced for export; and requires the Administrator, within nine months, to submit a report to the Congress on the feasibility of assessing and collecting fees to cover the costs of the pesticide registration program. S. 1678—Passed Senate July 29, 1977; Passed House amended October 31, 1977; In conference. (VV)

Grain Inspection.—Amends the United States Grain Standards Act to facilitate and improve the implementation of the amendments made in 1976 (Public Law 94–582); establishes a temporary 12–member committee (representing farmers, consumers and all segments of the grain industry) to advise the Administrator of the Federal Grain Inspection Service (FGIS) on the implementation of the 1976 act, and provides for its termination 18 months after the date of enactment; eliminates the requirement that grain merchandisers and elevator operators using grain inspection or weighing services maintain certain itemized types of records of their operations for a five-year period and requires them instead to keep only such records as the Administrator may prescribe for administration and enforcement; repeals, effective October 1, 1977, the authority for the charging of fees for Federal supervision of grain inspection and weighing and provides instead for funding of these activities through the regular appropriations process; makes several technical amendments; and prohibits effective May 1, 1977, subclassing of the hard red winter wheat on the basis of color, kernel content, or percentage of dark, hard and vitreous kernals. S. 1051—Passed Senate March 30, 1977. Note: (Provisions contained in S. 275, Omnibus Farm Bill, which became Public Law 95–113. (88)

Land and water resources conservation.—Establishes a mechanism for making long-range policy to encourage the wise and orderly development of the Nation's soil and water resources; requires the Secretary of Agriculture to (1) prepare an appraisal of the Nation's land, water and related resources and (2) develop a national land and water conservation program setting forth the direction for future soil and water conservation efforts by the Department of Agriculture on the Nation's private and non-Federal lands by December 31, 1979, and to update them each fifth year thereafter; requires that the appraisal and the program together with a detailed statement of policy for soil and water conservation activities be transmitted to Congress on the first day it convenes in 1980 and at each 5-year interval thereafter; requires the President beginning in fiscal 1982 and within 30 days of submission of his budget, to prepare and transmit to Congress a report stating the extent to which the programs and policies projected under the budget meet the statement of policy and to set forth reasons for requesting Congress to approve a lesser program or policy presented in the budget; requires the Secretary to submit to Congress beginning with fiscal 1982, an annual report evaluating the program's effectiveness; and authorizes such sums as necessary to carry out the act. S. 106—Public Law 95–192, approved November 18, 1977. (VV)

Omnibus farm bill.—Extends for 4 years through fiscal year 1981 the basic price support programs for wheat, feed grains, cotton, rice, and wool, the food stamp program, and the Food for Peace Program (P.L. 480); extends for three years the authorization for the Environmental Protection Agency to regulate pesticides; and establishes a new charter and clearer direction for the Federal role in agricultural research;

Payments limitation.—Places a limitation of $40,000 on the total payments which a person may receive annually under one or more of the programs for wheat, feed grains, and upland cotton for the 1978 crops, $45,000 for the 1979 crops, and $50,000 each for the 1980 and 1981 crops instead of the present $20,000 ceiling; limits such payments for rice to $52,250 for the 1978 crops, and $50,000 each for the 1979, 1980 and 1981 crops instead of the present $55,000 limitation;

Commodity programs.—Milk—sets the price support at 80 percent of parity adjusted semiannually but reviewed quarterly through March 31, 1979; Wool—updates the support levels to 85 percent of the formula; Wheat—sets the target price in 1977 at $2.90 per bushel with an increase thereafter if the cost per bushel unless the crop is 1.8 billion bushels or less in which case it will be $3.05 per bushel with an increase thereafter if the cost of production exceeds that level; Feedgrains—sets the target price levels for corn at $2.00 per bushel in 1977 and $2.10 in 1978 and any increases thereafter will be based on cost of production, and ties the target level for other feedgrains to corn; Cotton—establishes a target price of 51.1 cents per pound for 1978 to increase in subsequent years in relation to cost of production increases; Peanuts—establishes a national acreage allotment and a minimum national poundage quota; sets up a price support program for producers through loans, purchases or other operations; Soybeans—requires price support loans for producers on the 1978 through 1981 crops at a level determined appropriate by the Secretary; Sugar—requires the prices of the 1977 and 1978 crops of sugar beets and cane to be supported at 52.5 to 65 percent of parity, but not less than 13.5 cents per pound, raw sugar equivalent;

Grain reserves.—Requires the Secretary to formulate a producer storage program on original or extended price support loans for wheat and feedgrains at the same support level as provided by the 1949 Act, as amended, repayable in 3 to 5 years; authorizes the President to negotiate a system of food reserves for humanitarian food relief and to maintain such a reserve of food commodities as a contribution of the United States to the system; expands the authority of the Secretary to acquire commodities for disposition in the event of national disasters; makes the following changes in the farm storage facility loan program; authorizes the Secretary of Agriculture to use guarantees on secured loans as well as direct loans as a means of assisting farmers to construct or purchase on-farm facilities; permits the making or guaranteeing of loans for the construction of facilities to store high moisture grain and forage crops, as well as dry grain; and requires, with respect to direct loans, that the borrower put up security for the loan and base the interest rate charged to farmers on the rate charged the Commodity Credit Corporation;

Emergency feed program.—Authorizes the Secretary to implement an emergency feed program to assist producers in preserving and maintaining livestock;

Food for peace program (P.L. 480).—Extends the program through 1981 and increases the annual authorization to $750 million but allows carryover of unobligated funds of only the preceding calendar year; prohibits payment of commissions to selling agents; (additional changes in the program are contained in S. 1520, the Foreign Aid Authorization bill):

Food stamp reforms.—Eliminates the purchase requirements; limits participation to households whose incomes and other financial resources are determined to be a substantial limiting factor in permitting them to obtain a nutritionally adequate diet; establishes a standard deduction of $60 a month for each eligible household and an additional deduction of 20 percent of all earned income; allows a household to claim (1) a dependent care deduction, (2) a deduction for shelter expenses in excess of 50 percent of household income, or (3) a combination of both deductions; provides that in no event could the amount claimed for dependent care or excess shelter or both exceed $75 per month, an amount indexed to the Consumer Price Index; requires unemployed participants to seek employment; requires a 60-day period of ineligibility for a household whose head voluntarily terminates employment; eliminates automatic, categorical eligibility of welfare recipients; gives Indian tribal organizations greater authority over food distribution programs on reservations; increases incentives for States to root out program abuse and improve administration; authorizes pilot projects to improve administration; and extends authority to purchase commodities and establishes the Federal share of administrative costs for the Commodity Supplemental Food Program;

Food and Agricultural Research.—Expands support for research programs, improved dissemination of research findings, increased efficiency and coordination of Federally-funded food and agricultural research including nutrition research and animal health research; establishes a new program of grants for high-priority agricultural research to be awarded on the basis of competition among scientific research workers and all colleges and universities; establishes a new program of grants for facilities and instrumentation used in agricultural research; establishes a new program of education grants and fellowships to strengthen training and research programs in the food and agricultural sciences, to be awarded on the basis of competition;

Grain Inspection.—Adds the language of S. 1051, which amends the United States Grain Standards Act with respect to recordkeeping requirements and supervision fees, and establishes an advisory committee to provide advice to the Administrator of the Federal Grain Inspection Service;

Other Provisions.—Amends the authorizations for several existing rural development and conservation programs and contains other provisions including those relating to the inclusion of aquaculture and human nutrition as functions of the Department of Agriculture, beekeepers indemnity, ice cream milk content standards, and the importation of filberts. S. 275—Public Law 95-113, approved September 29, 1977. (169,362)

Rabbit Meat Inspection.—Makes rabbit meat inspection mandatory at Federal cost, by extending, with certain exceptions, the provisions of the Poultry Products Inspection Act to rabbits and rabbit products, effective October 1, 1978. H.R. 2521—Vetoed November 9, 1977. (VV)

Tobacco Quotas.—Amends the Agricultural Adjustment Act of 1938 to increase from 50 percent to 80 percent the amount of the farm acreage allotment for Flue-cured tobacco which must be planted on farms desiring to lease acreage-poundage quotas after June 14 of any year. H.R. 3416—Public Law 95-54, approved June 25, 1977. (VV)

Tomato Standards.—Amends section 8e of the Agricultural Adjustment Act of 1933, as reenacted and amended by the Agricultural Marketing Agreement Act of 1937, to require that imported tomatoes conform with pack-of-container standards imposed on domestic tomatoes under marketing orders. S. 91—Passed Senate July 25, 1977. (VV)

Wheat and Feed Grains Loan Levels.—States as the sense of the Senate that the Secretary of Agriculture should exercise his authority under existing law to increase the loan levels for the 1977 crops of wheat and feed grains. S. Res. 193—Senate agreed to June 22, 1977. (VV)

Wheat Producers Assistance.—Provides temporary emergency assistance to wheat producers who planted prior to January 1, 1977, in order to prevent further increases in carryover stocks resulting from record U.S. wheat production and decreasing U.S. exports; requires the Secretary of Agriculture to carry out, through the Commodity Credit Corporation, a special wheat acreage grazing and hay program for the 1977 crop whereby a wheat producer who elects to participate may designate an acreage of cropland on his farm, of not to exceed 40 percent of the wheat acreage allotment, for grazing purposes or hay production only; requires that the producer designate the specific acreage on the farm to be so used; directs the Secretary to pay any participating producer an amount determined by multiplying the number of acres placed in the program times the projected yield established for the farm times $1; makes the producer ineligible for any other payments or price supports, including deficiency payments and disaster payments under section 107 of the Agricultural Act of 1949, on that portion of the wheat allotment placed in the program; provides that such acreage shall be deemed to have been planted for harvest for the purposes of wheat acreage history; and authorizes the Secretary to issue the necessary regulations to carry out this act. S. 650—Passed Senate March 16, 1977. (60)

Wheat Referendum.—Defers the wheat marketing quota referendum for the 1978 crop, which by law must be held no later than August 1, until 30 days after the adjournment of Congress or October 15, whichever is earlier, in order to provide additional time for enactment of legislation, presently being considered by Congress, for the 1978 and subsequent wheat crops which would eliminate the need for a referendum. S. 1240—Public Law 95-48, approved June 17, 1977. (VV)

APPROPRIATIONS

Fiscal 1977:

Continuing.—Extends the continuing resolution (Public Law 94-473) which expires on March 31, 1977, until April 30, 1977, to provide financing authority for the following programs traditionally funded under the Departments of Labor, and Health, Education and Welfare Appropriations Act: higher education; National Health Service Corps; home health services; emergency medical services; library resources; teacher corps; alcohol abuse and alcoholism prevention, treatment and rehabilitation; health professions educational assistance; D.C. medical and dental manpower; activities under title VI of the Comprehensive Employment and Training Act; vocational education; and National Institute of Education; and amends the resolution to provide such amounts as necessary for the calendar quarter ending March 31, 1977, for general revenue sharing payments to State and local governments. H.J. Res. 351—Public Law 95-16, approved April 1, 1977. (VV)

Economic Stimulus.—Makes economic stimulus appropriations in the total amount of $20,101,484,000 in new budget obligational authority for fiscal year 1977; includes the following to implement the economic stimulus proposals recommended by the President in his message of January 31, 1977:

Public Works Projects.—$4 billion for acceleration of local public works projects;

Revenue Sharing Program.—$4,991,085,000 for revenue sharing payments for the last three quarters of fiscal 1977;

Antirecession Financing.—$632.5 million for increased antirecession payments under Public Law 94-369 to States and local governments in areas of high unemployment to assist them in maintaining basic services;

Public Service Employment.—$7.987 billion for public services jobs which will expand the present Comprehensive Employment and Training Act (CETA) public service programs from the current 310,000 jobs to 600,000 jobs by September 30, 1977, and 725,000 jobs by December 31, 1977;

Targeted Employment and Training Programs.—$1.438 billion for programs targeted to youth, veterans and those in need of new skills; and

Older Americans.—$59,400,000 for an additional 14,800 jobs for community service employment for Older Americans;

In addition, includes the following appropriations: $95 million for production of NASA's third shuttle orbiter; $300 million for the construction grants reimbursement program for sewage treatment plants; $175 million for a drought assistance program contingent upon enactment of authorizing legislation; $35 million increase in the obligation limitation on airport development grants; $366 million for various programs authorized under the Federal-Aid Highway Act; $50 million for the Northeast Corridor improvement program to speed up construction currently underway; and $2 million for IRS accounts collection and taxpayer service. H.R. 4876—Public Law 95-29, approved May 13, 1977. (130)

Supplemental.—Makes supplemental appropriations in the total amount of $28,923,859,260 for fiscal year 1977 for almost every department and agency of the Federal Government including appropriations to cover costs associated with the October 1, 1976, general government pay raise. H.R. 4877—Public Law 95-26, approved May 4, 1977. (98)

Urgent Disaster Supplemental.—Makes urgent supplemental appropriations of $200 million for fiscal year 1977 for disaster relief activities resulting from the severe weather conditions prevalent throughout the nation. H.J. Res. 269—Public Law 95-13, approved March 21, 1977. (VV)

Urgent Power Supplemental.—Makes urgent power supplemental appropriations of $6.4 million for fiscal year 1977 for the Department of the Interior, Southwestern Power Administration, for power purchases caused by critically low stream flow conditions in the area served by the Administration; and removes the restrictions in Public Laws 94-355 and 94-373 which limit the use of funds appropriated to ERDA subject to enactment of authorizing legislation to assure the continued funding of essential energy research development and demonstration programs. H.J. Res. 227—Public Law 95-3, approved February 16, 1977. (VV)

Fiscal 1978:

Agriculture.—Appropriates $12,749,378,000 in new budget authority for the Department of Agriculture and related agencies for fiscal year 1978; includes $441,202,000 for the Animal and Plant Health Inspection Service and $1 million for the Farmers' Home Administration for planning and evaluation of housing program; contains funding for domestic food programs; appropriates $50 million for fiscal year 1977 to be immediately available for the Agricultural Conservation Program in drought areas in the Southeast; and contains other provisions. H.R. 7558—Public Law 95-97, approved August 12, 1977. (VV)

Continuing.—Makes continuing appropriations for fiscal year 1978 for the Departments of Labor and Health, Education, and Welfare, the operations of the District of Columbia, and for salaries and related personnel benefits of employees carrying out functions under the Foreign Assistance and Related Programs Appropriations Act which shall be available from October 1, 1977, until enactment of their respective appropriations or October 31, 1977, whichever is earlier. H.J. Res. 626—Public Law 95-130, approved October 13, 1977. (VV)

Amends the continuing resolution, Public Law 95-130, to make continuing appropriations through November 30, 1977, for the Departments of Labor and Health, Education and Welfare and the operations of the District of Columbia. H.J. Res. 643—Public Law 95-165, approved November 9, 1977. (VV)

Continuing—District of Columbia.—Makes continuing appropriations for fiscal year 1978 for the operations and activities of the municipal government of the District of Columbia until enactment of the 1978 D.C. appropriation bill. S.J. Res. 90—Passed Senate October 12, 1977. Note: (Provisions are contained in H.J. Res. 626, Public Law 95-130. (VV)

Continuing—Labor-HEW.—Makes continuing appropriations for fiscal year 1978 for the Departments of Labor and Health, Education and Welfare and related agencies until enactment of the 1978 Labor-HEW appropriation bill. S.J. Res. 91—Passed Senate October 12, 1977. Note: (Provisions are contained in H.J. Res. 626, Public Law 95-130.) (VV)

Defense.—Appropriates $109,752,766,000 in new budget obligational authority for the Department of Defense for fiscal year 1978 including the pay, allowances, and support of military personnel, operation and maintenance of the forces, procurement of equipment and systems, and research, development, test and evaluation; omits funding for procurement of the B-1 bomber; includes $95.6 million for a clerk-hire subsidy of military commissaries; bars the use of funds to consolidate undergraduate helicopter pilot training; prohibits funds to support ROTC units not meeting minimum enrollment criteria; limits the number of military personnel in non-appropriated fund activities such as post exchanges and officers' clubs; limits the number of enlisted aides for general flag officers to a total of 300 for the Department of Defense; permits funds for the Civilian Health and Medical Program of the uniformed Services (CHAMPUS) to pay for psychiatric nursing and nurse-midwife services; and prohibits pay raises that would cause pay of wage board employees to exceed prevailing rates in the private sector but stipulates that no employee's pay shall be reduced from current levels. H.R. 7933—Public Law 95–111, approved September 21, 1977. (308)

District of Columbia.—Appropriates $399,116,000 in Federal funds and $1,340,431,800 in District of Columbia funds for a total of $1,739,547,800 for fiscal year 1978 for the operations and activities of the District of Columbia; contains second supplemental appropriations for fiscal 1977 of $7,378,500 payable from District funds; deletes funding for land acquisition for a Civic Center for the District; and adds a new title III making supplemental appropriations for fiscal year 1977 of $1.4 billion for the Disaster Loan Fund of the Small Business Administration which shall remain available until expended. H.R. 9005—Passed House September 16, 1977; Passed Senate amended October 4, 1977; In conference. (VV)

Foreign Aid.—Appropriates a total of $6,772,654,000 for foreign assistance and related programs for fiscal year 1978 including funds for foreign economic and military assistance, foreign military credit sales and the Export-Import Bank; includes $13 million for disaster assistance to Romania for fiscal year 1977; tightens the terms of U.S. development and security assistance loans so that loans reflect the varying potential for improvement among the national economies of aid recipients and provides that some loans will be for 20 or 30 years rather than a standard 40 years; provides that no part of any appropriation contained in this act shall remain available for obligation beyond the current fiscal year unless expressly provided by Congress; places a limitation of $115 million on the U.S. contribution to the United Nations Development Program; prohibits the U.S. from making a contribution to the United Nations University; appropriates $675,850,000 for foreign military credit sales of which $1 million is for Israel; prohibits the use of Export-Import Bank funds for exporting nuclear equipment to any non-nuclear weapons country that detonated a nuclear explosive after the date of enactment; prohibits U.S. direct aid and Export-Import Bank funds to be used to aid nations that granted sanctuary to international terrorists; places a limitation of $3 million on funds to be available for the United Nations Decade for Women; prohibits international military education and training funds for Argentina; prohibits military aid, training, or credit sales to Ethiopia or Uruguay; bans foreign military credit sales to Argentina, Brazil, El Salvador and Guatemala; limits military assistance to the Philippines to $18.1 million in fiscal year 1978, military credit sales to $1.85 million, and military education and training to $700,000; includes $50 million for the Sahel Development Program and limits U.S. assistance to 10 percent of total cash contributions to this drought-stricken area; includes security supporting assistance in the amount of $785 million for Israel, $750 million for Egypt, $93 million for Jordan, $90 million for Syria, $300 million for Portugal, $80 million for Southern Africa Special Requirements Fund, $20 million for Lebanon, and $15 million for Cyprus; provides $2 billion for international development banks which is almost a billion dollars increase above fiscal year 1977; states sense of the Congress language establishing appropriate levels for the "U.S. share" of future contributions to the international development banks; and limits the 1978 contribution to international banks until U.S. Executive Directors' salaries, now ranging from $78,820 to $83,830, are reduced to $50,000, the salary of the Assistant Secretary of the Treasury. (NOTE: House conferees agreed to the compromise after receiving assurances from the President that he would direct U.S. officials at the international banks to vote against loans to Vietnam, Cambodia, Laos, Uganda, Cuba, Mozambique, and Angola.) H.R. 7797—Public Law 95–148, approved October 31, 1977. (346,571)

HUD.—Appropriates a total of $69,370,554,000 in new budget authority for fiscal year 1978 which includes $7,538,644,000 for the Department of Housing and Urban Development of which $150 million is for disaster assistance; $39,144,000 for the Consumer Product Safety Commission; $848,803,000 for the Environmental Protection Agency; $4,017,940,000 for the National Aeronautics and Space Administration; $861,300,000 for the National Science Foundation; $17,770,282,000 for the Veterans' Administration; $6,854,924,000 for revenue sharing; and $1,400,000,000 for anti-recession financing; contains a provision to prohibit the use of government vehicles to drive Federal officials other than the Secretary of Housing and Urban Development between home and work; provides that no government consultants shall be paid in excess of the rate paid a GS–18 civil servant unless authorized by law; and prohibits the use of funds by EPA to administer or promulgate any program to tax, limit or otherwise regulate parking that is not specifically required pursuant to subsequent legislation. H.R. 7554—Public Law 95–119, approved October 4, 1977. (237)

Interior.—Appropriates a total of $10,026,349,000 for the Department of the Interior and related agencies for fiscal year 1978; includes significant increases in natural resources program, the Department's energy and minerals programs directed at the safe and environmentally sound development of energy resources both onshore and on the outer continental shelf, and the Forest Service; contains increased funding for energy programs outside the Interior Department with the major part directed to the Strategic Petroleum Reserve and programs benefiting American natives that are administered by Interior and HEW with emphasis on health, educational, and economic opportunities and the wise management of their natural resources; expands support for programs enhancing the Nation's cultural resources and for specific programs for the arts and humanities, historic preservation, the Smithsonian Institution, and others; and contains other provisions. H.R. 7636—Public Law 95–74, approved July 26, 1977. (221)

Labor-HEW.—Authorizes a total of $60,168,561,000 in new budget authority for fiscal year 1978 with $5,679,187,000 for the Department of Labor, $53,185,557,000 for the Department of Health, Education and Welfare, and $1,303,837,000 for related agencies;

Makes significant increases over the Administration's budget requests for the following: employment and training assistance programs, with primary emphasis on creating jobs for unemployed youths; the Occupational Health and Safety Administration to provide for an additional 100 Federal compliance staff members; health programs for community health services, preventive medicine, research and training; elementary and secondary education programs to provide title I grants to disadvantaged students, impact aid for schools in Federally affected areas, and emergency school aid to help school districts encountering special desegregation problems; higher education programs, particularly the basic opportunity grant, the direct student loan programs and a one-time demonstration project for law school clinical experience programs; the Head Start program; aging programs; rehabilitation programs; community service programs; and the Corporation for Public Broadcasting;

Makes significant decreases in the administration's budget requests for the Bureau of Labor Statistics, public assistance, and the Social Security Administration;

Contains a provision restricting the use of public funds for abortions; and prohibits the use of funds appropriated by this act to require the transportation of students, reorganization of school grade structures, pairing of schools, or clustering of schools for the purpose of achieving racial desegregation. H.R. 7555—Passed House June 13, 1977; Passed Senate amended June 29, 1977; House agreed to conference report August 2, 1977; Senate agreed to conference report August 4, 1977, with abortion provisions remaining in disagreement; House agreed to 2d conference report October 12, 1977; Senate agreed to 2d conference report October 12, 1977, insisting on its amendment regarding abortions; On October 27, the Senate defeated S. Res. 307 instructing Senate conferees to accept House abortion language; Senate agreed to 3d conference report and agreed to House abortion amendment with an amendment November 3, 1977; House disagreed to Senate amendment November 3, 1977; Senate agreed to House abortion amendment with an amendment November 29, 1977; House disagreed to Senate amendment November 29, 1977. (266, 583)

Labor-HEW-D.C. continuing.—Provides continuing appropriations through September 30, 1978, to the District of Columbia and the Departments of Labor and Health, Education, and Welfare;

District of Columbia.—Appropriates such funds as necessary to continue, at a rate not in excess of current operations, projects or activities which were conducted in fiscal years 1977 and which have been authorized for fiscal year 1978; provides that the Advisory Neighborhood Commission shall be continued at an annual rate of not to exceed $500,000; and adds $1.46 billion to the fiscal year 1977 Disaster Loan Fund of the Small Business Administration which shall remain available until expended;

Labor-HEW.—Authorizes a total of $60,168,561,000 in new budget authority for fiscal year 1978 with $5,679,187,000 for the Department of Labor, $53,185,557,000 for the Department of Health, Education, and Welfare, and $1,303,837,000 for related agencies;

Makes significant increases over the Administration's budget requests for the following: employment and training assistance programs with primary emphasis on creating jobs for unemployed youths; the Occupational Health and Safety Administration to provide for an additional 100 Federal compliance staff members; health programs for community health services, preventive medicine, research and training; elementary and secondary education programs to provide title I grants to disadvantaged students, impact aid for schools in Federally affected areas, and emergency school aid to help school districts encountering special desegregation problems; higher education programs, particularly the basic opportunity grant, the direct student loan programs and a one-time demonstration project for law school clinical experience programs; the Head Start program; aging programs; rehabilitation programs; community service programs; and the Corporation for Public Broadcasting;

Makes significant decreases in the administration's budget requests for the Bureau of Labor Statistics, public assistance, and the Social Security Administration;

Provides restricted use of public funds for abortions; prohibits the use of medicaid funds for abortions except in cases where the life of the mother would be endangered if the fetus were carried to term, or in cases of rape and incest if the incident is reported promptly to a law enforcement agency or a public health service, or in cases where two physicians have determined that severe and long-lasting physical health damage to the mother would result if the pregnancy were carried to term; and prohibits the use of funds appropriated by this act to require the transportation of students, reorganization of school grade structures, pairing of schools, or clustering of schools for the purpose of achieving racial desegregation. H.J. Res. 662—Public Law 95–205, approved December 12, 1977. (VV)

Legislative.—Appropriates a total of $990,067,800 for the Legislative Branch for fiscal year 1978; includes $653,395,000 for Congressional operations and $336,672,200 for related agencies totalling $20,520,700 for Congressional operations and related agencies; deletes $55 million for the extension of the West Front of the Capitol and includes language instructing the Architect of the Capitol to ascertain which operations currently housed in the Capitol could be relocated to the office buildings and to prepare plans and drawings in detail with cost estimates for restoration of the West Front; provides that virtually all 1977 costs associated with the March 1, 1977, pay raise be absorbed through savings; includes changes in Senatorial allowances, as mandated by the Official Code of Conduct Amendments of 1977, S. Res. 110, and reduces the 1978 budget request for Senate activities by $12 million; consolidates the clerk-hire and the so-called S. Res. 60 allowances into a single allowance which will afford maximum flexibility to Senators in utilizing funds authorized for employment; retains the S. Res. 60 provisions for accessibility to committee files and meetings and certain reductions for committee chairmen and ranking minority members effective October 1, 1977; revises the current Consolidated Office Expense Allowance to provide more flexibility to Senators and to create a fixed allowance for each State; adds to the categories of expenses for which Members may be reimbursed: per diem and travel for Members and staff in the U.S. on official business, travel on official business in Washington, D.C. and in the vicinity of the home State office; and sets aside one-tenth of each Member's allowance to meet any other official office expense; makes each Senator eligible for two WATS telephone lines to be paid out of the contingent fund of the Senate; increases allowances by 10 percent although the consumer price index has risen 42.5 percent since last adjustment; allows an employee to be on the payroll of more than one Senator; directs that a supplement to the Congressional Directory be printed during second sessions rather than a new edition; reduces from 100 to 50 the number of recipients per Senator of free copies of the Congressional Record and requires publication of their names on the Record; eliminates a requested $250,000 subsidy for the Senate Restaurant with the intent of balancing the budget through price increases and improved management; phases out the 34 elevator operator jobs on automatic elevators at a savings of $292,000; and contains other provisions. H.R. 7932—Public Law 95–94, approved August 5, 1977. (296)

Military Construction.—Appropriates $2,977,720,000 for military construction for the Department of Defense for fiscal year 1978 which provides the necessary funding for the planning, design, construction, alteration and improvement of military facilities worldwide, both for active and Reserve forces, including military family housing; provides certain types of community impact assistance as well as assistance to members who face loss on the sale of private residences due to installation realignments; includes $8.5 million for all energy consumption metering programs; and provides for the U.S. share of NATO infrastructure construction costs. H.R. 7589—Public Law 95–101, approved August 15, 1977. (VV)

Public Works—Energy Research.—Appropriates $10,350,669,000 for public works for water and power development and energy research for fiscal year 1978; provides $5,978,155,000 for the Energy Research and Development Administration (except for fossil fuel and certain conservation programs) in title I; provides $2,728,242,000 water resources development programs (including power) and related activities of the Department of the Army, civil functions—Army Corps of Engineers' civil works program; provides $785,168,000 for the Department of the Interior's Bureau of Reclamation and Power agencies; provides $802,849,000 for related independent agencies and commissions including the Appalachian Regional Commission and Applachian regional development programs, the Federal Power Commission, the Nuclear Regulatory Commission, the Tennessee Valley Authority; and the water Resources Council in title IV; includes funding for 9 water resources projects which the President had removed from the budget and omits new construction starts of such projects; omits funds for the Clinch River Breeder Reactor; bars production of enhanced radiation weapons until the President certifies to Congress that production of these weapons is in the national interest, with the proviso that the Congress, by concurrent resolution, may disapprove such production within 45 days following Presidential certification. H.R. 7553—Public Law 95–96, approved August 7, 1977. (284)

State-Justice-Commerce.—Appropriates a total of $7,709,432,000 in new budget authority for fiscal year 1978 including $1,234,970,000 for the Department of State: $2,300,619,000 for the Department of Justice; $1,923,275,000 for the Department of Commerce: $444,318,000 for the Judiciary; and $1,806,250,000 for related agencies including the Arms Control and Disarmament Agency, the International Trade Commission, the Small Business Administration, the Equal Employment Opportunity Commission, and the Legal Services Corporation; makes fiscal year 1977 supplemental appropriations totalling $211,515,000 for certain agencies with the major portion of the appropriation to replenish the Small Business Administration's disaster loan fund; and prohibits the use of funds for implementation of the President's pardon program for Vietnam-era draft resisters. H.R. 7556—Public Law 95–86, approved August 2, 1977. (242)

Supplemental.—Makes supplemental appropriations in the amount of $7,799,898,000 for fiscal year 1978 for EPA construction grants, SBA disaster loans and other programs including: $30 million for Federal crop insurance; $30 million for watershed and flood prevention operations; $36.6 million for the agricultural conservation program; $44.2 million for EPA research and development; $85 million for EPA abatement control; $4.5 billion for EPA waste treatment plant grants; $67 million for surface mine reclamation; $273 million for the FEA programs now under the Department of Energy; $383 million for strategic petroleum reserves; $124 million for refugee programs; $200 million for emergency fuel assistance for the elderly; $80 million for the Clinch River breeder reactor project; $1.4 million for SBA loans; $423 million for Defense Department programs; and $18 million for Amtrak. H.R. 9375—Passed House October 25, 1977; Passed Senate amended November 1, 1977; Senate agreed to 2d conference report December 7, but took no action on a provision regarding the rescission of funds for the B–1 bomber. (607)

Transportation.—Appropriates $6,196,609,023 for fiscal year 1978 for the Department of Transportation (including the Coast Guard, Federal Highway Administration, National Highway Traffic Safety Administration, Federal Railroad Administration, Urban Mass Transportation Administration, and Materials Transportation Bureau) and for related agencies (including the National Transportation Safety Board, Civil Aeronautics Board, Interstate Commerce Commission, Panama Canal Zone Government, United States Railway Association, Washington Metropolitan Area Transit Authority, and the National Transportation Policy Study Commission). H.R. 7557—Public Law 95–85, approved August 2, 1977. (230)

Treasury-Postal Service.—Appropriates a total of $7,478,254,000 in new budget obligational authority for fiscal year 1978 of which $2,842,714,000 is for the Treasury Department, $1,695,540,000 is for the Postal Service, $71,697,000 is for the Executive Office of the President, and $2,868,303,000 is for certain independent agencies; contains reductions in the number of permanent personnel positions in the Treasury Department based on the Presidential memorandum of March 1, 1977, restricting hiring until new personnel ceilings have been established and provides that if the ceilings established are lower than the committee recommendations the funds may not be used for other purposes without approval of the Appropriations Committees; and directs the Secretary of the Treasury to study the practice by Treasury Department agencies relating to the use of official Government vehicles by personnel and report to the committee by January 1, 1978. H.R. 7552—Public Law 95–81, approved July 31, 1977. (222)

ATOMIC ENERGY AND NASA

NASA Authorization.—Authorizes $4,049,429,000 for the National Aeronautics and Space Administration for fiscal year 1978 of which $3,041,500,000 is for research and development, $160,940,000 is for the construction of facilities, and $846,989,000 is for research program and management; includes funds to support the following new programs: (1) 5 space shuttle orbiters, (2) development of the shuttle-launched space telescope for research in astronomy, (3) a third generation earth resources survey spacecraft, Landsat-D, to carry an advanced scanning instrument, (4) initiation of a search and rescue satellite system in cooperation with Canada, and (5) initiation of a Jupiter orbiter probe mission; provides continued funding of the Space Shuttle; and includes the second funding increment for a fuel efficient aircraft technology development program designed to decrease fuel consumption of commercial jet transports by 50 percent. H.R. 4088—Public Law 95–76, approved July 30, 1977. (VV)

Nuclear Regulatory Commission Authorization.—Authorizes $297,740,000 for fiscal year 1978 for the Nuclear Regulatory Commission; includes $41,480,000 for nuclear reactor regulation, $12,130,000 for standards development, $33,050,000 for inspection and enforcement, $22,090,000 for nuclear materials safety and safeguards, $148,900,000 for regulatory research, $10,180,000 for program technical support with up to $600,000 authorized for the Fellowship Program, and $29,910,000 for program direction and administration; provides that $10 million may be reallocated among budget categories subject to the conditions that the amount relocated from a major program activity not exceed 15 percent of the amount authorized for the activity and that the appropriate congressional committees be notified of a reallocation in excess of $500,000; provides (1) $2,700,000 for obligations related to the Clinch River Breeder Reactor Project with a provision that the authorization be reduced by the same amount if the license application is withdrawn or further funding for the continuation of the project is not authorized or appropriated, and (2) $2,100,000 for obligations related to the Barnwell, South Carolina, fuel reprocessing plant with a provision that the authorization be reduced by the same amount if further construction of the facility for the purpose of providing plutonium to be used as fuel is cancelled or deferred; requires quarterly reports concerning the Commission's efforts to fulfill its obligations to assure equal opportunity employment; requires development of a plan to resolve generic safety issues to be submitted to Congress by January 1, 1978; requires preparation of a plan for the development of new or unproved safety systems of nuclear power plants; calls for an annual report on the Commission's reactor safety research program; establishes a fellowship program under the aegis of the Advisory Committee on Reactor Safeguards to assist the committee in carrying out its duties in a timely manner; contains conflict of interest provisions similar to those adopted for the FEA and ERDA; provides that funds for cooperative nuclear safety research programs may be retained and used for salaries and expenses associated with those programs; and directs the Administrator of the General Services Administration to study and report to the Environment Committee by June 15, 1977, on the feasibility of consolidating the NRC which is presently housed in nine buildings throughout the Washington metropolitan area. S. 1131—Public Law 95-209, approved December 13, 1977. (VV)

BUDGET

Deferrals:

Coast Guard.—Disapproves the proposed deferral of $13,031,000 in budget authority for the Coast Guard. S. Res. 282—Senate agreed to November 1, 1977. (VV)

Rescissions:

Helium Purchases.—Rescinds $47.5 million in contract authority for helium purchases under Public Law 87-122 as recommended by the President in his message of September 22, 1976, for which purchase contracts were terminated by the Interior Department in 1973 and the contract authority therefore is no longer needed. H.R. 3347—Public Law 95-10, approved March 10, 1977. (VV)

Second budget rescission.—Rescinds $644,-050,000 of the $941,278,000 in budget authority recommended by the President in his message of January 17, 1977, as follows: Department of Defense-Military—$143.6 million in retired pay, $452.6 million in Naval shipbuilding and conversion because of the decision not to procure the fourth nuclear powered aircraft carrier (CVN-71) or convert the nuclear powered cruiser USS Long Beach to the Aegis air defense weapons system, and $145.35 million for Air Force procurement because of termination of the Advanced Logistics System (ALS); $41.5 million in funds appropriated to the President for foreign military credit sales; and $12 million for the Department of State contributions for international peacekeeping activities because of the lower budget levels established by the U.N. General Assembly; and disapproves $277,228,000 as follows: Department of Commerce—$525,000 for salaries and expenses of the U.S. Travel Service and $1.5 million for operations, research and facilities of the National Oceanic and Atmospheric Administration to continue surveys, mission and cost analysis and initiation of design and engineering studies for OCEANLAB; and $6,803,000 for the Department of Transportation for retirement pay for the Coast Guard. H.R. 3839—Public Law 95-15, approved March 25, 1977. (VV)

Third budget rescission.—Rescinds $96,-090,000 in budget authority as recommended by the President in his message of July 19, 1977, of which $21,090,000 is a reduction in the foreign military credit sales program resulting from changes in the program plans that placed reliance on guaranteed loans rather than on direct credit during fiscal 1977, and $75,000,000 is a reduction in the GSA general building fund. H.R. 9019—Public Law 95-186, approved November 16, 1977. (VV)

Resolutions:

Third budget resolution, 1977.—Revises the Second Budget Resolution (S. Con. Res. 139) for fiscal year 1977 setting the level of revenues at $347.7 billion, outlays at $417.45 billion, deficit at $69.75 billion, budget authority at $472.9 billion and public debt at $718.4 billion; contains an adequate funding level to permit enactment of up to $13.8 billion in tax legislation stimulus as proposed by the administration and $3.7 billion in increased outlays to produce jobs in areas of high unemployment; sets a level of budget authority at $1.1 billion and outlays at $760 million for EPA construction grants, railroad and highway construction and improvement in recreational facilities; sets the following levels of funding for the relief of individuals and families hard hit by the recession and the harsh winter: (1) 1.8 billion in budget authority and outlays for direct payments to recipients of social security, SSI, and railroad retirement, or any similar stimulus proposals, (2) $508 million in budget authority and $508 million in outlays to extend the Federal supplemental benefits program for the unemployed, and (3) $200 million in budget authority and $200 million in outlays for Federal assistance to low- and moderate-income families to help them meet fuel costs during the winter emergency; includes adequate levels of budget authority for housing to support increased reservations for a total of 360,000 dwelling units for low- and moderate-income families; and makes the following revisions to the totals for budget authority and outlays contained in the Second Budget Resolution to reflect savings which have been achieved and additional costs which have arisen under existing programs (in billions of dollars):

National Defense—BA: $108.8 instead of $112.1, O: $100.1 instead of $100.65;

International Affairs—BA: $7.9 instead of $8.9, O: $6.8 instead of $6.9;

General Science, Space, and Technology—BA: $4.5 instead of $4.6, O: $4.4 instead of $4.5;

Natural Resources, Environment, and Energy—BA: $18.7 instead of $18.2, O: $17.2 instead of $16.2;

Agriculture—BA: $2.3 instead of $2.1, O: $3.0 instead of $2.2;

Commerce and Transportation—BA; $17.3 instead of $17.2, O: $16.0 instead of $17.4;

Community and Regional Development—BA: $14.8 instead of $9.55, O: $10.55 instead of $9.05;

Education, Training, Employment and Social Services—BA: $30.4 instead of $24.0, O: $22.7 instead of $22.2;

Health—BA: $40.6 instead of $40.5, O: $39.3 instead of $38.9;

Income Security—BA: $170.9 instead of $155.9, O: $141.3 instead of $137.2;

Veterans Benefits and Services—BA: $18.9 instead of $20.3, O: $18.1 instead of $19.5;

Law Enforcement and Justice—BA: $3.5, O: $3.6;

General Government—BA: $3.5 instead of $3.6, O: $3.5;

Revenue Sharing and General Purpose Fiscal Assistance—BA: $7.6, O: $7.7;

Interest—BA; $38 instead of $39.6, O: $38 instead of $39.6;

Allowances—BA: $0.8 instead of $0.7, O: $0.8;

Undistributed offsetting receipts—BA: −$15.6 instead of −$16.8, O: −$15.6 instead of −$16.8. S. Con. Res. 10—Action completed March 3, 1977. (38)

First budget resolution, 1978.—Sets the level for total budget outlays for fiscal year 1978 at $460.95 billion, estimated revenues at $396.3 billion, new budget authority at $503.-45 billion, and the estimated deficit at $64.65 billion as compared to the President's estimates of $462.6 billion in budget outlays, $404.7 billion in revenues, $506.2 billion in new budget authority, and a proposed deficit of $57.9 billion; sets the appropriate level of the public debt at $784.9 billion and the amount by which the statutory amount may be increased at $83.6 billion; for estimated revenues (1) assumes the level of fiscal stimulus in fiscal 1978 provided in the Tax Reduction and Simplification Act as agreed to by House and Senate conferees; (2) accepts a $65 million allowance for miscellaneous tax and tariff legislation; (3) considers the entire cost of the earned income credit as reduction of revenue; and (4) postpones the treatment of tax credits in excess of recipients tax liabilities until development of the second budget resolution; recommends outlays for budget programs by function for fiscal year 1978 as compared with the President's proposed budget outlays as follows:

National Defense: $110.0 billion as compared to $112.8 billion:

International Affairs (conduct of foreign affairs, foreign information and exchange activities, the Peace Corps, Food for Peace, and nonmilitary foreign assistance): $7.3 billion as compared to $7.2 billion:

General Science, Space and Technology: $4.7 billion, which is the same estimate submitted by the President:

Natural Resources, Environment, and Energy: $20.0 billion as compared to $20.9 billion;

Agriculture: $4.35 billion as compared to $4.4 billion:

Commerce and Transportation: $19.4 billion as compared to $19.9 billion:

Community and Regional Development: $10.8 billion as compared to $9.9 billion:

Education, Manpower, and Social Services: $27.2 billion as compared to $27.0 billion;

Health: $44.3 billion as compared to $44.6 billion;

Income Security (social security and unemployment insurance, retirement systems for Federal and railroad employees and assistance programs for the needy): $146.7 billion as compared to $148.7 billion;

Veterans Benefits and Services: $20.2 billion as compared to $18.8 billion;

Law Enforcement and Justice: $3.85 billion as compared to $3.8 billion;

General Government: $3.85 billion as compared to $4.0 billion;

Revenue Sharing and General Purpose Fiscal Assistance: $9.7 billion, which is the same estimate submitted by the President;

Interest: $43.0 billion as compared to $40.9 billion;

Allowances (includes Federal pay increases for civilian agencies and other expenditures which cannot be reasonably assigned to other functions): $1.9 billion as compared to $1.2 billion; and

Undistributed Offsetting Receipts (includes receipts from rents and royalties on leases on the Outer Continental Shelf and other deductions from outlays which cannot be reasonably assigned to other functions): $16.3 billion in undistributed offsetting receipts in the Congressional budget as compared to $16.0 billion in the President's budget. S. Con. Res. 19—Action completed May 17, 1977. (137,142)

Second budget resolution, 1978.—Revises the First Budget Resolution for fiscal year 1978 setting the level of revenues at $397 billion, budget authority at $500.1 billion, outlays at $458.25 billion, deficit at $61.25 billion, and public debt at $775.45 billion; makes the following revisions to the totals for budget authority and outlays in the First Budget Resolution to reflect savings which have been achieved and additional costs which have arisen under existing programs (in billions of dollars): National Defense—Budget Authority (BA): $116.4 instead of $8.5, Outlays (O): $110.1 instead of $111.0;

International Affairs—BA: $8.0 instead of $9.3, O: $6.6 instead of $7.3;

General Science, Space and Technology—BA: $4.9 instead of $9.0, O: $4.7 as in the First Budget Resolution;

Natural Resources, Environment and Energy—BA: $24.6 instead of $20.7, O: $20.0 as in the First Budget Resolution;

Agriculture—BA: $2.1 instead of $2.2, O: $6.3 instead of $4.35;

Commerce and Transportation—BA: $20.4 instead of $20.0, O: $19.6 instead of $19.4;

Community and Regional Development—BA: $8.2 as in the First Budget Resolution, O: $10.6 instead of $10.8;

Education, Training, Employment and Social Services—BA: $26.3 instead of $26.8, O: $26.4 instead of $27.2;

Health—BA: $47.7 instead of $47.9, O: $44.2 instead of $44.3;

Income Security—BA: $178.8 instead of $179.9, O: $146.1 instead of $146.7;

Veterans Benefits and Services—BA: $19.9 instead of $20.25, O: $20.2 as in the First Budget Resolution;

Law Enforcement and Justice—BA: $3.8 as in the First Budget Resolution, O: $4.0 instead of $3.85;

General Government—BA: $3.8 as in the First Budget Resolution, O: $3.85 as in the First Budget Resolution;

Revenue Sharing and General Purpose Fiscal Assistance—BA: $9.6 instead of $9.8, O: $9.7 as in the First Budget Resolution;

Interest—BA: $41.7 instead of $43.0, O: $41.7 instead of $43.0;

Allowances—BA: $0.9 instead of $0.8, O: $1.0 instead of $0.9;

Undistributed Offsetting Receipts—BA: –$16.8 instead of –$16.6, O: –$17.1 instead of –$16.3. H. Con. Res. 341—Action completed September 16, 1977. (361)

CONGRESS

Capitol Police jurisdiction.—Amends the act of July 31, 1946, as amended, to include certain specified areas and portions of streets within the U.S. Capitol Grounds in order to strengthen Capitol Police jurisdiction over traffic and other matters for security purposes. S. 1859—Passed Senate July 20, 1977. (VV)

Extends the supervision and protection of the U.S. Capitol Police over the employees and facilities of the Office of Technology Assessment located at 600 Pennsylvania Avenue, S.E., Washington, D.C. S. 2052—Public Law 95–175, approved November 14, 1977. (VV)

Congressional Campaign Committee Employees Retirement Credit.—Amends title V, U.S.C., to provide that a congressional employee may credit not to exceed 10 years of service as an employee of the Democratic Senatorial Campaign Committee, the Republican Senatorial Campaign Committee, the Democratic National Congressional Committee or the Republican National Congressional Campaign Committee for Civil Service Retirement purposes provided the required deposits for such service are made to the fund; and makes the provisions of this act applicable to an employee who retires on or after the date of enactment. S. 992—Passed Senate March 5, 1977. (VV)

Ernest Gruening statue.—Accepts in the name of the United States, the statue of the late Senator Ernest Gruening, presented by the State of Alaska, for the National Statuary Hall collection; expresses the appreciation of the Congress for the contribution; and provides for the temporary placement of the statue in the rotunda of the Capitol with appropriate ceremonies to mark the occasion. S. Con. Res. 25—Action completed September 26, 1977. (VV)

Joint Committee on Atomic Energy abolishment.—Abolishes the Joint Committee on Atomic Energy and provides for the disposition of its staff and the transfer of its statutory functions and authority to other congressional committees having jurisdiction over the development, utilization or application of atomic energy; and makes necessary and conforming amendments to certain laws which pertain to the Joint Committee. S. 1153—Public Law 95–110, approved September 20, 1977. (VV)

Joint Committee on Congressional Operations abolishment.—Abolishes the Joint Committee on Congressional Operations effective September 30, 1977, and transfers its duties and responsibilities to the Senate Committee on Rules and Administration. S. 1608—Passed Senate July 12, 1977. (VV)

Joint Economic Committee study.—Directs the Joint Economic Committee, or any of its subcomittees, to investigate past and prospective changes in the United States and world economies and their impact on the economies of the United States and other nations and to report to Congress their recommendations for meeting the economic policy requirements of the United States; authorizes the Committee to hire expert professional staff and supporting assistants as well as individual consultants and organizations and to sit and act during sessions of the present Congress whether or not either House is recessed or adjourned: and authorizes therefor $900,000 for the period July 1, 1977, through December 31, 1978, of which not to exceed $250,000 may be expended prior to December 31, 1977. H Con. Res. 248—Action completed July 18, 1977. (VV)

State taxation of Members of Congress.—Adds a new section 113 to title 4, U.S.C., effective with respect to all taxable years, which provides that no State in which a Member of Congress maintains a place of residence to attend sessions of Congress may for State income tax purposes treat the Member as a resident or domiciliary or treat his Congressional salary as income for services performed within or from sources within that State unless the Member represents the State. H.R. 6893—Public Law 95–67, approved July 19, 1977. (VV)

CONSUMER AFFAIRS

Debt collection practices.—Amends the Consumer Credit Protection Act to add a new title entitled the "Fair Debt Collection Practices Act" to protect consumers from a host of unfair, harassing, and deceptive debt collection practices; prohibits a debt collector from: (1) contacting third parties other than to obtain location information except the consumers attorney, a credit reporting agency, the creditor, the creditor's or debt collector's attorney, or any other person to the extent necessary to effectuate a postjudgement judicial remedy; (2) engaging in any conduct which harasses, oppresses or abuses any person; (3) using any false, deceptive or misleading representations; (4) using any unfair or unconscionable means; (5) attempting to collect a disputed debt until the consumer receives verification of the debt; and (6) applying payments to disputed debts; provides that if a consumer notifies a debt collector in writing that he refuses to pay a debt or wishes the debt collector to cease further contacts the debt collector must so cease except to notify the consumer of the debt collector's or creditor's further actions; requires that actions on real property be brought in the judicial district in which the property is located and actions on personal suits be brought either where the contract was signed or where consumer resided; provides that a debt collector who violates the act is liable for actual damages plus costs and reasonable attorney's fees; permits the court to award up to $1,000 in individual actions, and up to $500,000 or 1 percent of the debt collector's net worth, whichever is less, in class actions; provides the following two defenses for debt collectors: (1) good faith reliance on an FTC advisory opinion and (2) bona fide error notwithstanding procedures to avoid the error; provides that a court may award reasonable attorney's fees to a defendant if it finds that the consumer brought a suit in bad faith or for harassment; gets a 1-year statute of limitation on bringing actions; places enforcement of the act with the FTC and the Federal bank regulatory agencies; prohibits the promulgation of any additional rules or regulations pertaining to debt collectors; requires the FTC to report annually to the Congress on the Act's effectiveness and administrative enforcement; annuls state laws only if inconsistent to Federal; allows the FTC to exempt any collection practices within any State if they are subject to substantially similar requirements; and provides that the act shall take effect within 6 months of enactment. H.R. 5294—Public Law 95–109, approved September 20, 1977. (VV)

CRIME–JUDICIARY

Administrative conference.—Amends the Administrative Conference Act to raise the annual appropriation ceiling to a total of $1.6 million for fiscal 1979, $1.95 million for fiscal 1980, and $2.3 million for fiscal 1981. S. 1792—Passed Senate November 4, 1977. (VV)

Bilingual court proceedings.—Amends title 28, U.S.C., to insure that Federal court participants who do not speak or understand English, or have a hearing or speech impairment, will have access to qualified interpreters, and allows a limited use of Spanish in the District Court of Puerto Rico when it is found by the court to be in the interest of justice. S. 1315—Passed Senate November 4, 1977. (VV)

Child adoption and child abuse prevention.—Facilitates the removal of barriers to interstate adoptions and the placement of children with special needs in permanent adoptive homes; directs the Secretary of HEW to appoint an advisory board to recommend model adoptive legislation and procedures to facilitate interstate adoption of children, on the basis of which, the Secretary would promulgate uniform regulations, and encourage each State to adopt comprehensive assistance legislation based on the model plan; establishes within HEW an administrative arrangement to provide an adoption information exchange system and to coordinate departmental programs as well as to carry out education and training programs; and provides for a 4-year authorization of $5 million for fiscal year 1978 and such sums as necessary for the succeeding three fiscal years;

Extends for 2 years the authorizations for the Child Abuse Prevention and Treatment Act at the existing $25 million level; authorizes $2 million for each of fiscal years 1978 and 1979 for programs and projects designed to prevent, identify, and treat sexual abuse of children, including programs involving the treatment of family units; makes it possible for the Secretary to increase funding for State programs beyond the present 20-percent maximum, while at the same time providing a 20-percent minimum for State grants; includes research efforts in the 50-percent expenditure earmark now applicable only to demonstration projects; permits 3-year research grants made with funds obligated from a single year's appropriation, and requires public participation in the establishment of research priorities; provides for special consideration for continued funding of certain demonstration projects funded by HEW which are of proven effectiveness and of regional or national significance; redefines the term "child" to take into account situations where the State statute definition waives from the Federal definition therefor making the State ineligible for Federal grants; encourages States to obligate their grants on a more expeditious schedule; provides for greater exchange of information among Federal agencies on the Advisory Board on Child Abuse and Neglect concerning planned activities; provides for public membership on the Board; and requires submission by the Board to the President and the Congress of a comprehensive plan detailing the goals and objectives of child abuse prevention and treatment programs, and seeking to achieve maximum coordination of the goals and activities of all Federal and non-Federal programs in this field. H.R. 6693—Passed House September 26, 1977; Passed Senate amended October 28, 1977. (VV)

Child pornography.—Amends title 18, U.S.C., making it a Federal offense for anyone to use children under the age of 16 in the production of pornographic materials which are to be mailed or otherwise transported in interstate or foreign commerce; proscribes the interstate transportation of persons under 18 years of age for the purpose of engaging in prostitution by extending the Mann Act's provision against female prostitution to include juvenile males; and amends the penalty provisions regarding mailing, importation, or transportation of obscene materials to increase the penalties up to 10 years' imprisonment or $10,000 or, in case of a second offense, a minimum of 2 years and a maximum of 15 years imprisonment and up to $15,000. S. 1585—Passed Senate October 10, 1977; Passed House amended October 25, 1977; Senate agreed to conference report November 4, 1977. (553)

Courts of appeals judicial accommodations.—Amends title 28, U.S.C., to provide accommodations for judges of the U.S. courts of appeals at places other than those where regular terms of court are authorized by law to be held if such accommodations have been approved by the judicial council for the appropriate circuit and space is available without cost to the government. H.R. 2770—Public Law 95-196, approved November 19, 1977. (VV).

Drug Enforcement Administration.—Amends the Comprehensive Drug Prevention and Control Act of 1970 to extend for 2 years, through fiscal 1979, the Drug Enforcement Administration at an authorization of $182 million for fiscal 1978 plus such additional amounts as necessary for salary increases and other employee benefits authorized by law, and such sums as necessary for fiscal 1979. S. 1232—Passed Senate June 6, 1977. (VV)

Amends the Controller Substances Act of 1970 to extend for 2 years, through fiscal 1979, the Drug Enforcement Administration at an authorization of $188 million for fiscal 1978 and $215 million for fiscal 1979; and repeals the additional $6 million annual authorization under section 103 of the Controlled Substances Act for additional enforcement personnel in the Bureau of Narcotics and Dangerous Drugs. H.R. 5742—Public Law 95-137, approved October 18, 1977. (VV)

Federal rules and criminal procedure.—Approves with modifications certain amendments to the Federal Rules of Criminal Procedures proposed by the Supreme Court on April 26, 1976, and disapproves other such amendments;

Changes rule 6(e), which deals with the secrecy of grand jury proceedings, to allow disclosure information of grand jury proceedings to personnel deemed necessary by an attorney for the government to assist in the performance of his duty to enforce Federal criminal law; changes rule 23(b), which deals with cases tried by juries of less than 12 persons, to allow the parties to stipulate that a valid verdict may be returned by a jury should the court find it necessary to excuse one or more jurors after the trial commences, and changes rule 23(c), which deals with cases tried without a jury, to require that a request for a special finding be made prior to the general finding and to allow findings to be made orally; disapproves the Supreme Court's proposed changes to rule 24 which deals with the number of peremptory challenges to prospective jurors; changes rule 41(c), which deals with the issuance of search warrants, to provide for a telephone search warrant procedure; amends the present removal to Federal Court statute to minimize the disruption and unnecessary delay in State criminal procedures that can result from delatory petitions for removal; and specifies the effective dates of the proposed modifications. H.R. 5864—Public Law 95-78, approved July 30, 1977. (VV)

Jefferson F. Davis citizenship.—Restores posthumously full rights of citizenship to Jefferson F. Davis effective December 5, 1968. S.J. Res. 16—Passed Senate April 27, 1977. (VV)

Juvenile justice.—Strengthens and extends for 3 years, the program established by the Juvenile Justice and Delinquency Prevention Act of 1974 with authorization levels of $150 million, $175 million, and $200 million for fiscal years 1978, 1979, and 1980, respectively; extends the definition of "juvenile delinquency program" to include programs for all youths who would benefit from services designed to reduce delinquent conduct; reaffirms Congressional intent that the provisions of the act are to be administered through the Office of Juvenile Justice and Delinquency Prevention; changes the title of the head of the Office from Assistant Administrator to Associate Administrator and upgrades the position to the Executive Schedule, Level 5, to emphasize the importance of the position; affirms the authority of the Associate Administrator of the Office to administer LEAA juvenile justice funds subject to delegation and direction by the Administrator of LEAA; retains the Office's National Institute for Juvenile Justice and Delinquency Prevention and strengthens the scope of its activities particularly in the area of training:

Gives increased emphasis and recognition to the proper roles of the National Advisory Committee for Juvenile Justice and Delinquency Prevention and the Coordinating Council on Juvenile Justice and Delinquency Prevention; provides for the addition of the Commissioner of the Office of Education and the Director of Action to the statutory membership of the Council, and states that the Director of the Special Action Office for Drug Abuse Prevention shall be replaced on the Council by the Director of the Office of Drug Abuse Policy; expands the scope of representation on the advisory committee and requires that future appointments to the committee include at least three youth members who have been under the jurisdiction of the juvenile justice system; provides for more significant input at all levels from persons who, by virtue of their training or experience, have special knowledge concerning the prevention and treatment of juvenile delinquency and the administration of juvenile justice; makes changes to the formula grant program intended to fine tune this modified grant program, to clarify ambiguous language in the 1974 act, and to assist States to more effectively expand formula grant funds according to priority areas identified in the States' juvenile justice plan; requires that, beginning in fiscal year 1979, not more than 7.5 percent of a State's total formula grant allotment may be used to cover the costs of planning, administration, or any pre-award activities, and that any grant funds used for these purposes must be matched on a dollar-for-dollar basis from State or local funds; provides that formula grant program funds will cover 100 percent of the approved cost of any program or activity effective October 1, 1978; extends eligibility for State formula grant pass-through funds to local private agencies which have applied to the appropriate units of local government for funding and have been denied; provides one additional year for States to comply with the deinstitutionalization requirements of the program; requires that all facilities for juveniles be monitored in order to determine whether they are properly classified as juvenile detention and correctional facilities or as other types of facilities where status offenders may be placed; provides that participating States shall provide the Associate Administrator with a review of the extent of compliance with deinstitutionalization requirements; provides that States in compliance with the deinstitutionalization requirement shall have preference for reallocated formula grant funds;

Provides that 25 percent, rather than 25-50 percent, of Part B funds be allocated for the special emphasis program, and expands its scope to include activities to help prevent school violence and vandalism, to promote youth advocacy, and to assist State legislatures to develop legislation to achieve State compliance with the act; increases the minimum private agency share of special emphasis funding from 20 to 30 percent;

Prohibits the use of formula grant funds to match other LEAA funds, but allows the formula grant funds to be used as match for other Federal juvenile delinquency program grants; provides that the Administrator's authority to require a matching contribution extends to grants for the concentration of Federal efforts and programs of the National Institute for Juvenile Justice and Delinquency Prevention, but not to grants for special emphasis programs; requires that program records be kept confidential; authorizes funding at the level of $25 million for fiscal years 1978, 1979, and 1980 for the extension of the Runaway Youth Act to enable the Secretary of HEW to increase assistance to local groups which operate temporary shelter care programs in areas where runaways tend to congregate; and contains other provisions. H.R. 6111—Public Law 95-115, approved October 3, 1977. (VV)

Mississippi court terms.—Amends section 104(a)(1), title 28, U.S.C., to provide for holding terms of the U.S. District Court for the Eastern Division of the Northern District of Mississippi at Aberdeen, Ackerman, and Corinth. S. 662—Passed Senate April 7, 1977. (VV)

North Dakota judicial district.—Amends title 28, U.S.C., to realign the judicial districts of North Dakota by transferring Bottineau, McHenry, and Pierce Counties from the Northeastern Division to the Northwestern Division and transferring Sheridan and Wells Counties from the Southeastern Division to the Northwestern Division in order to reduce the average distance which litigants, attorneys, and jurors in these counties must travel to the nearest place of holding court by approximately 100 miles. S. 195—Passed Senate May 24, 1977. (VV)

Northern Marianas district court.—Implements article IV of the covenant to establish a Commonwealth of the Northern Mariana Islands in political union with the United States by establishing the District Court of the Northern Mariana Islands; specifies the jurisdiction of the court, both original and appellate; and authorizes such sums as necessary to carry out the act. S. 2149—Public Law 95-157, approved November 8, 1977 (VV)

Omnibus judgeships.—Provides for the appointment of 110 additional permanent district court judges in 65 specified judicial districts; creates three temporary district court judgeships, for a minimum of 5 years, in the Eastern District of Kentucky, Southern District of West Virginia, and Southern District of Florida; divides the fifth circuit into a new fifth circuit consisting of Alabama, Florida, Georgia, and Mississippi which would have 14 judges, and a new eleventh circuit consisting of Louisiana and Texas which would have a total bench of 12 judges; creates a total of 35 new circuit court judgeships distributed as follows: one new judgeship in the first circuit; two in the second circuit; one in the third circuit; three in the fourth circuit; five for the revised fifth circuit; two for the sixth district; one for the seventh circuit; one for the eighth circuit; ten for the ninth circuit; one for the tenth circuit; and six for the new eleventh circuit; contains a "report back" provision which requires the Judicial Council of the Ninth Circuit Court to make recommendations for a solution to the unique problems of that circuit within one year of the date on which the tenth new judge is appointed; authorizes the Administrative Office of the United States Courts to upgrade and reclassify eight employee positions; and amends existing law to require that actions brought against rail or motor carriers on claims for damage or delay to shipments be subject to a minimum jurisdictional amount of $10,000 for each bill in lading, in order to prevent abuse of the Federal judicial process by persons bringing such actions simply as a means of tolling the statute of limitations while settlement negotiations are undertaken. S. 11—Passed Senate May 24, 1977. (VV)

Prisoner exchange with Canada and Mexico.—Provides the statutory framework to implement the treaties with Canada (Ex. H, 95th-1st) and Mexico (Ex. D, 94th-1st) providing for the transfer of prisoners convicted of crimes in a foreign country so that they may serve their sentence of confinement or supervision in their home nation; directs that the transfer and custody of prisoners under this treaty shall be carried out by the Attorney General; requires that any person transferred to or from the United States must appear before a U.S. magistrate or judicial officer to verify that he has willingly and knowingly agreed to be transferred; grants any person who is to appear at a verification proceeding the right to be advised by counsel, and provides for a court appointed council for indigents; makes American citizens returning to this country as prisoners eligible for parole pursuant to U.S. law and regulations; provides that an American citizen returning home under this treaty will not waive his right to bring a writ of habeas corpus in a U.S. court, but when voluntarily transferring he would not gain opportunity to collaterally attack his foreign conviction in a U.S. court; and provides that if an American returning to this country is freed by U.S. courts before his foreign sentence has expired, he may be delivered back to foreign authorities to complete his term. S. 1682—Public Law 95-144, approved October 28, 1977. (VV)

Public safety officers group life insurance.—Establishes a nationwide program of group life insurance for public safety officers that would be under the control of the Law Enforcement Assistance Administration but purchased from one or more life insurance companies, with provision for reinsurance by other underwriters; defines "public safety officer" as any person employed by a State or unit of general local government as a policeman, corrections officer, criminal or juvenile delinquency court officer, or firefighter but excludes from coverage those already eligible under the FEGLI program or participating in the SGLI program; sets the amount of group life and accidental death and dismemberment insurance at the amount of the officer's salary plus $2,000, with a minimum coverage of $10,000 and a maximum of $32,000; terminates a policy 2 months after separation or discontinuance of pay with provision for conversion to an individual policy for the group life portion without medical examination at prevailing rates; provides for a Federal contribution of up to one-third the cost of the premium with the State or local government to contribute the same portion or all of the premium not covered by the Federal Government and any balance due after government contributions to be withheld from the officer's salary; provides that insurance in force on the date of death of an enrolled officer would be paid to the beneficiary designated in writing received in his employer's office prior to his death and, if there is no beneficiary designated, the funds would pass under criteria set out in the bill; provides that a State or unit of general local government with a program of group life insurance in existence at any time during the first year after the effective date of this act would be eligible for Federal assistance of up to one-third the cost of the premium; establishes an Advisory Council on Public Safety Officers Group Life Insurance to review the administration of the program and advise the LEAA on matters of policy; waives sovereign immunity to obviate any civil suit problems; and creates a fund in the Treasury known as the public safety officers' group insurance revolving fund. S. 262—Passed Senate September 16, 1977. (VV)

Sex discrimination on basis of pregnancy.—Amends title VII of the Civil Rights Act of 1964 to make clear that the prohibitions against sex discrimination in the act include discrimination in employment on the basis of pregnancy or pregnancy-related disabilities; provides that these provisions will take effect immediately upon enactment except that, with regard to fringe benefit plans, they are to take effect by July 1, 1980, 180 days after enactment whichever is greater; provides that for a period of 1 year or until the expiration of any applicable collective bargaining agreement, employers may not reduce existing benefits as a means of coming into compliance; and provides that where employees and employers share the cost of presently existing benefits, employers are permitted to apportion the cost of any benefit required as a result of this legislation. S. 995—Passed Senate September 16, 1977. (385)

U.S. magistrates.—Enlarges and amends the current jurisdictional provisions for U.S. magistrates in order to improve access to the Federal courts for the less advantaged;

Allows magistrates to finally determine civil cases, upon the consent of the parties involved; authorizes a magistrate to "conduct any or all proceedings in any jury or nonjury civil matter"; specifies appeal and review procedures available to an aggrieved party in a civil matter decided by a magistrate;

Qualifies the existing discretion of district courts to select and appoint magistrates by: directing the Judicial Conference to promulgate standards for qualification and selection procedures of magistrates; requiring that all subsequent magistrate appointments must conform to these standards; providing that the qualifications of full-time magistrate appointees must also be approved by the judicial council of the circuit before the appointment takes effect; and requiring that all magistrates must have been admitted to practice of law for at least five years; extends statutory prohibitions on outside activities to all full-time and part-time magistrates who exercise the new case-dispositive jurisdiction provided for in the bill; extends the existing provisions for payment of certain litigation expenses for indigents in proceedings before a district judge to proceedings before a magistrate;

Expands jurisdiction of magistrates to try minor criminal offenses to include all misdemeanors; eliminates the requirement for defendant consent to a magistrate conducting the trial in a petty offense case; allows the conduct of jury trials in misdemeanor cases before a magistrate where the court has specifically designated the magistrate to proceed in that manner; permits magistrates to sentence young adults and youthful offenders if the commitment imposed does not exceed the maximum term for an adult convicted of the same offense; provides that the procedural requirements of the Juvenile Delinquency Act do not apply to single petty offense cases in which terms of commitment or imprisonment are not usually imposed; and contains other provisions. S. 1613—Passed Senate July 22, 1977. (VV)

DEFENSE

Coast Guard authorization.—Authorizes $1,262,521,000 for fiscal year 1978 for the Coast Guard for the procurement of vessels and aircraft, construction and improvement of shore and offshore facilities, alteration and removal of obstructive bridges, aids to navigation, pollution abatement, administrative expenses, and operating expenses; authorizes a year-end strength for active duty personnel of 39,145; authorizes an average military student load of 5,506; includes funds for the recent Presidential program of boarding and inspecting oil tankers, reactivation of Coast Guard cutters to be used as back-up vessels in the enforcement of the 200-mile Fishery Conservation Zone, enforcement of the Fishery Conservation and Management Act of 1976, a search and rescue mission capability at the Portage, Mich., Coast Guard station, two additional icebreaking tugs and one large icebreaker, procurement of 2 short-range recovery helicopters for the search and rescue station at Cordova, Alaska, the procurement of radar and other equipment for a continuation of various vessel traffic systems, and the study of oil spill containment in high seas or fast rivers; restores funds which the Coast Guard expended as a result of the unanticipated winter storm damage; adds a new section which permanently authorizes the Coast Guard to continue its present accounting procedure of merging prior year "Operating Expenses" and "Reserve Training" appropriations with current year appropriations for the same purposes; authorizes the Coast Guard to contribute funds to the North Marin County Water District in California for the construction of a sewage treatment plant; authorizes the Coast Guard to accept money from the city of Baltimore, Maryland, for use in replacing Coast Guard facilities which will be removed by the city incident to a road improvement project, re-extends an exemption from Coast Guard inspection for fishing tender and cannery tender vessels in the States of Alaska, Oregon, and Washington and authorizes the commandant of the Coast Guard to assist HEW in providing medical emergency helicopter transportation services to civilians. H.R. 6823—Public Law 95-61, approved July 1, 1977. (VV)

Defense procurement officers.—Amends the Defense Production Act of 1950, as amended, to prohibit employment of any former Federal procurement official, for a 2-year period after leaving the U.S. Government, with any Government contractor over which that official has exercised substantial official authority; exempts individuals who were involuntarily terminated through reductions in force or similar personnel cutbacks and those individuals who left the Government prior to the effective date of this act; gives the Civil Service Commission the authority to coordinate administration of the act; authorize the Commission, upon application of a contractor or former Government procurement official, to issue an advisory opinion, within 30 days, as to the applicability of the act with an interim opinion to be filed within 10 days after receipt of an application; authorizes the Commission to find that proposed compensation or employment would not violate the intent of the act; provides criminal defense to any individual or contractor if the Commission granted a favorable opinion or failed to file a timely advisory opinion; grants the Commission the authority to convene hearings, issue subpenas, and take testimony pursuant to a review of an application for an advisory opinion; authorizes the Commission to review status and enforcement of provisions relating to the conduct of Government employees and recommend additional legislation to the Congress; and makes the act effective October 1, 1979. S. 695—Passed Senate October 11, 1977. (VV)

Defense production extension.—Extends for two years, through fiscal 1979, the titles of the Defense Production Act of 1950, as amended, which contain the sole authority for a number of programs designed to maintain the national defense production base in peacetime, prepare for mobilization, provide a pool of trained manpower for war production management, provide uniform cost accounting standards for negotiated defense contracts, provide for the examination of national policy with regard to material supplies and shortages, and continue the Joint Committee on Defense Production. S. 853—Public Law 95-37, approved June 1, 1977. (VV)

Deputy and Under Secretaries of Defense.—Eliminates one of the two positions of Deputy Secretary of Defense and establishes the position of Under Secretary of Defense for Policy; and changes the title of the Director of Defense Research and Engineering to that of Under Secretary of Defense for Research and Engineering. S. 1372—Public Law 95-140, approved October 21, 1977. (VV)

Medical personnel special pay.—Extends until September 30, 1978, the current authority to provide certain pay for physicians and dentists in the uniformed services as follows: a special pay for physicians and dentists ranging from $100 per month to $350 per month depending on length of service, a variable incentive pay for physicians below the rank of general or admiral who execute active duty agreements not to exceed $13,500 per year for each year of agreed service, and a continuation pay for physicians of the rank of general or admiral and for dentists who execute active duty agreements not to exceed 4 months basic pay; and reinstates the special pay of $100 a month for all optometrists and veterinarians on active duty. S. 1731—Public Law 95-114, approved September 30, 1977. (VV)

Military construction authorization.—Authorizes $3,724,718,000 for construction and other related authority for the military departments, and the Office of the Secretary of Defense within and outside the United States; contains authority for the construction of new projects which will create an estimated 50,000 jobs in the construction industry and to operate and maintain the current inventory of military family housing; contains funds for upgrading the chemical weapons storage sites; contains nearly $200 million for selected projects designed to conserve energy and to control pollution at military installations; encourages the utilization of solar energy where practical and economically feasible for projects authorized by this act; includes $70 million for a test program which will meter energy consumed in individual military family housing units in order to establish, once feasibility is demonstrated and after congressional review, reasonable energy consumption ceilings and to assess occupants for any consumption in excess of the established ceiling; specifies the guidelines which should be included in the program; includes $7.3 million for construction of supoprt facilities for personnel stationed at Diego Garcia; increases from $400,000 to $500,000 DOD authority for new minor construction projects without specific authorization; establishes permanent procedures for accomplishing base realignments at military installations employing more than 500 civilian personnel; makes these procedures applicable to relocating functions and civilian personnel positions if the authorized level of such personnel is to be reduced by 1,000, or 50 percent of the authorized strength, whichever is smaller, except if the reductions result from workload adjustments or other similar causes; requires that DOD notify Congress of any proposed action, comply with the provisions of the National Environmental Policy Act of 1969, submit a detailed justification for any final decision, and defer implementation for 60 days following notification of the final decision; authorizes the Secretary to enter into contracts for periods not to exceed 10 years for the purchase of fuel derived from waste products; provides that commissary surcharge funds may be used to provide new commissaries and renovate existing commissaries anywhere in the world; authorizes $2 million for the construction of visitors facilities for the U.S.S. *Arizona* memorial in Hawaii; and contains other provisions. S. 1474—Public Law 95-82, approved August 1, 1977. (VV)

Military enlistment and reenlistment bonuses.—Amends chapter 5, title 37, U.S.C., to extend for 15 months, from June 30, 1977, to September 30, 1978, present law authorizing the armed services to pay enlistment and reelistment bonuses to selected enlisted personnel who possess a critical skill or to those who enlist for service in a critical skill including the combat arms; and adds a provision whereby a member would forfeit his bonus if he becomes technically unqualified in the skill for which the bonus was paid unless it is the result of an injury, illness, or other impairment which is not a result of his own misconduct. H.R. 583—Public Law 95-57, approved June 29, 1977. (VV)

Military procurement authorizations.—Authorizes a total of $36.1 billion for fiscal year 1978, for procurement of aircraft, missiles, naval vessels, tracked combat vehicles, torpedoes, and other weapons, and research, development test, and evaluation for the Armed Forces; continues funding of submarine-based missiles, land-based ICBM's and manned bombers to maintain the strategic balance with the Soviet Union; increases funds for Naval shipbuilding including several new initiatives; contains funds to improve the deterrent and fighting capabilities of NATO without increasing the commitment of American ground forces; establishes a Naval Shipbuilding Commission to study and report to the President and Congress on current naval policies and procedure together with its recommendations on a more efficient and cost-saving means of procuring vessels; prohibits the use of funds after fiscal 1980 for the development or procurement of any main battle tank, mechanized infantry combat vehicle, armored personnel carrier, armored self-propelled artillery vehicle, or armored self-propelled air defense artillery vehicle which does not possess collective system protection for all occupants against chemical and radiological agents; sets the end-strength for active duty personnel at 2,085,100, the average strength of the Selected Reserve at 868,900, the end strength of civilian personnel at 1,018,600 with authority for the Secretary to exceed the limit by 1¼ percent, and the average military student load at 248,984; sets at $313.20 the monthly pay for a cadet or midshipman; directs the Secretary to expand the job classifications to which female members of the Armed Services may be assigned; authorizes a test educational bonus program for the Selected Reserve and requires quarterly reports to Congress; requires the Secretary to maintain at least one ROTC unit in each State; includes $95,250,000 for programs of the Defense Civil Preparedness Agency; provides that females who become members of the Armed Forces will incur the same 6-year statutory obligation as males; eliminates the requirements for annual inspections of National Guard units and for quadrennial physical examinations for members of the Fleet Reserve and the Fleet Marine Corps Reserve; extends the authority to provide financial assistance of $100 a month to officer candidates under the Marine Corps Platoon Leaders Class program; extends to October 1, 1979, the President's authority to transfer to Israel by sale, credit sale, or guaranty aircraft and equipment to counteract military assistance provided to other countries in the Middle East, and authorizes the Secretary to restock Armed Forces inventories with equivalent aircraft and equipment; requires the Secretary to submit to the Armed Services Committees by October 1 of each year a full accounting of all experiments and studies conducted by DOD in the preceding 12-month period which involved the use of human subjects for testing chemical or biological agents and requires the Secretary to notify the Committees 30 days after final approval and 30 days prior to initiation of plans to conduct such tests; prohibits such experiments involving civilians unless local officials are notified in advance and a period of 30 days has expired; prohibits DOD from increasing the percentage of funds allocated to private research and development contracts pending submission of a study to Congress or March 15, 1978; prohibits the use of funds for advertising the Special Discharge Review Program for certain Vietnam-era individuals; reduces the authorized levels of generals and admirals to 1,073 over a 3-year period beginning fiscal 1978 and provides for a like reduction in the number of civilian personnel grades GS 13-18; requires the Secretary to submit a report with the fiscal 1979 authorization request on the required number of general officers as well as any justification for deferring the proposed reductions; provides for congressional consideration of modifications in U.S. Strategic Arms Programs which the President may recommend to facilitate negotiation or agreement in the Strategic Arms Limitation Talks; requires the Secretary to report to Congress on the proposed sale or transfer of defense articles from active forces, inventories or current production valued at $25 million or more; and provides that retiring military and civilian personnel (of Grade GS-13 or above) in the procurement field may submit written suggestions for methods to improve procurement policy H.R. 5970—Public Law 95-79, approved July 30, 1977. (144)

Military procurement supplemental authorization.—Authorizes $476.4 million in supplemental funds for fiscal year 1978 for procurement of aircraft and missiles at $170.9 million and research and development, test, and evaluation for the Air Force and Defense agencies at $305.5 million which were necessitated by the cancellations of the B-1 bomber and the request for funds for the cruise missile program. S. 1863—Public Law 95-184, approved November 15, 1977. (550)

Military unionization.—Amends chapter 49, title 10, U.S.C., to make it unlawful for a member of the Armed Forces to join a military union or to solicit or maintain membership, knowing the activities or objectives of the organization; makes it unlawful for a labor organization to enroll military members, to solicit or accept dues or fees, to negotiate or bargain with the Government for military members, or to represent military members in grievance proceedings; prohibits any military or civilian official of the Department of Defense from negotiating or bargaining with a purported military union or from authorizing union activities on Government property; and prohibits any individual from bargaining on behalf of military members, from using military property for purposes outlawed elsewhere in the bill, or organizing of carrying out a strike or other concerted action involving military members against the Government. S. 274—Passed Senate September 16, 1977. (388)

DISASTER ASSISTANCE

Disaster relief programs.—Amends the Disaster Relief Act Amendments of 1974 to extend the authorizations for the Federal disaster assistance programs of the Federal Disaster Assistance Administration, which expire on June 30, 1977, through fiscal year 1980. H.R. 6197—Public Law 95-51, approved June 20, 1977. (VV)

Drought emergency authority.—Provides temporary authorities to the Secretary of the Interior to facilitate emergency actions to mitigate the impacts of the 1976-77 drought conditions affecting irrigated lands in the western States; authorizes the Secretary, acting through the Bureau of Reclamation and the Bureau of Indian Affairs, to: (1) study available means to augment, utilize, or conserve Federal reclamation and Indian irrigation projects water supplies and to undertake construction (which must be completed by November 30, 1977), management, and conservation activities to mitigate drought damage, (2) acquire water supplies by purchase from willing sellers and redistribute the water to users based upon priorities he determines, and (3) undertake evaluations and reconnaissance studies of potential facilities to mitigate the effects of a recurrence of a drought emergency and make recommendations to the President and Congress; provides that payment for water acquired from willing sellers be at negotiated prices; directs the Secretary to determine the priority of need in allocating the acquired or developed water; authorizes the Secretary to defer without penalty, the 1977 installment charge payments, including operation and maintenance costs, owed to the U.S. on Federal reclamation projects, with the costs to be added to the end of the repayment period which may be extended if necessary; requires that this program be coordinated, to the extent practicable, with emergency and disaster relief operations conducted by other Federal agencies under existing provisions of law; requires the Secretary to report to Congress by March 1, 1978, on all expenditures made under this act; authorizes the Secretary to make interest-free five year loans to individual irrigators for construction, management and conservation activities or acquisition of water; authorizes $100 million to carry out the water purchase and reallocation (water bank) program of which 15 percent shall be available to carry out other programs authorized by this act; and provides that up to 15 percent of fiscal 1977 funds available to the Secretary for the Emergency Fund Act may be used for non-Federally financed irrigation projects, 5 percent for State Government drought emergency programs, and $10 million for the purchase of water. S. 925—Public Law 95–18, approved April 7, 1977. (54)

Amends Public Law 95–18 to remove constraints on the allocation of funds for drought assistance and permit the use of funds already appropriated for the programs authorized in a more effective and timely manner; and authorizes the Secretary to waive all or any portion of the repayment of loans made if the recipient agrees to undertake a program of water conservation. S. 1935—Public Law 95–107, approved August 17, 1977. (VV)

Drought Emergency Relief.—Authorizes $225 million in grant and loan authority to the Economic Development Administration for assistance to States, Indian tribes or units of local government with a population of 10,000 or more for drought-related projects; includes among the permissible activities for which grants may be made the improvement or expansion of existing water supply facilities, construction of new facilities, well drilling or impoundment where appropriate, transportation of water by pipeline, and purchase of water if it is the most economic method of providing the needed supply; gives the Secretary of Commerce authority to designate areas eligible for assistance; limits grants to 50 percent of the cost of any project and provides that loans shall be at 5 percent interest for not to exceed 40 years and at terms determined by the Secretary; directs the Secretary to consider the relative needs of the applicants giving priority to communities facing the most severe problems; permits obligation of funds for drought impacted projects conducted by eligible applicants during fiscal year 1977 if they are compatible with the purposes of the act; permits funds to be obligated to December 31, 1977, and requires that projects be completed by April 30, 1978; and extends the time allowed for convening the White House Conference on Balanced Growth and Economic Development from 12 to 18 months after the date of enactment of Public Law 94–487. S. 1279—Public Law 95–31, approved May 23, 1977. (VV)

Small business disaster loans.—Authorizes $50 million to the Small Business Administration to make disaster loans to relieve economic injury caused by the 1976–77 drought at a 5 percent rate of interest and up to 30 years; permits SBA to make loans for short term construction projects to improve water conservation practices or to rehabilitate, replace, or augment water supply facilities adversely affected by the drought; makes eligible for such loans farms and businesses in drought-designated areas as determined by the President, Secretary of Agriculture, or the Administrator of SBA; requires that a small business, to be eligible, must demonstrate that it has suffered or is likely to suffer substantial economic injury without the assistance provided under this act; and requires that loan applications must be submitted and approved before October 1, 1978, all assistance funds committed before October 1, 1978, and short term projects completed by November 30, 1978. S. 1306—Passed Senate August 4, 1977. (VV)

Soil erosion prevention.—Authorizes the Secretary of Agriculture to undertake emergency measures for runoff retardation and soil erosion prevention to safeguard lives and property from floods, drought, and erosion whenever fire or any other natural occurrence has caused a sudden impairment of a watershed; authorizes the establishment of an emergency fund in the Treasury for use of the Secretary in carrying out these measures and authorizes therefor such sums as necessary; and makes the bill effective October 1, 1978. S. 1462—Passed Senate August 5, 1977. (VV)

DISTRICT OF COLUMBIA

D.C. Armory Board.—Amends the Home Rule Act to allow the Armory Board of the District of Columbia, which manages Robert F. Kennedy Stadium and the D.C. Armory, to operate under a fiscal year coinciding with the calendar year, rather than the October 1–September 30 fiscal year required of all city government agencies in order to accommodate the special seasonal nature of the revenues earned by the concerns, and changes the filing date for the Board's annual reports from January to July. S. 1062—Public Law 95–185, approved November 15, 1977. (VV)

D.C. bonds.—Amends section 490 of the District of Columbia Self-Government and Governmental Reorganization Act of 1973 to allow the proceeds of revenue bonds which have been sold under acts approved by the Council and the Congress for the benefit of "private" colleges and universities to be remitted to the respective entities for whom the bonds were issued without further legislative action. S. 1063—Public Law 95– , approved 1977. (VV)

D.C. borrowing authority.—Amends the Home Rule Act to extend until October 1, 1979, the District's interim authority to borrow from the U.S. Treasury to finance its capital improvements projects; changes from November 1 to February 1 of each fiscal year the date by which the Mayor must submit to the Council of the District a complete financial statement and report for the preceding fiscal year; and makes procedural and technical changes to the act respecting qualifications for appointment to the Commission on Judicial Disabilities and Tenure, and to the Judicial Nomination Commission. S. 1061—Passed Senate June 13, 1977. (VV)

Contains identical provisions as in S. 1061 and includes a provision which repeals the authority of the District to borrow from the U.S. Treasury with respect to a sewer connection to Dulles International Airport, which project is now complete. H.R. 6530—Public Law 95–131, approved October 13, 1977.

D.C. reciprocal tax collection.—Authorizes any State, territory or possession to bring suit in the Superior Court of the District of Columbia to recover any tax lawfully due and owing to it, if a reciprocal right is accorded to the District by the State, territory or possession. S. 1103—Passed Senate May 26, 1977. (VV)

Federal water and sewer payment.—Allows the District of Columbia to collect the amount of money owing from the Federal Government for water and sewer services in its next fiscal year's budget. S. 1322—Public Law 95–122, approved October 6, 1977. (VV)

ECONOMY-FINANCE

Council on wage and price stability.—Extends the Council on Wage and Price Stability to September 30, 1979, and increases its authorization from $1,700,000 to $2,210,900 for fiscal years 1978 and 1979; directs the Council, in the course of its public hearings, to emphasize the purpose of controlling inflation; indicates that full employment is one of the objectives of the anti-inflation programs; directs the Council to review information about and analyze the effects on the U.S. economy of U.S. participation in international trade and commerce, changing patterns of supplies and prices of commodities in the world market, investment of U.S. capital in foreign countries, short- and long-term weather changes in the world, interest rates, capital formation, and changing patterns of world energy supplies and prices; makes it clear that voluntarily submitted data has the same amount of protection and confidentiality as data submitted pursuant to a subpena or periodic report order; and strengthens the language requiring the Council to maintain the confidentiality of trade secrets and other business information submitted to it. S. 2056—Passed Senate September 21, 1977. (VV)

Extends for two years, through fiscal 1979, the Council on Wage and Price Stability Act of 1974, as amended, which established the Council on Wage and Price Stability to monitor inflationary price and wage movements in the private sector of the economy as well as inflationary activities of the agencies and departments of the Federal Government. H.R. 6951—Public Law 95–121, approved October 6, 1977. (VV)

Employee retirement benefit plans insurance.—Amends the Employee Retirement Income Security Act of 1974 to defer for 18 months, until July 1, 1979, the date by which multiemployer pension plans must pay an annual insurance premium to the Pension Benefit Guaranty Corporation to guarantee retirement benefits in the event that a pension plan terminates with insufficient funds; increases the premium rate payable to the Corporation by plans that are not multiemployer plans from $1.00 to $2.60 per plan participant; and requires the Corporation to report to the Senate Human Resources and Finance Committees and the House Education and Labor Committees by July 1, 1978, on the anticipated financial condition of the termination insurance program, alternatives available to insure proper financing of the multiemployer plan program and proper coverage of the plan, and any recommendations it believes necessary regarding the multiemployer plans. H.R. 9378—Passed House November 1, 1977; Passed Senate amended November 3, 1977. (VV)

European trade.—States the sense of the Senate that the President should: (1) express concern about, and seek negotiations to terminate, the regulations adopted by the Council of European Communities which damage U.S. exports of dried prunes, and other processed fruits and vegetables; (2) seek to accelerate consideration of the U.S. complaint instituted under article XXIII of the General Agreement on Tariffs and Trade should negotiations fail; (3) put the European Communities on notice that the U.S. intends to exercise its rights under the General Agreement on Tariffs and Trade to take retaliatory measures against these restrictive regulations if they are not removed; and (4) seek to obtain agreement from the European Communities that similar restrictive regulations on U.S. exports of other agricultural products will not be imposed in the future. S. Res. 76—Senate agreed to September 16, 1977. (VV)

Export Administration—Arab boycott.—In title I, authorizes $14,033,000 for the extension of the Export Administration Act of 1969, through fiscal year 1979; requires a review of the export control lists, rules, and regulations issued under the Act, to be submitted not later than December 1, 1978; authorizes the Secretary of Defense to recommend his approval of an export license application whenever he determines that the export would be detrimental to U.S. national security; exempts agricultural commodities purchased for export and stored in the United States from subsequent export restrictions if such storage will not have a serious domestic inflationary impact; requires a study of the national security impact of the export of technical information to restricted countries within 6 months of enactment and adds other reporting and notification requirements of the act;

Excludes petroleum products refined in the U.S. foreign trade zones or in Guam from any quantitative limitations imposed for short supply purposes unless the Secretary of Commerce limits such exports; prohibits export of Alaskan oil except (1) for exchanges of crude oil in similar quantity, for convenience or increased efficiency in transportation, with governments of adjacent foreign states, or for oil that is temporarily exported for increased efficiency of transportation across part of an adjacent foreign state and reenters the United States, or (2) where the President publishes and submits to Congress 60 days prior to export an express finding that the export of such oil is in the national interest and in accord with the provisions of the Export Administration Act of 1969; allows a 60-legislative-day period for any such action to be vetoed by either House of Congress prior to any export; provides that any contract for the export of such oil may be terminated any time that U.S. petroleum suppliers are seriously threatened;

Reaffirms Congressional intent that the secrecy provisions of the act do not abridge the inherent right of Congress to acquire information obtained under the act; directs the Secretary of Commerce to undertake a review of unilateral and multilateral export controls and to submit the results to Congress by December 31, 1978; requires that monitoring of exports for short supply purposes commence at a time adequate to insure that sufficient data will be available to permit achievement of the act; increases the penalties applicable to violations of the Export Administration Act and otherwise improve the administration of U.S. export controls;

In title II, seeks to prevent most forms of compliance with foreign boycotts; prohibits refusal to do business with blacklisted firms and boycotted friendly countries pursuant to foreign boycott demands; prohibits discrimination against any U.S. person on the grounds of race, religion, sex, or national origin in order to comply with a foreign boycott; prohibits U.S. persons from furnishing information about any person's race, religion, sex or national origin for foreign boycott enforcement purposes; provides for public disclosure of requests to comply with foreign boycotts; requires domestic U.S. persons who receive such requests to disclose publicly whether they are complying with such requests; provides that these provisions apply to all domestic concerns and persons, including intermediaries in the export process;

Exempts from the antiboycott provisions transactions in which a unilateral and specific selection is made by a boycotting country, or national or resident thereof; allows United States persons residing in a foreign country to comply with the laws of that country with respect to his activities exclusively therein; permits a negative certification with respect to carriers or route of shipment in order to comply with requirements protecting against war risks and confiscation; allows compliance with immigration or visa requirements with respect to the individual and members of his family; permits U.S. persons to comply with requests for information pertaining to securing or maintaining employment in a boycotting country; preempts all State foreign boycott laws; provides a 2-year grace period for agreements in effect on or before March 1, 1977, with three additional 1-year extensions available in cases where good faith efforts are being made; and generally strengthens U.S. law against foreign boycotts to reduce their domestic impact. H.R. 5840—Public Law 95–52, approved June 22, 1977. (140)

Export-Import Bank.—Extends from June 30, 1978, to September 30, 1978, the operating authority of the Export-Import Bank in order to conform to the new fiscal year; requires the Bank to obtain the State Department's advice on whether Bank Credits are consistent with U.S. human rights policy; directs the Bank to cooperate with other U.S. government agencies in international negotiations directed toward mutual reduction of government subsidized export financing; requires a 25-day Congressional review period before the Bank may loan or guarantee any export transaction involving nuclear power, enrichment, reprocessing, research, or heavy water production facilities; prohibits the Bank from approving future financial transactions involving support for exports to a country which the Secretary of State determines has violated International Atomic Energy Agency nuclear safeguards or agreements with the U.S. concerning transfers of nuclear materials or has exploded a nuclear device (except Britain, France, China, and Russia) unless the President determines that it would be in the national interest, and Congress has 25 days to review the transaction; and prohibits the Bank from supporting the export of liquid metal fast breeder nuclear reactors and nuclear fuel reprocessing plants. H.R. 6415—Public Law 95–143, approved October 26, 1977. (VV)

Federal Reserve Banks purchase of U.S. obligations.—Extends, through April 30, 1978, the authority of the Federal Reserve banks to purchase U.S. Government obligations directly from the Treasury up to the amount of $5 billion. H.J. Res. 611—Public Law 95–154, approved November 7, 1977. (VV)

Financial institutions regulatory agencies.—Strengthens the supervisory authority of the Federal banking agencies over financial institutions and their affiliates;

Empowers the regulatory agencies to issue cease-and-desist orders under the Financial Institutions Supervisory Act of 1966 against individuals directly without the necessity for naming the corporate financial institution; authorizes the imposition of civil penalties of up to $1,000 per day against a financial institution or individual for violating a final cease-and-desist order; authorizes the divestiture of a nonbank subsidiary of a bank holding company if the nonbank or noninsured subsidiary constitutes a serious risk to the financial safety, soundness or stability of the subsidiary bank or insured savings and loan association; requires that loans to insiders be aggregated with loans to companies they control and, when aggregated, may not exceed the lending limitations on loans to a single borrower under Federal law in the case of a national bank or applicable State law in the case of State-chartered bank; requires approval by two-thirds of the banks' board of directors for insider loans over $25,000 with substantially the same terms as loans prevailing in the market; authorizes the removal of an officer or director of a financial institution if the individual has demonstrated a willful disregard for the safety or soundness of the institution and provides that an officer or director who has been suspended or removed after a hearing upon an indictment or conviction of a crime involving dishonesty or breach of trust may appeal to the U.S. Court of Appeals;

Prohibits interlocking management and director relationships, with certain specified exceptions, among depository institutions including commercial banks, savings and loan associations, savings banks and trust companies; prohibits interlocking relationships between a depository institution having assets in excess of $1 billion and a depository institution with assets in excess of $500 million; authorizes the Federal Reserve to exempt by rule interlocking management or director relationships among financial institutions where the effect would be procompetitive;

Requires prior approval of the FDIC for a State-insured nonmember bank to establish a foreign branch or invest in a foreign bank; clarifies the authority of the bank regulatory agencies to examine bank service contractors; makes it a crime to forcibly assault or intimidate a financial institutions regulatory official;

Proscribes revolving door employment practices by the heads of the financial institutions regulatory agencies and provides increases in salary for these officials to encourage them to complete their terms of office;

Amends the Federal Credit Union Act to transfer management of the National Credit Union Administration from a single Administrator to a three-member board, appointed by the President with the advice and consent of the Senate, to serve for fixed terms; requires each Federal Credit Union to pay an annual operating fee to the Administration to defray expenses of the Board; requires Federal Credit Unions to make financial reports to the Board at least annually; and

Amends section 5202 of the Revised Statutes to provide for the regulation of standby letters of credit, guarantees, surety agreements and certain acceptances issued by commercial banks. S. 71—Passed Senate August 5, 1977. (VV)

Foreign corporate bribes and domestic disclosure.—Amends the Securities Exchange Act of 1934 to require companies subject to the jurisdiction of the Securities and Exchange Commission to maintain accurate records, prohibit certain bribes, and expand and improve disclosure of ownership of the securities of U.S. companies;

Requires corporate issuers subject to SEC jurisdiction to maintain accounting standards and management control over their assets; makes it a crime for corporations to use the mail or any instrument of interstate commerce to bribe a foreign official for the purpose of obtaining or retaining business; imposes a maximum fine of $1 million on issuers and $10,000 and 5 years imprisonment on officers, directors, employees or stockholders acting on behalf of the issuer for each violation of the criminal prohibitions;

Requires those persons who already file reports with the SEC when they own more than 5 percent of the shares in a U.S. company to identify their residence, citizenship, and the nature of their beneficial ownership; provides for the development of a comprehensive system for gathering and disseminating information about ownership interests in publicly held companies; requires the Commission to consolidate the various beneficial ownership reporting requirements of the Securities Exchange Act into a centralized nonduplicative system for the collection of such information, and to tabulate and make it available to regulators and the public; requires the Commission, within 30 months of enactment, to report to Congress with respect to the effectiveness of the ownership reporting requirements and the desirability and feasibility of reducing or otherwise modifying the 5-percent disclosure threshold giving appropriate consideration to specified regulatory and public policy; and provides the Commission with authority to assure that the jurisdictional effectiveness of section 15(d) of the Securities Exchange Act is not inappropriately limited because of the use of nominee and street name registration of securities. S. 305—Public Law 95- , approved 1977. (VV)

International Trade Commission.—Authorizes $11.5 million to the U.S. International Trade Commission for fiscal year 1978; provides that the President will designate one Commissioner as Chairman and one Commissioner as Vice-Chairman, each to serve for 2-year periods, except that the individual the President designates may not be of the same party affiliation as his predecessor; makes the Chairman responsible for all administrative functions of the Commission subject to disapproval by a majority vote of the Commission; and authorizes the Commission to continue publication of its reports on synthetic organic chemicals until 1981. H.R. 6370—Public Law 95–106, approved August 17, 1977. (VV)

Public debt limit.—Increases the temporary debt limit from $300 billion to $352 billion for the six month period ending March 31, 1978, making a total permanent and temporary debt limit of $752 billion. H.R. 9290—Public Law 95–120, approved October 4, 1977. (502)

Regulation Q.—Extends until December 15, 1978, the authority for various Federal financial regulatory agencies to establish flexible ceilings on rates paid by financial institutions on time and savings deposits (Regulation Q); sets forth clear guidelines for monetary policy and establishes regular oversight hearings focused on the Federal Reserve's plans for the growth of the monetary and credit aggregates during the current year and its expectations for the Nation's economic performance; doubles the number of Reserve bank directors who will represent the public at large; permits the Federal Reserve Board to extend current conflict of interest statutes to Federal Reserve officers and employees; permits the Federal Reserve Board to extend for 3 successive 1-year terms the current 2-year period within which a holding company or bank must divest shares of another bank acquired in the regular course of securing or collecting a debt previously contracted in good faith; and requires Senate confirmation of the Chairman and Vice-Chairman of the Federal Reserve Board. H.R. 9710—Public Law 95–188, approved November 16, 1977. (VV)

Regulation Q—Federal credit unions.—Extends from March 1, 1977, until December 15, 1977, existing authority (commonly known as Regulation Q) under the Interest Rate Control Act by which Federal financial regulatory agencies set interest rate ceilings on deposits in financial institutions under their respective jurisdictions; extends until August 31, 1977, the Treasury Department's authority to borrow funds from the Federal Reserve System;

Modernizes the powers of Federal credit unions under the Federal Credit Union Act in order that they may provide more contemporary financial services to their members; considers demand deposit accounts of state chartered credit unions as member accounts, if they qualify pursuant to state law, thus making them eligible for Federal share insurance; establishes varying self-replenishing lines of credit to member borrowers; removes the distinction between secured and unsecured loans and raises the maximum loan maturities to 12 years (currently 5 years on unsecured loans and 10 years on secured loans); empowers the board of directors to establish their own loan maturity and collateral requirements; removes the $2,500 maximum account for unsecured loans; provides the necessary flexibility to meet members' needs in accordance with the applicant's creditworthiness and the credit union's soundness rather than arbitrary loan ceilings; permits real estate loans with maturities up to 30 years; and includes the following restrictions on such lending authority: (1) loans must be secured by a first lien, (2) loans must be for a one-to-four family dwelling, (3) the dwelling must be the principal residence of the borrower, and (4) the sales price must not exceed 150 percent of the median sales price of residential real property to be determined on a market area basis; allows loans with maturities of up to 15 years for the purchase of mobile homes used as the member's residence, or for the repair, alteration or improvement of a member's residence; permits Federally guaranteed or insured loans, such as the VA guaranteed mobile home loans, with maturities as specified in those statutes; increases the officials' borrowing limit on unsecured loans from $2,500 plus pledged shares to $5,000 plus pledged shares and permits them to guarantee or endorse up to the same amounts without board approval; clarifies the existing provisions regarding the penalty for excess interest and the provision regarding loan amortization; ensures that a member may repay his or her loan prior to maturity with no penalty; authorizes loans to other credit unions and credit union organizations; and contains other provisions. H.R. 3365—Public Law 95–22, approved April 19, 1977. (VV)

Securities and Exchange Commission Authorizations.—Amends the Securities Exchange Act of 1934 to increase the authorization for fiscal year 1977 from $55 million to $56.5 million. S. 1025—Public Law 95–20, approved April 13, 1977. (VV)

Authorizes $63,750,000 for fiscal year 1978 to the Securities and Exchange Commission. H.R. 3722—Public Law 95- , approved 1977. (VV)

Small business amendments—disaster relief loans.—Amends the Small Business Act to authorize a total of $1.4 billion for fiscal 1978 and $1.565 billion for fiscal 1979 for the Small Business Administration; sets levels of $2 billion for the surety bond guarantee program, $4 million for the lease guarantee program, $150 million for pollution lease guarantees, and $171 million for salaries and expenses; places ceilings for the first time on SBA lending programs except for the physical and economic injury disaster loans which are open ended authorizations;

Eliminates SBA's obligation to pay interest on capital appropriations to the Real Estate Lease Guarantee Revolving Fund, the Surety Bond Guarantee Revolving Fund and the Pollution Control Lease Guarantee Revolving Fund; eliminates the authority to invest temporarily idle funds except for fees from the Pollution Control Lease Guarantee Revolving Fund; requires the submission of certain reports to the Senate and House Small Business committees and others to the Senate Select Committee on Small Business, the President of the Senate and the Speaker of the House; requires SBA's annual report to break out the assistance provided to socially and economically disadvantaged individuals; requires SBA to specify the Administration's goals for the next fiscal year with respect to minority small business and to make recommendations to improve such assistance; authorizes SBA to finance residential or commercial construction or rehabilitation for sale but provide that such loans may not be used primarily for land acquisition; authorizes SBA to undertake, for a period of 5 years, a small business concern's obligation to make required payments under a SBA loan if the business would become or remain insolvent without such a suspension; requires the business to repay the amounts that become due during the suspension and authorizes SBA to extend the maturity date of the loan to coincide with the suspension; expands SBA's displaced business loan program by authorizing SBA to make displaced business loans to small concerns suffering substantial economic injury as a result of displacement by a State or local government or public service entity which exercises its right to eminent domain; authorizes SBA economic injury loans, upon the request of the Governor of the State, to small business concerns in an area affected by a natural disaster even if the extent of the disaster was not sufficient for a disaster declaration by the President, Secretary of Agriculture, or Administrator of SBA; authorizes the Administrator, upon certification by a State Governor, to lend up to $100,000 to a small business concern in an impacted area which would otherwise become insolvent because of the magnitude of economic dislocations or natural disasters;

Lowers the interest rate on physical disaster loans from the period July 1, 1976, to October 1, 1978, for the uninsured damaged portion of the principal residence and property from the present rate of 6⅝ percent to the following: 1 percent on the first $10,000 of the loan and 3 percent on the next $30,000 of the loan; reduces to 3 percent on the first $250,000 the interest rate on all loans to other applicants; makes similar reductions in the Farmers Home Administration disaster loan programs; reduces to 3 percent on the first $25,000 the interest rate on economic injury disaster loans; authorizes SBA to increase the principal of a loan by not to exceed $2,000 in order to insulate property which was damaged or destroyed during the period April 1, 1977, to January 1, 1978, whether or not the property was insulated at the time of the damage.

Authorizes SBA to certify a small business company's ability to perform a specific government contract; provides that a contract may not be withheld for any reason without referring the matter to SBA for a determination and that the contract must be awarded if SBA issues a certificate of competency; directs the contracting procurement agency for set-aside contracts in excess of $1 million to reduce the dollar amounts of each contract in excess of that amount in order that SBA may issue a surety bond guarantee; and directs that priority be given to labor surplus areas when awarding small business set-aside contracts. H.R. 692—Public Law 95–89, approved August 4, 1977. (VV)

Small business associate administrator for women's business.—Establishes within the Small Business Administration, a level V position of Associate Administrator for Women's Business Enterprise who shall report directly to the Administrator and be charged with broad policy responsibilities in providing assistance to women within small business concerns to insure that the unique problems of women entrepreneurs are represented at the policy making level and are fully considered in the administration of SBA's varied assistance programs. S. 1526—Passed Senate August 5, 1977. (VV)

Small business development centers.—Establishes a small business development center program within SBA to aid in the growth and development of new and existing small businesses; authorizes SBA to make grants to a State to defray 75 percent of the cost of developing and operating a development center program which will provide smaller concerns with a broad range of advice, information and assistance and to fund 100 percent of the cost of developing and operating regional centers; requires a State, in order to participate, to submit for SBA's approval, a plan containing specified information; creates a Small Business Management and Technical Assistance Division within SBA headed by an Associate Administrator for Management and Technical Assistance; provides for the appointment of a Deputy Associate Administrator whose sole responsibility shall be the administration of the program; creates a 17-member Small

Business Development Center Advisory Board (with 12 of the members to be appointed by the President to serve for staggered 3-year terms) to advise the Deputy Associate Administrator with regard to policies and management of the program; establishes State and regional center advisory boards; authorizes SBA to make grants to universities, public and private organizations, and business concerns to undertake research to identify and solve managerial, economic, and other problems affecting small business; authorizes $8 million for fiscal year 1979 and $15 million annually for fiscal 1980 through 1982 for State and regional center program grants, plus an additional $5 million annually for fiscal 1979 through 1982 to fund research grants; provides that not to exceed 5 percent of the funds authorized may be used for administration expenses; and requires that a complete evaluation of the program be submitted to the Senate and House Small Business Committees not later than 3 years following enactment and annually thereafter S. 972—Passed Senate August 5, 1977. (vv)

Small Business loan ceilings.—Amends the Small Business Act to increase the fiscal year 1977 authorization ceilings for the following SBA financial assistance programs: Business Loan and Investment Fund from $6 billion to $7.4 billion, Economic Opportunity Loans from $450 million to $525 million, and Small Business Investment Company Program Investment Act of 1958 to increase the fiscal year 1977 ceiling on the Surety Bond Guarantee Program from $56.5 million to $110 million. H.R. 2647—Public Law 95-14, approved March 24, 1977. (vv)

Tax and loan accounts—IMF—ESF.—Authorizes the Secretary of Treasury to invest excess operating cash balances, which are now held interest-free in Treasury tax and loan accounts at commercial banks, in either interest-bearing obligations of financial institutions holding such accounts or obligations of the United States and of agencies of United States with such investments in obligations of depository institutions bearing rates of interest prescribed by the Secretary; permits savings and loan associations and credit unions to participate in the tax and loan system which is now limited to commercial banks and mutual savings banks; permits savings and loan associations and credit unions which are Federally or State chartered and Federally or State insured to act as depositories of public money and fiscal agents of the United States; provides that timely deposits of income tax withholding and tax payments in savings and loan associations and credit unions shall be taken as a timely filing and payment of tax; and

Requires Congressional approval before added International Monetary Fund (IMF) gold can be used for the IMF Trust Fund for less developed countries and before any new trust fund may be established which specifically aids a single member or group of IMF members; improves Congressional oversight of U.S. Government activities regarding participation in the international monetary system and U.S. foreign economic policy by directing the President to provide appropriate information to the Congressional committees having jurisdiction over these matters; requires the President to provide Congress with a written determination any time money is used from the Exchange Stabilization Fund for loans in excess of a 6-month period; and repeals the joint resolution of June 5, 1933, which eliminated private ownership of gold. H.R. 5675—Public Law 95-147, approved October 28, 1977. (VV)

White House Conference on Small Business.—States as the sense of the Senate that the President should convene a White House Conference on Small Business to develop recommendations that will increase public awareness of the importance of small business; identify the problems of new, small, and independent business enterprise; and suggest appropriate governmental actions to encourage and maintain the economic interests and potentials of the small business community in order to strengthen the overall economy of the Nation. S. Res. 105—Senate agreed to March 28, 1977. (VV)

EDUCATION

Career education incentives.—Provides Federal financial incentives to States, local educational agencies, and postsecondary educational institutions to develop, implement and strengthen career education programs to ensure that education will be more closely related to the work world and career preferences of individuals; authorizes $50 million for fiscal year 1979, $100 million each for fiscal 1980 and 1981, $50 million for fiscal 1982 and $25 million for fiscal 1983 to State and local educational agencies to implement career education programs in elementary and secondary schools; provides that no funds may be appropriated after 1980 unless appropriations were made for the preceding fiscal year; provides that up to 5 percent of these funds may be reserved for administration at the Federal level and for model programs, up to 0.5 percent for evaluation, and up to 1 percent for career education information; provides for the allocation of funds to the States on the basis of each State's 5- to 18-year-old population with a minimum of $125,000 annually; permits each State, except for minimum allotment States, to use a maximum of 25 percent of funds received in fiscal 1979 for State administration and leadership activities, and a maximum of 15 percent for such purposes during the remaining period of Federal participation, with the balance distributed to local educational agencies; requires States, except minimum allotment States, to employ designated personnel to administer the program; grants minimum allotment States the discretion to utilize Federal funds received as they see fit provided the uses comply with Federal requirements; requires all States to provide increasing percentages of non-Federal funds over the 5-year period; specifies the permissible uses of funds at both the State and local levels; requires each State applying for funds to submit a one-time application, a one-time State plan, and subsequent amendments to the plan as necessary; makes the State Educational Agency the planning administering agency for programs funded under this bill; prohibits States from allocating funds to local educational agencies on the basis of per capita enrollment or through matching of local expenditures on a uniform percentage basis or from denying funds to an agency because it cannot pay the non-Federal share; authorizes $15 million annually over the 5-year period to postsecondary institutions, public agencies, or private nonprofit entities for postsecondary education demonstration projects having national significance or unusual promise in promoting career education at the postsecondary level and provides that no funds may be authorized for postsecondary projects under section 406(f) of the Education Amendments of 1974 in any year in which this provision is unfunded; requires an annual evaluation by the Commissioner of Education to determine those methods best fulfilling the purposes of the act; requires the Commissioner to reserve 1 percent of the appropriation for use in Guam, the Virgin Islands, American Samoa, and the Trust Territory of the Pacific Islands; specifies that career education materials funded under the Act must have special emphasis on overcoming sex bias and stereotyping; requires States to provide for equitable participation by private school children but allows the Commissioner to waive this requirement if a State is prohibited by law from providing for their participation or has substantially failed to do so; and makes the Office of Career Education in the U.S. Office of Education the administering unit at the Federal level. H.R. 7—Public Law 95-207, approved December 13, 1977. (VV)

Education amendments.—Extends for 1 year, through fiscal 1979, programs of Federal aid to elementary and secondary education which include the following titles of the Elementary and Secondary Education Act of 1965: Title I—Financial Assistance to Local Educational Agencies for the Education of Children of Low-Income Families; Title II—School Library Resources, Textbooks, and Other Instructional Materials; Title III—Supplementary Educational Centers and Services, Guidance, Counseling, and Testing; Title IV—Libraries, Learning Resources, Educational Innovation, and Support; Title V—Strengthening State and Local Educational Agencies; Section 807—Dropout Prevention Projects; Section 808—Grants for Demonstration Projects to Improve School Nutrition and Health Services for Children from Low-Income Families; and Section 811—Consumers' Education Programs; and extends through fiscal 1979 the Adult Education Act, Title II of the National Defense Education Act of 1958, and the carryover authority contained in section 412(b) of the General Education Provisions Act. S. 1752—Public Law 95-112, approved September 24, 1977. (VV)

Education of the handicapped.—Extends certain programs under the Education of the Handicapped Act for 5 years, through fiscal year 1982, with authorizations for each of fiscal years 1978 through 1982, respectively, as follows: (1) Part C, Centers and Services to Meet Special Needs of the Handicapped—$76 million, $80 million, $86 million, $89 million, and $93 million; Part D, Training Personnel for the Education of the Handicapped—$77 million, $82 million, $87.5 million, $92.5 million, and $97.5 million; Part E, Research in the Education of the Handicapped—$20 million, $22 million, $24 million, $26 million, and $28 million; Part F, Instructional Media for the Handicapped—$24 million, $25 million, $27 million, $29 million, and $29 million; and provides the authority for the Bureau of Education to support model education projects for all handicapped children under section 641 of the act. H.R. 6692—Public Law 95-49, approved June 17, 1977. (VV)

Grand Canyon National Park School Aid.—Authorizes the Secretary of the Treasury to establish a special fund to hold a portion of the annual concessionaires' fees from the Grand Canyon National Park; and authorizes the Secretary of the Interior to draw from that fund for the purpose of providing educational services to dependents of persons working in the Grand Canyon National Park. S. 2076—Passed Senate September 9, 1977. (VV)

Higher Education—Trust Territory of the Pacific.—Amends the Higher Education Act of 1965 to include the Trust Territory of the Pacific in the definition of "State" for the purpose of participating in programs under the act. H.R. 9512—Public Law 95-180, approved November 15, 1977. (VV)

Higher Educational Technical Amendments.—Makes technical and miscellaneous changes to the higher education provisions contained in the Education Amendments of 1976 (Public Law 94-482). H.R. 6774—Public Law 95-43, approved June 15, 1977. (VV)

Vocational Education Amendments.—Makes a number of technical amendments to title II of the Education Amendments of 1976, Public Law 94-482, dealing with printing and clerical errors and changing certain reporting dates; removes the $25 million a year limit for State administrative expenses and authorizes funds under the basic State grant for this purpose with the requirement that States match Federal funds used; requires States to set forth in their State plan the amount of Federal funds it plans to retain at the State level for administration; and gives each local recipient the option of using a percentage of Federal funds which is equal to the percentage of Federal funds in their vocational education program or to use any amount of Federal funds as long as they are matched by States appropriated funds for administrative expenses. H.R. 3437—Public Law 95-40, approved June 3, 1977. (VV)

ELECTIONS

Campaign Act amendments.—Amends the Federal Election Campaign Act of 1971 to substantially reduce the number of reports required to be filed with the Federal Election Commission; raises the threshold above which detailed information with respect to contributions and expenditures must be reported from $100 to $250 and, with respect to independent expenditures, from $100 to $250; makes changes in the law to strengthen the role of political parties in future elections; contains language to encourage a candidate to support his political party's Presidential candidate by providing that the costs of listing or mentioning the name of any Presidential nominee by any other candidate in his campaign material will not be considered as a contribution in-kind prohibited by the act; permits the transfer of excess campaign funds to a political party committee without limitation; contains provisions to improve the act in regard to political action committees; and contains several administrative provisions to facilitate more expeditious handling of complaints; authorizes $250,000 in fiscal year 1978 to reimburse States for the additional costs of receiving and preserving Federal campaign reports; and changes the statute of limitations from 3 years to 5 years with regard to violations of Campaign Act. S. 926—Passed Senate August 3, 1977. (331)

Federal Election Commission authorization.—Authorizes $7,811,500 for activities of the Federal Election Commission for fiscal year 1978. S. 1435—Public Law 95-127, approved October 12, 1977. (VV)

Overseas citizens voting rights.—Amends the Overseas Citizens Voting Rights Act of 1975 and the Federal Voting Assistance Act of 1955 to improve the administration and operation of these laws; vests the authority and responsibility for collecting and disseminating absentee voting information to citizens overseas in the President's designee (currently the Secretary of Defense) under the Federal Voting Rights Assistance Act; authorizes utilization of the same ballot application and free airmail postage provisions presently contained in the Federal Voting Assistance Act for all citizens residing overseas; provides the designee with the authority to revise the absentee registration and ballot application forms currently recommended for use by military personnel and civilians temporarily residing abroad and to develop a single form which could also be used by citizens covered by the Overseas Voting Act; provides that any balloting material sent from the United States to persons covered by either act or returned by them to this country shall be sent by priority airmail or by the most expeditious postal service available; directs the designee to publicize and notify appropriate citizens and State election officials of the availability of free postage and the expedited mail delivery of balloting material; and provides that the exercise of the right to register or vote in Federal elections by citizens residing overseas shall not affect the determination of his place of residence or domicile for the purpose of any tax imposed under Federal, State, or local law. S. 703—Passed Senate May 9, 1977. (VV)

EMPLOYMENT

Age discrimination in employment.—Raises the upper age limit of the Age Discrimination in Employment Act from 65 to 70, effective January 1, 1979; prohibits the application of a mandatory retirement age of less than 70 which is contained in a seniority system or an employee benefit plan; requires the secretary to conduct a study on the effects of raising the Act's upper age limit to 70, and the feasibility of raising the Act's upper age limitation above 70 or reducing the current lower age limitation of 40; permits the compulsory retirement of management or highly compensated employees at the age of 65 or above if they will receive an employer-provided annual retirement benefit of at least $20,000 exclusive of social security; permits colleges and universities to maintain compulsory retirement policies for faculty at age 65 or above with unlimited tenure; provides that the effective date of the prohibition against mandatory retirement between the ages of 65 and 70 if such policies are contained in collective bargaining agreements which are in effect on September 1, 1977, shall be delayed until the termination of the contract or January 1, 1980, whichever occurs first; makes clear that where a bona fide occupational age qualification has been established, an employer may lawfully require mandatory retirement at that specified age; recreates the Advisory Committee on Sheltered Workshops to the Department of Labor; guarantees the availability of jury trials in private actions brought under the Act; and places a 2-year limitation on the period during which the statute of limitations could be waived by the Administrative actions of the Department of Labor. H.R. 5383—Passed House September 23, 1977; Passed Senate amended October 19, 1977; In conference. (567)

CETA.—Extends the authorization of sums as may be necessary for all titles of the Comprehensive Employment and Training Act (CETA) through fiscal year 1978; extends the amendments to title VI made by the Emergency Jobs Programs Extension Act of 1976, which provide that each prime sponsor of a public service employment program may use its allocation, first, to sustain its existing number of public service job holders under the Act, and shall thereafter fill any additional public service jobs with low-income persons unemployed for at least 15 weeks who have been receiving or are eligible for unemployment compensation, and also provide that 50 percent of title VI job vacancies due to attrition must meet those eligibility requirements, but the remaining 50 percent may be filled under the original title VI requirements (15 days unemployment in areas having 7 percent or higher unemployment rates, and 30 days unemployment in other areas). H.R. 2992—Public Law 95-44, approved June 15, 1977. (VV)

Emergency unemployment compensation.—Extends the Emergency Unemployment Compensation Act to October 31, 1977, to provide a maximum of 13 weeks of emergency benefits (which combine with the 26 weeks of regular and 13 weeks of extended benefits for a total of 52 weeks of unemployment benefits) in States where the insured unemployment rate is 5 percent or more, with a phase-out under which individuals eligible before October 31, 1977, may continue to receive benefits until January 31, 1978; extends until April 30, 1977, the maximum 26 week program now in effect (which combine with 26 weeks of regular and 13 weeks of extended benefits for a total of 65 weeks of unemployment benefits) in order to avoid terminating benefits for certain participants in that program; provides that the cost of emergency unemployment compensation paid after March 31, 1977, be met from nonrepayable general revenues without the present law requirements that the costs ultimately be met from Federal Unemployment Tax;

Provides that, in addition to any eligibility requirements of State law, an individual would be disqualified from receiving emergency benefits for failing to (1) actively seek work, (2) apply for any suitable work which was referred by the State agency, or (3) accept any offer of suitable work; defines suitable work as that which (1) is within the capabilities of the claimant, (2) meets conditions of present Federal law, (3) meets the conditions of State law and practices pertaining to suitable or specific disqualifying work such as unreasonable travel distance or threat to morals, health, or safety, (4) pays wages equal to Federal or State minimum wage, (5) pays gross average weekly remuneration equal to the individual's weekly unemployment benefits plus any Supplemental Unemployment benefits he might be entitled to, and (6) was listed with the State employment service or offered in writing; allows a State to waive these requirements if an individual furnishes satisfactory evidence that prospects for obtaining work within a reasonable period of time in his or her occupation are good;

Establishes new statutory authority and procedures for the treatment of fraud and erroneous payments; disqualifies applicants submitting false or erroneous information; requires States with certain exceptions, to recover any overpayments made to individuals; makes fraud in connection with the program a Federal crime and imposes a fine of up to $10,000 and imprisonment of up to 5 years;

Provides for State implementation of changes made by this act; requires each State to enter into a modification if its present agreement within 3 weeks after the Secretary of Labor proposes the modification to the State; provides that if modification is not entered into, the Unemployment Compensation Program in that State would expire within the last week which ends on or before March 31, 1977; permits Kentucky, which does not have a scheduled meeting of its legislature during 1977, to defer until 1979 compliance with certain requirements of the act;

Simplifies administration by terminating an individual's entitlement to emergency benefits two years after the end of the benefit year for which regular benefits were payable; extends for two years, through 1979, the moratorium under which the Federal unemployment tax is automatically increased to recapture any loan to a State which is unpaid after 2 years; prohibits benefits to an individual who was illegally working at the time he earned his eligibility; allows States to deny unemployment compensation to teachers during brief mid-year vacation periods if the teacher was employed by the school system immediately before the start of the vacation and has reasonable assurance of the employment continuing at the conclusion of the vacation; makes clear that groups of local governments are to be provided the same options for financing unemployment compensation as those provided to single government units; extends from September 30, 1979, to March 31, 1980, the provision contained in Public Law 94-566 which requires States to reduce the unemployment benefits of an individual by the amount of any public or private pension including social security and railroad retirement annuities in order to conform this enactment date with the final reporting extension granted the National Commission of Unemployment Compensation; extends the time by which the National Commission on Unemployment Compensation must submit its interim report from March 31, 1978, to September 30, 1978, and the time by which it must submit its final report from January 1, 1979, to July 1, 1979; and amends present law to require an affirmative vote of the Senate and the House to make effective the President's quadrennial recommendations regarding the salary increases of Members of Congress, the Federal judiciary, Cabinet officials and other top Federal personnel. H.R. 4800—Public Law 95-19, approved April 12, 1977. (82)

Public works employment.—Authorizes an additional $4 billion to extend the program of grants to State and local governments to provide jobs through construction in places with the most distressing levels of unemployment as originally authorized under Title I of the Public Works Employment Act of 1976; provides that 65 percent of the funds be allotted on total numbers of unemployed and 35 percent on the basis of the relative severity of unemployment, with States' participation in the 35 percent allocation only if their unemployment rates exceed 6.5 percent for the most recent 12 month period; provides that no State shall receive less than three-fourths of 1 percent nor more than 12.5 percent; requires that within a State 70 percent or more of the funds be spent in areas with rates of unemployment above the national average and 30 percent for areas with rates below the national average but above 6.5 percent; provides a $70 million set aside for grants that were not received, considered or rejected solely because of an error by a U.S. employee or officer; contains a 2½ percent set-aside for Indian and Alaskan Natives projects to insure a substantial fund for such projects while permitting high-unemployment non-Indian communities a competitive chance to be awarded projects in States with Indian communities; includes the transportation of water to drought-stricken areas within the term "public works project" and permits an applicant who received a grant to substitute one or more projects for the project for which the grant was made under certain conditions approved by the Administrator; requires that all articles, materials and supplies used in a project be produced and made from substances mined or produced in the U.S. except in certain cases; requires a grant applicant to expend 10 percent of the funds for minority business enterprises if available within project areas; requires that priority and preference be given to pending applications resulting in energy conservation; repeals the provision permitting the Secretary to consider the unemployment rate in adjoining areas from which the labor force for a project may be drawn; ensures that all laborers and mechanics employed on projects are paid the prevailing wage rate under the Davis-Bacon Act; requires the Secretary to consider only those applications for grants submitted on or after December 23, 1976, and before the date of enactment except for applications from the Trust Territory of the Pacific, Indian tribes and Alaska Native Villages or any applicant if a sufficient number of applications were not received; requires the Secretary of Commerce to study public works investment in the U.S. and report his findings to Congress within 18 months of enactment; requires the promulgation of regulations assuring special consideration to the employment of qualified disabled and Vietnam-era veterans;

Mandates, in Title II, the obligation of funds for water resource projects for fiscal 1977 (with the exception of the Meramec Dam in Missouri) and states congressional intent not to uphold any prospective budget rescissions or deferrals regarding these projects; provides that the rates of interest or discount used to access the return on Federal investment in projects carried out by the U.S. Army Corps of Engineers or the Department of Interior Bureau of Reclamation be those established by the Water Resources Development Act of 1974 or by prior law authorizing such projects. H.R. 11—Public Law 95-28, approved May 13, 1977. (48,126)

Youth employment and training.—Adds a new youth employment title VIII to the Comprehensive Employment and Training Act of 1973 (CETA), as recommended by the President as part of his economic recovery package, and authorizes such sums as may be necessary to carry out the new title over a 3-year period; creates, in title I, a National Young Adult Conservation Corps to provide work for unemployed youths in the Nation's public lands and water; establishes, in title II, a variety of employment, training, and demonstration programs to explore methods of dealing with the structural unemployment problems of the Nation's youth; authorizes the establishment of youth incentive entitlement pilot projects for economically disadvantaged youth to provide part-time employment and/or training for youths between the ages of 16 and 19 who resume or maintain attendance in secondary school for the purpose of acquiring a high school diploma or its equivalent; authorizes the establishment of youth community conservation and improvements projects to put unemployed youths to work for a period not to exceed 12 months on the rehabilitation or improvement of public facilities, neighborhood improvements, weatherization and basic repairs to low-income housing, and conservation, maintenance, or restoration of natural resources on non-Federal public lands; and authorizes support for employment and training programs designed to enhance job prospects and career opportunities for young persons, including activities involving useful work experience opportunities in community betterment and appropriate training and services such as outreach, counseling, occupational information, institutional and on-the-job training, and transportation assistance;

Specifies the wage rates to which employed youths are entitled; prohibits full time employment to youths who have not attained the compulsory school attendance age; permits full time employment when school is not in session; requires the Secretary of Labor to submit a report to the Congress on the progress of the programs by March 15, 1978; disregards a youth's earnings in determining the family's eligibility to participate in Federal or Federally-assisted welfare programs;

Requires the Secretary of Labor to take steps to increase CETA participation by disabled veterans and Vietnam-era veterans under 35 years of age; and provides that, in filling teaching positions in public schools with financial assistance under CETA title II (public service employment in high unemployment areas) or title VI (Job Corps), each prime sponsor shall give special consideration to unemployed persons with previous teaching experience who are certified by the State and who are otherwise eligible under CETA. H.R. 6138—Public Law 95-93, approved August 5, 1977. (170)

ENERGY

Alaska pipeline (ALCON).—Approves the President's decision on an Alaska natural gas transportation system submitted to the Congress on September 22, 1977, which authorizes private construction of a natural gas pipeline through Canada, and finds that any environmental impact statements prepared relative to the system and submitted with the President's decision are in compliance with the National Environmental Policy Act of 1969. H.J. Res. 621—Public Law 95-158, approved November 8, 1977. (VV)

Alaska pipeline destruction.—Amends title 18, U.S.C., to make a Federal crime the willful distruction or attempt to destroy the Trans-Alaska pipeline system with a fine of not more $15,000 and/or 15 years imprisonment. S. 1496—Passed Senate July 18, 1977. (VV)

Coal conversion.—Prohibits certain new electric power plants and major fuel burning installations (MFBI's) capable of a fuel heat rate input of at least 100 million Btu's per hour or an aggregation of units which together are capable of a fuel heat rate input of 250 Btu's per hour from using natural gas or petroleum as their primary energy source except for fuel required for startup testing, flame stabilization, feedstock uses and direct-fire uses;

Requires existing electric powerplants and MFBI's capable of using coal or other fuels with fuel heat input rates of at least 100 million Btu's per hour, or an aggregation of coal capable units of fuel heat input rates exceeding 250 million Btu's per hour, or units which cannot use coal capable of fuel heat input rates of at least 250 Btu's per hour to cease using natural gas as their primary energy source after January 1, 1990, and not to increase the proportional use of natural gas before that date; exempts existing powerplants and MFBI's with fuel rates of less than 300 Btu's from the petroleum provisions;

Provides that any existing facility which uses coal after April 19, 1977, may not increase its use of petroleum unless the appropriate State certifies that such an increase is necessary for compliance to the Clean Air Act; authorizes the Administrator to order existing powerplants and MFBI's capable of using combinations of coal or other fuels with natural gas or petroleum, to use minimal amounts of natural gas or petroleum; prohibits plants using petroleum as the primary energy source as of April 20, 1977, from converting to natural gas; extends coal conversion provisions of the Energy Supply and Environment Coordination Act of 1974 which allows the Administrator to order coal conversions by facilities capable of using coal prior to 1990;

Provides temporary exceptions of up to 5 years to facilities: (1) if coal or fuels other than gas or petroleum are not available; (2) if adequate coal or other fuel transportation facilities are not available; (3) if necessary air pollution equipment and facilities are not available; (4) where the use of natural gas is necessary to achieve or maintain an ambient air quality standard; or (5) if existing plants need additional time to employ synthetic fuels or innovative technologies;

Provides permanent exemptions from the petroleum provisions to facilities: (1) if coal and fuels other than natural gas or petroleum are not available; (2) if the cost of using coal or other fuels substantially exceeds the cost of using oil; (3) if physical, environmental, or legal factors preclude compliance; (4) if the facility is constructed for only standby emergency operation; (5) if a cogeneration facility cannot obtain economic and other benefits if coal or other fuels are used; or (6) if such an exemption would be in the public interest;

Provides that new electric peakload powerplants are to be granted permanent exemptions from petroleum prohibitions if the facility will be operated for peakload purposes only, and from natural gas prohibition in any area where a national ambient air quality standard has not or will not be attained; allows intermediate-load powerplants to be exempted from the petroleum prohibitions if constructed in nonattainment areas, if greater than 36-percent efficient, and if convertible to coal derived fuels when available; mandates that permanent exemptions from petroleum prohibitions are to be granted to MFBI's if satisfactory product quality control would be jeopardized or product requirements cannot be met by the use of coal or fuels other than gas and petroleum; requires applicants seeking permanent exemptions for new electric powerplants to consider alternate sites where coal and other fuels could be used or the possibility of purchasing electric power instead of using petroleum;

Requires existing powerplants and MFBI's to file annual compliance reports beginning January 1, 1980; allows electric utility systems using intrastate gas to submit a system compliance report rather than individual reports; empowers the Administrator to compensate any existing facility which in the absence of such compensation would otherwise be entitled to a permanent exemption; authorizes the Administrator to make direct loans and loan guarantees to facilities for air pollution control devices necessitated by coal conversion;

Provides that a facility prevented from using natural gas under contract may sell its rights at a price to be determined, but to include an amount to compensate the company which transports the gas; contains provisions which allow facilities to use natural gas or petroleum in emergency situations; authorizes assistance for additional public facilities and services in regions impacted by coal production expansion and to report thereon to the Congress; requires the Administrator to monitor coal prices and to report thereon to the Congress; authorizes $100 million for rehabilitation of minor and branch railroad lines which transport coal and coal products; and

Suspends the duty on imports of competition bobsleds and luges. H.R. 5146—Passed House July 18, 1977; Passed Senate amended September 8, 1977; In conference. (356)

Deepwater ports.—Extends through fiscal year 1980 the annual $2.5 million authorization under the Deepwater Port Act of 1974 which established a licensing and regulatory program governing offshore deepwater port development beyond the territorial limits of the United States. S. 891 (identical to H.R. 6401)—Passed Senate May 17, 1977. H.R. 6401—Public Law 95-36, approved June 1, 1977. (VV)

Department of Energy.—Creates a cabinet-level Department of Energy (DOE) to permit coherent administration of the national energy policy with a Secretary, one Deputy Secretary, one Under Secretary (with responsibility for energy conservation), and eight Assistant Secretaries; establishes within the Department (1) the Energy Information Administration to gather, analyze and distribute energy data and to implement a system of mandatory reporting by major energy-producing firms of information related to the economics of energy supply; (2) the Economic Regulatory Administration to administer regulatory functions which the Secretary deems appropriate and which do not fall exclusively within the jurisdiction of the Federal Energy Regulatory Commission; (3) an Office of Inspector General to promote efficiency and prevent fraud and abuse within DOE; (4) the Office of Energy Research; and (5) the Leasing Liaison Committee, composed of an equal number of members from the DOE and the Department of Interior, to provide for cooperation and consultation between the two Departments; provides that the GAO shall audit DOE;

Transfer of functions.—Transfers to and vests in the Secretary all functions of the Federal Energy Administration, the Energy Research and Development Administration, and the Federal Power Commission, except those functions transferred to the Federal Energy Regulatory Commission; four Regional Power Marketing administrations and the power-marketing functions of the Bureau of Reclamation currently under the Department of Interior; authority under the Outer Continental Shelf Lands Act, Mineral Lands Leasing Act, Mineral Leasing Act for Acquired Lands, Geothermal Steam Act of 1970 and the Energy Policy and Conservation Act related to the leasing of energy resources onshore and offshore; functions relating to fuel supply and demand analysis currently under the Bureau of Mines; authority for development and promulgation of new building conservation standards now vested in the Secretary of HUD; Commerce Department programs to promote voluntary industrial energy conservation; jurisdiction over three naval oil reserves and three naval oil shale reserves currently administered by the Department of Defense; authority currently vested in the Interstate Commerce Commission related to the transportation of oil by pipelines; and authority to publish guidelines for the Rural Electrification Administration on the issuance of loans or loan guarantees for generation and transmission facilities;

Retains the responsibility for promulgation of automobile efficiency standards within the Department of Transportation, but requires the Secretary of Transportation to give the Energy Secretary 10 days in which to provide written comment on any standard prior to its implementation; leaves responsibility for policing clean air standards with the Environmental Protection Agency; continues responsibility for actual leasing of resources for the extraction of energy sources from public land in Interior, but places control over all economic terms and conditions of such leases in DOE; provides that nothing in the transfer of Federal leasing functions from Interior to DOE shall be construed as affecting Indian lands and resources or as transferring the responsibility of the Secretary of Interior concerning such lands and resources; requires cabinet-level departments and agencies with conservation responsibilities to designate a principal conservation officer within their Department; provides that the responsibility for the promotion of vanpooling and carpooling shall be transferred to the Secretary of Transportation;

Federal Energy Regulatory Commission.—Creates within the Department, independent of the Secretary's control, a five-member Federal Energy Regulatory Board, with its members appointed by the President, subject to Senate confirmation; prohibits members from engaging in any other business while serving on the Commission; provides that the Commission shall have sole jurisdiction over the establishment and enforcement of rates and charges for the transmission and sale of electricity and natural gas, and authority to license hydroelectric power plants; provides that either the Secretary or the Commission may propose a rule pertaining to functions within the exclusive jurisdiction of the Commission and that the Secretary can set reasonable time limits for completion of a rulemaking proceeding before the Commission; provides that the Secretary shall have jurisdiction over the import and export of natural gas and electricity, emergency interconnections and curtailment priorities;

Provides that the Secretary shall have sole power to propose oil pricing actions, and that all such proposals must be referred immediately to the Commission which has sole power to make such final decisions on the proposal; provides that the Commission can either agree to an oil pricing proposal (in which case the Secretary may issue the rule), amend the proposal (in which case the Secretary may accept the changes and issue the final rule or reject the changes and not issue the rule), or reject the proposal (in which case the Secretary may not issue the rule); provides that during an energy crisis the President may grant the Secretary temporary exclusive pricing authority;

Miscellaneous.—Contains general administrative and procedural provisions governing rulemaking and other proceedings of the Department, and other provisions to eliminate or minimize conflicts of interest within the Department; requires the President to submit a proposed national energy policy plan by April 1, 1979, to be updated biennially thereafter; provides that the act shall become effective 120 days after the Secretary assumes office, or earlier as the President may prescribe; and requires the President to submit to the Congress a comprehensive review of each program in the Department by January 15, 1982, for Congressional review with respect to authorizing legislation for fiscal year 1983. S. 826—Public Law 95-91, approved August 4, 1977. (148,323)

ERDA nonnuclear authorization—Civilian, 1977.—Authorizes a total of $4,946,261,000 for the Energy Research and Development Administration for fiscal year 1977, of which $1,175,671,000 is designated for nonnuclear scientific research and programs, and $3,770,590,000 is designated for non-weapon nuclear scientific research programs; includes: $461,801,000 for fossil energy; $286.2 million for solar energy; $65.7 million for geothermal energy; $221 million for conservation research and development; $10 million for a high Btu pipeline gas demonstration plant; $5 million for a fuel gas low Btu demonstration plant; and $10 million for solar energy projects; authorizes funds for numerous plans to make improvements to comply with safety regulations; contains authorizations for capital equipment not related to construction to replace obsolete or worn-out equipment and to purchase certain new equipment to meet the needs of expanding programs and new technology at ERDA installations; provides an additional $50 million for the clean boiler fuel demonstration plant authorized by Public Law 94-187 and $15 million for the 5 megawatt solar thermal test facility authorized by Public Law 94-187; provides guidelines under which funds for fossil energy programs may be utilized; deauthorizes authorized fossil energy projects which were not appropriated within 3 full fiscal years; allows the Administrator to assist in the demonstration of the production of synthesis gas, methane, methanol, anhydrous ammonia, and similar energy intensive products from municipal waste by entering into agreements with units of local government or persons proposing to construct facilities for the manufacture of such products; provides authority by which ERDA may reprogram funds between major program areas; directs ERDA to relate the funds authorized and appropriated in annual authorization and appropriation measures to the objectives and goals of the various enabling legislation under which the Agency operates; amends the Federal Nonnuclear Energy Research and Development Act of 1974 to transfer responsibility for preparation of demonstration project water assessments from ERDA to the Water Resources Council; requires the Administration to classify the recipients of ERDA contracts into various categories including: Federal agency, non-Federal governmental entity, profitmaking enterprise, non-profit enterprise, and nonprofit education institution; authorizes the establishment of a small grants program to promote the research, development, and demonstration of energy related systems and technologies appropriate to the needs of local communities; requires the Administrator, in consultation with EPA, to report to the Congress on the environmental monitoring, assessment and control efforts related to its various energy demonstration projects;

Authorizes $464,302,000 for work in biomedical and environmental research, operational safety, environmental control technology, the materials sciences, and molecular mathematical and geosciences portion of the basic energy sciences program and program support; provides $26.7 million for plant and capital equipment obligations including construction, acquisition, or modification of facilities, land acquisition and acquisition and fabrication of capital equipment not related to construction; prohibits ERDA from starting projects if the current estimated cost exceeds the original estimated cost by more than 25 percent;

Authorizes ERDA to transfer sums from its "Operating Expenses" to other agencies for work for which the moneys were appropriated; authorizes "Operating Expenses" and "Plant and Capital Equipment" as no year funds; authorizes any Government-owned contractor operated laboratory, energy research center or other laboratory performing functions under contract to ERDA to use a reasonable portion of its operating budget for funding employee suggested research projects up to the pilot plant state of development; permits ERDA to contract for advanced architect/Administrator services for construction projects essential to meet the needs of national defense or the protection of life, property, health or safety prior to congressional authorization; requires any officer or employee of ERDA in a policy making position to report certain known financial interests in various energy technologies and related resources; directs the Administrator to develop regulations that would avoid conflicts of interest in ERDA contracts with private persons or organizations involved in energy research and development; and authorizes the establishment of a National Energy Extension Service. S. 36—Public Law 95-39, approved June 3, 1977. (VV)

ERDA nonnuclear authorization—Civilian, 1978.—Authorizes a total of $2,496,762,000 for fiscal year 1978 for ERDA non-nuclear related programs and certain support activities for both nuclear and non-nuclear programs; provides $977.15 million for the fossil energy development program to direct research of extraction, utilization, and conversion of coal, oil and natural gas, and oil shale and in-site coal gasification (of which $88 million is for research in magnetothermodynamics); $131.8 million for the geothermal energy development program; $384 million for solar energy development programs (of which $7.5 million is earmarked for design works for small community applications); $372.8 million for energy conservation research and development programs to develop and demonstrate technologies for end-use conservation and conversion efficiency; $249.9 million for the environmental research and development program to assure that environmental, health and safety standards are maintained as new energy technologies are introduced; and $379.4 million for general program management and support. S. 1340—Passed Senate June 13, 1977; Passed House amended December 7, 1977. (195)

ERDA nuclear authorization—Joint applications.—Authorizes $392,050,000 for fiscal year 1978 for operating expenses and plant and capital equipment for three ERDA military programs (laser fusion, space applications and naval reactors) which have potential for civilian energy applications. S. 1341—Passed Senate June 29, 1977. *Note:* (Provisions are contained in S. 1339, Public Law 95-183.)

ERDA nuclear authorization—Military.—Authorizes appropriations of the funds appropriated by Public Law 94-344 for the Energy Research and Development Administration (ERDA) for fiscal year 1977 national security programs and authorizes a total of $2,607,100,000 for fiscal year 1978; includes funding of the national defense programs; $116.2 million in operating expenses for the laser fusion program, $211.7 million for the naval reactor program, and $40.8 million for program management and support items attributed to national security; prohibits the start of any new construction project if the current estimated cost exceeds the amount authorized by more than 25 percent unless reauthorized by Congress; provides authority to merge funds appropriated in different years for the same requirement category; directs that funds appropriated pursuant to this act remain available until expended; authorizes the use of funds when necessary in connection with all ERDA national security programs; authorizes ERDA to proceed to design any national security project subject to the total amount authorized for the activity; authorizes ERDA to retain monies received from outside sources and use them for operating funds; and authorizes ERDA to transfer funds to other agencies supporting its programs. S. 1339—Public Law 95-183, approved November 15, 1977. (VV)

ERDA nuclear/nonnuclear authorization—Civilian.—Authorizes a total of $6,161,445,000 for civilian energy research and development and plant and capital equipment for the Energy Research and Development Administration for fiscal year 1978; includes $636.6 million for R. & D. in fossil energy, $344.9 million for solar energy, $124.5 million for geothermal energy, and $228.8 million for nuclear research; includes $80 million for the Clinch River Breeder Reactor with the stipulation that funds not be used to terminate or plan to terminate the project; authorizes a program whereby the Administrator may guarantee loans for the conversion of biomass into desirable forms of energy including synthetic fuels with the outstanding indebtedness not to exceed $300 million at any one time and a loan guarantee program for the demonstration of technologies to produce alternative fuels from coal, oil shale and other domestic resources; prohibits the use of funds to return any foreign spent nuclear fuel to the United States except in an emergency with Congress given the opportunity to disapprove the return; changes the basis for government charge for uranium enrichment services to prevent unreasonable increases in the price of uranium; and contains other provisions. S. 1811—Vetoed November 5, 1977. (VV)

ERDA synthetic fuel loan guarantee program.—Amends the Federal Nonnuclear Energy Research and Development Act of 1974 to establish a loan guarantee program to be administered by the Energy Research and Development Administration (ERDA) whereby the Administrator may guarantee the payment of interest and principal of bonds, debentures, notes, and other obligations issued for the purpose of financing the construction and initial operation of commercial-sized demonstration facilities for the conversion of biomass into synthetic fuel or other usable forms of energy; authorizes guarantees of up to 75 percent of the total project cost and, during the construction and start up period, up to 90 percent; limits the total outstanding indebtedness that may be guaranteed at any one time to $300 million; requires ERDA, before approving an application, to notify the appropriate State and local governmental officials and to give the Governor of the State an opportunity to make his recommendation respecting the facility; prohibits ERDA from guaranteeing a project if the Governor recommends against it; authorizes the Administrator, in the event of default, to complete the project and assume management of the facility including the authority to sell the products or energy produced; provides that any patents and technology resulting from the facility will be treated as assets in cases of default and requires that the guarantee agreement contain a provision assuring their availability to the Government if needed to complete the facility; and requires ERDA to submit a report of the proposed guarantee and facility to the appropriate committees of Congress which shall have 90 days to disapprove by passage of a disapproval resolution. S. 37—Passed Senate March 31, 1977. (VV)

Energy conservation policy.—Establishes both voluntary and mandatory energy conservation programs designed to significantly reduce the rate of growth in domestic energy consumption;

Residential provisions.—Requires electric and natural gas companies, pursuant to a plan filed with the FEA by each governor, to (1) offer to inspect and advise each customer about the energy conservation measures appropriate to the residential building that the customer owns or occupies, (2) provide the customer with a list of installation contractors and lending institutions which have been certified under the provisions of the State plan, (3) arrange, at the request of the customer, for the installation and financing of the measure chosen and collect from the customer the associated costs on a regular utility billing cycle; requires unregulated utilities to file individual plans directly with the Administrator; prohibits any electric and natural gas utility company from installing or financing energy conservation measures unless it provided these services prior to enactment or unless State law requires or explicitly permits a utility to do so;

Amends the National Housing Act to include public utilities allowed to provide financing for conservation measures as financial and lending institutions under the home improvement loan program; authorizes the Federal Home Loan Mortgage Corporation and the Federal National Mortgage Association to purchase loans for residential energy conservation measures; authorizes the Government National Mortgage Association to purchase up to $15 billion in 90 percent federally-insured loans for residential conservation loans of up to $2500 to be granted to persons of all income groups; establishes a revolving fund of $100 million administered by the Secretary of HUD to provide loans for installation of residential solar heating and cooling equipment; establishes a loan program within HUD for energy conservation improvements to multifamily housing;

Consumer products efficiency standards.—Requires the Administrator of the FEA to establish mandatory energy efficiency standards by January 1, 1980, for refrigerators, refrigerator-freezers, freezers, water heaters, room air-conditioners, furnaces and other home heating equipment, and clothes dryers; grants discretionary authority to the FEA Administrator to set standards for dishwashers, televisions, clothes washers, humidifiers, dehumidifiers, and other products which consume at least 150 kwh/year per household or 4.2 billion kwh per year; exempts small businesses from the standards for up to two years; provides that State standards shall be superseded whenever a Federal standard is implemented; allows a State or a manufacturer to appeal to the Administrator regarding a standard;

Federal energy initiatives.—Authorizes $15 million per year for fiscal years 1978, 1979, 1980, and 1981, and $3 million for fiscal year 1982 for the establishment of a vanpooling program for Federal employees to be administered by the FEA; allows the General Services Administration (GSA) to acquire 6,000 vans for the vanpooling program; provides that charges for participation in the program are to be adjusted so that all costs to the government will be repaid within 8 years;

Requires GSA to establish life cycle capital and operating cost methods for all Federal buildings; provides that in leasing buildings, the Federal government must give preference to buildings with solar heating and cooling equipment or energy efficient buildings; authorizes $100 million through fiscal year 1980 for development by the FEA of a program to demonstrate solar heating and cooling in Federal buildings; authorizes $98 million through September 30, 1981, for procurement by the FEA of photovoltaic solar electric generation systems; provides that all passenger vehicles purchased by the Federal government must be equipped, to the extent possible, with passive restraint systems;

Additional programs.—Requires the FEA to set energy efficiency standards for new industrial electric motors and pumps and to develop the procedures and labeling requirements for fourteen other categories of energy intensive industrial equipment within specified time periods; allows the FEA Administrator discretionary authority as to which classes of pumps and motors and other categories shall have standards mandated; sets minimum mileage standards for new automobiles of 16 miles per gallon in model year 1980, 17 mpg in 1981, 18 mpg in 1982, 19 mpg in 1983, 20 mpg in 1984, and 21 mpg in 1985; sets penalties for noncompliance with absolute automobile efficiency standards and doubles penalties for noncompliance with fleet average fuel economy requirements; authorizes $100 million per year for fiscal years 1979 and 1980 to continue energy conservation programs operated by State governments through Federal grant programs established by the Energy Policy and Conservation Act of 1975; authorizes $65 million for fiscal year 1978 and 1979 to assist local governments in planning and implementing energy conservation measures in buildings other than schools or hospitals;

Energy saving grants for schools.—Adds the provisions contained in S. 701, Energy Saving Grants for Schools, which passed the Senate on July 20, 1977, which establishes, for fiscal years 1978–1981, the following three programs of matching grants to provide Federal financial assistance to institutions of higher education, public elementary and secondary schools to assist them in meeting the emergency caused by the high costs of fuel, fuel shortages, and harsh weather conditions: $300 million for energy conservation measures including insulation, remodeling and renovation (50 percent Federal—50 percent applicant); $50 million for demonstration projects for innovated energy conservation projects (66⅔ Federal—33⅓ percent applicant); and $150 million for technical assistance for energy saving programs involving planning, studies or the temporary employment of special personnel (50 percent Federal—50 percent applicant). H.R. 5037—Passed House July 18, 1977; Passed Senate amended September 13, 1977. (NOTE: H.R. 5037 was a private bill to which the Senate attached the Energy Conservation Act, S. 2057, and the Energy Saving Grants for Schools, S. 701.)

Energy saving grants for schools.—Establishes, for fiscal years 1978–1981, the following three programs of matching grants to provide Federal financial assistance to institutions of higher education, public elementary and secondary schools and private nonprofit elementary and secondary schools to assist them in meeting the emergency caused by the high costs of fuel, fuel shortages, and harsh weather conditions: $300 million for energy conservation measures including insulation, remodeling and renovation (50 percent Federal-50 percent applicant); $50 million for demonstration projects for innovated energy conservation projects (66⅔ percent Federal-33⅓ percent applicant); and $150 million for technical assistance for energy saving programs involving planning, studies or the temporary employment of special personnel (50 percent Federal-50 percent applicant). S. 701—Passed Senate July 20, 1977. NOTE: (Comparable provisions are contained in H.R. 5037, Energy Conservation.) (VV)

Energy taxes.—Sets forth an energy taxation policy to encourage energy conservation, expansion of domestic energy sources, and conversion to coal fuel sources by utilities and industrial installations;

Residential tax credits.—Includes a refundable tax credit of 20 percent of the initial $2,000 of expenditures on home insulation and other residential energy conserving components for a maximum credit of $400; provides a refundable tax credit of up to $75 per year for persons 65 years and older for residential energy costs; entitles homeowners to a refundable tax credit for renewable energy source equipment, which includes solar, wind and geothermal energy systems of 30 percent of the first $2,000 of expenditures and 20 percent of the next $8,000 for a maximum credit of $2,200; provides, through 1982, a refundable tax credit of 25 percent of the cost of home heating oil, with a maximum annual credit of $150;

Business energy investment credit.—Contains a business energy investment credit which provides an additional 15 percent refundable credit for certain alternate energy property (equipment involved in the use of a substance as a fuel or feedstock other than oil, natural gas, or a derived product), and an additional 10% refundable credit for certain specially defined energy property (equipment which reduces energy consumption when added to an existing production or processing) during the period between April 19, 1977 and January 1, 1986; provides that charitable, educational, religious and other tax exempt organizations, as well as State and local governments, are eligible to receive the credit;

Additional incentives.—Contains language which is intended to give the conferees flexibility, with respect to any new taxes which may be in the bill agreed to by the conferees, to use a portion of the revenues raised by such taxes to provide tax and other economic incentives for increased production, conservation, and conversion;

Oil and gas users tax.—Imposes an excise tax on the industrial and utility use of oil and natural gas of $6 per barrel by 1985 or the equivalent amount to bring gas to the same price; limits this tax to new electric powerplants and major fuel-burning installations and existing facilities which are capable of burning coal;

Energy trust fund.—Provides that a portion of any funds which may be raised by new taxes in the bill be used for an energy trust fund, to finance outlays for energy production, energy conservation and energy-efficient forms of transportation;

Other tax provisions.—Extends through September 30, 1985, the existing 4-cent-per-gallon tax on gasoline and other motor fuels, which otherwise is scheduled to decline to 1½ cents per gallon after September 30, 1979; removes the 2-cents-per-gallon refund or credit for gasoline and other fuels for motorboat and other nonbusiness, off-highway use; exempts from the 4-cent gasoline tax gasoline-alcohol blends (gasahol) if such blends contain at least 10 percent ethanol and/or methanol and if the alcohol is made from agricultural or forestry products, and reduces the tax rate to 3 cents per gallon for gasahol containing alcohol made from other products (such as coal); contains a $300 tax credit for the purchase of electric cars for personal use; provides an exemption from income tax of employees for energy-efficient transportation provided by employers; exempts rerefined lubricating oil from the excise tax on new oil; extends the existing 10-percent investment tax credit to business insulation; increases the rate of percentage depletion from 5 percent to 10 percent for peat used directly or indirectly for fuel; allows percentage depletion and expensing of intangible drilling costs for geothermal energy under rules similar to existing provisions for oil and gas; provides 10-percent depletion and expensing of intangible drilling costs and geological and geophysical costs for geopressurized methane gas; contains a $3 per barrel tax credit for production of shale oil, and a 50-cent per mcf credit for production of geopressurized methane gas and gas from other nonconventional sources; provides a permanent exemption from the minimum tax for intangible drilling costs to the extent of oil and natural gas production income; allows a tax exemption for industrial development bonds used for bioconversion facilites and for coal liquefaction and gasification facilities;

Nontax provisions.—Requiries an annual report to the Congress by the President on the energy saving and revenue effects of the bill; and limits the President's power to impose tariffs, license fees, or quotas on crude oil imports to wartime or actual hostilities and limits his authority to adjust imports of refined petroleum products to adjustments necessary for national security, and allows a two-House veto by Congress within 30 days. H.R. 5263—Passed House July 18, 1977; Passed Senate amended October 31, 1977; In confernce. (606)

Federal Energy Administration authorization.—Extends through fiscal year 1978 the authorities under the Federal Energy Administration Act; includes $1.210 billion to permit 250 million barrels of crude oil to be placed in the Strategic Petroleum Reserve by the end of calendar year 1978; contains $1.8 million for the appliance labeling program under the Energy Supply and Environmental Coordination Act of 1974 and extends FEA's authority to require certain facilities which presently burn oil and gas to convert to coal; adds provisions limiting the powers of the regional counsels of FEA; establishes general procedures to be followed with respect to the use of commercial standards by the FEA; and requires the Administrator within 120 days of enactment, to publish regulations which would require prospective FEA contractors to disclose all relevant data which could cause a possible conflict of interest in carrying out activities for FEA. S. 1467—Public Law 95–70, approved July 21, 1977. (VV)

Natural Gas Emergency.—Authorizes the President to declare a natural gas emergency if he finds that a severe shortage exists or is imminent in the United States which would endanger the supply of natural gas for high-priority uses and the exercise of his authorities is reasonably necessary to assist in meeting requirements for such uses; provides that these authorities shall terminate when the President finds that shortages no longer exist and are no longer imminent;

Emergency allocation.—Authorizes the President, during a declared natural gas emergency, to require (1) any interstate pipeline to make emergency deliveries or transport interstate natural gas to any other interstate pipeline or a local distribution company served by an interstate pipeline; (2) any intrastate pipeline to transport interstate natural gas from one interstate pipeline to another or to any local distribution company served by an interstate pipeline; or (3) the construction and operation by any pipeline of necessary facilities to effect deliveries or transportation; directs the President, in issuing such orders, to consider the availability of alternative fuel users of the interstate pipeline ordered to make deliveries and to determine that they would not have an adverse effect on the natural gas supply or exceed the transportation capacity of the pipeline; provides that these authorities shall terminate by April 30, 1977, or after the President terminates the emergency, whichever is earlier;

Emergency sales at deregulated prices.—Authorizes interstate pipelines or local distribution companies to purchase supplies of natural gas for delivery before August 1, 1977, from intrastate pipelines at unregulated prices as reviewed by the President for fairness and equity; provides that these purchases could be delivered from intrastate pipelines and any producer of natural gas not affiliated with an interstate pipeline unless such natural gas was produced from the Outer Continental Shelf, and the sale or transportation of the gas was not, immediately prior to the date of the contract for purchase of the gas, certificated under the Natural Gas Act; authorizes the President to require, by order, any interstate or intrastate pipeline to transport gas and operate facilities necessary to carry out emergency purchase contracts;

Miscellaneous.—Authorizes the President to subpoena information to carry out his authority under the Act; contains antitrust protection provisions available as a defense against civil or criminal action brought against any person for violation of the antitrust laws with respect to actions taken pursuant to a Presidential order; gives the Temporary Emergency Court of Appeals exclusive jurisdiction to review all cases including any order issued or other action taken under this act; imposes civil penalties of up to $25,000 a day for violations of orders and $50,000 a day for willful violations; directs the President to require weekly reports which shall be made available to the Congress on prices and volume of natural gas delivered transported or contracted for, and to report to Congress by October 1, 1977, on all actions taken under this act; and authorizes the President to delegate all or any portion of the authority granted to him to such executive agencies or officers he deems appropriate. S. 474—Public Law 95-2, approved February 2, 1977. (21)

Reinstates through February 15, 1978, the President's authority under Public Law 95-2 to declare a natural gas emergency if he finds that a severe shortage exists or is imminent in the United States which would endanger the supply of natural gas for high-priority uses and the exercise of his authorities is reasonably necessary to assist in meeting requirements for such uses. S. 2359—Passed Senate December 15, 1977. (VV)

Natural gas pricing.—Amends and extends the Natural Gas altering the pricing structure of domestic natural gas in order to encourage increased development, production, and conservation of U.S. natural gas resources;

New onshore natural gas.—Provides that for the next two years the price of new onshore natural gas shall not exceed the current cost of No. 2 fuel oil (approximately $2.01 per thousand cubic feet at the beginning of 1978) as determined by the Federal Energy Regulatory Commission (FERC) and thereafter deregulates the price of new onshore natural gas; defines "new natural gas" as gas which is sold or delivered in interstate commerce for the first time on or after January 1, 1977, including reservoirs discovered by deeper drilling of an existing well, or gas produced from wells initiated on or after January 1, 1977, and completed within an extension of a previously discovered reservoir regardless of whether or not the leases covering the previously discovered reservoirs were committed to the interstate market; excludes from the definition of new natural gas that gas from reservoirs with wells prior to January 1, 1977, which was wrongfully withheld from sale or delivery in anticipation of higher prices;

OCS new gas.—Authorizes FERC to establish national price ceilings on new natural gas from the Outer Continental Shelf (OCS) sold or delivered on or after January 1, 1977, through December 31, 1982, and deregulates new offshore natural gas thereafter; provides that FERC shall consider the following factors when setting the national price ceiling on new offshore gas; (1) the prospective costs of exploration, development, production, gathering, and sale of new OCS gas; (2) the rates necessary to encourage optimum development of OCS gas resources; (3) the rates necessary to promote sound conservation practices in natural gas consumption; and (4) the rates necessary to protect consumers from prices in excess of what is necessary to achieve the goals of increased production and conservation; authorizes FERC to allow prices in excess of the national ceilings for new offshore gas which is unusually expensive to extract or produce; requires FERC, pending the establishment of a national price ceiling, to issue on a monthly basis, interim price ceilings for new offshore gas equivalent to the average first sale price for domestic new crude oil (approximately $2.67 per thousand cubic feet at the beginning of 1978); provides that any company which sells or delivers gas while the interim price ceiling is in effect shall have the benefit of the national ceiling thereafter if it is higher, but shall not have to reduce its rates for such deliveries or sales if the national ceiling is lower;

Curtailment.—Provides that, in cases of natural gas curtailment, residential users, small users, hospitals, and similar users vital to public health and safety shall have first priority to available natural gas; users who need gas to perform essential agricultural, food processing, and food-packaging purposes shall have second priority, and industrial users for which natural gas is essential for users (other than boiler fuel) for which there is no practical substitute shall have third priority; specifies certain limitations on FERC in implementing curtailment policies;

Incremental pricing.—Provides for incremental pricing whereby companies which transport gas must allocate for rate purposes the cost of lower priced old oil to residential users, small users utilizing less than 50 mcf on a peak day, users performing functions vital to public health and safety, and essential agricultural users until the resulting rates to low-priority users for natural gas equals the costs of substitute fuel oil;

Contains provisions requiring the commission to report to the Congress annually on specified aspects of natural gas pricing policies. H.R. 5289—Passed House July 18, 1977; Passed Senate amended October 4, 1977; In conference. (VV)

Outer Continental Shelf: Declares that the Outer Continental Shelf (OCS) is a vital national resource reserve held by the Federal Government for all the people, which should be made available for expeditious and orderly development, subject to environmental safeguards, in a manner consistent with maintenance of competition and other national needs; directs the Secretary of Interior to prepare a five-year comprehensive leasing program to facilitate environmentally-safe development of the OCS while assuring receipt of fair market value for publicly owned oil and gas resources; provides a mechanism for separation of exploration from development and production so that Federal, State, and local government officials can assess the political, environmental, social, and economic impact of proposed development in order to resolve any problems prior to production; contains other provisions to increase Coastal states participation in OCS policy development; directs the Secretary of Interior to contract for exploratory drilling where he determines that such drilling is necessary to gain better information about OCS reserves; requires an independent Presidential investigation of all domestic crude oil and natural gas; authorizes the Secretary to modify the bidding system with the proviso that either House of Congress may veto any such change; reduces the maximum amount of bonus bids permitted under the law from 66.67 percent to 50 percent and requires the use of new leasing systems on an experimental basis; provides that at least 20 percent of offshore production be set aside for independent refiners;

Provides that an OCS lessee is liable for the total cost of control and removal of spilled oil; creates a new strict liability rule for damages from oil spills from any offshore facility or any vessel carrying oil produced offshore; sets maximum liability amounts for a lessee or holder of a right-of-way at $35 million for a vessel owner at $150 per gross registered ton unless such damage resulted from gross negligence or willful misconduct or violation of a safety or construction regulation; creates the Offshore Oil Compensation Fund, which receives its funds from a fee of 3 cents per barrel on oil produced from the OCS; requires that any company permitted to conduct exploratory activities on the OCS submit to the Government all data which it collected about oil and gas resources, including interpretive data, and requires the Secretary to keep all proprietary data confidential until public availability of the data would not damage the competitive position of the permittee; directs the Secretary and the Coast Guard to establish safety and environmental protection standards for equipment used for development of OCS resources; increases criminal penalties for willful violations of the act; and establishes a Fishermen Contingency Fund to provide compensation for damage to commercial fishing vessels and gear caused by OCS development. S. 9—Passed Senate July 15, 1977. (293)

Pipeline destruction.—Amends title 18, U.S.C., to make a Federal crime the willful destruction or attempt to destroy any interstate pipeline system used in the transportation of gas or oil in interstate commerce with a fine of not more than $15,000 and/or 15 years imprisonment. S. 1502—Passed Senate July 18, 1977. (VV)

Public utility rate reform.—Requires State regulatory authorities and nonregulated utilities which have sales of more than 750 million kilowatt-hours of electricity annually or 10 billion cubic feet of natural gas annually, to provide, on a biannual basis, information to the Secretary of Energy covering those factors which affect daily and seasonal peak loads, the costs of serving various classes of consumers, and varying consumption patterns within a service area; authorizes the Secretary to reimburse a regulatory authority or utility for the costs of gathering required information which it does not already collect; allows the Secretary to exempt parties from the reporting requirements;

Authorizes the Secretary to intervene at his own initiative in proceedings before a state regulatory authority or in administrative proceedings by a non-regulated utility which relate to utility rates or rate design in order to advocate policies which will encourage energy conservation, optimize efficient use of electric generation facilities, and encourage equitable rates to consumers; provides that the Secretary may appeal or seek judicial relief from decisions on rate making by state regulatory commissions only at the invitation of a party in the proceeding; authorizes the Secretary to give written notice of his recommendations in cases where non-regulated utilities set rates without any proceedings open to intervention; requires the Secretary to examine methods used by utilities for determining the costs of service and to analyze the extent to which such methods reveal the costs attributable to daily and seasonal demand and the probable impact upon costs of additional peak-period capacity, additional gross demand, or additional service connections; requires the Secretary to consider the potential advantages of load management systems and rate-making methods including but not limited to cost of service rates, elimination of declining block rates, time-of-day rates, mechanical load management systems, seasonal rates and interruptable rates to commercial or industrial customers; requires FEA to file an annual report to Congress on activities relating to electric utility rate provisions of the act;

Provides that utilities must extend to persons 62 years of age and older a basic amount of electricity at the lowest cost afforded any other class of consumer, and requires the Department of Energy to explore long-run incremental pricing as an alternate utility rate design.

Directs the Secretary, in consultation with the Federal Energy Regulatory Commission, to carry out a study and report to Congress on gas utility rate design; requires the Secretary to develop and transmit to Congress within 12 months proposals to improve gas utility rate design;

Requires the Secretary to recommend guidelines to State regulatory authorities for requiring State regulated electric utilities to purchase and sell electricity to qualifying cogenerators or small power producers; provides the Secretary with authority to exempt cogenerators and small power producers with capacity below 30 megawatts from Federal regulation as an incentive to achieve the purposes of the act; provides that no exemption may be granted to any power producer who intends to offer for sale the ouptut of more than 30 megawatts of generating capacity at any single geographical site;

Requires the Secretary to report to Congress within 270 days after enactment on the additional financial burden the act will place on State regulatory authorities; establishes the National Regulatory Research Institute, which is to be a non-profit unit of the Ohio State University, to provide economic and technical research to State regulatory authorities on utility regulation issues; exempts certain low-head hydroelectric demonstration projects from the requirement to obtain a license under the Federal Power Act; authorizes $10 million to enable the Secretary to make loans for feasibility studies for small hydroelectric projects and existing dams to municipalities, electric cooperatives, industrial development agencies, non-profit organizations, and any other persons; provides that a gas utility may keep any gas which it saves through conservation measures for use in the same service area; authorizes such sums as necessary to carry out the act for fiscal years 1979, 1980, and 1981; authorizes such sums as necessary to carry out provisions of title II of the Energy Conservation and Production Act relating to electric utility rate design for fiscal years 1979 and 1980, and to establish the National Regulatory Research Institute; and

Suspends until the close of June 30, 1980, the duty on certain doxorubin hydrochloride antibiotics. H.R. 4018—Passed House July 18, 1977; Passed Senate amended October 6, 1977; In conference. (533)

Radiation exposure.—Extends the program of the Energy Research and Development Administration (ERDA) to provide financial assistance to limit radiation exposure resulting from the widespread use of sand containing mill tailings in the construction of approximately 500 public and private buildings in the Grand Junction, Colorado area: calls for a cooperative arrangement with the State of Colorado whereby ERDA is authorized to provide 75 percent of the costs of the program; extends the deadline for applying for remedial work under the program from 4 to 7 years; provides that property owners who removed mill tailings at their own expense prior to the date of enactment and without the administrative determination required may apply for such reimbursement within the first year of enactment; permits the State of Colorado to waive the requirement that it perform the remedial work; and increases the authorization therefor from $5 million to $8 million. S. 266—Passed Senate April 4, 1977. (VV)

Stripmining control and reclamation.—Establishes a program for the regulation of coal surface mining activities and the reclamation of coal mined lands, under the administration of the Office of Surface Mining Reclamation and Enforcement in the Interior Department, to assure that surface coal mining operations—including exploration activities and the surface effects of underground mining—are conducted so as to prevent or minimize degradation to the environment and that such surface coal mining is not conducted where reclamation is not feasible; sets forth a series of minimum uniform requirements for all coal surface mining on both Federal and state lands which deal with (1) preplanning (requires that an operator applying for a permit do certain research regarding adjacent land uses, the characteristics of the coal and the overburden, and hydrologic conditions and requires inclusion in his application of the planned methodology and timetable for the operation in a reclamation plan); (2) mining practices (requires that mining methods be used which will minimize or obviate environmental damage or injuries to public health and safety including restrictions on the placement of overburden, blasting regulations, water pollution control requirements, and waste disposal standards); and (3) post-mining reclamation (requires reclamation and restoration of the mined land to its pre-mined condition including backfilling and regrading to approximate original contour, restoration of water quality and quantity, revegetation to pre-mining conditions and elimination of erosion and sedimentation with certain exceptions) provides that these minimum Federal standards be administered and enforced by the States and by the Secretary of the Interior on public lands; authorizes funds to assist State in improving their regulatory and enforcement programs; provides for Federal enforcement of a State program if a State fails to comply with the Act;

Authorizes $200,000 in 1978, $300,000 in 1979 and $400,000 thereafter for 5 years in matching funds to each State to establish a state mining and mineral resources research institute to conduct research and train mineral engineers and scientists;

Provides for the protection of scarce and vital water resources in the permit application requirements, reclamation standards and provisions for designation of areas unsuitable for mining; provides for a mechanism on both State and Federal lands for citizens to petition that certain areas be designated as unsuitable for surface coal mining; prohibits stripmining of lands which cannot be reclaimed under the standards of the Act; prohibits stripmining in national parks and recreational areas (except for such lands which do not have significant forest cover within those national forests west of the 100th meridian) and areas which would adversely affect such parks; prohibits stripmining 300 feet from an occupied building, 100 feet from a public road, or 500 feet from an underground mine; permits certain variances to the mining-reclamation standards of the bill;

Requires with regard to lands where the Federal government owns the coal but not the surface estate that the surface owner must give written consent to the stripmining of the Federally-owned coal deposits; provides that if the surface and mineral estates are in private ownership, disputes shall be settled by State law;

Requires the Secretary of Interior to issue interim regulations for environmental standards within 90 days; waives provisions of the National Environmental Policy Act of permanent standards one year after enactment; requires EPA approval of air and water quality regulations; requires compliance by all new mines within 6 months; exempts mining operators with under 100,000 tons annual production from compliance with the interim environmental standards until January 1, 1979;

Bans strip mining on alluvial valley floors if it disrupts farming and the quantity and quality of the water supply except for (1) undeveloped range lands which are not significant to farming; (2) those lands the regulatory authority finds have negligible impact on the agricultural production of the affected farm; and (3) those surface coal mining operations in commercial production during the past year or for which a permit has been approved prior to enactment; requires a coal exchange program for fee coal located in alluvial valleys;

Requires that applicants seeking to stripmine on prime farmland demonstrate to the State regulatory authority that they have the technological capability to restore the mined area, within a reasonable time, to equivalent or higher levels of yield as nonmined prime farmland soils in the surrounding area under equivalent levels of management;

Establishes a fund to be used to reclaim abandoned mined lands which will be derived from a reclamation fee levied on every ton of coal mined at 35 cents per ton for surface mined coal and 15 cents per ton for all coal mined by underground methods or 10 percent of the value of the coal at the mine, whichever is less; requires that 50 percent of all fees must be allocated to the State or Indian reservation from which it was mined; applies to lignite coal a fee of the lesser of either 10 cents per ton or two percent of the value of the coal;

Provides that, beginning no later than 6 months from the date of enactment continuing until a State program has been approved or a Federal program has been implemented, the Secretary is required to carry out a Federal enforcement program which includes inspection and enforcement actions in accordance with the act; and contains comprehensive provisions for inspections, enforcement notices and orders, administrative and judicial review, penalties, and citizen participation. H.R. 2—Public Law 95–87, approved August 3, 1977. (159,310)

ENVIRONMENT

Clean air: Amends the Clean Air Act, as amended, as follows:

Auto emission standards.—Extends for 2 additional years, for model years 1978 and 1979, the existing interim auto emission standards of 1.5 grams per mile for hydrocarbons (HC), 15 grams for carbon monoxide (CO), and 2 grams for nitrogen oxides (NO_x); requires 1980 model cars to meet emission standards of .41 gram for HC, 7 grams for CO, and 2 grams for NO_x; requires 1981 model cars to meet the final emission standards set by the 1970 Clean Air Act of .41 grams for HC, 3.4 grams for CO, and 1 gram for NO_x; authorizes EPA to waive the 1 NO_x standard to a level not to exceed 1.5 grams per mile beginning in model year 1981 (1) to encourage the production of new engines (such as the diesel) and emission systems not using precious metal catalysts, or (2) for small manufacturers who produce less than 300,000 cars and who must purchase this pollution control technology from another manufacturer (American Motors); authorizes EPA to grant a 2-year waiver of the CO standard to 7 grams; reduces warranties for emission-control devices from 5 years and/or 50,000 miles to two years and/or 24,000 miles;

Delayed compliance.—Authorizes EPA and the States to issue enforcement orders extending compliance schedules for stationary sources until July 1, 1979; limits extension of compliance to not more than 3 years delay, except in case of innovative technology (5 years), coal conversion extensions, or smelter orders; automatically subjects noncomplying sources to a penalty after July 1, 1979, equal to the cost of compliance to eliminate any economic advantage of delay;

Nondeterioration.——Provides that areas where air quality is presently cleaner than the existing standards shall be protected by non-deterioration standards; designates the most carefully protected areas as Class I areas and other areas as Class II and III areas; provides a mechanism for States to redesignate lands from class I to II or II to III; provides that the following areas are not eligible for Class III designation if the area is over 10,000 acres: national monuments, primitive areas, preserves, wild and scenic rivers, wildlife refugees, lakeshores, seashores, parks, wilderness areas and any new areas subsequently designated into these categories; allows a State to redesignate any Federal land as a Class I area without the concurrence of any Federal authority; allows an Indian tribe to designate its land as Class I;

Defines "significant deterioration" in all clean air areas as a specified amount of additional pollution measured by increments of sulfur oxides and particulates; exempts facilities otherwise subject to the nondegradation provisions which emit less than 50 tons per year of total pollutants from the increment requirements; provides that States issue construction permits to new major emitting facilities in clean air areas (with EPA acting in the role of monitor of State actions) requiring the use of best available control technology; requires new sources locating in Class II areas to demonstrate to the State that they will not exceed the Class II pollution increments, or adversely affect the air quality values in any nearby Class I area; allows a State Governor to waive compliance with the Class I standards if computer models show in advance that the standards would not be exceeded for 18 days annually with the right of the Secretary of Interior to object and a final decision to be made by the President within 90 days;

Nonattainment areas.—Requires new sources proposed for construction in nonattainment areas (where pollution levels exceed the public health standards) to meet a number of conditions prior to approval of construction; requires that such sources meet the lowest achievable emission rate; requires that emission reductions from existing sources more than offset the emissions from the new source; requires that existing sources use all reasonably available controls; provides that sources may only be approved after July 1, 1979, if a State implementation plan exists, the source is in compliance with its requirements, and the plan assures the attainment of the health standards within 3 years; makes available an extension until 1987 for States that cannot show attainment of the oxidant and carbon monoxide standards within 3 years; provides waiver from the source-by-source emission offset requirement available to a State under limited conditions; and

Other.—Requires a review of the air quality criteria for existing ambient air quality standards which shall be completed by December 31, 1980 and subsequently every 5 years thereafter; allows a state to temporarily suspend State implementation plan requirements where necessitated by energy or economic emergencies under specified conditions; authorizes the President to require major noncomplying industrial coal burners to utilize coal supplies that are locally and regionally available instead of importing low-sulfur Western coal if necessary to avoid local economic disruption, after taking into account the final cost to the consumer; and contains other provisions. H.R. 6161—Public Law 95–95, approved August 7, 1977. (190)

Clean water.—Amends the Federal Water Pollution Control Act Amendments of 1972 including the following provisions:

Waste treatment construction.—Authorizes $24.5 billion through 1982 in Federal grants to local municipalities for construction of sewage treatment plants; increases the flexibility of the Administrator of the Environmental Protection Agency (EPA) and the States in determining the best cleanup techniques; allows the Secretary to extend for 5 years, until July 1, 1983, on a case-by-case basis, the deadline for communities to meet clean water standards if they have been unable so far to obtain Federal funds for construction; alters the criteria for grant allocation from the current formula based totally on need, to a new formula based on population plus partial needs; provides a 4% set-aside for grants to rural states; provides a set-aside for construction grants to encourage innovative and alternate technologies of 2 percent in 1979, and 3 percent in 1980 and 1981 to bring the rate of funding up from 75 percent to 85 percent;

Industrial standards.—Allows the Administrator of EPA to allow a "reasonable" time for compliance with the 1977 deadline and to set up a compliance schedule; allows EPA to grant an extension of the 1977 deadline for achieving the "best practicable technology" up to April 1, 1979, to a source whose facilities are under construction but not completed by July 1, 1977, and who in good faith has tried to meet the requirements; extends for one year, until July 1, 1984, the deadline for using the best available technology to limit discharge of conventional pollutants and 129 other pollutants to be specified by EPA; allows EPA to specify other pollutants which industry must use the best available technology to limit discharge within three years of the designation by the EPA, but compliance must be complete no later than July 1, 1984; extends the deadline for using the best available technology for all other pollutants until 1987;

Oil spill liability.—Increases the jurisdiction for oil spills out to 200 miles and the limits of liability for cleaning up oil spilled from tankers or oil terminals; sets liability with respect to inland oil barges at $125 per gross ton or $125,000, whichever is greater and, with respect to any other vessel, at $150 per gross ton unless the vessel carries oil or hazardous substances as cargo in which case there is a minimum liability of $250,000; authorizes the President to raise liability for onshore and offshore handling facilities up to $50 million from $8 million;

Wetlands protection.—Modifies the controversial wetlands protection provisions by exempting such activities as farming, ranching, and forestry; retains Federal control over disposal of dredge and fill materials, but allows any state to administer its own program if it has an EPA approved plan; and

Community flexibility.—Allows some communities to use an ad valorem tax system or another payment scheme to charge residential users for waste treatment if the charges are in proportion to use and if the consumer is notified of his contribution to support the waste treatment facility; continues to require proportionate user charges from industry; and gives States exclusive control over the priority of projects for Federal funding so long as those priorities reflect the requirements of the Act. H.R. 3199—Public Law 95– , approved 1977. (336)

Earthquake hazards reduction.—Establishes a national earthquake hazards reduction program under the direction of the President to minimize the loss and disruption resulting from future earthquakes; specifies the objectives of the program which includes the following four elements: (1) a research element dealing with fundamental earthquake risk analysis for land-use consideration, hazards assessment, and engineering and research to reduce earthquake vulnerability; (2) an implementation plan to be prepared within 6 months setting year-by-year targets through at least 1985, specifying roles for Federal agencies, and recommending approriate roles for State and local units of government, individuals, and private organizations; (3) a State assistance program allowing assistance to the States under the Disaster Relief Act of 1974; and (4) the opportunity for wide sectors of the population to participate in the formulation and implementation of the program; provides for public involvement in the program; calls for cooperation among a number of Federal agencies including the U.S. Geological Survey and the National Science Foundation; requires the President to report annually to the Congress on progress achieved in the program; and authorizes therefore $1 million, $2 million and $2 million for fiscal years 1978, 1979 and 1980 respectively, which is in addition to any authorizations for similar purposes incuded in other acts. S. 126—Public Law 95–124, approved October 7, 1977. (VV)

Endangered species.—Extends through fiscal year 1980 and authorizes a total of $16 million for the section 6 State grant-in-aid program under the Endangered Species Act of 1973, and contains language to facilitate qualification by a State for financial assistance under the program. S. 1316—Public Law 95– , approved 1977. (VV)

EPA authorization.—Authorizes a total of $253,603,000 for the environmental research and development program conducted by the Environmental Protection Agency for fiscal year 1978 as follows: $35 million for air quality; $92.5 million for water quality under the Federal Water Pollution Control Act; $16 million for water suppy activities under the Safe Drinking Water Act; $25 million for solid waste disposal; $10.8 million for pesticides under the Federal Insecticides, Fungicide and Rodenticide Act; $830,000 for radiation under section 301 of the Public Health Service Act; $8.2 million for toxic substances under the Toxic Substance Control Act; $31.273 million for interdisciplinary activities; $19 million for program management; $10 million for a long-term R&D program; $2 million for training of environmental health scientists; and $3 million for Gulf Coast air quality studies; includes the $35 million supplemental request for funds necessary to implement energy-related R&D in the National Energy Plan; provides the legislative and statutory mandate for EPA's Science Advisory Board consisting of nine members, appointed by the Administrator for staggered terms, to provide scientific advice, advise the Administrator on the adequacy and reliability of the technical basis for rules and regulations and comment on the Agency's 5-year plan for environmental research, development and demonstration; directs the Administrator to coordinate EPA's programs of environmental research with those of other agencies; directs the Council on Environmental Quality in consultation with the Office of Science and Technology Policy to study all aspects of the coordination of environmental research and development and to submit a report of its findings to the President and Congress by May 31, 1978, and requires the President to report to Congress by September 30, 1978, his recommendations for implementation; instructs EPA to implement each recommendation contained in a November, 1976, report prepared for the Subcommittee on the Environment and Atmosphere relating to various problems within EPA's research program unless the Administrator determines otherwise; and requires Agency employees who perform duties pertaining to environmental research and development or who have known conflict of interest to file statements with the Administrator concerning such interests. H.R. 5101—Public Law 95–155, approved November 8, 1977. (VV)

Great Plains conservation.—Amends effective October 1, 1978, section 16(b) of the Soil Conservation and Domestic Allotment Act, which provides for a Great Plains conservation program by (1) striking the provisions in current law that no new conservation contracts may be entered into after December 31, 1981, thus making the Great Plains conservation program permanent; (2) making the program available to all farmers in eligible States, not just those in counties classified as "semi-arid"; and (3) amending the authorization to carry out the program by deleting the current $300 million limitation on total appropriations and $25 million limitation on annual appropriations and authorizing instead, such sums as necessary. S. 896—Passed Senate August 3, 1977. (VV)

Marine mammal protection.—Extends through fiscal year 1978 the Marine Mammal Protection Act of 1972 and authorizes therefor $2.05 million for the Department of the Interior of which $1.2 million is for research grants in subjects relevant to the protection and conservation of marine mammals, $11.5 million for the Department of Commerce of which approximately $5 million would fund a 100 percent observer program on all large tuna-purse seine vessels in order to determine the status of porpoise populations and establish a permissible quota of porpoises which may be taken by tuna fishermen, and $2 million for the Marine Mammal Commission; makes it unlawful for any person or vessel to take any species of whale in commercial fishing within the 200-mile U.S.

fishery conservation zone established by the Fishery Conservation and Management Act; and prohibits any Federal employee from approving any modification which would increase the volume of crude oil capable of being handled at any terminal, dock, or other facility in or adjacent to Puget Sound in the State of Washington with the exception of oil to be refined for consumption in that State. S. 1522—Public Law 95-136, approved October 18, 1977. (VV)

National Advisory Committee on Oceans and Atmosphere.—Repeals the Act of August 16, 1971, which established a National Advisory Committee on Oceans and Atmosphere and etsablishes a new and smaller National Advisory Committee on Oceans and Atmosphere (NACOA) to replace it, consisting of 18 members (which is reduced from 25 in the original act) appointed by the President for staggered 3-year terms; sets more stringent qualifications for membership by requiring that each member be an expert or otherwise knowledgeable in either oceanic matters, atmospheric matters, or both; provides for the transfer of the personnel, positions, records, and unexpended funds to the new Committee; directs the Committee to undertake a continuing review of national ocean policy (on a selective basis), coastal zone management, and the status of U.S. marine and atmospheric science and service programs and advise the Secretary of Commerce with respect to the National Oceanic and Atmospheric Administration; requires the Committee to submit a report by June 30 of each year to the President and Congress and such other reports as may from time to time be requested; gives the Secretary of Commerce 60 days (instead of 90 days) to review and comment on the annual report; directs the Secretary to provide administrative support and services to the Committee; and authorizes $520,000 for fiscal year 1978. H.R. 3849—Public Law 95-63, approved July 5, 1977. (VV)

Noise control.—Authorizes $10.9 million for general technical assistance, regulatory and administrative responsibilities under section 19 of the Noise Control Act of 1972 and $2.1 million for research and development for fiscal year 1978. S. 1511—Passed Senate May 18, 1977. (VV)

Ocean dumping.—Amends the Marine Protection, Research and Sanctuaries Act of 1972 to authorize a total of $11.3 million for fiscal year 1978 of which $4.8 million is for title I of the act which specifies how ocean dumping shall be regulated, $6 million for title II which deals with the research aspects needed to support a limitation on dumping harmful materials into the ocean, and $500,000 for title III which provides for the designation and regulation of marine sanctuaries; and provides that the dumping into ocean waters of municipal sewage sludge which may unreasonably degrade the marine environment shall be ended as soon as possible, and in no case continue beyond December 31, 1981. H.R. 4297—Public Law 95-153, approved November 4, 1977. (VV)

Ocean pollution research.—Establishes a comprehensive Federal program of ocean pollution research and monitoring; designates the National Oceanic and Atmospheric Administration as the lead Federal agency for ocean pollution research and monitoring; provides for the assistance of the Director of the Office of Science and Technology Policy, through the Federal Coordinating Council for Science, Engineering, and Technology, in coordinating, on a continuing basis, the Federal program of ocean pollution research and monitoring; requires the Administrator to submit annually to the President and Congress a report on all Federal ocean pollution and monitoring efforts; and authorizes therefor $5 million for fiscal 1978 and $6 million for fiscal 1979 to the National Oceanic and Atmospheric Administration. S. 1617—Passed Senate August 3, 1977. (VV)

Safe drinking water.—Extends the Safe Drinking Water Act of 1974 through fiscal year 1979 and authorizes therefor a total of $71 million for fiscal 1978 and $81 million for fiscal 1979 which includes: $17 million annually for studies, technical information and training, $35 million for fiscal 1978 and $45 million for fiscal 1979 for grants to States for water supply supervision programs, $10 million for grants to States for underground water protection programs, $8 million annually for special emergency assistance, and $1 million annually for survey of rural water supplies;

Allocates a total of 80 new supergrade positions to EPA; requires EPA to submit to Congress, within 18 months of enactment, a report relating to costs of implementing the Act and an analysis of the present and projected availability of an adequate and dependable supply of safe drinking water; requires the National Academy of Sciences to report every 2 years on the maximum safe contaminant levels and potential contaminants; and requires EPA to conduct studies on reaction between humic acids and chlorine in drinking water and on other toxic substances in water;

Directs the Administrator to make grants for free training to personnel of State and local agencies and those who work for public water systems, and to enable individuals to qualify for such positions provided at reasonable cost; authorizes EPA to make grants to states if the State is making diligent effort and significant progress toward primary enforcement; provides for EPA retention and realloctaions to other States of 25 percent of grants if primary enforcement is not assumed by fiscal 1980; extends for an additional 270 days the current 270 day period for State submission of applications for primary enforcement responsibility for the underground drinking water sources program; requires Federal agencies to comply with all State and local requirements respecting drinking water and underground injection programs; directs the Administrator to avoid disrupting or duplicating existing State law when establishing regulations governing underground injection control; provides that any State or local government may bring suit in State courts to enforce any requirement of safe drinking water or the underground injection program; authorizes the Administrator to make grants to alleviate emergency drinking water situations; and authorizes the Administrator to require public waste systems to monitor for sodium and other unregulated contaminants and to notify their customers of the level in their drinking water. S. 1528—Public Law 95-190, approved November 16, 1977. (VV)

Sea grant program.—Extends through fiscal 1978 the authorization for the national sea grant program as follows: $50 million for the basic sea grant program; $5 million for the national program, and $3 million for the international program. H.R. 4301—Public Law 95-58, approved June 29, 1977. (VV)

Toxic substances.—Provides a compensation system, administered through the States, so that the victims of chemical contamination incidents involving food, livestock or poultry may be more fully compensated for the economic and personal damages they suffer; provides a mechanism for a State to apply for Federal grants of up to 75 percent of the amount a State pays injured victims of a chemical accident; provides that States may apply for Federal assistance for farming operations that would be hard hit by any quarantine or condemnation actions taken against their crops, livestock or poultry; permits consumers who unknowingly are exposed to the toxic chemicals through consumption of tainted food products to apply to the Environmental Protection Agency for assistance; grants the Administrator the authority to prescribe such rules as necessary to carry out his or her functions under the act; and increases the authorization to $50 million for fiscal 1978 and $100 million for fiscal 1979. S. 1531—Passed Senate October 31, 1977. (VV)

Western States conservation.—Amends, effective October 1, 1978, section 16(b) of the Soil Conservation and Domestic Allotment Act, which provides for a Great Plains conservation program in the States of Colorado, Kansas, Montana, Nebraska, New Mexico, North Dakota, Oklahoma, South Dakota, Texas, and Wyoming by (1) extending the program into all 22 contiguous States west of the Mississippi River; (2) authorizing farmers and ranchers participating in the program to utilize program funds to improve irrigation systems to conserve water; and (3) adding a condition to cost-sharing contracts under the program that farmers or ranchers who destroy permanent conservation measures installed on farms or ranches under the program forfeit all rights to Federal disaster payments for farm production losses. S. 1614—Passed Senate August 3, 1977. (VV)

FISHERIES

Atlantic tunas.—Extends for an additional 3 years, until 1980, the Atlantic Tunas Convention Act of 1975 which implemented an international convention governing fishing for tuna and tuna-like fishes in the Atlantic Ocean and authorizes therefor such sums as necessary; and redefines the term "fishery zone" to mean the 200-mile fishery zone described in Public Law 94-265. H.R. 6205—Public Law 95-33, approved May 26, 1977. (VV)

Commercial fisheries.—Extends the Commercial Fisheries Research and Development Act for 2 years, through fiscal 1980, and increases the annual authorization for fiscal year 1978 and the two subsequent years as follows: $10 million for section 4(a) general programs (increased from $5 million); $3 million for section 4(b) which provides funds on an emergency basis if there is a commercial fishery disaster or serious disruption affecting future production due to a resource disaster arising from natural or undetermined causes (increased from $1.5 million); and $500,000 for the section 4(c) program of grants to develop new commercial fisheries (increased from $100,000). H.R. 6206—Public Law 95-53, approved June 22, 1977. (VV)

Fishermen's protection reimbursement program.—Extends the provisions of the Fishermen's Protective Act of 1967 which expires October 1, 1977, to October 1, 1979; establishes the Federal Fishing Claims Recovery Program whereby the Secretary of Commerce may make a loan after October 1, 1977, to the owner or operator of any U.S. vessel for damages claimed in excess of $2,000 which are reasonably determined to have been caused by a foreign vessel or crew; provides that only those claims which have not been substantially resolved and which occurred after July 1, 1976, shall be eligible for the loan program; conditions loans upon assignment to the Secretary of all rights of recovery against a foreigner and directs the Secretary with the assistance of the Attorney General, to take appropriate actions to collect on any right assigned to him; cancels repayment of a loan if it is determined that the owner or operator was not at fault; and provides that repayment of the loan will be required within a reasonable period if the Secretary determines that the claimant was at fault in causing the damages. S. 1144—Public Law 95-194, approved November 18, 1977. (VV)

Fishery agreement with Canada.—Amends the Fishery Conservation Zone Transition Act by adding a new section giving Congressional approval of the Reciprocal Fisheries Agreement between the United States and Canada during the period of March 1, 1977, to December 31, 1977; authorizes Canadian vessels and nationals to fish within the Fishery Conservation Zone of the United States, or for anadromous species and Continental Shelf fishery resources of the United States beyond the zone only when the fishing is carried out pursuant to the provisions of the Agreement; waives the requirements of title II (relating to foreign fishing and international fishery agreements) and the penalty provisions in section 307 of the act; requires any person who owns or operates a United States fishing vessel and engages in fishing to which the agreement applies or any person who directly or indirectly receives fish in sufficient quantities as determined by the Secretary of Commerce, to submit to the Secretary such statistics as he may request; authorizes the Secretary, after consultation with the Secretary of State, to issue regulations as necessary regarding the collection of such statistics; and provides that any person violating the act or regulations issued pursuant thereto would be deemed to be committing an act prohibited by section 307 of the Act and subject to a civil penalty of up to $25,000. H.R. 5638—Public Law 95-73, approved July 26, 1977. (VV)

Fishery agreement with Mexico.—Approves the Governing International Fishery Agreement (GIFA) with Mexico by waiving certain procedural requirements of the Fishery Conservation and Management Act of 1976 to permit Mexican fishermen access to the allowable catch for specified fisheries within the 200-mile fishery zone of the United States where there is a surplus above the harvesting capacity of U.S. vessels; and adds several new positions and makes certain changes in titles and existing positions within the National Oceanic and Atmospheric Administration. H.R. 9794—Passed House November 1, 1977; Passed Senate amended November 3, 1977; House disagreed to Senate amendment November 3, 1977; Senate insisted on its amendment November 4, 1977; House agreed to Senate amendment with an amendment November 29, 1977. (VV)

Fishery conservation zone transition.—Gives Congressional approval of the fishery agreements between the United States and the People's Republic of Bulgaria, the Socialist Republic of Romania, the Republic of China, the German Democratic Republic, the Union of Soviet Socialist Republics, and the Polish People's Republic; provides that these agreements will enter into force on the date of enactment of this joint resolution; waives the 60-day Congressional review period; limits to 7 days the 45-day period for review and comment on application permits required of the Regional Fishery Management Councils created under the Fishery Conservation Zone Act during 1977 for those applications received by the Council on or before the date of enactment and those received by the Council from the Secretary of State after the date of enactment to provide for an orderly transition from the 12-mile to 200-mile fishing limit; waives, until May 1, 1977, the requirement that foreign fishing vessels have a valid permit on board and permits the Secretary to waive the fee required before fishing permits may be issued if he is satisfied that the foreign nation will pay the fee before May 1, 1977; and repeals, effective March 1, 1977, the Northwest Atlantic Fisheries Act of 1950. H.J. Res. 240—Public Law 95-6, approved February 21, 1977. (VV)

Gives Congressional approval of the fishery agreements between the United States and Spain, Japan, South Korea, and the countries of the European Economic Community (Iceland, France, Italy, Luxembourg, the United Kingdom, Denmark, Belgium, West Germany, and the Netherlands); contains essentially the same provisions as H.J. Res. 240 (Public Law 95-240) to provide for an orderly implementation of foreign fishing within the 200-mile fishery zone of the United States after March 1, 1977, including the 7-day period of comment by the Fishery Management Councils and the public with respect to applications for permits, the May 1 extension of time for the payment of fees and permit requirements, and waives the 60-day Congressional review period. H.R. 3753—Public Law 95-8, approved March 3, 1977. (VV)

GENERAL GOVERNMENT

Age discrimination report—nutrition programs for elderly.—Amends the Age Discrimination Act of 1975 to extend for 6 months, until November 1977, the time in which the U.S. Commission on Civil Rights must submit its report on unreasonable discrimination based on age in programs and activities receiving Federal financial assistance; authorizes the Commission for a 90-day period following transmittal of its report to provide technical assistance and information to Government officials; and

Amends the Older Americans Act to extend the surplus commodities provision of the title VIII nutrition program for the elderly through fiscal year 1978 in order that it will coincide with the authorization period of the other programs of the act; and gives States the option to receive cash in lieu of such commodities. H.R. 6668—Public Law 95-65, approved July 11, 1977. (VV)

Alaskan native claims.—Amends the Alaska Native Claims Settlement Act making technical corrections to allow the Sealaska Regional Corporation to make land selections in the withdrawal for Klukwan Village Corporation; extends certain deadlines involving the implementation of the Cook Inlet land exchange for eighteen months; and permits regional corporations to assign future receipts due them under the Alaska Native funds so that they may qualify for lower interest loans. H.R. 8499—Public Law 95-178, approved November 15, 1977. (VV)

Associate attorney general.—Amends chapter 31, title 28, U.S.C., to authorize the President to appoint, with the consent of the Senate, an Associate Attorney General who is authorized to exercise the duties of the office of Attorney General upon the absence or disability of the Attorney General or Deputy Attorney General, or in the event of a vacancy in those offices, continues the authority of the Attorney General to designate the further order of succession from among the Solicitor General and the Assistant Attorneys General; and adds the position of Associate Attorney General to those Government offices compensated at Level III of the Executive Schedule. S. 2089—Public Law 95-139, approved October 19, 1977. (VV)

Big Brothers-Big Sisters of America.—Amends the Original Federal Charter of Big Brothers of America to recognize the merger with Big Sisters International, Inc.; and enables Big Brothers to acquire the assets of Big Sisters upon discharging or satisfactorily providing for the payment and discharge of all the liabilities of the corporation. S. 2208—Public Law 95-167, approved November 11, 1977. (VV)

Center for the book.—Establishes a Center for the Book in the Library of Congress, under the direction of the Librarian of Congress, which will be supported by private gifts to provide a program to stimulate public interest and research in the role of the book in the diffusion of knowledge through such activities as a visiting scholar program accompanied by lecturers, exhibits, publications, and any other related activities. S. 1331—Public Law 95-129, approved October 13, 1977. (VV)

Civil Rights Commission authorization.—Raises the authorization limitation for the Civil Rights Commission from the present annual maximum of $9,540,000 to $10,480,023 for fiscal year 1978 plus such additional amounts as may be necessary for salary increases and other employee benefits authorized by law. H.R. 5645—Public Law 95-132, approved October 13, 1977. (VV)

Commission on Malnutrition and Hunger.—States the sense of the Senate that the President should establish a 2-year, 15-member Commission on Domestic and International Hunger and Malnutrition to establish the causes of hunger and malnutrition, identify and evaluate Federal programs and policies, and develop for the President and Congress specific recommendations for policies and legislation to reduce malnutrition and hunger; requires the Commission to submit an interim report within 6 months and its final report within 1 year; and provides that the Commission, in the year following transmission of its final report shall assist in implementing its recommendations and conduct an educational program to disseminate its findings and recommendations. S. Res. 271—Senate agreed to October 20, 1977. (VV)

Commission on New Technological Uses of Copyrighted Works.—Extends from December 31, 1977, to July 31, 1978, the date by which the National Commission on New Technological Uses of Copyrighted Works must submit its final report to the President and Congress. H.R. 4836—Public Law 95-146, approved October 28, 1977. (VV)

Daughters of the Confederacy patent renewal.—Extends for 14 years design patent number 29,611 which is the insignia of the United Daughters of the Confederacy. S. 810—Public Law 95-168, approved November 11, 1977. (VV)

Executive Protective Service name change.—Amends title 3, U.S.C., to change the name of the Executive Protective Service to U.S. Secret Service Uniformed Division. H.R. 8992—Public Law 95-179, approved November 15, 1977. (VV)

Federal assistance program information.—Increases the availability of information about Federal domestic assistance programs by requiring the Director of the Office of Management and Budget (OMB) to: (1) establish and maintain a data base containing specified information on all Federal domestic assistance programs; (2) develop and maintain a computerized information system to provide for the widespread availability of information contained in the data base by computer terminal facilities; and (3) publish annually a catalog of Federal domestic assistance programs containing information from the data base, a detailed index and any other information deemed appropriate; authorizes therefor $1.2 million for the first year; $1.7 million the second year and $2.2 million the third year;

Amends section 201 of the Intergovernmental Cooperation Act of 1968 to give OMB the responsibility to insure that information is provided to the States through their Governors or designated information centers on Federal financial assistance; requires the Director to report his recommendations to Congress for improving, consolidating and further developing Federal financial information systems; and requires the General Accounting Office to submit a report to Congress 1 year after enactment on actions taken by OMB to implement this act and, within 2 years of enactment, a progress report including an evaluation of its effectiveness and any legislative recommendations. S. 904—Passed Senate May 17, 1977. (VV)

Federal grants and cooperative agreements.—Distinguishes assistance relationships as a class from procurement relationships by restricting the term "contract" to procurement and the terms "grant", "grant-in-aid" and "cooperative agreement" to assistance; requires each executive agency to use a contract, grant, or cooperative agreement which would reflect more precisely the relationship between the Federal Government and the recipient as follows: (1) contract—when the principle purpose of the instrument is the acquisition, by purchase, lease, or barter, of property or services for the direct benefit of use of the Federal Government, (2) grant—when the principle purpose is the transfer of money, property, services or anything of value to the recipient to accomplish a public purpose authorized by Federal statute and there is no anticipated substantial involvement between the executive agency and the recipient during performance of the contemplated activity, and (3) cooperative agreement—when the principle purpose is the transfer of money, property, services, or anything of value to a recipient to accomplish a public purpose authorized by Federal statute and substantial involvement is anticipated between the executive agency and the recipient during performance of the contemplated activity; directs the Office of Management and Budget to undertake a study to develop a better understanding of alternative means of implementing Federal assistance programs and to determine the feasibility of developing a comprehensive system of guidance for such programs and report its findings to Congress within two years; authorizes the Director of OMB to issue government-wide guidance and to manage agency implementation; and repeals, effective 1 year after enactment, the Grants Act (42 U.S.C. 1891 and 1892). H.R. 7691—Passed House September 27, 1977; Passed Senate amended October 1, 1977. (VV)

Federal Home Loan Bank Board Members.—Amends the Federal Home Loan Bank Board Act, as amended, to permit a board member, whose term expires, to continue to serve on the board for an additional 30 days or until his successor is appointed, whichever occurs first. S.J. Res. 63—Public Law 95–56, approved June 29, 1977. (VV)

Amends the Federal Home Loan Bank Act to extend for an additional 15 days the term of the member of the Federal Home Loan Bank Board which expired on July 31, 1977, in order to permit the Board to obtain a quorum for transacting business until the new prospective chairman can be sworn into office. S.J. Res. 79—Public Law 95–90, approved August 4, 1977. (VV)

Folger Shakespeare Library.—Authorizes the Architect of the Capitol to furnish chilled water for air conditioning from the Capitol Power Plant to the Folger Shakespeare Library on a cost reimbursable basis. H.R. 9836—Public Law 95–182, approved November 15, 1977. (VV)

Former President's staff.—Increases from $96,000 to $150,000, effective October 1, 1977, the annual authorization to pay salaries for staff of former Presidents for the 30-month period following the expiration of Transition Act funds. H.R. 9354—Public Law 95–138, approved October 18, 1977. (VV)

GAO audits of IRS and ATF.—Amends the General Accounting and Auditing Act of 1950 to provide that the General Accounting Office may conduct management and financial audits of the Internal Revenue Service and the Bureau of Alcohol, Tobacco, and Firearms; contains provisions to insure the confidentiality of information including Congressional oversight and penalties for unauthorized disclosure; and requires the Comptroller General to submit to the Senate Finance and Governmental Affairs Committees, the House Ways and Means and Government Operations Committees, and the Joint Committee on Taxation, every six months, the names and titles of GAO employees having access to tax returns and information; to submit as frequently as possible results of the audit; and to submit annually a report of his findings and recommendations which must also include the procedures established for protecting the confidentiality of tax return information and the scope and subject matter of the audit. S. 213—Public Law 95–125, approved October 7, 1977. (VV)

Hawaiian Native Claims Settlement Commission.—Establishes an Aboriginal Hawaiian Claims Settlement Study Commission to conduct a study, for submission to Congress within 1 year of enactment, of the culture, needs, and concerns of the Aboriginal Hawaiians; the nature of the wrong committed against, and the extent of the injuries to, the Aboriginal Hawaiians by reason of the incident in 1893 when the U.S. naval representative, acting without the authority or knowledge of the Congress or President, unlawfully committed and deployed U.S. Armed Forces in support of the overthrow of the lawful Government of Hawaii; and various means to remedy such wrong. S.J. Res. 4—Passed Senate October 20, 1977. (VV)

Indochina refugee assistance.—Extends the Indochina Migration and Refugee Assistance Act of 1975 through fiscal year 1981; authorizes such sums as necessary to carry out the domestic provisions of the Migration and Refugee Assistance Act of 1962 with respect to refugees from Cambodia, Vietnam or Laos; authorizes the use of funds under the act to reimburse State or local public agencies for the non-Federal share of costs for those refugees who qualify under the AFDC or medicaid program; provides 100 percent reimbursement for fiscal 1978 to States and localities for refugee cash assistance, medical assistance, social services and State-local administrative costs and phases down such assistance for the subsequent three fiscal years by providing for reimbursement at the rate of 75, 50 and 25 percent respectively, of the 1978 cost; authorizes $25 million to remain available until expended for special projects and programs to be administered by State or local public agencies or by private voluntary agencies participating in the Indochina Refugee Assistance Program to assist refugees in resettling and in gaining skills and education necessary to become self-reliant; and eliminates obsolete reporting requirements and requires annual rather than quarterly reports to the Congress. H.R. 7769—Public Law 95–145, approved October 28, 1977. (VV)

Intelligence activities authorization.—Authorizes such amounts as specified in a classified report prepared by the Senate Select Committee on Intelligence for fiscal year 1978 for intelligence activities of the United States Government including specific amounts for activities of the Central Intelligence Agency, the Defense Intelligence Agency, the Office of the Secretary of Defense, the National Security Agency, the military service, the Department of State, the Department of the Treasury, the Energy Research and Development Administration, the Federal Bureau of Investigation, and the Drug Enforcement Administration; authorizes $8.95 million for the Intelligence Community Staff for fiscal 1978 which supports the Director of the C.I.A. in fulfilling his responsibilities for overall management and direction of the intelligence community and the Policy Review Committee of the National Security Council; sets at 170 the end-strength of full time employees for the Intelligence Community staff; and authorizes $35.1 million for the Central Intelligence Agency Retirement and Disability System for fiscal 1978. S. 1539—Passed Senate June 22, 1977. (VV)

Kennedy Center authorization.—Authorizes $4.7 million for the John F. Kennedy Center for the Performing Arts, to remain available until expended, for the Secretary of the Interior, acting through the National Park Service, to correct leaks in the roof, terraces, kitchen, and East Plaza Drive and the damage which has resulted from these leaks; gives the Center approval authority over contracts let by Interior Department; and authorizes $4 million for fiscal year 1978. S. 521—Public Law 95–50, approved June 20, 1977. (VV)

Kennedy Presidential Library.—Authorizes the Administrator of General Services to accept land, buildings, and equipment that have been or may be offered to the United States without reimbursement, for the purpose of maintaining, operating and protecting as part of the National Archives system a Presidential archival depository located next to the University of Massachusetts campus on Columbia Point in Boston in memory of John Fitzgerald Kennedy. H.J. Res. 424—Public Law 95–34, approved May 26, 1977. (VV)

Library Services and Construction.—Extends through fiscal year 1982 the Library Services and Construction Act and authorizes therefor $110 million for fiscal 1978, $140 million for fiscal 1979, and $150 million each for fiscal 1980–1982 for title I grants for library services; such sums as necessary for fiscal 1978–1981 and $97 million for fiscal 1982 for title II grants for public library construction; $15 million for fiscal 1978, and $10 million each for fiscal 1979–1982 for title III grants for interlibrary cooperation; and such sums as necessary for fiscal 1978–1982 for grants for older readers services; retains current use and allocation of funds but adds a provision directing that a portion of title I appropriations in excess of $60 million be reserved for urban libraries (which are defined as public libraries in incorporated areas with populations exceeding 100,000) with the allocation of funds divided to guarantee each urban center a proportionate share in the same ratio as its population relates to that of the State; prohibits a State from using funds received pursuant to an urban resource library program in place of existing funds spent on the program; revises the hold harmless base year date regarding library services to the handicapped from fiscal 1971 to the second preceding fiscal year for which a determination is made; and provides that remodeling funds under library construction programs may be used to remove architectural barriers to the handicapped and to make library structures more energy efficient. S. 602—Public Law 95–123, approved October 7, 1977. (VV)

Natural Science Foundation authorization.—Authorizes $879.35 million for fiscal year 1978 to the National Science Foundation and an additional $4.9 million in foreign currencies which the Treasury Department determines to be in excess to the normal requirements of the U.S.; includes (1) $246.8 million for mathematical and physical sciences and engineering; (2) $210.5 million for astronomical, atmospheric, earth, and ocean sciences; (3) $47.5 million for the U.S. Antarctic Research Program; (4) $142.5 million for biological, behavorial, and social sciences; (5) $4.5 million or 2 percent of the funds for (1), (2), and (4), whichever is less for basic research stability grants; (6) $83.3 million for science education programs; (7) $75.85 million for Research Applied to National Needs (RANN), with not less than 25 percent of these funds to be earmarked for applied social research and policy-related scientific research and not less than 12.5 percent earmarked for the Small Business Innovation Program; (8) $20.9 million for scientific technological, and international affairs; (9) and $47.8 for program development and management;

Contains provisions to support interaction between academic and industry researchers, and to emphasize the activities of the Office of Science and Society; earmarks $4.5 million for programs directed to minority graduate students; contains certain requirements designed to protect pre-college students involved in research funded by the agency; establishes financial disclosure procedures to guard against possible conflicts of interest on the part of NSF employees; requires the National Science board to submit an annual report to Congress; and contains other provisions. H.R. 4991—Public Law 95–99, approved August 15, 1977. (VV)

Presidential reorganization authority.—Extends for three years from the date of enactment, the authority of the President under chapter 9, title 5, U.S.C., to submit reorganization plans to Congress proposing the reorganization of agencies in the executive branch; expresses Congressional intent that the President provide appropriate means for public involvement in reorganization; requires that the President, on a continuing basis, examine the organization of all agencies of the executive branch and determine what changes are necessary to accomplish the purpose of the statute;

Provides that reorganization plans may: create new agencies, transfer or consolidate the whole or part of agencies or their functions to other agencies, abolish all or part of the functions of an agency except any enforcement function or statutory program, change the name of an agency, authorize an agency official to delegate any of his functions, and provide that the head of an agency be an individual, commission or board with a fixed term not to exceed 4 years;

Requires that each plan be based upon a Presidential finding stated in a message to Congress that the proposed action is necessary to accomplish one or more of the purposes of the statute; requires that the message specify, with respect to each plan, the reduction of or increase in expenditures likely to result from the plan, as well as any improvements in the effectiveness or efficiency of the government anticipated as a result of the plan;

Prohibits the use of reorganization authority to: create a new executive department, abolish an executive department or an independent regulatory agency, abolish any function mandated by Congress through statutes, increase the term of an office beyond that provided by law, create new functions not authorized by pre-existing statutes, or continue a function beyond the period authorized by law.

Requires the President to submit each plan, which must deal with only one logically consistent subject matter, to both Houses of Congress simultaneously for referral to the Senate Governmental Affairs Committee and the House Government Operations Committee; requires the Chairman of the respective committee to introduce a disapproval resolution whenever a reorganization plan is submitted to assure that there will be a resolution for the Committee to act on and to report either favorably or unfavorably a disapproval resolution for each proposed plan; provides that plans shall become law at the end of 60 calendar days of continuous session of the Congress or if specified, at a later date, unless either House passes a resolution of disapproval or prior to that time if both Houses defeat a disapproval resolution; requires the committees in both Houses to file recommendations on each plan with the full House within 45 days and provides, if the committee has not done so, the resolution will automatically be discharged from further consideration and placed on the calendar; specifies that no more than three reorganization plans may be pending in the Congress at any one time;

Allows the President to (1) amend a plan within the first 30 days after submission if neither committee has ordered reported a disapproval resolution or made any other recommendations on the plan, or (2) withdraw a plan at any time prior to the conclusion of the 60 day period;

Provides that any member may move to proceed to consider a disapproval resolution once it has been reported or discharged; limits to 10 hours floor debate on a disapproval resolution and on appeals and motions made in connection therewith, and makes motions to postpone consideration or amend the resolution out of order;

Provides that suits brought against an agency affected by a reorganization plan, or regulations or other actions taken by an agency under a function affected by the plan shall not abate as a result of the plan, except in the case where the function is abolished; specifies that plans may provide for the transfer or other disposition of affected records, property, and personnel, and for the transfer of unexpended appropriations if the funds will be used for their original purpose; and requires that unexpended funds revert to the U.S. Treasury. S. 626—Public Law 95-17, approved April 6, 1977. (40)

Privacy Protection Study Commission extension.—Extends the life of the Privacy Protection Study Commission from July 10, 1977, to September 30, 1977, to provide additional time for the printing of a set of appendix volumes for its final report. S. 1443—Public Law 95-38, approved June 1, 1977. (VV)

Smithsonian Institution—Canal Zone biological area.—Increases from $350,000 to $750,000 the annual authorization for the Canal Zone Biological Area (the Barro Colorado Island Facility of the Tropical Research Institute of the Smithsonian Institution). S. 1031—Passed Senate May 2, 1977. (VV)

U.S. territories.—Provides for the continuance of the civil government of the Trust Territory of the Pacific Islands by authorizing $90 million for fiscal 1978, $122.7 million for fiscal 1979, and $112 million for fiscal 1980 in addition to such amounts authorized but not appropriated for fiscal years 1975 through 1977; authorizes $13,515,000 for the government of the northern Marianas until the separate funding provisions of their Covenant become effective; authorizes payment of adjudicated claims and final awards made by the Micronesian Claims Commission under title I of the 1971 act contingent upon Japan's payment of 50 percent of these claims and authorizes the full payment of awards under title II of the act with any interest which the Commission was not authorized to make excluded; authorizes $12.5 million for the rehabilitation and resettlement of Enewetak Atoll; provides for compensation to the people of Rongelap and Utirik Atolls in the Marshall Islands for radiation exposure resulting from a thermonuclear detonation on Bikini Atoll on March 1, 1954; authorizes $25,000 to each individual who has developed hypothyroidism or a radiation-related malignancy, $1,000 to each person or heir who was an inhabitant of Utirik Atoll at the time of exposure, and not to exceed $25,000 in compassionate compensation to an individual who has suffered a physical injury from a radiation-related cause; authorizes the Secretary of Interior to provide adequate medical care and treatment to any person who has a radiation injury or related illness with the costs to be assumed by ERDA; directs the Secretary to report to Congress by December 31, 1980, on any additional compassionate compensation that may be justified for those individuals continuing to suffer from radiation-caused illnesses or injuries;

Authorizes $15 million for a grant to the Government of Guam to assist in typhoon rehabilitation, upgrading and construction of public facilities, and maintenance of essential services; authorizes Guam to use funds provided under this act as its matching share for Federal programs and services; authorizes for 5 fiscal years beginning in fiscal 1978, $1 million annually for the Guam Development Fund; provides for the Secretary to assume the costs of the Guam comptroller effective October 1, 1977; allows Guam to impose a separate tax on all taxpayers of not to exceed 10 percent of their annual income tax obligation to the Government of Guam; grants jurisdiction to the district court of Guam to review individual claims arising from U.S. land acquisitions in Guam immediately after World War II; requires an individual to prove that he received less than fair value for his land by the United States and provides that claims of individuals who received payment for their land in judicial condemnation proceedings shall remain res judicata and the district court will not have jurisdiction to review their awards; authorizes $25 million to enable the Guam Government to purchase the new Medical Center of the Marianas to replace the Guam Memorial Hospital;

Provides for the Secretary to assume the costs of the Comptroller General of the Virgin Islands; allows the Virgin Islands Legislature to vary the present 6 percent ad valorem custom duty on the importation of articles into the Virgin Islands; extends to Guam and the Virgin Islands certain programs that will be extended to the Northern Marianas by the Commonwealth Covenant; directs the Secretary to submit to Congress by January 1, 1978, a report on Federal programs available to U.S. territories in order to determine the feasibility of extending to Guam and the Virgin Islands those programs extended to the Northern Marianas by the Commonwealth Covenant; authorizes a one-time payment of $15 million to Guam and an additional $14 million to the Virgin Islands for tax revenue losses; and provides for the consolidation of block grants to the Virgin Islands, Guam, American Samoa, the Trust Territory of the Pacific and the Government of the Northern Marianas. H.R. 6550—Public Law 95-134, approved October 15, 1977. (VV)

GOVERNMENT EMPLOYEES—FEDERAL OFFICIALS

Ethics in government.—Establishes a mechanism for the appointment of a temporary special prosecutor to deal with (a) matters concerning the President, Vice President, Members of Congress, and other high-level officials, and (b) matters which may directly and substantially affect the partisan political or personal interests of the President, the Attorney General, or the President's party and in which there exists a conflict of interest within the Justice Department; contains a general provision requiring any officer or employee of Justice to disqualify himself from cases in which he could have a conflict of interest; creates an Office of Government Crimes within the Justice Department to deal with abuses of office committed by government officials, violations of Federal lobbying, elections, and conflicts-of-interest laws, and other matters; provides that the director of this Office shall be appointed by the President and confirmed by the Senate;

Provides that an individual who has played a leading partisan role in the election of a President cannot be appointed Attorney General or Deputy Attorney General; sets forth procedures to be followed by the Attorney General with respect to any investigation of influence peddling by the Korean Government;

Establishes an Office of Congressional Legal Counsel to represent Congress and, with the consent of Congress, protect the vital interests of Congress in matters before the courts; provides that the Congressional Legal Counsel and the Deputy Congressional Legal Counsel will be appointed by the joint leadership and must be approved by both houses, and that neither position may be filled by persons who have been Congressional members, candidates, employees or persons who have served in Congressional campaigns within the preceding three years;

Requires annual financial disclosure reports be filed by the President, Vice President, Members of Congress, justices and judges of the U.S. and D.C. government, officers and employees of the executive branch at the GS-16 level or greater; officers and employees of the legislative and judicial branches compensated at a rate equal to or greater than the GS-16 pay rate; members of a uniformed service compensated at a rate equal to or greater than the grade 0-7 pay rate, candidates for Federal elective office, and Presidential appointees subject to advice and consent of the Senate; specifies the required contents of such disclosure reports; creates various offices to monitor compliance with this statute; sets criminal penalties for knowing and willful falsification or omission and civil penalties for failure to file or accidental omissions;

Establishes an Office of Government Ethics within the Civil Service Commission with primary responsibility for implementing financial disclosure requirements throughout the executive branch; provides that the director of this Office shall be appointed by the President with the advice and consent of the Senate;

Revises the current statute concerning restrictions on post service activities by officials and employees of the executive branch by imposing a new restriction which prohibits, for a period of one year following termination of government service, a former top-level official from contacting his former department or agency on any matter pending before the department or agency; and makes other minor modifications to the statute. S. 555—Passed Senate June 27, 1977. (245)

Federal comparability increases.—Denies the October 1 cost-of-living increase to Members of Congress, the Supreme Court Justices and other members of the Judiciary, Cabinet officials, and top Executive personnel who received the March 1 quadrennial pay increase under which salaries were increased as follows: Members of Congress from $44,600 to $57,500; Cabinet officers from $63,000 to $66,000; the Vice President, Speaker, and Chief Justice from $65,000 to $75,000; the President Pro Tempore and Majority and Minority Leaders from $52,000 to $65,000; circuit court judges from $44,600 to $57,500; district judges from $42,000 to $54,500; subcabinet assistants from $44,600 to $57,500; and other top Federal personnel from $42,000 to $52,000. S. 964—Public Law 95–66, approved July 11, 1977. (44)

Librarian of Congress.—Amends the provisions of the Annual and Sick Leave Act of 1951, as amended, to exclude the Librarian of Congress from the provisions of the act in order to treat the Librarian as the head of an agency for both pay administration and leave purposes. S. 1626—Passed Senate September 9, 1977. (VV)

Secret service protection of former Federal officials.—Authorizes the Secret Service to continue to furnish protection to certain former Federal officials (Secretaries Kissinger and Simon and Vice President Rockefeller) or members of their immediate families who received such protection immediately preceding January 20, 1977, if the President determines that they may be in significant danger, and provides that such protection shall continue for a period determined by the President but not beyond July 20, 1977, unless otherwise permitted by law. S.J. Res. 12—Public Law 95–1, approved January 19, 1977. (VV)

HEALTH

Clinical laboratories.—Extends and expands the existing program of mandatory licensure to all laboratories (except those under the jurisdiction of the Department of Defense or the Veterans' Administration) soliciting and accepting specimens for laboratory analysis; authorizes the Secretary of Health, Education, and Welfare to license those laboratories meeting quality assurance standards; authorizes the Secretary to promulgate standards and regulations to assure the quality, accuracy, and reliability of laboratory testing; authorizes the Secretary to delegate his licensure authority to states with primary enforcement responsibility to implement laboratory quality assurance programs at least equal to the Federal program; authorizes the Secretary and any State with primary enforcement responsibility to take necessary actions against laboratories not meeting the quality assurance standards; authorizes the Secretary to establish an Office of Clinical Laboratories to provide a uniform regulatory program for all laboratories subject to Federal jurisdiction; authorizes the Secretary to establish an advisory council to advise, consult with, and make recommendations to the Office of Clinical Laboratories concerning the development of quality assurance standards and the implementation of such standards; authorizes the Secretary to exempt physicians' office laboratories under certain conditions where physicians file an attested application with the Secretary, including but not limited to a description of the qualifications of nonphysician laboratory personnel, the quality and type of tests conducted, and the score of proficiency examinations taken by such personnel, or where the laboratory participates in an approved proficiency testing program; authorizes the Secretary to waive from the personnel standards laboratories located in and serving rural areas; authorizes the Secretary and any State with primary enforcement responsibility to utilize the services of private, nonprofit entities for the provision of inspection and proficiency testing services; authorizes $15 million annually to permit the Secretary to provide technical and financial assistance to States to become States with primary enforcement responsibility; authorizes the Secretary to inspect laboratories without a warrant solely for the purpose of determining compliance with the promulgated national standards; authorizes the Secretary to seek revocation of a laboratory's license where it is found that the laboratory has engaged in kickbacks, bribes, or false, fictitious, or fraudulent billing practices; prohibits discrimination by any licensed laboratory against any employee who has become involved in any activity concerning allegations that the laboratory is in violation of this section; authorizes the Secretary to exempt laboratories which are primarily engaged in biomedical or behavioral research, or where the sole purpose of the tests or procedures performed is to determine insurability for insurance; authorizes $1 million annually to permit the Secretary to make grants and contracts for projects and studies respecting clinical laboratory methodology and utilization; authorizes increased penalties for failure to comply with national standards and for any fraudulent activities undertaken in connection with obtaining reimbursement under titles XVIII and XIX of the Social Security Act; authorizes one year experimental demonstration competitive bidding in State medicaid programs under title XIX of the Social Security Act; and authorizes citizen suits for alleged violation of compliance with the law. S. 705—Passed Senate July 28, 1977. (VV)

Lateral sclerosis.—Expresses the sense of the Congress that action should be taken to focus national attention on the extent and consequences of amyotrophic lateral sclerosis ("Lou Gehrig's disease" which is a disorder affecting the motor neurons in the brain and spinal cord to produce progressive weakness and wasting of muscle tissue) and the need to find a cure for that disease. S. Con. Res. 26—Action completed November 29, 1977. (VV)

Medical school grants.—Amends the provision of the Public Health Service Act which requires medical schools to accept U.S. citizens who have completed at least 2 years of study in foreign medical schools in the 1978–79 school year and passed part I of the National Board of Medical Examiners examination as a condition to receiving capitation grants under section 770 of the Act to require instead that they increased by 5 percent the third year enrollment for the 1978–79 school year; restores preventative medicine and dentistry to the list of subjects eligible for study by public health trainees; allows the Secretary to award public traineeship grants to all public or nonprofit institutions which provide graduate or specialized training in public health rather than just to accredited medical schools; amends the Public Health Service Act to permit equitable treatment for the medical school class of 1980 in applying for National Health Service Corps scholarships; makes technical amendments to section 731 of the Public Health Service Act relating to eligibility of student borrowers and terms of federally insured student loans; raises the maximum annual interest rate which may be charged under the guaranteed student loan program from 10 to 12 percent; makes certain changes to existing law concerning the authority of the Secretary to enter into agreements for the designation of health system agencies; gives the director of the Indian Health Service additional flexibility to recruit doctors to serve Indian populations; provides that student loans cannot be denied to students in U.S. medical schools which are not eligible for capitation funds solely because they did not comply with the third year enrollment increase requirement; and requires the Secretary of HEW to conduct a study to determine whether schools of medicine, nursing or osteopathy deny admission or otherwise discriminate against any applicant because of the applicant's views on abortion. H.R. 9418—Public Law 95– , approved 1977. (632)

Public health programs—biomedical research.—Authorizes a total of $3.357 billion to extend through fiscal year 1978, without major substantive modifications, the assistance programs under the Community Mental Retardation and Community Mental Health Centers Act and the programs under the Public Health Service Act, including biomedical research; computes the authorizations for these programs generally on a formula of the higher of the fiscal 1977 authorization or the fiscal 1977 appropriation plus 20 percent;

Establishes five supergrade positions for the National Institute on Alcohol Abuse and Alcoholism in order to attract highly qualified senior level scientific presonnel; increases the number of National Cancer Institute consultants from 100 to 151; authorizes the Secretary of Health, Education and Welfare to develop minimum public health standards to maintain preventive health care programs; directs the Secretary to arrange for studies of international health issues and opportunities and to submit a final report by January 1, 1978; authorizes an additional $67.5 million to enable the Secretary to make grants for construction and modernization projects to assist public hospitals to meet life and safety codes and avoid loss of accreditation; prohibits payments under medicare and medicaid to health maintenance organizations which memberships are made up of a majority of individuals who are recipients of such benefits; requires the Secretary of HEW to take into account unusual local conditions which inhibit access or availability of personal health services in designating medically underserved populations for the purpose of making grants and awarding contracts for community health services; reaffirms Congressional intent that the existing prohibition on the use of funds under the authority of the Public Health Service Act other than section 1004 (relating to authorizations for family planning research) includes the administrative costs of family planning research activities;

Amends the Health Professions Educational Assistance Act to provide for equity in student loan programs, scholarship programs, and payback provisions for medical students within the National Health Service Corps (NHSC) who had made commitments under previous legislation; amends the definition of a health professions educational institution eligible to participate in the guaranteed student loan program to provide that an institution would be eligible for the program if it received or was eligible to receive capitation support in the previous fiscal year; assures that all physicians graduating from medical schools accredited by the Liaison Committee on Medical Education are treated equally; provides that individuals with obligated service to the NHSC may participate in residency training programs as officers in the regular or reserve corps of the Public Health Service prior to fulfilling the obligated service in an underserved area; permits an area Health Education Center to conduct training in general pediatrics as well as in family medicine and general internal medicine; allows the Secretary to repay, in return for service in a health manpower shortage area, educational loans obtained by health professions students before October 12, 1976; guarantees that students who graduated from two-year U.S. medical schools will be treated the same as U.S. students who completed 2 years at a foreign medical school when transferring to degree-granting institutions; authorizes construction assistance for the establishment or expansion of regional health professions programs; provides that traineeships in emergency medicine for graduate medical education students shall provide for tuition and fees and such stipends and allowances that the Secretary of HEW may deem necessary; reinstates the Indian Health Scholarship program; modifies amendments to the Immigration and Nationality Act to ensure that actions by HEW officials will be consistent with the intentions of Congress in regard to the so-called "f" visa training program which sets standards for alien graduates of foreign medical schools enrolling in the United States to study and practice medicine; and amends the Public Health Service Act to conform certain provisions of the student loan program with those in the NHSC;

Increases to $399,864,200 the authorization for the maternal and child health grant programs under the Social Security Act and extends through fiscal 1980 the authority for 100 percent Federal financing of medicaid skilled nursing and intermediate care facility inspection and enforcement costs; extends for 1 month, until August 30, 1977, the date by which the Committee on Mental Health of the Elderly must make its report to Congress to coordinate its actions and recommendations with the Presidential Commission on Mental Health; provides that States shall not receive less than their 1976 formula grant allotments under the Comprehensive Alcohol Abuse and Alcoholism Prevention, Treatment and Rehabilitation Act; and authorizes $140 million for preventive family planning project grants and $5 million for the Sudden Infant Death Syndrome Counseling and Information Services. H.R. 4975—Public Law 95-83, approved August 1, 1977. (131)

Saccharin study.—Provides the authority for studies on the health risks and benefits of saccharin and information respecting food additives in general; directs the Secretary of HEW to first ask the National Academy of Sciences to conduct the studies with an agreement to be finalized within 60 days; requires that the study of saccharin be completed within one year of enactment and the study of food additives within 15 months and submitted to the appropriate congressional committees; delays the FDA proposed ban on the sale of saccharin and saccharin products for 18 months pending completion of the studies;

Requires a warning label on all food products containing saccharin which reads as follows: "Use of this product may be hazardous to your health. This product contains saccharin which has been determined to cause cancer in laboratory animals."; requires retail stores which sell food products containing saccharin to post warning signs; authorizes the Secretary to require warnings on vending machines; makes these provisions effective 90 days after enactment; and

Extends to June 30, 1978, the National Commission for the Protection of Human Subjects of Biomedical and Behavioral Research and postpones the effective date of the establishment of the National Advisory Council for the Protection of Subjects of Biomedical and Behavioral Research from January 1, 1978, to November 1, 1978. S. 1750—Public Law 95-203, approved November 23, 1977. (382)

HOUSING

Housing and community development.—Amends the Housing and Community Act of 1974 and authorizes a total of $14,678,975,000 for housing programs through fiscal year 1980;

Community development.—Authorizes $12.4 billion for extension of the community development program through fiscal 1980 with funding levels for the basic block grant program of $3.5 billion for fiscal year 1978, $3.65 billion for 1979, and $3.8 billion for 1980; provides that not less than $197 million be made available for low-cost housing projects, and not less than $120 million be used for housing for the elderly and handicapped; provides a dual formula method of allocation which permits communities to use either poverty or age of housing stock as the primary indicator of need; authorizes $400 million for the creation of an urban development action grant program (UDAG) to aid seriously distressed cities over the next 3 years; provides that priority for UDAG funds be given to impacted cities and urban counties most in need based upon a formula which uses the proportion of housing stock built prior to 1940 as the primary indicator of need; authorizes $100 million annually for the next 3 years for completion and financial close-out of urban renewal projects; allows multiyear funding to small cities; permits a town or township to be deemed a city if all incorporated places within its boundaries enter into agreements with it to undertake essential community development and housing assistance activities; sets aside 25 percent of the urban action funds for use by smaller cities with populations under 50,000; authorizes $60 million for the loan rehabilitation program and $75 million for the comprehensive planning program;

Housing assistance and related programs.—Provides $1.2 billion in new contract authority for low-income housing programs and limits the amount of assistance to be used on existing rather than new housing; authorizes $685 million for public housing operating subsidies; permits HUD to make assisted housing payments for new or rehabilitated housing units beyond 60 days in an FHA-insured project; provides that loans for housing and related facilities for elderly and handicapped persons assisted under section 202 be made without regard to mortgage insurance limits contained in the National Housing Act; permits interest reduction subsidies for section 235 cooperatives to increase the availability of cooperative housing projects for low-income families; authorizes $60 million for policy development and research and $15 million for the urban homesteading program; extends the flood insurance program for 1 year, with several modifications, including a provision allowing communities which choose to not participate in the flood insurance program to continue to have access to conventional forms of financing;

Mortgage credit.—Extends through fiscal year 1978 the following mortgage credit programs authorized under the National Housing Act: insurance of financial institutions, general insurance program, housing for moderate income and displaced families, homeownership for lower income families, rental cooperative housing for lower income families, experimental financing, armed services housing, mortgage insurance for land development, and mortgage insurance for group practice facilities; extends through fiscal 1978 the authority to set FHA interest rates (Public Law 90-301) and the National Flood Insurance Act of 1968;

Increases the maximum loan amount for FHA-insured mortgages and for loans made by chartered savings and loan associations to adjust for the inflation in the costs of homes, mobile homes, and home improvements; decreases the downpayment requirements for FHA-insured loans; lowers the FHA mortgage insurance premium paid by nonprofit teaching facilities hospitals; provides for the expansion of the experimental graduated payment mortgage program; amends the Government National Mortgage Association emergency tandem plan to correct problems in the program and give it greater flexibility, particularly for use in urban areas and for housing rehabilitation;

Community reinvestment.—Authorizes the Community Reinvestment Act which requires Federal financial regulatory agencies in the course of examining the institutions they regulate to assess each intitution's performance in meeting the credit needs of its primary savings service area to the extent consistent with sound business operations; provides that regulations resulting from the Act will become effective no later than 390 days after its enactment;

Rural housing.—Amends the Housing Act of 1949 to extend through fiscal year 1978 the housing programs under the Farmers Home Administration (FmHA); increases by $25 million the low rent housing for domestic farm labor and low income repair loans programs;

Modifies the guaranteed loan program of FmHA to completely separate the guaranteed loan program, both in operation and funding, from the insured (direct) loan program; restricts the guaranteed loan program to persons with above average incomes, thereby asserting Congressional intent that FmHA use the direct loan program for low- and moderate-income persons; makes interest rates on guaranteed loans negotiable between the borrower and the lender in order to increase the program's attractiveness to private lenders;

Authorizes $10 million in fiscal 1978 for the mutual and self-help housing program; provides, for the first time, special authorizations for rural housing for the handicapped; authorizes congregate housing for elderly and handicapped persons and families; requires that at least 60 percent of FmHA loans made pursuant to section 502 (single family) and section 515 (rental) programs benefit persons of low income; requires establishment of a research capacity within FmHA; mandates the implementation of a rural rent subsidy; expands the definition of "rural area" to include smaller communities with standard metropolitan statistical areas which have a serious lack of mortgage credit; and states explicitly that property subject to a lien by the United States or held by the FmHA is taxable by State and local jurisdictions. H.R. 6655—Public Law 95-128, approved October 12, 1977. (177, 513)

Mortgage insurance.—Extends for 30 days, to July 31, 1977, the authority of the Secretary of Housing and Urban Development to: insure mortgages or loans under certain HUD-FHA mortgage or loan insurance programs under the National Housing Act, administratively to set interest rates for FHA-insured mortgage loans, enter into new flood insurance contracts; and extends certain authorities under title V of the Housing Act of 1949 with respect to FHA's rural housing program. H.J. Res. 525—Public Law 95–60, approved June 30, 1977. (VV)

Extends from July 31, 1977, to September 30, 1977, the authority of the Secretary of Housing and Urban Development to: insure mortgages or loans under certain HUD-FHA mortgage or loan insurance programs under the National Housing Act, administratively set interest rates for FHA-insured mortgage loans to meet the market at rates above the statutory maximum, and enter into new flood insurance contracts under the National Flood Insurance Act of 1968; and extends through September 30, 1977, certain authorities under title V of the Housing Act of 1949 with respect to FHA's rural housing programs. S.J. Res. 77—Public Law 95–80, approved July 31, 1977. (VV)

Neighborhood Reinvestment Corporation.—Establishes a National Neighborhood Reinvestment Corporation as a public, nonprofit corporation administered by a board of directors composed of the Chairman of the Federal Home Loan Bank Board (as Chairman of the Corporation), the Secretary of Housing and Urban Development, a Governor of the Federal Reserve Board, the Chairman of the Federal Deposit Insurance Corporation, the Comptroller of the Currency, and the National Credit Union Administrator; authorizes the Corporation to adopt its own internal rules and subjects it to the Freedom of Information Act; provides for open board meetings unless closed by majority vote; directs the Corporation to continue the work of the Urban Reinvestment Task Force in sponsoring Neighborhood Housing Services programs and to continue development of Neighborhood Housing Services of America as a secondary market operation; makes the Corporation responsible for assuring compliance by its local grantees with substantive provisions of applicable law; authorizes the Corporation to contract with the Office of Neighborhood Reinvestment of the Federal Home Loan Bank Board for personnel and staff support and gives it the usual corporate powers, including the power to sue and be sued, hold property, invest funds, and other powers necessary to carry out the act; authorizes the Office of Management and Budget to review and modify the Corporation's budget request; requires the Corporation to publish an annual report, to arrange for an annual audit, to audit grantees and contractors, and to cooperate with the General Accounting Office; authorizes therefor $15 million for fiscal year 1979, $20 million for fiscal 1980, and $30 million for fiscal 1981; and authorizes the Corporation to accept non-Federal funds, which must be reported and accounted for separately. S. 1724—Passed Senate September 9, 1977. (VV)

Supplemental housing authorizations.—Authorizes additional funds for housing assistance for lower income Americans in fiscal year 1977; extends the riot insurance and crime insurance programs; and establishes a National Commission on Neighborhoods;

Increases, in title I, the authorization for section 8 rental assistance, the major housing program for lower income Americans, by $378 million for a total of $1,228,050,000; increases operating subsidy funds for public housing projects by $19.6 million to pay for this winter's unexpectedly high heating costs; extends the contract period for new, privately developed section 8 housing from 20 to 30 years in order to attract more private financing; authorizes such appropriations as may be necessary for reimbursement of the FHA general insurance fund for losses on the sale of foreclosed properties from the FHA inventory; contains a $10 million increase for a total of $15 million for the HUD urban homesteading program as a means of of attracting additional rehabilitation funds into neighborhoods and disposing of the HUD inventory of foreclosed properties; increases from $500 million to $1.341 billion the ceiling for losses incurred by the Federal Housing Administration General Insurance Fund; extends HUD's authority to write crime insurance and riot reinsurance policies through September 30, 1978, and authorizes continuation of policies in force before April 30, 1978, through September 30, 1981; extends from April 30, 1978, to September 30, 1978, the date that the Secretary must submit a plan for the liquidation and termination of these programs; deletes the requirement whereby mortgages may be insured under section 220 of the National Housing Act only if the property is located in an area which has a workable program for community development; makes clear that mortgages insured under section 221(d)(4) of the Act may be executed by a mortgagor which is a public body or agency, or a cooperative, limited dividend corporation or other entity, private nonprofit corporation or association, as well as a profit motivated entity, as defined by the Secretary; and

Authorizes, in title II, $1 million for the establishment of a National Commission on Neighborhoods to assess existing policies, laws and programs having an impact on neighborhoods and make recommendations regarding investment in city neighborhoods, community government participation, economically and socially diverse neighborhoods, rental housing, and rehabilitation of existing structures, among other issues. H.R. 3843—Public Law 95–24, approved April 30, 1977. (VV)

INDIANS

Ak-Chin water settlement.—Provides emergency water relief on a temporary basis to the Ak-Chin Indians in Central Arizona by authorizing a feasibility study and, based on its findings, construction of a Federal wellfield and pipeline to the Reservation from nearby Federal land; reaffirms U.S. obligation to provide a permanent supply of water on a date certain; provides that the Ak-Chins, in exchange for a permanent supply of water, would waive all past and future claims against the U.S., Arizona, and other parties concerning both ground and surface water rights; and authorizes $500,000 for the feasibility study and $42.5 million to cover the Federal wellfield and delivery system. S. 1582—Passed Senate October 11, 1977. (VV)

American Indian Policy Review Commission.—Extends from February 18, 1977, to May 18, 1977, the period of time in which the American Indian Policy Review Commission must submit its final report to the Congress and increases the authorization therefor from $2.5 million to $2.6 million. S.J. Res. 10—Public Law 95–5, approved February 17, 1977. (VV)

Cheyenne-Arapaho lands.—Declares that two separate tracts of excess Government land, totaling approximately 107 acres, located in Canadian and Custer Counties, Okla., be held in trust for the Cheyenne-Arapaho Tribes of Oklahoma and authorizes the Secretary of the Interior to accept, upon request from the tribes, the fee simple title to lands conveyed to them pursuant to the acts of September 14, 1960, and May 18, 1968, to be held in trust for the tribes. S. 1291—Passed Senate June 9, 1977. (VV)

Creek nation land.—Declares that 5 acres of Federally-owned land in McIntosh County, Okla., be held in trust by the United States for the Creek Nation of Oklahoma. S. 947—Passed Senate June 9, 1977. (VV)

Ely Indian land.—Declares that 90 acres of Federally-owned land located in White Pine County, Nevada, be held in trust for the Ely Indian Colony in Ely, Nevada. S. 103—Passed Senate June 9, 1977. (VV)

Declares that approximately 90 acres of Federally-owned land located in White Pine County, Nevada, be held in trust for the Ely Indian Colony, Ely, Nevada. H.R. 6348—Public Law 95–191, approved November 18, 1977. (VV)

Fallon Paiute and Shoshone land.—Provides for the transfer of two separate tracts of land, totaling 2,700 acres, to be held in trust by the United States for the Paiute and Shoshone Tribes of the Fallon Indian Reservation, Fallon, Nevada, to provide sufficient irrigable land to enable the Tribes to make full use of their water rights; directs the Secretary of the Interior to develop irrigation facilities for the lands; and authorizes $5.4 million for construction under the act. S. 785—Passed Senate October 17, 1977. (VV)

Indian business development program.—Amends the Indian Financing Act of 1974 to extend the Indian Business Development Program for 2 years, through fiscal year 1979, at an annual authorization of $14 million. H.R. 4992—Public Law 95–68, approved July 20, 1977. (VV)

Indian child welfare.—Establishes legislative standards and an order of preference to govern the placement of Indian children in foster or adoptive care settings; accords first preference to members of the child's extended family, then to Indian homes on reservations where the child may reside or to tribally licensed homes; provides that tribes may alter this statutory order of preference by enacting ordinances of their own establishing alternative preference order; defines the respective jurisdiction of State and tribal governments in matter relating to child placements; provides that tribes may request transfers of placement cases from State to tribal courts; authorizes tribes, presently under State civil and criminal jurisdiction by virtue of Federal law, to apply to the Secretary for return of jurisdiction over child placement matters; authorizes States and tribes to enter into mutual agreements regarding the care, custody and jurisdiction over Indian children; provides for full faith and credit to be accorded the laws and court orders of Indian tribes relevant to child placement matters; provides that tribes shall receive the same information regarding informal child placements for educational programs operated by non-governmental entities across state lines or outside reservation boundaries as is now provided to States who are members of the Interstate Compact on the Placement of Children; establishes procedural safeguards for parents or extended family members in child placement proceedings by nontribal public or private organizations; establishes a right of tribes to receive notification of placement proceedings in State or local courts and provides for a right of tribal intervention in such proceedings; authorizes an Indian child who has been placed in adoptive, foster care or other setting, upon reaching the age of 18, to qualify for enrollment in his or her tribe of origin and for other benefits and property rights to which he or she may be entitled because of Indian status;

Authorizes the Secretary to make grants to Indian tribes and organizations to carry out Indian family development programs including grants for legal representation to families involved in child placement proceedings, the establishment of tribal licensing procedures for foster homes, and support of children placed in adoptive or foster care settings; directs the Secretary to collect and maintain records relating to future adoptive and foster care placements of Indian children; and directs the Secretary to conduct a study on the impact resulting from a lack of locally convenient day school facilities and file a report to Congress which shall contain a plan for remediation of the problem. S. 1214—Passed Senate November 4, 1977. (VV)

Indian claims.—Extends to April 1, 1980, the statute of limitation under which the

U.S., as trustee, can bring Indian claims for monetary damages which arose prior to the enactment of the original statute in 1966 on land claims by Indian tribes, bands and groups. S. 1377—Public Law 95-103, approved August 15, 1977. (VV)

Extends for an additional month, until August 18, 1977, the statute of limitation under which the U.S., as trustee, can bring Indian claims for monetary damages which arose prior to the enactment of the original statute in 1966 on land claims by Indian tribes, bands and groups. H.J. Res. 539—Public Law 95-64, approved July 11, 1977. (VV)

Indian Claims Commission.—Authorizes $2,250,000 for the Indian Claims Commission for fiscal year 1978; adds a new section to facilitate the transfer of cases from the Indian Claims Commission to the U.S. Court of Claims; confers upon the Court the powers of the Commission to set fees for attorneys representing Indian tribes or claimants and to obtain information and documents from Government agencies and congressional committees; provides that final judgments of the Court shall be paid as other Court of Claims judgments are paid; provides that cases transferred to the Court shall be subject to review by the Supreme Court; provides that the law establishing a revolving loan fund for tribes to obtain expert witnesses in Commission cases shall remain applicable to transferred cases; and increases from 15 to 16 the number of Court of Claims Commissioners. H.R. 4585—Public Law 95-69, approved July 20, 1977. (VV)

Indian education.—Authorizes appropriations for basic support grants to tribally controlled community colleges to be utilized for planning, development, operation, and improvement of the colleges; and provides a new authorization for construction and a more equitable funding formula for the Navajo Community College. S. 1215—Passed Senate November 4, 1977. (VV)

Indian rights to Arkansas riverbed.—Directs the Secretary of the Interior to enter into an agreement with the Cherokee, Choctaw, and Chickasaw Nations of Oklahoma for the use, lease, or purchase by the United States of their rights in the Arkansas Riverbed; directs the Secretary to utilize, as a basis for the terms of any agreement, the value of the property rights as determined by appraisals conducted by the Secretary and provides for payment of not less than the appraised value of the property rights involved; directs the Secretary to take such action as necessary to immediately carry out any agreement; and authorizes therefor $177 million. S. 660—Passed Senate June 30, 1977. (VV)

Oklahoma Indian tribes.—Extends Federal recognition to the Modoc, Wyandotte, Peoria and Ottawa Tribes of Oklahoma who were adversely affected by the termination policy adopted by the United States in 1953 in order that they will be eligible for Federal services and assistance provided to Federally recognized tribes and their members. S. 661—Passed Senate November 3, 1977. (VV)

Pueblo lands.—Authorizes the 19 Pueblos Tribes of New Mexico to convey all of their rights and interests in 11.6 acres of land in Albuquerque, New Mexico, to the United States to be held in trust jointly for them. S. 1509—Passed Senate September 29, 1977. (VV)

Pueblo lands maintenance charges.—Amends the act of August 27, 1935, to provide permanent authorization for the Secretary of the Interior to contract with the Middle Rio Grande Conservancy District for the payment of operation and maintenance changes of Pueblo Indian lands served by that district; and directs the Secretary of the Treasury to make payments under the authority of act for the period between the date of expiration and the date of enactment. H.R. 2719—Passed House September 19, 1977; Passed Senate amended November 3, 1977. (VV)

Siletz Indian tribe restoration.—Extends Federal recognition to the Confederated Tribes of the Siletz Indians, Oregon; makes the provision of the Indian Reorganization Act of June 18, 1934, applicable to the tribe and the tribe and its members eligible for all Federal services and benefits without regard to the existence of a tribal reservation or its members residing on a reservation; provides that the Interim Council of the Siletz Tribe shall have authority to receive grants from and to make contracts with the Secretaries of Interior and Health, Education, and Welfare; restores to the tribe all rights and privileges, other than hunting, fishing and trapping, under any Federal treaty, Executive order, agreement, or statute, or under the act of August 13, 1954, which terminated the tribe; provides a procedure by which membership in the tribe is to be established; provides for an election to adopt a constitution and bylaws and to elect tribal officials as provided in the constitution and bylaws; directs the Secretary of the Interior to negotiate with all interested parties to develop a plan for the establishment of a reservation, and to submit the plan, in the form of proposed legislation, to the appropriate Congressional committees within two years of enactment; and authorizes the Secretary to promulgate such rules and regulations as necessary to carry out the act. S. 1560—Public Law 95-195, approved November 18, 1977. (VV)

Sioux Black Hills claim.—Authorizes the U.S. Court of Claims to review, without regard to the technical of res judicata or collateral estoppel the determination of the Indian Claims Commission entered February 14, 1974, that the act of February 28, 1877, effected a taking of the Black Hills portion of the Great Sioux Reservation in violation of the fifth amendment. S. 838—Passed Senate May 3, 1977. (VV)

Te-Moak Shoshone land.—Transfers 80 acres of land from the United States to the Te-Moak Bands of Western Shoshone Indians to be held in trust by the United States in order to provide a home for the Wells Indian Community, a group of the Te-Moak Band who are presently landless. S. 667—Public Law 95-133, approved October 15, 1977. (VV)

Wichita tribal land claim.—Authorizes the Indian Claims Commission to consider claims by the Wichita Indian Tribe and affiliated bands with respect to aboriginal title to lands which were acquired by the United States without payment of adequate compensation. S. 773—Passed Senate May 5, 1977. (VV)

Zuni lands.—Directs the Secretary of the Interior to acquire through purchase, trade or otherwise the 618.41 acres in the State of New Mexico upon which the Zuni Salt Lake is located and hold such land in trust for the Zuni Indian Tribe; confers jurisdiction upon the Court of Claims to hear and determine an aboriginal land claim that the Tribe failed to file with the Indian Claims Commission under the Act of August 13, 1946, which established that forum; and authorizes the Tribe to purchase and exchange lands in the States of New Mexico and Arizona notwithstanding the restrictions in the act of May 25, 1918, expressly prohibiting further expansion of Indian reservations in these States. S. 482—Passed Senate May 3, 1977. (VV)

INTERNATIONAL

Abu Daoud.—States as a sense of the Senate that the release by France of Abu Daoud, a known terrorist who is accused of having planned the murder of Olympic athletes in Munich in 1972, is harmful to the effort of the community of nations to stamp out international terrorism; further states that the United States could consult promptly with France and other friendly nations to seek ways to prevent a recurrence of a situaiton in which a terrorist leader is released from detention without facing criminal charges in a court of law; and directs the Secretary of the Senate to provide a copy of this resolution to the Secretary of State for transmission to the Government of France. S. Res. 48—Senate agreed to January 26, 1977. (13)

Arms Control and Disarmament Agency.—Authorizes a total of $16.6 million for the Arms Control and Disarmament Agency (ACDA) for fiscal year 1978, including $11.05 million for program operations, $3.55 million for external research and public affairs, and $2 million for the purpose of furthering the nuclear safeguards and program activities of the International Atomic Energy Agency; creates a new executive level IV position, Special Representative for Negotiations, to be appointed by the President with the advice and consent of the Senate to serve as the Alternate Chairman of the U.S. SALT delegation and to take part in other negotiations; removes the requirement that all ACDA contracts and grants be with U.S. institutions and persons; allows the agency an exception from the appointment and classification provisions of the Civil Service System in order to allow the agency to compete effectively for employees with other Federal agencies; permits ACDA employees to accept reimbursement for work-related travel and expenses; adds a new section 37 to the Arms Control and Disarmament Act which states the sense of Congress that adequate verification compliance with the terms of arms control agreements should be an indispensable part of any such agreement, and requires the ACDA Director to report to Congress his determinations as to the veritability of the components of arms control proposals, any degradation of veritability in existing arms control agreements, and the amount of agency resources expended on the verification task. H.R. 6179—Public Law 95-108, approved August 17, 1977. (220)

Belgrade Conference.—States as the sense of the Congress that the U.S. delegation to the preparatory Belgrade meeting, beginning on June 15, 1977, should make every effort to insure that the agenda adopted for the subsequent meeting on the Conference on Security and Cooperation in Europe provides for proper, straightforward and serious exchange of views among the participating States on the application of the principles of the Final Act of the Helsinki Conference as well as on compliance and noncompliance with all of its provisions, including the presentation and thorough discussion of all violations of the Final Act, especially those related to universal humanitarian ideals. H. Con. Res. 249—Action completed June 15, 1977. (VV)

States the sense of the Senate that the U.S. representatives to the Helsinki Accords Review Conference should indicate to the Soviet Union and other states represented at the Conference the official concern of the U.S. over the treatment of Anatoly Scharansky, Yuri Orlov, and others who sought to monitor compliance with the Helsinki Accord. S. Res. 198—Senate agreed to July 12, 1977 (VV)

Canadian-U.S. relations.—Expresses the sense of the Senate that the President should bring to the attention of the Government of Canada the adverse effect on the United States broadcasting industry of recent provisions of the Canadian tax code. S. Res. 152—Senate agreed to September 8, 1977. (VV)

Harp seal killings.—Urges the Canadian Government to reassess its present policy of permitting the killing of newborn harp seals in Canadian waters which is considered by many citizens of the U.S. to be cruel and, if continued at the current high level, may cause the extinction of that species of seal. H. Con. Res. 142—Action complete April 6, 1977. (VV)

International cooperation on nuclear proliferation.—Commends the President for his stated intentions to give diplomatic priority to the pursuit of nonproliferation measures; endorses and strongly supports active consultations with world leaders on the highest level to: (1) curb the spread of nuclear enrichment and reprocessing facilities and otherwise discourage the diversion of nuclear energy from peaceful uses to nuclear weapons or other nuclear explosive devices, (2) achieve universal acceptance of international safeguards on all peaceful nuclear activities, as well as to seek international cooperation to improve the packaging and handling of high-level wastes and to provide for international storage of plutonium, spent reactor fuel, and other sensitive nuclear materials, (3) explore possible international arrangements for the provision of nuclear fuel services to help meet the legitimate energy needs of cooperating states, (4) reach agreement on sanctions to be applied against any nation which seeks to acquire a nuclear explosives option, and (5) strengthen the safeguards of the International Atomic Energy Agency; and pledges prompt Senate action on legislation to enact a clear statement of goals for U.S. nonproliferation policy providing guidance and support to these Presidential diplomatic initiatives, and to establish a clear statutory framework for the development and implementation of U.S. nuclear export policy. S. Res. 94—Senate agreed to April 28, 1977. (VV)

International development assistance—food for peace.—Authorizes $1,646,800,000 for fiscal year 1978 for bilateral development assistance, international disaster assistance programs, operating expenses for the United States Agency for International Development (AID) and voluntary U.S. contributions to international organizations;

Authorizes $200 million for the initial U.S. contribution to the Sahel Development Program which combines the resources of more than 12 donors and 8 recipient countries in a long term development effort in the Sahel region of Africa; continues the New Directions aid policies initiated by the Congress in 1973 which require that U.S. assistance be channeled directly to aid the poor people in developing countries; extends the Housing Investment Guaranty Program through fiscal year 1979 and combines the separate Latin American and worldwide guaranty authorities; extends through fiscal 1978 the Agricultural and Productive Credit and Self-Help Community Development Programs; authorizes the following housing guaranty programs for fiscal year 1978: Israel—$25 million. Portugal—$15 million, and Lebanon—$10 million, notwithstanding the fact that these countries are not otherwise receiving development assistance; provides $30 million to continue U.S. assistance for the relief, rehabilitation, and reconstruction assistance for the relief, rehabilitation, and reconstruction assistance for victims of the Italian earthquake; improves U.S. population planning programs by providing for their integration with U.S. health and other development assistance programs; bars the use of funds for assistance to or reparations for Vietnam, Cambodia, Laos, or Cuba and directs the President to continue to try to obtain an accounting of MIA's; repeals various provisions of the Foreign Assistance Act prohibiting assistance to countries which furnish assistance to or trade with Cuba or Vietnam; bars funds for involuntary sterilizations; establishes an international Energy Institute;

Includes a separate title to strengthen the economic development and trade expansion aspects of the Food for Peace program (Public Law 480) and to clarify the humanitarian intent of the program; repeals the present exclusion from title I sales program of those countries or exporters which trade with Cuba or North Vietnam; removes the restriction on title I sales to the United Arab Republic; changes the title I sales allocation formula by requiring that 25 percent of the food aid commodities provided in each fiscal year be allocated to countries other than those with a per capita gross national product of $520 instead of $300 or less and by allowing the Secretary of Agriculture to reallocate some portion of title I financing if he certifies to Congress that the quantity of commodities that would be required to be allocated could not be used effectively to carry out humanitarian or development purposes of title I; permits the Secretary to finance projects to aid in the utilization, distribution, and storage of U.S. agricultural commodities; increases the annual minimum of agricultural commodities to be shipped under title II of Public Law 480 from 1.3 to 1.5 million metric tons; requires that 1.3 instead of 1 million metric tons of this amount be distributed through the U.S. voluntary agencies and the world food program; creates a new food for development program; expands and refines the "grantback" authority provided in 1975; permits the President to waive the repayment of title I obligations under a carefully developed plan for utilization of the proceeds raised by the recipient government from the sale of title I commodities upon its own market; and makes various other improvements. H.R. 6714—Public Law 95–88, approved August 3, 1977. (207)

International emergency economic powers.—Revises and delimits the President's authority to regulate international economic transactions during wars or national emergencies under section 5(b) of the Trading with the Enemy Act of 1917; restricts such authority to wartime situations with provision for continuation of existing exercises of authority; removes the authority to control certain economic transactions during a Presidentially declared national emergency; grandfathers the exercise of authorities already being exercised until September 14, 1978, which is 2 years from the date of enactment of the National Emergencies Act but provides that these authorities could be extended for unlimited 1-year periods if the President determines it to be in the national interest; enables the President to continue to control transactions with certain countries (Cuba and Vietnam) and to block assets of certain countries (People's Republic of China); insures that Presidential determinations to extend or terminate existing uses of authorities will not be subject to provisions of this act or the National Emergencies Act including provisions for termination of emergency authority by concurrent resolution of the Congress; increases the maximum criminal fine for violations to $50,000;

Grants authority to the President to regulate certain categories of international economic transactions during future national emergencies and prescribes procedures to be observed in the exercise of such authority; enables the President to apply emergency controls to transfers of funds, transfers by non-U.S. nationals, or transfers of articles clearly not intended to serve humanitarian purposes; restricts the exercise of emergency controls in order to enable U.S. persons to make humanitarian contributions in accordance with their consciences but not to permit transfers which subvert, contravene, or preclude effective exercise of emergency authority; requires the President to consult with Congress prior to and during the exercise of emergency authority, and to provide detailed reports on the basis for emergency authority and his exercise of such authority; authorizes the President to issue such regulations as necessary to exercise the authorities; provides a maximum civil fine of $10,000 for violation of regulations and maximum penalties of $50,000 and/or 10 years imprisonment for willful violation; and provides that blocked assets may continue to be blocked by the President despite termination of a state of emergency unless Congress specifies otherwise. H.R. 7738—Public Law 95– approved 1977, (VV)

International financial institutions.—Provides a total of $5.125 billion in multiyear authorizations for continued participation by the United States in six international financial institutions which includes $1.57 billion for the World Bank to be spread over three years; $2.4 billion for the International Development Association to be spread over three years; $112 million for the International Finance Corporation to be spread over three years; $814 million for the Asian Development Fund to be spread over three years; and a $50 million one-year authorization for the African Development Fund with a provision directing the Secretary of the Treasury to begin discussions with other donor nations for the purpose of setting amounts for future replenishments and of reviewing the voting structure within the Fund;

Instructs U.S. representatives to all international financial institutions to use their voice and vote to channel aid to projects which address the basic human needs of people in the recipient country; requires U.S. representatives to oppose all assistance to any country which engages in consistent patterns of gross violations of internationally recognized human rights or which provides refuge to airline hijackers unless the assistance is directed specifically to programs which serve basic human needs of the citizens of such country; requires the U.S. Executive Directors to consider several additional factors in carrying out their duties: (1) the extent of cooperation of a country in permitting unimpeded investigations of alleged human rights violations by specified international organizations; (2) U.S. actions on bilateral assistance due to human rights considerations; (3) the extent to which economic assistance directly benefits needy people; (4) whether a country has detonated a nuclear device or is not a State Party to the Treaty on Nonproliferation of Nuclear Weapons, or both, and (5) in dealing with requests from Vietnam, Laos, or Cambodia, the responsiveness of these governments in providing a more substantive accounting of American MIAs; requires U.S. representatives to oppose loans or other assistance for expanding foreign production of palm oil, sugar, or citrus crops for export if such production will cause injury to U.S. producers of the same, similar, or competing agricultural commodities; contains language to clarify that all funds to international financial institutions, including multiyear authorizations and pledges for callable capital, are subject to the annual appropriations process; and directs U.S. officials to try to maintain salaries in these institutions at levels near to comparable positions in the United States. H.R. 5262—Public Law 95–118, approved October 3, 1977. (203)

International security assistance.—Authorizes a total of $3,195,900,000 ($53 million below the Administration's request) in 1978 budget authority for eight programs to finance international security programs totalling $4,579,100,000;

Military programs.—Provides $228.9 million to the military assistance program which includes funds for military aid to Greece ($33 million), Portugal ($25 million), Spain ($15 million), Turkey ($48 million), the Philippines ($20 million), Jordan ($55 million), Indonesia ($15 million), and Thailand ($8 million); continues the phasedown of the military assistance advisory group program by reducing the number of groups from 34 to 17 and establishing a worldwide personnel ceiling of 865; retains the provision which states that no military personnel performing military functions may operate in any foreign country unless specifically authorized by Congress; authorizes the assignment of overseas management teams in fifteen countries; provides $31 million for the international military education and training program; provides $677 million to finance foreign military sales credits to 29 countries, with direct credits of $500 million to Israel and $20 million to Zaire, and with all loans to other countries to be financed through the Federal Financing Bank; states that a policy of restraint in U.S. arms transfers shall not impair Israel's deterrent strength or undermine the military balance in the Middle East;

Economic programs.—Authorizes $1.89 billion for the security assistance program to provide economic assistance for 15 countries and recommends that such programs be subject to the "new directions" criteria of the Foreign Assistance Act which requires that aid be channeled directly to aid the poor people in developing countries; provides $20,000 in security supporting assistance for disaster relief in Lebanon; provides that not less than $300 million of the amount authorized for Israel shall be available only for budgetary support on a grant basis; adds a new section 533 to the Foreign Assistance Act of 1961 to create an $80 million Southern Africa Special Requirements Fund to address the economic problems caused by the conflict in that region and prohibits the use of such funds for assistance in Mozambique, Angola, Tanzania, or Zambia unless the President determines that such aid would further U.S. policy interest; authorizes a balance of payments support loan to Portugal not to exceed $300 million to assist in stabilizing the Portugal economy; provides $25.0 million to continue the Middle East special requirements fund with $12.2 million of that amount earmarked for the Sinai support mission;

Narcotics control and contingency funds.—Provides $39 million for international narcotics control, with the understanding that $12.5 million will be used for programs in Mexico; requires the Department of State to review the narcotics control assistance program in Burma; provides $5 million for the President's Contingency Fund to give the Administration some flexibility in dealing with national security;

Other provisions.—Prohibits military assistance, training, and credits to Ethiopia and Argentina; exempts Australia, Japan, and New Zealand from the license requirement contained in the Arms Export Control Act for the export of major defense equipment; includes a statement of Congressional intent to authorize $100 million for a Zimbabwe Development Fund when progress toward an internationally recognized settlement will so permit; prohibits funds to promote any military or paramilitary operations in Zaire; prohibits economic assistance to any supplier or recipient of nuclear technology or equipment unless both agreed to place the transferred equipment under multilateral auspices when available, and that the recipient agreed to place all nuclear activities under international safeguards; authorizes such sums as may be necessary in fiscal year 1978 to carry out international agreements relating to defense cooperation with Greece and Turkey, and raises to $175 million the FMS credits and sales ceiling for Turkey contained in the Foreign Assistance Act; authorizes additions to stockpiles of defense articles in foreign countries of $270 million, with the entire amount earmarked for War Reserve Stocks of ammunition for Korea, a bookkeeping shift requiring no appropriation; and requires the termination of the sale of defense articles and services for one year to any country granting sanctuary to international terrorists unless U.S. national security justifies continuation of such sales. H.R. 6884—Public Law 95-92, approved August 4, 1977. (209)

Middle East peace negotiations.—Expresses the sense of the Congress that Anwar el Sadat, President of Egypt, and Menahem Begin, Prime Minister of Israel, be commended for the courageous steps they have taken to resolve the differences between their nations and to bring peace between Israel and her Arab neighbors through face to face negotiations in the context of a Geneva conference. H. Con. Res. 417—Action completed November 29, 1977. (VV)

National Academy of Peace and Conflict.—Establishes a 1 year Commission to study proposals for establishing the National Academy of Peace and Conflict consisting of 9 members, three each appointed by the President pro tempore of the Senate, the Speaker of the House, and the President, to conduct a study to consider whether to establish a National Academy of Peace and Conflict Resolution; the size, cost and location of the Academy; the effects the establishment of the Academy would have on existing institutions of higher education; the relationship which would exist between the Academy and the Federal Government; the feasibility of making grants and providing other forms of assistance to existing institutions of higher education in lieu of, or in addition to, establishing the Academy; and alternative proposals, which may or may not include the establishment of the Academy, to assist the Federal Government in accomplishing the goal of promoting peace; and authorizes therefor $500,000. S. 469—Passed Senate June 17, 1977. (VV)

OPIC.—Extends until September 30, 1981, the basic operating authority of the Overseas Private Investment Corporation, a wholly owned U.S. government corporation created by Congress in 1969 by which the government insures U.S. investment in developing countries against the risks of inconvertibility of local currency into dollars and expropriation loss due to war or revolution; eliminates the requirement that OPIC transfer its insurance operation to private companies; permits OPIC to seek private coinsurance on equitable terms when this is consistent with OPIC's basic objectives as a developmental agency; and

Removes the present prohibition against OPIC's use of its own funds in prompting or financing mineral surveys or projects to permit OPIC to undertake a limited program of involvement in encouraging investments in non-fuel raw materials in oil-importing less developed countries. S. 1771—Passed Senate October 25, 1977. (577)

Peace Corps authorization.—Authorizes $82.9 million to finance the operation of the Peace Corps for fiscal year 1978 and $1 million for increases in salary, retirement, or other employee benefits authorized by law. S. 1235—Public Law 95-102, approved August 15, 1977. (VV)

Portugal—military assistance.—Modifies the existing statutory limitations on the allocation of military assistance funds for fiscal year 1977 contained in section 504(a)(1) of the Foreign Assistance Act of 1961, as amended, to add Portugal to the list of eligible countries and specify that $32.25 million be allocated to that country to upgrade its armed forces which were debilitated as a result of prolonged colonial wars in Africa. S. 489—Public Law 95-23, approved April 30, 1977. (VV)

Regulations to prevent collisions at sea.—Provides the necessary statutory authority to implement the provisions of the "Convention of Internationl Regulations for Preventing Collisions at Sea, 1972" (Ex. W. 93d-1st) by specifying the means by which the Regulations will come into force and effect for the United States, ensuring coordination with the international implementation of the Regulations, and providing legal notice to interested persons through publication in the Federal Register; repeals Public Law 88-131 and replaces it with a congressional authorization for the President to proclaim the International Regulations and to establish the effective date of the Regulations, Annexes thereto, and any subsequent amendments, by publishing the proclamation in the Federal Register; provides for executive and legislative review of any proposed amendment to the Regulations and Annexes by requiring the President to notify Congress of the Proposal, including the date before which objections must be received by the International Maritime Consultative Organization (IMCO) and provides that either House of Congress may adopt a disapproval resolution within 60 days of receipt of a notification or 10 days before the last date on which an objection must be communicated to IMCO; provides that the regulation will be applicable to and must be complied with by all U.S. vessels, both public and private, while operating on the high seas; makes the regulations inapplicable to vessels operating in U.S. waters covered by the Inland Rules of the Road, the Navigation Rules for the Great Lakes and their connecting and tributary waters, and the Western Rivers rules which are established by both statute and Coast Guard regulations; requires U.S. vessels to comply with the international regulations if a foreign state has not exercised its recognized right to promulgate different rules; directs the Secretary of the Navy to require a vessel to comply as closely as possible to requirements of the international regulations which he certifies cannot be complied with without interfering with the special functions of the vessel; permits the Secretary of the Navy to establish special rules for sound and light signals for ships of war or vessels in convoy provided that they not be mistaken for signals authorized in the Regulations; authorizes the Secretary of the Department in which the Coast Guard is operating to promulgate reasonable rules and regulations to implement the act and international regulations and to establish special rules for sound and light signals for fishing vessels operating as a fleet; and imposes two separate civil penalties of not more than $500 each for violations. H.R. 186—Public Law 95-75, approved July 27, 1977. (VV)

Rhodesian chrome.—Amends the United Nations Participation Act of 1945 to halt the importation of Rhodesian chrome by nullifying the effect of Section 203 (the so-called Byrd amendment) of the Armed Forces Appropriation Act of 1972, Public Law 92-156, which permitted the importation into the United States of chromium and other strategic minerals from Rhodesia, despite mandatory U.N. sanctions against trade with that country which the United States supported by its vote in the United Nations Security Council and by Executive Order 11419; prohibits the importation into the United States of Rhodesian commodities and products as specified in that Executive Order, of July 29, 1968, as well as steel mill products containing Rhodesian chromium in any form; establishes an enforcement mechanism which requires a certificate of origin for these products confirming that they do not contain chromium from Rhodesia; and authorizes the President to suspend the act if he determines that it would encourage meaningful negotiations and further the peaceful transfer of government from minority to majority rule in Rhodesia. H.R. 1746—Public Law 95-12, approved March 18, 1977. (59)

Romanian earthquake.—States as a sense of the Senate that the United States should join with other nations and international, public, and private organizations to assist the people of Romania following the 1977 earthquake; and expresses deepest sympathy to the victims and their families on behalf of the people of the United States. S. Con.

Res. 12—Action completed March 17, 1977. (VV)

Romanian earthquake authorization.—Authorizes $20 million to the President for fiscal year 1977, to remain available until expended, for the relief and rehabilitation of refugees and other earthquake victims in Romania; requires the President to transmit a report to the Foreign Relations Committees of the Senate and House 60 days after enactment and quarterly thereafter on the obligation of authorized funds; and states that nothing in this act shall be interpreted as endorsing any measure undertaken by the Government of Romania which would suppress human rights as defined in the Conference on Security and Co-operation in Europe (Helsinki Declaration) Final Act and the United Nations Declaration on Human Rights or as constituting a precedent for or commitment to provide development assistance to Romania and requires that the Romanian Government be so notified. H.R. 5717—Public Law 95-21, approved April 18, 1977. (VV)

REGULATIONS

Safe containers.—Provides the legislative authority necessary to implement the International Safe Container Convention (Ex. X, 93d-1st); requires owners to get their new containers approved according to procedures established by the Secretary of Transportation or by the administration of any party to the Convention and to maintain all of their containers to meet the standards established by the Convention; gives owners of existing containers 5 years to submit them to the Secretary for approval; details the duties of the Secretary of Transportation who is the Administrator of the Convention for the U.S.; authorizes the Secretary to initially test, inspect and approve containers in international transport to determine if they have a valid safety approval plate and do not have any significant evidence of obvious risk of safety; permits the Secretary to remove the container from service if it does not have a plate; makes it the duty of owners to pay for or reimburse the Secretary for the cost of inspecting, testing and approvals; requires the Secretary to notify the owners of containers when he issues a detention or other order; establishes penalties for violations; and establishes an enforcement procedure for the Secretary of Labor against an owner who has discharged or discriminated against an employee for reporting the existence of an unsafe container or other violation. H.R. 8159—Public Law 95-208, approved December 13, 1977. (VV)

SALT II agreements.—Authorizes the President to proceed in accordance with the declaration of the Secretary of State of September 23, 1977, declaring the intention of the United States not to take any action inconsistent with the provisions of the SALT I Interim Agreement of 1972 and with the goals of the SALT II negotiations provided that nothing be construed preventing any action or prohibiting any weapons system development, procurement or deployment authorized by Congress; and requires the Secretary of State to report to Congress, at least every six months, on the exact status of negotiations for the SALT II agreement. S. Con. Res. 56—Senate agreed to October 19, 1977. (VV)

Soviet detention of Robert Toth.—States as the sense of the Senate that the U.S. should continue to press the Soviet Government for a complete accounting of the circumstances which precipitated the detention of Robert C. Toth, a Los Angeles Times staff member, and that appropriate means should be taken to obtain the safe return of Mr. Toth to the United States. S. Res. 194—Senate agreed to June 15, 1977. (VV)

Soviet expulsion of George A. Krimsky.—States as the sense of the Senate that: (1) the Soviet expulsion of Associated Press reporter George A. Krimsky is contrary to the spirit of the Helsinki Declaration respecting the rights of journalists; (2) the decision serves only to obstruct the implementation of the free flow of information provisions contained in the Declaration; (3) the action only invites and justifies steps of a reciprocal nature by the U.S. Government; and (4) the U.S. and Soviet Governments should seek greater communication in this area to prevent similar events of a counterproductive nature from occurring in the future; and directs the Secretary of the Senate to transmit a copy of this resolution to the President for the Department of State to convey directly to General Secretary Leonid Brezhnev of the Central Committee of the Soviet Communist Party. S. Res. 81—Senate agreed to March 4, 1977. (VV)

Soviet freedom of emigration.—Conveys to the Soviet Government the sustained interest of the American people regarding Soviet adherence to the Helsinki Declaration, including their pledge to facilitate freer movement of people, expedite the reunification of families, and uphold the general freedom to leave one's country. S. Con. Res. 7—Action completed March 22, 1977. (39)

State Department authorization.—Authorizes $1,693,308,000 for fiscal year 1978 for the operations of the State Department (including the Office of Foreign Buildings), the U.S. Information Agency (USIA), and the Board for International Broadcasting (which makes grants to Radio Free Europe/Radio Liberty);

Facilitates compliance by the United States with the Helsinki Agreement by requiring that the Secretary of State recommend the necessary waiver for any prospective visitor to the United States who could be subject to the denial of a visa solely for reason of political affiliation with the exception of the right of continued denial of entry to any person whom the Secretary judges to be a threat to U.S. security;

Strengthens the ability of the Board for International Broadcasting to oversee and set broad policy direction for Radio Free Europe/Radio Liberty, Inc.;

Provides that (1) U.S. policy toward Korea should be arrived at jointly by the President and the Congress; (2) any implementation of the President's policy of phased troop withdrawal from Korea should be consistent with the security interests of South Korea and the interests of the United States in Asia, notably Japan; (3) such policy should involve appropriate consultations between the United States and governments directly involved; and (4) any implementation of such policy shall be carried out in regular consultation with Congress;

Contains provisions to encourage the State Department to assist Americans incarcerated abroad and requires an annual report to Congress on the prisoners' status, including an assessment of the performance of Embassy and consular personnel in assisting them;

Provides that any new Panama Canal treaty or agreement negotiated with funds appropriated under this title must protect the vital interests of the United States in the Canal Zone and in the operation, maintenance, property, and defense of the Panama Canal;

Repeals existing law which authorizes suits against U.S. consular officers for damages resulting from neglect or failure to perform any duty imposed by law or by an order pursuant to the law in a timely fashion;

States the sense of the Congress that negotiations toward the normalization of relations with Cuba be conducted in a deliberate manner and on a reciprocal basis; that the vital concerns of the United States with respect to the basic rights and interests of U.S. citizens whose persons or property are the subject of negotiations be protected; and that Cuban policies and actions regarding the use of military and paramilitary personnel beyond its borders and the Cuban government's disrespect for human rights are among elements which must be taken into account during negotiations;

Strengthens the Foreign Gifts and Decorations Act of 1966 by clarifying existing ambiguities as to who is covered by establishing certain reporting and publication requirements and by increasing penalties for noncompliance; prohibits the President from making a commitment to provide any reparations or aid to Vietnam and prohibits funds for reparations or aid to Vietnam and directs the President to take all possible steps to obtain a final accounting of POWs and MIAs. H.R. 6689—Public Law 95-105, approved August 17, 1977. (219)

State Department supplemental auhorization.—Provides a supplemental authorization of $89.5 million for the Department of State for fiscal year 1977 as follows: (1) $60 million to pay U.S. dues and assessments to UNESCO for 1975 and 1976, in arrears because of Congressional action suspending further payments until the President certified that UNESCO's policies were in line with its objectives and less political, and part of the 1977 assessment, (2) $11,325,000 for aid to Soviet and East European refugees not settling in Israel and $7.4 million for the Indochinese Refugee Program administered by the United Nations High Commissioner for Refugees to continue U.S. support of 80,000 refugees in Thailand who arrived from Vietnam, Cambodia and Laos in 1975, and (3) $10,775,000 to provide for the construction of 108 apartment units for the U.S. mission in Cairo—36 for the State Department and 72 for AID; authorizes the Secretary to use appropriated funds to provide emergency medical attention, dietary supplements, and other assistance to U.S. citizens incarcerated abroad; requires that the Chairman or Vice-Chairman of the Senate and House delegations to the four interparliamentary union groups (Canada-U.S., Mexico-U.S., North Atlantic Assembly, and Interparliamentary Union) be a member of their respective foreign affairs committee; increases from 18 to 24 the size of the delegation to the North Atlantic Assembly and specifies that no more than 7 of the 12-member Senate delegation be of the same political party; and amends Public Law 94-203 (known as the Case Act which requires the Secretary of State to transmit the text of any international agreement other than a treaty to Congress within 60 days after the agreement has entered into force with respect to the United States) to require any department or agency entering into an international agreement on behalf of the United States to transmit the text of the agreement to the Department of State within 20 days following the date on which the agreement was signed. H.R. 5040—Public Law 95-45, approved June 15, 1977. (VV)

1984 Summer Olympics.—Advises the International Olympic Committee that the Congress would welcome the holding of the 1984 Summer Olympic games at Los Angeles, California, the site designated by the United States Olympic Committee; and expresses the hope of the Congress that the U.S. will be selected as the site for the 1984 games and pledges cooperation and support toward their successful fulfillment. H. Con. Res. 368—Action completed October 7, 1977. (VV)

Uganda—Human rights.—Expresses the sense of the Senate that the actions of the current regime in Uganda violating the human rights of its citizens and residents deserve condemnation by the world community and by the Organization of African Unity; urges all nations supplying lethal arms to Uganda to halt all deliveries of weapons; and urges the U.S. Ambassador to the United Nations to request that the situation in Uganda be investigated by an appropriate agency in the United Nations. S. Res. 175—Senate agreed to May 25, 1977. (VV)

Vietnam POW's and MIA's.—Directs the

President, as Commander in Chief of the Armed Forces, to require an accounting of all military personnel presently categorized on personnel rosters of the various branches of the U.S. Armed Forces as prisoner of war, missing in action, or killed in action in Southeast Asia; directs the President, by executive order, to require the Secretary of State to pursue enforcement of the Paris agreement of January 27, 1973; states that the Congress, having passed Public Law 88-408 authorizing the deployment of U.S. Armed Forces for the maintenance of international peace and security in Southeast Asia, recognize a corresponding duty and obligation to determine the fate of missing or unaccounted for Americans; requires that the President, through the Secretary of State, hold the Democratic Republic of Vietnam and the Provisional Revolutionary Government of the Republic of South Vietnam responsible to account for and provide information not otherwise available to satisfactorily dispose of the POW/MIA problem in accordance with the Paris agreement or seek alternatives that might resolve the question; and requires responsible officeholders in the executive and legislative branches to address the authority of their office toward a satisfactory resolution of the problem, make a public accounting, and remove any question as to the integrity of their function. S. Con. Res. 2—Senate agreed to February 21, 1977. (VV)

States as a sense of the Congress that the honor of those Americans who upheld the dignity of the law and served in the U.S. Armed Forces should be reaffirmed and that the Government should do everything possible to address the problems of those who served during the Vietnam war; and urges that there be established, in view of the recent issuance of a general pardon for U.S. draft evaders of the Vietnam war era, a Presidential Task Force on Missing in Action and Prisoners of War to propose courses of action to achieve the fullest possible accounting for all Americans listed in a missing status in Southeast Asia, including the return of remains, and to make recommendations concerning Federal policies relating to POW's and MIA's. S. Con. Res. 3—Senate agreed to February 21, 1977. (VV)

World Assembly on Aging.—States as the sense of the Senate that the President should instruct the United States delegation to the United Nations to work with the delegations of other nations to call for a World Assembly on Aging and a World Year on Aging for not later than 1982. S. Res. 238—Senate agreed to October 5, 1977. (VV)

LABOR

Black lung benefits.—Amends title IV of the Federal Coal Mine Health and Safety Act to improve the black lung benefits program established thereunder, and to impose an excise tax on the sale or use of coal;

Title I—Black Lung Benefits Reform Act: Seeks to simplify and expedite the refiling claims under the revised benefits standards by individuals whose claims were previously denied; allows these claims to be filed without regard to certain time limitations otherwise applicable and be retroactive to the time of the initial claim but not before January 1, 1974; requires the Secretary of Labor to provide to a denied claimant specific reasons for the denial; modifies the definitions of "pneumoconiosis" to include the sequelae of the disease and respiratory and pulmonary impairment arising out of coal mine employment as presently interpreted by the Social Security Administration; modifies the definition of "miner" to expand the coverage of the program to include workers around a coal mine, processors and transporters of coal, and coal mine construction workers; provides for the Secretary of Labor to revise the regulations defining what constitutes disability for purposes of the black lung program and setting forth the criteria for determining whether the definition is met; prohibits a finding that a miner was not disabled at the time of his death solely on the basis that he was actually employed at that time; permits a miner to apply for benefits while still employed although he would not be permitted to receive the benefits until after his employment terminates; permits the use of affidavits in determining the disability of deceased miners in the absence of other sufficient evidence; authorizes the establishment of Labor Department field offices to assist claimants with their claim filing and processing in the field; makes permanent a $10 million annual authorization for the establishment and operation of clinical facilities for the treatment and examination of miners with respiratory impairments paid directly from the Treasury and not from the Black Lung Disability Fund; provides that the Black Lung Disability Fund would pay all eligible claims with respect to miners whose last coal mine employment was before January 1, 1970; provides that the Federal Government be reimbursed from the Fund for all previous part C payments; expands the situations under which coal mine operators who acquire mines from previous operators would be required to assume liability (concurrently with the prior operator) for the payment of black lung benefits to individuals previously employed in the mine which has a retroactive effect, applying to changes in ownership taking place since December 31, 1969;

Title II—Black Lung Benefits Revenue Act: Imposes a one-percent *ad valorem* manufacturers excise tax on the sale of coal by the producer; provides that the tax does not apply to lignite;

Establishes a Black Lung Disability Fund in the Treasury, administered by the Secretary of the Treasury supported from tax revenues, appropriated repayable advances and investment income; provides that the fund pay benefits for which it is responsible including part C benefits expended by the Secretary of Labor, repayment of advances to the fund, including interest and all expenses of operation and administration under part C; makes the fund effective October 1, 1977 and authorizes the IRS to disclose to the National Institute for Occupational Safety and Health the mailing address of taxpayers for the purpose of locating individuals exposed to occupational hazards. H.R. 4544—Passed House September 19, 1977; Passed Senate amended September 20, 1977; In conference. NOTE. (Provisions of the conference report are contained in H.R. 5322 which passed the Senate Dec. 15, 1977.)

Black lung trust funds.—Provides for the duty-free entry of istle, crude or processed; and imposes an *ad valorem* tax on the sale of coal by the coalproducer at the rate of 50 cents a ton on underground-mined coal and 25 cents a ton on surface-mined coal but in no event more than 2 percent of the sales price; makes it clear that the provision is a tax and brings into effect all of the regular procedures for manufacturers excise taxes such as providing rules for situations where the producer uses the coal rather than selling it as in the case of integrated electric utilities and a number of steel companies, providing rules for the time for payment of tax, and giving the taxpayers the right to sue for refunds of overpayments of the tax; sets the rates in the statute;

Establishes a Black Lung Disability Fund in the Treasury administered by the Secretary of the Treasury supported from tax revenues, appropriated repayable advances and investment income; provides that the fund pay benefits for which it is responsible including part C benefits expended by the Secretary of Labor, repayment of advances to the fund, including interest and all expenses of operation and administration under part C; provides special rules for trust funds established by coal mine operators to satisfy their obligations under the so-called "responsible operator" provisions of the black lung benefits program; permits the coal mine operator designated as the one responsible for payment of benefits to a miner to fund its obligations in advance through contributions to a tax-exempt trust; and makes these contributions deductible, within limits, and includes safeguards to ensure that the money in the trust can be used only for the payment of these black lung benefits. H.R. 5322—Passed House July 18, 1977; Passed Senate amended December 15, 1977. (VV)

Mine safety and health.—Strengthens the national mine safety and health program by providing uniform administration and enforcement for the entire mining industry under a single act administered by the Department of Labor;

Repeals the Metal and Non-Metallic Mine Safety Act of 1966; amends the Federal Mine Safety and Health Act of 1969 (the Coal Act) to make its enforcement and administrative provisions applicable to the entire coal and non-coal mining industry; transfers the responsibility for the administration and enforcement of the mine safety and health program from the Department of the Interior to the Department of Labor;

Provides a streamlined mechanism for the promulgation of mandatory safety and health standards by imposing time limitations on each step of the standard-making process; vests all standard-making authority in the Secretary of Labor who may use Advisory Committees for the development of standards; provides for public comment and hearings on standard proposals and for judicial review of promulgated standards; contains provision for improved health standards and authorizes the Secretary of HEW, through NIOSH, to prepare criteria to be used in their development; gives the Secretary of Labor authority to issue emergency temporary standards in situations of grave danger to miners, without going through the statutory standards setting process;

Establishes an independent Federal Mine Safety and Health Review Commission which is assigned all administrative review responsibilities and authorized to assess civil penalties; imposes strict time limitations on each step of these processes; authorizes the courts to enforce routine agency determinations that are not appealed within the statutory time limitation;

Requires each operator to have a Secretary-approved safety and health training program which provides at least 40 hours of training for new underground miners, 24 hours of training for new surface miners, and 8 hours of annual retraining for all miners; requires that any miner who is assigned a new task be trained in the safety and health aspects of the new task; requires that such training be provided at the owner's expense, during normal working hours and that miners be compensated for their expenses in cases where the training is given away from the mine;

Requires at least four inspections each year for all underground mines in their entirety, at least two inspections a year for all surface mines in their entirety, and at least one spot inspection every 5 working days for particularly hazardous mines; expands miners' participation in inspection by authorizing their representatives to participate in the annual inspection and any pre- or post-inspection conferences held at the mine; permits miners to request inspections in writing if they suspect a hazardous situation; requires the Secretary to notify the mine operator of any violation of the health and safety standards with a time period within which the violation must be fully abated; authorizes the inspector to issue an order closing all or a portion of a mine affected by certain violations and if a pattern of violations exists; expands the coverage of those presently protected against discriminatory actions under the Coal Act to include applicants for employment; and provides a variety of civil and criminal penalties. S. 717—Public Law 95–164, approved November 9, 1977. (231)

Minimum wage increase.—Amends the Fair Labor Standards Act of 1938 to increase the minimum wage rate to $2.65 on January 1, 1978, to $2.90 in 1979, to 3.10 in 1980, and to $3.35 in 1981; increases the minimum wage in Puerto Rico for employees at wages between $2 per hour and $2.29 by $.25 in 1978 and by $.30 in 1979 and each year thereafter until parity is reached; and for those at wages less than $2 per hour increases the minimum wage by $.20 in 1978 and by $.25 in 1979 and each succeeding year until $2.30 per hour after which it will be increased by $.30 until parity is reached; establishes a Minimum Wage Study Commission to conduct a study of specific economic and employment effects of changes in minimum wage and overtime provisions; requires a report within 1 year on the effects of eliminating all minimum wage and overtime exemptions with regard to conglomerates; reduces from 50 percent to 45 percent in 1979 and to 40 percent in 1981 the credit against the minimum wage which an employer may credit against payment of the minimum wage to employees who receive more than $30 per month tips; excludes concessioner employees in national parks, refuges and forests from the minimum wage and overtime exemption presently provided for amusement and recreational establishments with the overtime exemption limited in that overtime compensation would be required for more than 56 hours per week and preserved as it applies to private entities engaged in providing services and facilities directly related to skiing; repeals the overtime exemption in the case of shade-grown tobacco employees; revises the overtime exemption for cotton ginning and sugar employees and requires overtime pay for employment in excess of 10 hours in a day and 48 hours in a workweek for the entire 14 workweek period; retains the existing exemption for babysitters who are employed on a casual basis; authorizes the Secretary of Labor, within certain guidelines to waive child labor restrictions for employment of children as hand harvest agricultural laborers paid on a piece rate basis if the Secretary finds that the use of 10 and 11-year old children is necessary to prevent severe economic disruption of an applicant's industry; increases the small business sales test which exempts small businesses from minimum wage coverage from $250,000 to $275,000 effective July 1, 1978, to $325,000, July 1, 1980, and to $362,500 December 1, 1981; exempts from minimum wage and overtime compensation requirements employees of organized camps and religious or nonprofit educational conference centers operated on a seasonal basis; and increases from 4 to 6 the number of students an employer may hire at a special minimum wage and requires simplification of the forms necessary for hiring such students. H.R. 3744—Public Law 95–151, approved November 1, 1977. (549)

Steel industry.—Reaffirms Senate support for existing laws restricting unfair or subsidized competition from imports, particularly the Antidumping Act of 1921 and the Trade Act of 1974, and urges the President to direct Federal agencies to enforce vigorously and aggressively existing laws to prevent cases of dumping, trade discrimination, and other forms of unfair competition that have an adverse impact on the American steel industry. S. Res. 279—Senate agreed to October 12, 1977. (VV)

MEMORIALS, TRIBUTES AND MEDALS

Alex Haley.—Honors and pays tribute to Alex Haley for his exceptional achievement in writing *Roots* and extends to him the highest praise of the Senate. S. Res. 112—Senate agreed to March 14, 1977. (VV)

Alf Landon's 90th birthday.—Extends, on behalf of the Senate, warm wishes to Alf Landon on the occasion of his 90th birthday, September 9, 1977; expresses admiration and gratitude to Governor Landon for his many years of distinguished service to the people of Kansas and the United States; and expresses appreciation for his contributions as Governor of Kansas, presidential candidate, statesman, progressive and venerable leader of his political party, civic leader, humanitarian and successful businessman and for his interest in young people. S. Res. 259—Senate agreed to September 9, 1977. (VV)

Benjamin Whitcomb Independent Corps of Rangers.—Extends best wishes of the Senate to the Benjamin Whitcomb Independent Corps of Rangers on the occasion of the re-enactment, on August 19, 1977, of the Revolutionary War Battle of Bennington, Vermont, and commends the Rangers for their continuing educational efforts in connection with the Revolutionary War. S. Res. 241—Senate agreed to August 3, 1977. (VV)

Brooks Robinson.—Honors and pays tribute to Brooks Robinson on the occasion of Brooks Robinson Appreciation Day, Sunday, September 18, 1977, at Memorial Stadium, Baltimore, Maryland. S. Res. 262—Senate agreed to September 16, 1977. (VV)

Carl T. Hayden.—Pays tribute to the Honorable Carl T. Hayden on the occasion of the one hundredth anniversary of his birth, October 2, 1977. S. Res. 275—Senate agreed to September 30, 1977. (VV)

Charles A. Lindbergh.—Honors Charles A. Lindbergh for his service to our country in peace and war, and expresses appreciation for his leadership and advocacy in the conservation of natural resources and for his daring and courageous contributions to the field of aviation and aeronautical science. S. Res. 177—Senate agreed to May 19, 1977. (VV)

Cora Rubin Lane 100th birthday.—Expresses the gratitude and appreciation of the Senate to Cora Rubin Lane for her long and outstanding service as an assistant to Senator Wililam E. Borah and expresses best wishes to her on the occasion of ner 100th birthday. S. Res. 162—Senate agreed to May 3, 1977. (VV)

Courtney C. Pace.—Commends Courtney C. Pace, administrative assistant to Senator James O. Eastland, for his long, faithful and outstanding service to the Senate and to his State and Nation. S. Res. 280—Senate agreed to October 4, 1977. (VV)

Frances G. Knight retirement.—Commends Frances G. Knight upon her retirement as Director of the Passport Office, Department of State, for her diligence and outstanding performance to the Nation during a landmark career of public service. S. Res. 231—Senate agreed to July 27, 1977. (VV)

Francis R. Valeo retirement.—Commends Francis R. Valeo for his long, faithful and exemplary service as an employee of the Senate and his ten years of service as Secretary of the Senate. S. Res. 133—Senate agreed to April 1, 1977. (VV)

Future Farmers of America.—Commends the Future Farmers of America which will have its golden anniversary convention November 8 through November 11, 1977, in Kansas City, Missouri, for the contributions it has made in sustaining our Nation's most basic industry of agriculture through developing leadership, encouraging cooperation, promoting good citizenship, teaching sound agricultural techniques and principles, and preparing our Nation's young women and men for careers in the industry of agriculture. S. Res. 299—Senate agreed to November 3, 1977. (VV)

Gen. Draza Mihailovich Monument.—Authorizes the Secretary of the Interior to permit the National Committee of American Airmen Rescued by General Draza Mihailovich to construct and maintain a monument to General Mihailovich on Federal land in the District of Columbia in recognition of the role he played in saving the lives of approximately 500 United States airmen in Yugoslavia during World War II; and provides that the location and design of the monument shall be subject to the approval of the National Capital Planning Commission, the Fine Arts Commission, and the Secretary of the Interior. S. 244—Passed Senate June 29, 1977. (VV)

Gen. Thaddeus Kosciuszko.—Provides, as an expression of esteem and gratitude by the American people, that the plaque to be erected in the Wawel Cathedral in Krakov, Poland, on October 17, 1977, in the memory of General Thaddeus Kosciuszko, shall be presented by the Ambassador of the United States to Poland on behalf of the American people as a gift to the people of Poland. H.J. Res. 573—Public Law 95–149, approved November 1, 1977. (VV)

Encourages the Secretary of the Interior to accept donations of suitable markers recognizing the role of General Thaddeus Kosciuszko in the American Revolutionary War. S. Con. Res. 44—Senate agreed to October 27, 1977. (VV)

Gerald R. Ford Building.—Names the Federal building located at 110 Michigan Avenue, N.W., in Grand Rapids, Mich., the "Gerald R. Ford Building". S. 385—Public Law 95–25, approved May 4, 1977. (VV)

Henry Ford.—Marks the occasion of the 75th anniversary of the first mass-produced motor vehicle by the elder Henry Ford as an appropriate time to recognize his unique industrial statesmanship. S. Res. 215—Senate agreed to June 29, 1977. (VV)

Hubert H. Humphrey Building.—Authorizes the naming of the Department of Health, Education and Welfare South Portal Building in Washington, D.C. as the "Hubert H. Humphrey Building". S. 2169—Public Law 95–141, approved October 23, 1977. (VV)

Jackie Robinson.—States the sense of the Senate to commemorate the 30th anniversay of Jackie Robinson's entry into major league baseball and join in the celebration of the week of July 18 through 25, 1977, in paying tribute to Jackie Robinson and what he symbolized to so many Americans. S. Res. 223—Senate agreed to July 18, 1977. (VV)

Jaycees International Conference.—Commends the "Old Sourdough Jaycees" of Anchorage, Alaska, the U.S. Jaycees, and the Jaycee International for bringing together Jaycee leaders around the world who have contributed to the betterment of mankind. S. Res. 137—Senate agreed to April 6, 1977. (VV)

John L. McClellan, death of.—Expresses the sorrow and regret of the Senate over the death of the Honorable John L. McClellan of Arkansas. S. Res. 328—Senate agreed to November 29, 1977. (VV)

John L. McClellan Hospital.—Names the Veterans' Administration Hospital in Little Rock, Arkansas, the "John L. McClellan Hospital". S. 2351—Passed Senate December 15, 1977. (VV)

Lt. Gen. Ira C. Eaker Medal.—Authorizes the President to present, on behalf of the Congress, to Lieutenant General Ira C. Eaker, U.S.A.F. (retired), a gold medal of appropriate design in recognition of his distinguished career as an aviation pioneer and Air Force leader; provides a $5,000 authorization therefor; and authorizes the Secretary of the Treasury to have duplicate medals struck in bronze and sold at cost. S. 425—Passed Senate May 13, 1977. (VV)

Lou Brock.—Pay tribute to Louis Clark Brock for his outstanding achievements in major league baseball especially for his new major league record of 893 career bases stolen; and recognizes and commends him for his outstanding contributions to the people of this nation, his exemplary conduct on and off the baseball playing field, his founding and active participation in the Lou Brock Boys' Club of St. Louis, and his service as a member of the Board of Directors of the Big Brothers and Sisters of America. S. Res. 260—Senate agreed to September 12, 1977. (VV)

Marian Anderson Medal.—Authorizes the President to award to Marian Anderson, in the name of the Congress, a gold medal with suitable emblems and inscriptions in recognition of her highly distinguished and impressive career; provides that bronze duplicates of the medal shall be coined and sold under regulations prescribed by the Secretary of the Treasury; and authorizes therefor $2,500. H.J. Res. 132—Public Law 95-9, approved March 9, 1977. (VV)

Medal of Honor.—Expresses best wishes to the Congressional Medal of Honor Society on the occasion of its national convention to be held in San Jose, California, November 9 through November 13, 1977, and expresses renewed appreciation and tribute to the individual members of the organization and to all recipients of the Medal of Honor, living and dead, for their bravery in battle and high service to country. S. Res. 322—Senate agreed to November 3, 1977. (VV)

Mike Monroney Aeronautical Center.—Designates the Federal Aviation Administration Aeronautical Center in Oklahoma City, Oklahoma, as the "Mike Monroney Aeronautical Center". S. 1640—Passed Senate June 8, 1977. (VV)

Motion Picture Academy 5th Anniversary.—Congratulates the Academy of Motion Picture Arts and Sciences for its past achievements on the occasion of its 50th anniversary on May 11 and extends best wishes for the future. S. Res. 168—Senate agreed to May 11, 1977. (VV)

Nez Perce War Commemoration.—States as the sense of the Senate that June 17, 1977, is to be a day for the commemoration of the Nez Perce War of 1977 and for the remembrance of the courage and honor of the Nez Perce during the long tortuous maneuvers of 1877. S. Res. 196—Senate agreed to June 16, 1977. (VV)

Philip A. Hart, death of.—Expresses the sorrow of the Senate over the death of Senator Philip A. Hart, of Michigan. S. Res. 15—Senate agreed to January 4, 1977. (VV)

President and Mrs. Ford.—Congratulates and commends President and Mrs. Ford on their exemplary conduct as President and first lady and for their dedicated public service to the Nation during their entire career of public service. S. Res. 22—Senate agreed to January 10, 1977. (VV)

President Ford.—Commends President Ford for the manner and integrity with which he carried out his responsibilities and wishes him Godspeed in his new and active life. S. Res. 38—Senate agreed to January 18, 1977. (VV)

President-elect Carter.—Extends best wishes to President-elect Jimmy Carter and to all those who will serve in his administration. S. Res. 23—Senate agreed to January 10, 1977. (VV)

Roman L. Hruska Meat Animal Research Center.—Designates the United States Department of Agriculture Meat Animal Research Center located near Clay Center, Nebraska, as the "Roman L. Hruska Meat Animal Research Center". S. 409—Passed Senate July 12, 1977. (VV)

Rosalynn Carter.—Congratulates the President on his selection of Rosalynn Carter as his recent emissary to Latin America and commends her on her performance as a representative of the people of the United States. S. Res. 195—Senate agreed to June 16, 1977. (VV)

St. Patrick's Parish anniversary.—Commemorates the people of St. Patrick's Parish, in Pottsville, Pennsylvania, who this year are celebrating the 150th anniversary of the founding of the parish. S. Res. 116—Senate agreed to March 17, 1977. (VV)

Vice President Rockefeller.—Commends Vice President Rockefeller for the manner and integrity with which he carried out his responsibilities and wishes him Godspeed in his new and active life. S. Res. 37—Senate agreed to January 18, 1977. (VV)

William A. Ridgely retirement.—Commends William A. Ridgely upon his retirement as financial clerk of the Senate for his lengthy, faithful and outstanding service. S. Res. 236—Senate agreed to July 28, 1977. (VV)

William O. Douglas Memorial.—Dedicates the canal and towpath of the Chesapeake and Ohio Canal National Historical Park to Justice William O. Douglas; directs the Secretary of the Interior to provide the necessary identification to inform the public of the contributions of Justice Douglas and to erect and maintain within the exterior boundaries of the Park an appropriate memorial; and authorizes such sums as necessary to carry out the act. S. 776—Public Law 95-11, approved March 15, 1977. (VV)

NATURAL RESOURCES—NATIONAL HISTORIC SITES

Bull Run Reserve.—Authorizes the Secretary of Agriculture to permit, under the provisions of the Miltiple Use-Sustained Yield Act of 1960, general recreational access and geothermal explorations for six months within a 42,500 acre area of the Bull Run Reserve in the Mount Hood National Forest, Oregon. H.R. 7606—Public Law 95-55, approved June 25, 1977. (VV)

Adjusts the boundaries of the existing 142,080 acre Bull Run Reserve in the Mt. Hood National Forest, Oregon, to 97,244 acres; insures that the Bull Run watershed is managed in a manner which will assure the long-term production of high quality raw potable water for the city of Portland and its outskirts; and permits sustained-yield logging and other activities within the reserve as long as they are compatible with the goal of high quality raw potable water production. H.R 7074—Public Law 59-200, approved November 23, 1977. (VV)

Cibola National Forest.—Increases the boundary of the Cibola National Forest in New Mexico to include four separate tracts adjacent to the forest which comprise approximately 25,975 acres. S. 553—Passed Senate October 29, 1977. (VV)

Eleanor Roosevelt National Historic Site.—Authorizes the Secretary of the Interior to establish 175 acres, including the Val-Kill estate in Hyde Park, New York, as the Eleanor Roosevelt National Historic Site to commemorate the life of Eleanor Roosevelt as well as provide a location for the conduct of studies and seminars relating to the issues with which she was concerned. H.R. 5562—Public Law 95-32, approved May 26, 1977. (VV)

Fort Union Trading Post National Historic Site.—Increases from $613,000 to $8.5 million the authorization ceiling for the Fort Union Trading Post National Historic Site in North Dakota and Montana of which $73,000 is for land acquisition and $8,427,000 for development facilities at the site with the stipulation that these funds will not be available until October 1, 1978, and that no funds for the reconstruction of the fort may be expended until the Secretary has determined, based on historical documentation, that reconstruction can be accomplished with a minimum of conjecture. S. 491—Passed Senate October 29, 1977. (VV)

George W. Norris Home National Historic Site.—Authorizes the Secretary of the Interior to acquire by donation or purchase with donated funds the home of Senator George William Norris (who, among other achievements, authored the 20th amendment to the Constitution which deals with Presidential and Congressional terms and the sessions of Congress, and the legislation which established the Rural Electrification Administration) in the State of Nebraska and to establish it as the "George W. Norris Home National Historic Site". S. 1828—Passed Senate July 11, 1977. (VV)

Land and water conservation fund.—Amends the Land and Water Conservation fund Act of 1965 to establish a special account for use in acquiring the backlog of lands previously authorized for inclusion in the national park system and certain similar Federal areas; increases the authorized level of the fund from $600 million to $900 million in fiscal year 1978 and from $750 million to $900 million in fiscal 1979 with the additional $450 million to be credited to the special account and to remain available until appropriated; provides that prior acquisition ceiling limitations on authorized areas may be exceeded in any one fiscal year by up to $1 million or 10 percent of the statutory limitation, whichever is greater; permits preacquisition work such as title searches, mapping, and other preliminary work which does not interfere with the rights of private landowners if Congressional authorization appears to be imminent; authorizes the Forest Service to use Land and Water Conservation Fund monies to purchase land in the Big Thompson Canyon at pre-flood value; and gives the Secretary the authority to (1) make minor boundary adjustments in units of the national park system with such authority to expire 10 years from the date of enactment of the authorizing legislation establishing the boundaries, and (2) accept adjacent lands outside park boundaries by donation. H.R. 5306—Public Law 95-42, approved June 10, 1977. (VV)

Legionville National Historic Site.—Provides for the establishment of a Legionville National Historic Site in Beaver County, Pennsylvania, consisting of 22 acres to be administered by the Secretary of the Interior as a unit of the national park system. S. 1104—Passed Senate October 29, 1977. (VV)

Public works on rivers and harbors—waterways user fee.—Authorizes the construction, repair, and preservation of certain public works of the Corps of Engineers on rivers and harbors for navigation and flood control; includes authorization (either construction or Phase I engineering) for 15 projects developed by the Corps of Engineers, modifications to previously authorized projects, and general legislative items; increases monetary authorizations for eleven river basins which will cover anticipated funding requirements for fiscal year 1978;

Authorizes the reconstruction of Locks and Dam 26 on the Mississippi River at Alton, Illinois, by replacing it with a new dam and a single 1,200 foot lock with contingencies for a second lock, at an estimated cost of $421 million;

Establishes, for the first time in U.S. history, a system of user charges to be paid by the commercial cargo vessels that use the 25,000 miles of Federally built and maintained inland waterways; provides that the user charge plan recover 50 percent of Federal expenditures for construction of navigation aids such as locks and 100 percent of operational and maintenance costs of the inland waterways; and provides that the charges be phased in over 10 years beginning October 1, 1979, unless Congress disapproves by concurrent resolution within 90 days. H.R. 5885—Passed House May 17, 1977; Passed Senate amended June 22, 1977; Senate requested conference June 24, 1977. (235)

Reclamation projects.—Authorizes $31,050,000 for fiscal year 1978 for continuing construction of the distribution system and drains of the San Luis Unit, Central Valley project, California; and provides for the establishment of a task force to review the management, organization and operation of the Unit and to report to Congress by January 1, 1978, the results of an examination of certain specified issues. H.R. 4390—Public Law 95-46, approved June 15, 1977. (VV)

Recreation permits.—Establishes uniform and objective policies and procedures to be employed by the Forest Service in issuing and administering permits for ski area and other commercial outdoor recreation facilities and services on national forest lands; removes permits for ski area facilities and services from any acreage limitations providing instead a separate procedure for such areas having more than 3,000 acres; continues the present maximum permit term of years and allows the renewal of the permit at any time during the permit's term if substantial investment is to be made by the permittee with the requirement that there must be six month's public notice prior to the renewal; authorizes the Secretary to suspend or terminate a permit if the permittee has breached the terms and is given due notice and a reasonable opportunity to correct the violation or if the lands are needed for another use; requires the Secretary to submit to the Congress within six months proposed regulations setting forth the conditions and procedures for the issuance of permits and provides certain congressionally mandated conditions and procedures which are to be included; requires that the permittee pay annual fees for the use of the lands to which the permit applies; increases from 25 to 50 percent the State's share of these fees; requires that the share be paid directly to affected local government rather than to the State, and widens the permissible use of the funds from construction of roads and schools only to construction of any public facility and provision of any public service; contains provisions whereby a permittee may increase a charge to the public for use of his principle facilities and services; provides for public disclosure of any memoranda, financial statement, or other materials concerning historical or financial data or information of commercial outdoor recreation facilities and services used in support of or in opposition to proposed increases in charges to the public; provides that structures, fixtures, or improvements not owned by the U.S. to which a permit applies, are the property of the permittee who may remove them and assign, transfer, encumber or relinquish their title; authorizes the Secretary to furnish, on a reimbursement of appropriation basis, all types of utility service on forest reserve lands to concessioners and permittees; contains a provision concerning maintenance of records and provisions of access to them by the Secretary and Comptroller General and requires that such records be kept for six years unless they are mandated to be kept longer in another statute; and contains other provisions. S. 1338—Passed Senate July 13, 1977. (VV)

River Basins.—Authorizes $3,905,000 for fiscal year 1978 to carry out the comprehensive river basin planning program of the U.S. Water Resources Council in those areas and river basins where river basin commissions have not been created, and to finance work on national water assessments. H.R. 6752—Public Law 95-41, approved June 6, 1977. (VV)

Increases the authorization for the Brazos River Basin in Texas to $7.5 million and the San Joaquin River Basin in California to $6 million which funds are appropriated but not authorized in order to permit contractors to continue work under their present contracts and allow the Corps to let additional contracts that were scheduled to be awarded in October. S. 2001—Public Law 95-104, approved August 15, 1977. (VV)

Authorizes a total of $215 million through March 31, 1978, for continued work on the following river basin projects: Alabama-Coosa River Basin; Arkansas River Basin; Brazos River Basin; Mississippi River Basin and tributaries; Missouri River Basin; North Branch, Susquehanna River Basin; Ohio River Basin; San Joaquin River Basin; and South Platte River Basin. S. 2281—Public Law 95-189, approved November 16, 1977. (VV)

Sabine River Compact.—Gives congressional consent to the amendment to the Sabine River Compact, entered into by the States of Texas and Louisiana, which would permit the Sabine River Authority of the respective States to address themselves to the problems of pollution abatement and saline intrusion in the water resources within their jurisdiction, subject to the powers already vested in them under the existing agreement. H.R. 1551—Public Law 95-71, approved July 23, 1977. (VV)

Sawtooth National Recreation Areas.—Increases the authorization ceiling for land acquisition for the Sawtooth National Recreation Area in Idaho from $19,802,000 to $27,802,000. S. 791—Passed Senate October 27, 1977. (VV)

Timber sales.—Requires the Secretary of Agriculture to select the bidding method on Forest Service timber that will foster open and fair competition, that will insure that the Federal government will receive the appraised value of the timber, and that takes into consideration the economic stability of communities whose economies are dependent on such national forest materials; authorizes the Secretary to select or alter the bidding method as he determines necessary; requires that in oral auctions, only prospective purchasers whose written sealed bids which are equal to or in excess of the appraised value of the forest timber may participate in the oral bidding process; and requires the Secretary to monitor bidding, and to report any instances of possible collusive bidding practices to the Attorney General. S. 1360—Passed Senate September 14, 1977. (VV)

Tinicum National Environmental Center.—Amends the Tinicum National Environmental Center Act which provides for the preservation of the tidal marshland in Pennsylvania to extend the boundaries of the center and increase the authorization to develop the center and complete the land acquisition from $3,850,000 to $11,100,000. H.R. 2817—Public Law 95-152, approved November 4, 1977. (VV)

Water Resources Development—Saline Water Conversion.—Reinstates for fiscal year 1978 the authorization for grants under title II or the Water Resources Act of 1964, as amended, for an institute, center, or equivalent agency at a college or university in each State to carry out water resources and technology; and extends through fiscal year 1978 the Saline Water Conversion Act of 1971 and authorizes therefor $21.95 million plus an additional $40 million for four projects which demonstrate the technology of desalination of which two must utilize underground brackish water. H.R. 4746—Public Law 95-84, approved August 2, 1977. (VV)

Water resources management.—States the sense of the Senate that no new national water resources management policy shall be implemented without Congressional concurrence, and no proposed regulations shall take effect for six calendar months during which Congress is in session, from the time of publication in the Federal Register and of notification to the Congress by the Executive Branch; provides that the Executive Branch shall transmit all recommendations and proposals to the States and to make all materials pertaining to regional hearings available to them; gives States two months to develop their responses and recommendations to the Executive Branch and to transmit them to the Water Resources Council and appropriate Congressional committees; provides States with an additional month to meet within river basin or regional commissions for recommendations of regional water resources management policies which should be transmitted to the Water Resources Council and appropriate Congressional committees; and gives Congress three months to hold hearings on the establishment of a national water resources management policy. S. Res. 284—Senate agreed to October 5, 1977. (VV)

White River National Forest.—Increases by 2,416 acres the boundary of the White River National Forest in Colorado and authorizes $2.6 million for the purchase of 789 of these acres. S. 2101—Passed Senate October 29, 1977. (VV)

WILDERNESS AREAS

Endangered wilderness.—Designates 14 additional units comprising 1.25 million acres of national forest land to the National Wilderness Preservation System as follows: 56,430 acres in the Coronado National Forest, Arizona, to be known as the Pusch Ridge Wilderness; 333,100 acres of land in California just south of Sequoia National Park to be known as the Golden Trout Wilderness; 21,250 acres of the Los Padres Forest in California to be designated as the Santa Lucia Wilderness area; 4 additions totalling 61,000 acres to the existing Ventana Wilderness also in the Los Padres; an 80,000-acre wilderness in the White River National Forest in Colorado, to become the Hunter-Fryingpan Wilderness; 37,000 acres of land near Albuquerque, New Mexico, in the Cibola Forest, to be known as the Monzano Mountain Wilderness; 30,930 acres of the Cibola also located near Albuquerque, which will be called the Sandia Mountain Wilderness; 29,567 acres outside Salt Lake City, Utah, to be called the Lone Peak Wilderness; 3 areas in Oregon, previously passed by the Senate in S. 658, the Oregon Omnibus Wilderness Act; an 82,400-acre addition to the Kalmiopsis Wilderness, a 33,000-acre addition to the Mt. Hood Wilderness area, and a 185,000-acre wilderness area along the Washington-Oregon border, to be known as the Wenaha-Tucannon Wilderness; an area in Oregon's Willamette National Forest known as the French Pete additions to the Three Sisters Wilderness; and 206,000 acres in Idaho, to be known as the Gospel-Hump Wilderness; provides for the study of additional public lands for inclusion in the wilderness system; and makes certain clarifying amendments regarding administration of the system. H.R. 3454—Passed House September 12, 1977; Passed Senate amended October 20, 1977; In conference. (573)

Oregon Wilderness.—Designates additional land for inclusion in the following wilderness areas: Kalmiopsis Wilderness, Siskiyou National Forest, Oregon—82,400 acres, Wenaha-Tucannon, Umatilla National Forest, Washington and Oregon—185,000 acres, and Mt. Hood Wilderness, Mt. Hood National Forest, Oregon—33,000 acres and designates the proposed Hidden Wilderness area, Willamette and Mt. Hood National Forests, Oregon, for study for possible inclusion in the National Wilderness System under the interim management of the Secretary of Agriculture. S. 658—Passed Senate July 20, 1977. (VV)

WILDERNESS AREAS STUDIES

Montana Wilderness.—Directs the Secretary of Agriculture to study 9 areas of land totaling approximately 973,000 acres located within the following National Forests in Montana to determine their suitability for designation as wilderness under the provisions of the Wilderness Act of 1964: Beaverbrook National Forest—West Pioneer Wilderness and Taylor-Hilgard Wilderness; Bitteroot National Forest—Bluejoint Wilderness and Sapphire Wilderness; Kootenai National Forest—Ten Lakes Wilderness and Mt. Henry Wilderness; Lewis and Clark National Forest—Middle Ford Judith Wilderness and Big Snowies Wilderness; and Gallatin National Forest—Hyalite-Porcupine-Buffalo Horn Wilderness; requires the Secretary to complete the studies and report his findings to the President within 5 years of enactment who is to submit his recommendations with respect thereto to the Congress within 7 years of enactment; and directs the Secretary to administer the areas so as not to diminish their presently existing wilderness character and potential until Congress determines otherwise. S. 393—Public Law 95-150, approved November 1, 1977. (VV)

Wildlife refuges.—Extends through fiscal year 1980 the authorization for the acquisition and development of the San Francisco Bay National Wildlife Refuge in California (consisting of approximately 21,000 acres), the Tinicum National Environmental Center in Pennsylvania (consisting of approximately 1,200 acres), and the Great Dismal Swamp National Wildlife Refuge in Virginia (consisting of approximately 107,360 acres). H.R. 5493—Passed House May 16, 1977; Passed Senate amended May 24, 1977. (VV)

NOMINATIONS

(Action by Rollcall Vote)

Griffin B. Bell, of Georgia, to be Attorney General.—Nomination confirmed January 25, 1977. (10)

Joseph A. Califano, Jr., of District of Columbia, to be Secretary of Health, Education, and Welfare.—Nomination confirmed January 24, 1977. (7)

Charles D. Ferris, of Massachusetts, to be a member of the Federal Communications Commission.—Nomination confirmed October 10, 1977. (554)

Peter F. Flaherty, of Pennsylvania, to be Deputy Attorney General.—Nomination confirmed April 5, 1977. (99)

James B. King, of Massachusetts, to be a member of the National Transportation Safety Board.—Nomination confirmed October 10, 1977. (555)

Ray Marshall, of Texas, to be Secretary of Labor.—Nomination confirmed January 26, 1977. (12)

Paul C. Warnke, of the District of Columbia, for rank of Ambassador for SALT negotiations and to be Director of the Arms Control and Disarmament Agency.—Nominations confirmed March 9, 1977. (41 and 42)

Andrew J. Young, of Georgia, to be U.S. Representative to the United Nations.—Nomination confirmed January 26, 1977. (14)

PROCLAMATIONS

American Business Day.—Designates May 13 of each year as "American Business Day". S.J. Res. 40—Passed Senate April 27, 1977. (VV)

Day of Prayer.—Designates the third Thursday in December of 1977 as "National Day of Prayer". S.J. Res. 81—Public Law 95-197, approved November 21, 1977. (VV)

Family Week.—Designates that week in November which includes Thanksgiving Day as "National Family Week". H.J. Res. 372—Public Law 95-100, approved August 15, 1977. (VV)

Gifted and Talented Children Week.—Designates the week beginning November 13, 1977, as "National Gifted and Talented Children Week". S.J. Res. 88—Passed Senate October 7, 1977. (VV)

Grandparents Day.—Designates the first Sunday of September of each year as "Grandparents Day". S.J. Res. 24—Passed Senate May 16, 1977. (VV)

Law Student Recognition Day.—Designates November 8, 1977, as "National Law Student Recognition Day". S.J. Res. 80—Passed October 10, 1977. (VV)

Lupus Week.—Designates the Week of September 18 through 24, 1977, as "National Lupus Week". H.J. Res. 24—Public Law 95-72, approved July 25, 1977. (VV)

Medical Laboratory Week.—Designates the second week of April of each year as "National Medical Laboratory Week". S.J. Res. 78—Passed Senate October 29, 1977. (VV)

School volunteers.—Requests the president to issue a proclamation recognizing the thousands of Americans who are voluntarily working to improve the quality of education in the United States. S.J. Res. 62—Passed Senate June 13, 1977. (VV)

Sickle Cell month.—Designates the month of September, 1977, as "National Sickle Cell Month". S.J. Res.—Passed Senate August 3, 1977. (VV)

SENATE

Commission on the operation of the Senate.—Extends for an additional 30 days, until April 1, 1977, the Commission on the Operation of the Senate. S. Res. 92—Senate agreed to February 24, 1977. (VV)

Committee reorganization.—Amends the Standing Rules of the Senate to reorder and rationalize the jurisdictions of Senate committees, effective February 11, 1977, among 15 standing committees and 6 other special, select or joint committees; abolishes the Aeronautical and Space Sciences Committee and transfers its jurisdiction to a newly created Committee on Commerce, Science, and Transportation; abolishes the District of Columbia Committee and the Committee on Post Office and Civil Service and transfers their jurisdictions to a newly created Committee on Governmental Affairs; transfers the jurisdiction of the former Interior Committee to an Energy and Natural Resources Committee; transfers the jurisdiction of the former Public Works Committee into a new Environment and Public Works Committee; transfer the jurisdiction of the former Labor and Public Welfare Committee to a new Human Resources Committee; continues the existence of the Special Committee on Aging with membership reduced to 9 in the next Congress; continues the existence of the Select Committee on Nutrition and Human Needs until December 31, 1977, after which its jurisdiction will be transferred to the Committee on Agriculture, Nutrition and Forestry; establishes a temporary Select Committee on Indian Affairs to consider all legislation relating to Indians for the duration of the 95th Congress after which its jurisdiction will be transferred to the Human Resources Committee;

Limits the number of committee and subcommittee memberships a Senator can hold generally to two major or class "A" committees and one class "B" committee and eight subcommittees thereof; prohibits committees from establishing subunits other than subcommittees; permits the Majority and Minority Leaders to temporarily increase the sizes of committees to ensure majority party control; allows Senators to serve on joint committees where such service is required to be from members of a committee on which such Senator serves; prohibits Rules Committee members from serving on any joint committee unless the Senate members of such committees are required by law to be from the Rules Committee; exempts members of the Budget Committee during the 94th Congress from certain assignment limitations during the 95th Congress; continues grandfather rights for Senators who are serving on three standing committees as a result of an exemption in the Legislative Reorganization Act of 1970 to continue to do so during the 95th Congress; allows the chairmen and ranking minority members of the Post Office and Civil Service Committee and the District of Columbia Committee to serve on the Governmental Affairs Committee and two other committees of the same class, as long as their service on Governmental Affairs remains continuous; prohibits a Senator from serving as Chairman of more than one standing, select, special, or joint committee unless the jurisdiction is directly related to that of the standing committee he chairs; prohibits Senators from serving as chairman of more than one subcommittee of each standing, select, special or joint committee; limits members to two class A committee or subcommittee chairmanships and one class B committee or subcommittee chairmanship, effective at the beginning of the 96th Congress; requires that not later than July 1, 1977, the appropriate standing committees shall report legislation terminating the statutory authority of the Joint Committees on Atomic Energy, on Congressional Operations and on Defense Production; requires that the appropriate standing committees report recommendations not later than July 1, 1977, with respect to the Joint Committees on the Library and on Printing; allows Senators to serve on joint committees considered for termination pending final disposition of the issue;

Provides for sequential and joint referral of bills that cross jurisdictional lines based on motions by the Majority and Minority Leaders, instead of by unanimous consent; provides for a computerized schedule of committee meetings by the Rules Committee; permits committees to meet without special leave until the conclusion of the first 2 hours of a meeting of the Senate or 2:00 p.m., except for the Appropriations and Budget Committees which may meet at any time without special consent; requires that morning meetings of committees and subcommittees be scheduled for one or both of two periods, one ending at 11:00 a.m. and a second beginning at 11:00 a.m. and ending at 2:00 p.m.; provides for continuous review of the committee system by the Rules Committee in consultation with the Majority and Minority Leaders; prohibits consideration of committee amendments to bills when the amendments are not in the jurisdiction of the committee proposing them; requires committee reports to contain an evaluation of the regulatory impact which would be incurred by individuals and businesses in carrying out the provisions of the bill; provides for the transition of staff from abolished or realigned committees to the new committees and provides for salary and tenure of committee staff during a transition period; provides that committee staff reflect the relative numbers of majority and minority members and that one-third of the committee staffing funds be allocated to the minority members for compensation of minority staff; provides that such adjustment be made over a four-year period beginning July 1, 1977, with not less than one-half being made in 2 years; provides for funding of increases in the expenditures of new committees resulting from this resolution; incorporates provisions of S. Res. 60 of the 94th Congress relating to individuals appointed by Senators to assist them with committee work; provides for the rereferral of measures according to the realigned jurisdictions; and provides that legal references to old committees are to be construed as referring to their successors. S. Res. 4—Senate agreed to February 4, 1977. (36)

Deputy President pro tempore.—Establishes, effective January 5, 1977, the Office of Deputy President Pro Tempore which shall be held by any Senator who is a former President or Vice President of the United States; authorizes the President Pro Tempore and the Deputy President Pro Tempore each to appoint an administrative assistant, a legislative assistant and an executive secretary; authorizes the Sergeant at Arms to provide and maintain an automobile for use by the Deputy President Pro Tempore and to employ a driver-messenger; and authorizes the Secretaries of the Conferences of the Majority and Minority each to appoint two staff assistants in each office. S. Res. 17—Senate agreed to January 10, 1977. (VV)

Names Hubert H. Humphrey of Minnesota Deputy President Pro Tempore of the Senate, effective January 5, 1977. S. Res. 27—Senate agreed to January 11, 1977. (VV)

Financial disclosure under Rule 42.—Amends S. Res. 110, to provide that Rule 42, the public financial disclosure provisions, would take effect on January 1, 1978, instead of October 1, 1977; provides that each person covered by old Rule 44 would make financial reports under its provisions for all of 1977 instead of the first three quarters of 1977;

requires each person covered by Rule 42 to disclose real property, personal property holdings, personal liabilities, patent rights or interest in patent rights, outside positions held and post Government employee agreements, which is the same information required for the first filing under title III of S. 555, January 1, 1978; requires Senators and others who become candidates for nomination or election to the Senate as defined in rule 42 in 1977 or 1978 to disclose the same information a Senator or other covered person who is not a candidate is required to disclose under rule 42; makes rule 42 also apply to a Senator, officer, or employee, compensated at a rate in excess of $25,000, who is employed for 60 days between January 1 and May 1, 1978, and any employee designated under rule 49 to handle campaign funds between January 1 and May 1, 1978; and incorporates into the Senate Rules the blind trust provision of S. 555 which states the requirements of a qualified blind trust. S. Res. 265—Senate agreed to September 29, 1977. (VV)

Joint Committee on Atomic Energy abolishment—Transitional accommodations.—Establishes until March 31, 1979, an Office of Classified National Security Information under the policy direction of the majority and minority leaders and the chairman of the Rules Committee and the administrative direction of the Secretary of the Senate which shall be responsible for safeguarding national security information and other restricted data of the Joint Committee on Atomic Energy; authorizes the Office to classify and declassify information within the guidelines developed for restricted data by the responsible executive agencies and to estabilsh a central repository in the Capitol for safeguarding such data; directs the office, within 30 days of enactment, to furnish the Senate Armed Services, Energy Environment and Foreign Relations Committees with a listing of all records, data, charts, and files to be transferred and to indicate which committee may have jurisdiction; directs the chairmen of the committees involved to resolve any jurisdictional problems which may arise; and makes necessary conforming amendments to certain laws which pertain to the Joint Committee on Atomic Energy. S. Res. 252—Senate agreed to August 5, 1977. (VV)

Political fund raising.—Amends paragraph 1 of rule XLIX of the Standing Rules of the Senate to permit those two assistants of a Senator designated to solicit campaign funds to also receive, be the custodian of, or distribute such funds. S. Res. 188—Senate agreed to June 13, 1977. (VV)

Senate delegation to the Middle East.—Authorizes the President of the Senate to appoint a special delegation of not to exceed 12 members of the Senate upon the recommendation of the Majority and Minority Leaders to visit certain countries in the Middle East and other areas as needed to conduct a study on U.S. economic and security interests in those areas, and authorizes $45,000 for expenses therefor which shall be paid from the contingent fund of the Senate. S. Res. 256—Senate agreed to August 5, 1977. (VV)

Senate delegation to South America.—Authorizes the President of the Senate to appoint, upon the recommendation of the Majority and Minority Leaders, a special delegation of not to exceed 12 members of the Senate to visit certain countries in South America and other areas as needed to conduct a study on U.S. economic and security interests in those areas, and authorizes therefor $45,000. S. Res. 221—Senate agreed to July 15, 1977. (VV)

Senate Ethics Code.—Amends the Standing Rules of the Senate to create a Code of Official Conduct; amends Senate Resolution 338, the original resolution establishing the Select Committee on Ethics, to provide for additional procedures for enforcing the new Code as well as other laws and rules of the Senate; and directs other Senate committees to study certain matters related to this resolution;

Public financial disclosure.—Requires Senators, candidates for the Senate, officers and employees of the Senate earning in excess of $25,000 per year to file a report listing their earned income and the sources and categories of value of their income, other than earned income, and all other interests, assets, and holdings held for the purposes of investment or income production;

Gifts.—Prohibits knowingly accepting a gift or gifts having an aggregate value of over $100 during a year from any individual or organization defined as having a "direct interest in legislation;"

Outside earned income.—Limits outside earned income of a Senator, officer or employee earning over $35,000 to 15 percent of the person's salary; limits each honorarium to $1,000 for Senators and to $300 for officers and employees; allows Senators or staff to accept honoraria up to $25,000 if immediately donated to a tax-exempt charity;

Conflict of interest.—Bars the use of one's official position to introduce or aid the progress of legislation the principal purpose of which furthers one's own financial interest; allows Members or staff who earn over $25,000 to provide professional services for compensation if not affiliated with a firm or association and if their work is not carried out during regular Senate office hours; directs committee employees earning over $25,000 to divest themselves of any holdings which may be directly affected by the actions of the Committee for which they work unless permitted by their supervisor and the Ethics Committee; prohibits Senators from lobbying the Senate for one year after leaving the Senate; applies a similar prohibition to employees lobbying the Committee or office for which they worked;

Unofficial office accounts.—Abolishes unofficial office accounts, those accounts defined as not including personal funds of a member, official funds, political funds and reimbursements;

Foreign travel.—Prohibits "lame duck" travel by a defeated or retiring member; prohibits receipt of counterpart funds where there has been reimbursement from another source; restricts per diem allowance to food, lodging and related expenses and places the responsibility on the person receiving the per diem to return any unused funds;

Franking privilege—Radio-TV studio—Senate computer.—Prohibits mass mailings and the use of official funds to purchase paper, to print, and prepare mass mailings under the frank; requires a Senator to register mass mailings annually for public inspection; prohibits the use of the Senate computer to store names identified as campaign workers;

Political activity by officers and employees.—Restates the present ban on staff soliciting or receiving campaign contributions; allows a Senator to name one assistant each in his Washington and State office to receive and handle campaign funds;

Discriminatory employment practices.—prohibits discrimination on the basis of race, color, religion, sex, national origin, or state of physical handicap in employment practices in the Senate;

Enforcement.—Sets forth procedures for the Select Committee on Ethics in investigating complaints of violation of the Code and enforcing its provisions;

Further studies.—Requires the Appropriations Committee to report within 120 days regarding an adjustment of official allowance; requires the Finance Committee to report within 120 days on the tax status of funds raised and expended to defray ordinary and necessary expenses of Members; directs the Rules Committee (1) to report within 120 days on the desirability of promulgating rules providing for: (a) periodic audits by GAO of all committee and office accounts; (b) a centralized recordkeeping system of accounts, allowances, expenditures and travel expenses of all committees and offices; (c) suggested accounting procedures for committee and office accounts; and (d) public disclosure and availability of information on the accounts of all committees and offices in a form which segregates the allowances and expenses of each committee and office; (2) to report within 120 days on the desirability of requiring that only official Senate funds may be used to pay for any expenses incurred by a Senator in the use of the radio-TV studios; and (3) to study laws relating to contributions made by officers or employees as well as on proposals to prohibit the misuse of official staff in election campaigns and report thereon within 180 days; requires the Governmental Affairs Committee to report (1) within 180 days regarding employee discrimination complaints and the desirability of establishing rules requiring "blind trusts" by members, officers and employees of Senate and (2) within 120 days regarding the use of simplified form of address for franked mail; and directs the Foreign Relations Committee to report in 90 days on the problem of travel, lodging and other related expenses provided members and staff paid for by foreign governments where it is not possible to procure transportation, lodging or other related services or to reimburse the foreign government for those purposes. S. Res. 110—Senate agreed to April 1, 1977. (94)

Severance pay for displaced Senate employees.—Provides severence pay for certain committee staff members whose service as an employee of the Senate was terminated solely and directly as a result of the reorganization of Senate committee staffs caused by the Committee Reorganization Amendments of 1977. S. Res. 239—Senate agreed to August 5, 1977. (VV)

Special Committee on Official Conduct.—Establishes a temporary Special Committee on Official Conduct composed of fifteen members appointed by the President pro tempore of the Senate (eight appointed upon the recommendation of the majority leader and seven upon the recommendation of the minority leader, with the chairman designated by the majority leader and the vice chairman by the minority members) to conduct a complete study of all matters relating to standards of conduct of Members, officers and employees of the Senate in the performance of their official duties including standards for: (1) annual public disclosure of income, assets, debts, gifts, and other financial items; (2) restrictions on, or the elimination of, outside income from honoraria, legal fees, gifts and other sources of financial or in-kind remuneration; (3) conflicts of interest arising out of investments in securities, commodities, real estate, or other sources; (4) office accounts, and excess campaign contributions; (5) Senate travel; and (6) engaging in business, professional activities, employment, or other remunerative activities, so as to avoid any conflict with the conscientious performance of official duties; requires the Committee to submit a report of its findings by March 1, 1977, together with a resolution setting forth, by way of proposed amendments to the Standing Rules of the Senate, a Code of Official Conduct for Members, officers, and employees of the Senate;

Provides that on March 1, 1977, after the conclusion of routine morning business, the resolution shall become the pending business of the Senate under a 50 hour time limitation on amendments thereto and 1 hour on amendments in the second degree, debatable motions or appeals; provides that amendments not germane to the bill will not be received; states that motions to limit debate are not debatable and that motions to table or recommit are out of order;

Authorizes the Committee to utilize the facilities and services of the staff of any other committee and provides that expenses of the Committee shall be paid from the contingent fund of the Senate. S. Res. 36—Senate agreed to January 18, 1977. *Note:* (On March 3, 1977, the Senate, by unanimous consent, extended until midnight, March 7, 1977, the time for the Committee to file its report and provided that the leadership may call the resolution up on March 8, 1977, or any time thereafter.) (VV)

Teamsters' Pension Fund.—Authorizes the Committee on Human Resources to inspect and receive any tax return, return information, or other tax related matter held by the Secretary of Treasury with respect to the Teamsters' Central States Southeast and Southwest Area Pension Fund, and any related matter which the committee demonstrates, to the satisfaction of the Secretary, contains or may contain information directly relating to its study and oversight proceedings. S. Res. 139—Senate agreed to April 22, 1977. (VV)

SOCIAL SERVICES—WELFARE

Appalachian child development programs.—Amends the Appalachian Regional Development Act to extend from 5 years to 7 years the child development demonstration programs administered by the Appalachian Regional Commission in order to provide additional time for projects to move to other Federal, State or local resources for continuing and permanent funding; directs the Commission and the Department of Health, Education and Welfare to make a complete investigation of child development programs to determine the source and nature of the problems in phasing out Federal financial assistance; and requires that a report of their findings and recommendations be submitted to the Congress within 1 year of enactment. H.R. 8777—Public Law 95-193, approved November 18, 1977. (VV)

Child care program extension.—Extends through fiscal year 1978 certain provisions relating to the title XX social services program which otherwise would expire September 30, 1977, including provisions which: add $200 million in child care funding and authorizes states to use part of these funds for the employment of welfare recipients in child care jobs; allow an income tax credit of 20 percent of wages paid (up to $1,000) to employers who hire welfare recipients for child care jobs; set Federal staffing standards for preschool child care facilities, and permit certain aspects of treatment of addicts and alcoholics to be funded under the social service program and require special confidentiality standards for such program;

Modifies the protective and vendor payment provisions of the Aid to Families with Dependent Children Program to allow a State Agency to make such payments in cases where the recipient is judged incapable of managing funds for up to 20 percent of AFDC case load rather than 10 percent; provides that Federal matching funds cannot be denied to any State because it exceeded the previous 10 percent limitation on joint payments, or because it did not comply with other specified conditions; extends to employees of a central State Agency employed to provide specialized services to schools provisions of the State Unemployment Compensation Program which specify that the school employees are not ordinarily eligible for unemployment benefits during regular vacation periods; increases to 90 percent Federal participation in State administrative costs to implement the Indian Health Care Improvement Act; increases by 6 months, to July 1, 1978, the period for allowing depreciation for expenditures to rehabilitate low income rental housing; extends for 2 years the exclusion from income of amounts received under the Armed Forces Health Professional Scholarship Program and similar programs; protects disaster victims from having their SSI benefits reduced or terminated because they received assistance to replace damaged property; permits employment agencies placing companion sitters to be exempt from the Internal Revenue Code requirements imposed on employers in regard to unemployment taxes; and contains provisions to protect the sitters rights under the unemployment compensation and social security programs. H.R. 3387—Public Law 95-171, approved November 12, 1977. (564)

Legal Services Corporation.—Authorizes $205 million for fiscal year 1978 and such sums as may be necessary for fiscal years 1979 and 1980 for extension of the Legal Services Corporation; allows judicial review of decisions of the Corporation; permits the Corporation to represent a client in a civil action in which the client's status as a conscientious objector is at issue; authorizes the Corporation to undertake, by grant or contract, training and technical assistance, and clearinghouse activities; permits research activities to be undertaken by grant or contract but excludes broad general legal or policy questions unrelated to representation of eligible clients by grant or contract; restricts funding of grants and contracts for support assistance to not more than 10 percent of the appropriation for any fiscal year; provides that challenges to the right of a litigant to representation by the Corporation shall not affect final disposition of the proceeding; provides that a Legal Services attorney shall not be appointed by a court unless the attorney is compensated on the same terms as a member of the private bar in that court; requires client representation on the national board and on the local boards of Legal Service Corporation recipients to insure sensitivity to client needs in establishing priorities; makes recipient staff attorneys subject to the mandates of the Hatch Act that are applicable to other government employees by eliminating the additional restrictions which currently apply; allows Corporation attorneys to represent people who were denied representation in the past simply because the subject matter of the cases did not appeal to lawmakers, regardless of the merits of those cases under the Constitution and other statutes, including new authority to represent juveniles in a broad range of cases; leaves intact existing law prohibiting legal assistance in civil actions brought by a convicted dependent to challenge the validity of a criminal conviction and in litigation of proceedings involving school desegregation; prohibits the use of Legal Services funds to initiate formation or act as an organizer of any association, and states that this provision shall not be construed to prohibit the provision of legal assistance to eligible clients; and makes various other changes to the program. H.R. 6666—Public Law 95- , approved 1977. (561)

Medicare coverage for rural health clinics—NIOSH.—Authorizes payment by medicare and medicaid for the reasonable costs of services provided by physician assistants and nurse practitioners in rural clinics which meet appropriate standards; directs the Secretary of HEW to submit a report to Congress within six months of enactment on the advantages of extending such coverage to urban or rural mental health centers and centers for the treatment of alcoholism and drug abuse; and permits the Internal Revenue Service to continue to furnish the National Institute of Occupational Safety and Health (NIOSH) with addresses of taxpayers for the sole purpose of assisting NIOSH in locating persons previously employed in occupations exposing them to known or suspected occupational hazards and referring sick or injured workers for medical care and treatment. H.R. 8422—Public Law 95-210, approved December 13, 1977. (VV)

Medicare-medicaid anti-fraud.—Strengthens the capability of the government to detect, prosecute, and punish fraudulent activities under the medicare and medicaid programs;

Program penalty sanctions.—Modifies the penalty provisions in existing law which relate to those persons providing services under medicare and medicaid; reclassifies misdemeanors as felonies and increases penalties to a maximum fine of $25,000 and/or five years imprisonment; clarifies the types of financial arrangements and conduct classified as illegal; permits States to suspend the eligibility of medicaid recipients convicted of defrauding the program; requires the Inspector General of HEW to include in his annual report an evaluation of the effort of the Department of Justice in the investigation and prosecution of fraud in the programs together with any recommendations; requires the Secretary of HEW to suspend from participation under medicare and medicaid, for a period he deems appropriate, an individual practitioner who has been convicted of a criminal offense involving medicare or medicaid;

Disclosure of information.—Requires the participating entity, as a condition of participation or certification in either medicare, medicaid, the maternal and child health program, or health-related entities providing services under title XX of the Social Security Act, to disclose annually to the Secretary or appropriate State agency the identity of any person who has a five percent or more ownership interest in the entity; requires providers of services to disclose similar ownership information about any subcontractor of which five percent or more is owned by the provider; requires a provider to comply with a specific request by the Secretary or the medicaid State agency for full and complete information as to any significant business transaction between it and any subcontractors or between it and wholly-owned suppliers, and in the case of subcontractors having more than $25,000 in annual business transactions with a provider, compliance would be required with similar requests related to ownership information pertaining to the subcontractor; requires all institutional providers of services to disclose, in the application for participation or certification, the names of owners, officers, directors, agents or managing employees who have been convicted of fraud against the medicare, medicaid, or State social service grant programs; authorizes the Comptroller General to issue subpoenas to obtain necessary information and facilitate review of Social Security Act health programs and upon resistance or refusal by an individual to obey a subpoena, to request a court order requiring compliance with the subpoena; requires any provider of services participating in medicare to notify the Secretary of its employment of an individual who, at any time during the preceding year, was employed in a managerial, accounting, auditing, or similar capacity by a medicare fiscal intermediary or carrier that services the provider; allows Federal access to the records of persons or institutions providing services under medicaid in the same manner that such access is presently provided to State agencies;

Professional standards review.—Includes several provisions designed to clarify the nature and scope of PSRO review responsibilities, to enhance their capacity to perform reviews of the necessity and appropriateness of services more effectively, and to improve the administration and coordination of review activities to assure that program funds are properly expended;

Administrative reforms.—Requires the Secretary to establish for each of the different types of health services institutions a uniform system for the reporting of such items as cost of operation, volume of services, rates, capital assets and bill data for use by medicare and medicaid providers to be phased in by type of provider; repeals the program review team provisions of present law and gives its functions with respect to the quality and utilization of services to the Professional Standards Review Organizations; provides for 90 percent Federal matching funds for fiscal years 1978 through 1980 subject to an annual maximum payment of one percent of medicaid expenditures in a State or $500,000 whichever is greater for expenditures to establish and operate State medicaid fraud control units to prepare and prosecute cases of suspected fraud and abuse; authorizes the Secretary to arrange for demonstration projects designed to develop improved programs for detection, investigation, and prosecution of fraud and abuse; requires States to make provision in their State medicaid plan for claims payment procedures which ensure that 90 percent of the bills submitted by eligible noninstitutionally-based providers will be reimbursed within 30 days, and 99 percent within 90 days effective for calendar quarters beginning July 1, 1978; directs the Comptroller General to conduct a comprehensive review of the administrative structure for the processing of medicare claims; authorizes the Secretary to assign providers to available intermediaries and to designate a regional or national intermediary for a class of providers if he determines the administration of the program would be more effective and efficient based on developed standards; provides that standards and criteria established shall not have the effect of excluding an intermediary solely because it operates in one State; establishes a medical support program under which medicaid applicants and recipients may be required by a State to assign their rights to medical support or indemnification to the State; requires, as a condition for participation in the programs, a skilled nursing or intermediate care facility to establish and maintain a system to assure the proper accounting of personal patient funds funds which provides for separate and discrete accounting for each patient with a complete accounting of income and expenditures;

Other medicaid and medicare amendments.—Modifies the requirements of current medicaid law concerning review of care delivered in institutional facilities; waives for calendar quarters ending prior to January 1, 1977, all penalties against States for noncompliance and waives all penalties assessed for noncompliance during calendar year 1977 if a State meets the requirements by December 31, 1977; provides that the penalties for States not in compliance by December 31 shall be determined by taking into account the proportion of medicaid patients in homes that were not reviewed to all medicaid patients in homes to be reviewed; specifies procedural requirements for the Secretary to carry out the validation requirements in a more timely fashion; modifies the requirements pertaining to the composition of medical review teams in skilled nursing facilities to conform them with those requirements applicable to intermediate care facility review; authorizes, under certain circumstances, reimbursement to a Veterans' Administration hospital for care provided to a nonveteran medicare beneficiary; requires the Secretary to report to Congress, within 12 months after enactment, his recommendations on all aspects of the delivery of home health services under medicare, medicaid and the title XX social services program;

Technician revision.—Clarifies existing law to insure that a power of attorney cannot be used to circumvent the prohibition against the use of "factoring" arrangements in connection with the payment of provider claims by the medicare and medicaid programs; mandates that the Secretary require the purchase of durable medical equipment where purchase would be less costly than extended rental payments; increases individual State's incentives to adopt a computerized medicaid claims processing and information retrieval system; and precludes Federal matching of State medicaid expenditures that result from State laws or contracts which exclude or limit insurance benefits because an individual is eligible for medicaid. H.R. 3—Public Law 95-142, approved October 25, 1977. (VV)

School lunch and child nutrition:— Extends through September 30, 1980, the summer food service program for children with changes designed to eliminate abuses and otherwise strengthen the administration of the program; extends through September 30, 1982, the authority of the Secretary of Agriculture to purchase agricultural commodities for donation to the child nutrition programs when acquistitions under other agricultural authorities are not available; requires the Secretary to establish procedures to assure that donations of agricultural commodities to the child nutrition programs are more responsive to the problems and needs of local school districts; requires the Secretary to conduct studies of the impact and the effect on the child nutrition programs of making cash payments in lieu of commodities, and of past and present patterns of sanitary practices of commodity producers under consideration for contracts for child nutrition programs; authorizes additional funds for States administative expenses in operating the child nutrition program; requires the Secretary to make funds available to States to help defray the cost of conducting audits; revises the special milk program to provide that in schools and institutions participating in the school lunch, breakfast, or child care feeding programs, free mlik may be provided to children eligible for free school meals only at times other than the regular school lunch or school breakfast serving period; revises the school breakfast program to increase the Federal maximum reimbursement for especially needy schools and requires States to establish the standards, subject to the Secretary's approval, under which schools in severe need may receive 100 percent of their operating costs; revises the authority under which equipment funds are furnished schools to give priority to schools without a food service program and schools without the facilities to prepare and cook hot meals; permits junior high and middle schools participating in the school lunch program, if approved by the governing body of the school, to refuse to accept offered foods they do not intend to eat; amends the special assistance provisions to provide (1) that these payments may be made for the school year following the year in which the children's eligibility determination is made at a school in which at least 80 percent of the children are eligible for free or reduced price lunches, and (2) for any school which elects to serve free lunches for three years and pays for the lunches from sources other than Federal funds, that special assistance payments are to be made to that school for a period of three years based on the number of children determined eligible for free and reduced priced meals; revises the authority under which States are provided administrative expenses for carrying out certain child nutrition programs to require that a specific amount (based on a percentage of the State's total costs) be made available for the 1978 through 1980 fiscal years; establishes a five-year entitlement nutrition education and information program under which grants (based on the rate of 50 cents for each child enrolled in schools or other educational institutions in each State) would be made to State educational agencies for the purposes of encouraging effective dissemination of scientifically valid information about food and nutrients to children participating in the school lunch and related child nutrition programs; and requires the Secretary to approve the competitive foods which may be offered for sale at the same time and place as school meals. H.R. 1139—Public Law 95-166, approved November 10, 1977. (267)

Smith College carillon—SSI food stamp eligibility—Child support funding—Child day care study—Medicaid funding.—Directs the Secretary of the Treasury to admit free of duty thirty-three carillon bells, including all accompanying parts and accessories, provided by the Paccard Founderie de Cloches, Annecy, France, for the use of Smith College, Northampton, Massachusetts;

Extends through fiscal year 1978 current provisions of law relating to the method whereby SSI recipients are eligible for food stamps;

Extends from July 1, 1977, through fiscal year 1978 the Federal matching payments to States for paternity and parent locator services directed toward maximizing child support for nonwelfare families;

Extends from July 1, 1977, until April 1, 1978, the date by which HEW must submit its report on the appropriateness of the Federal Interagency Day Care Program; and

Extends for 90 days the statutory requirement whereby States must have in place regular independent evaluations of long-term patients in skilled nursing homes, intermediate care facilities, and mental hospitals to be eligible for their share of Medicaid funding. H.R. 1404—Public Law 95-59, approved June 30, 1977. (VV)

Social security financing.—Restores the social security programs of old age, survivors, and disability insurance to financial soundness in both the short range and long range; reduces from 72 to 70 the age at which income earned by a social security recipient pill not reduce social security benefits; and increases the earnings limitation from $3,000 to $6,000 by 1982 for those aged 65 to 70; and makes certain changes to the Aid to Families with Dependent Children (AFDC) program;

"Decoupling"—Revised benefit formula for future retirees.—Makes existing law cost-of-living increase provisions apply only to individuals who are already on the benefit rolls at the time each increase occurs; applies a new automatic adjustment mechanism to the benefit formula for new retirees using wage indexing which will avoid the present overindexing;

Tax rate increase.—Modifies the social security tax rate schedules to bring in additional revenue by increasing the percent paid by employer and employee each from 5.85 percent in 1977, to 6.05 in 1978, to 7.05 percent in 1985; increase the tax to 7.65 percent in 1990 and thereafter for self-employed from 7.90 percent in 1977, to 8.10 percent in 1978, to 9.90 percent in 1985, and to 10.75 percent in 1990 and after;

Increase in amount of earning subject to employer and employee tax.—Provides for three increases in the contribution and benefit base equally for employees and employers to $22,900 in 1979, $25,900 in 1980, $29,700 in 1981 and automatically thereafter; makes the tax base under the railroad retirement program and the pension insurance administered by the Pension Benefit Guaranty Corporation the same as the automatic increase provisions of present law;

Benefits for dependent spouses.—Reduces with certain exceptions, benefits payable under social security to dependent spouses, including surviving spouses, by the amount of any civil service retirement benefit payable to the spouse applicable only to future applicants for social security benefits for spouses; shortens from 20 to 10 years the length of time a divorced person must have been married to a worker to be eligible for the divorced persons benefits; prevents any loss of benefits for widows over 60 who remarry;

Modification of earnings limitation.—Reduces from 72 to 70 the age at which income earned above the earnings limitation by a social security recipient will not reduce social security benefits; increases the earnings limitation to $4,000 in 1978, $4,500 in 1979, $5,000 in 1980, $5,500 in 1981 and $6,000 in 1982;

Distribution of social security checks.—Requires timely delivery of social security checks when the normal delivery day falls on a weekend or holiday;

Limitation on retroactive social security benefits.—Prohibits retroactive reduced benefits in cases involving entitlement before age 65, effective January 1, 1978;

State and local welfare costs.—Provides $187 million in additional Federal funding of welfare costs as a means of providing fiscal relief to State and local governments for fiscal year 1978; requires States to pass through to local jurisdictions the full amount of the payment but not more than 100 percent of the amount of the AFDC cash for which the local government was otherwise responsible;

Demonstration projects.—Broadens and makes more explicit the provision of present law relating to State demonstration programs so as to permit States to achieve more efficient and effective use of funds for public assistance, to reduce dependency, and to improve the living conditions and increase the incomes of persons on assistance;

Quality control and incentives to reduce errors.—Establishes a program of fiscal incentives as part of the AFDC quality control program to encourage States to reduce errors;

Access to wage information for AFDC verification.—Allows States to acquire accurate wage data from earnings information in records maintained by the Social Security Administration and State employment security agencies; and authorizes the Secretary of HEW to establish necessary safeguards against improper disclosure of the information. H.R. 9346—Public Law 95-   , approved 1977. (631,636)

TAXATION

Distilled spirits excise taxes.—Extends to distilled spirits that are imported and then packaged or bottled in the United States for export the same drawback benefits given under present law to domestically produced spirits that are packaged or bottled for export; allows distilled spirits to be returned to bonded premises of distilled spirits plants or to export storage facilities, with benefit of tax credit or refund, for storage pending exportation and certain other preferred dispositions; allows distilled spirits bottled in bond, or returned to an export storage facility for export, to be transferred without payment of tax to customs bonded warehouses for storage pending exportation; allows distilled spirits to be withdrawn from bonded premises without payment of tax for purposes of research, development or testing; relaxes the conditions under which bonded distilled spirits may be mingled; allows gin to be made with the extracted oils of juniper berries and other aromatics, as well as with the juniper berries or other aromatics themselves, without payment of the rectification tax; and makes the effective date of the bill the first day of the first calendar month which begins 90 days after the date of enactment. H.R. 4458—Public Law 95-176, approved November 14, 1977. (VV)

DUTY SUSPENSIONS

Aircraft engines.—Allows duty free entry of previously imported foreign-made aircraft engines used by aircraft engine repair companies or the manufacturer to temporarily replace engines they are repairing in the United States. H.R. 422—Public Law 95-198, approved November 23, 1977. (VV)

Copying lathes—Wool—Istle fiber.—Suspends the duty on imports of copying lathes, and of parts for such lathes, used for making rough or finished shoe lasts (forms); suspends, until July 1, 1980, the duty on imports of certain coarse wool; and suspends the duty on imports of istle, a plant fiber used as upholstery padding and in brushes and brooms. H.R. 2093—Public Law 95-162, approved November 8, 1977. (VV)

Horses—Canadian crude oil—Doxorubicin hydrochloride.—Suspends, until June 30, 1980, the duty on imports of certain horses; suspends the duty on importation of Canadian crude petroleum and crude shale oil provided that an equivalent amount of domestic or duty-paid foreign crude petroleum or crude shale oil is exported to Canada from the United States; and suspends, until June 30, 1980, the duty on imports of doxorubicin hydrochloride, an anticancer drug. H.R. 3259—Public Law 95-159, approved November 8, 1977. (VV)

Intravenous fat emulsion—Color couplers—Glasses.—Suspends, until June 30, 1980, the duty on imports of intravenous fat emulsion used as a source of calories and essential fatty acids for patients requiring intravenous nutrition for an extended period, and the duty on imports of color couplers and coupler intermediates used in the manufacture of color photographic paper, film, and graphic arts materials; suspends, until December 31, 1978, the duty on imports of certain field glasses, opera glasses, binoculars, and other telescopes; provides for the liquidation or reliquidation of certain musical instruments imported between October 1971 and October 1973 by Joe Cortina; and extends until September 18, 1977, the expiration date of the temporary importation bond covering the schooner Panda to permit Jack R. Misner, of New York, to complete the renovation of the schooner within the United States. H.R. 1904—Public Law 95-206, approved December 12, 1977. (VV)

Latex sheets—Synthetic rutile.—Suspends until June 30, 1978, the duty on imports of certain latex foam rubber sheets used to make mattresses; suspends until June 30, 1979, the duty on imports of synthetic rutile used to make white pigments for paint, paper, and plastic; and provides that film, strips, sheets, and plates of certain plastic or rubber must be usefully processed in a commercial sense before they can be classified as "processed" for purposes of the Tariff Schedules of the United States. H.R. 2850—Public Law 95-160, approved November 8, 1977. (VV)

Mattress blanks—Bobsleds and luges—Private foundation donations.—Suspends, until June 30, 1978, the duty on imports of mattress blanks of rubber latex; permits the duty-free entry of competition bobsleds and luges; and amends the Internal Revenue Code to treat certain persons as not being "substantial contributors" under the private foundations self-dealing rules merely because of contributions made in lieu of rental payments required under leases before 1969. H.R. 2849—Public Law 95-170, approved November 12, 1977. (VV)

Silk yarns—Communications excise tax.—Suspends, until June 30, 1980, the duty on imports of single and plied silk yarns; and reduces the amounts of Federal excise tax on communications services by excluding from the Federal Tax base those State or local telephone taxes which are separately stated on the subscriber's billing. H.R. 3373—Public Law 95-172, approved November 12, 1977. (VV)

Synthetic tantalum—Poppy straw—Bicycle parts.—Suspends, until June 30, 1980, the duty on imports of: (1) synthetic tantalum/columbian concentrate, used in the production of tantalum and columbium steels for the manufacture of machinery, and oil and gas pipelines; (2) poppy straw used in producing codeine or morphine; and (3) certain bicycle parts. H.R. 2982—Public Law 95-161, approved November 8, 1977. (VV)

Sick pay exclusion.—Delays for one year, to taxable years beginning after December 31, 1976, the changes made by the Tax Reform Act of 1976 with regard to the exclusion of "sick pay" from income; makes a similar delay of the effective date of the provisions regarding the tax treatment of income earned abroad by U.S. citizens; modifies the withholding requirement enacted in the 1976 Tax Reform Act on proceeds of wagers placed in parimutuel pools with respect to horse races, dog races, and Jai Alai requiring a 20 percent withholding tax on winnings of $1,000 or more only if the odds are 300 to one or more; extends for one year the provisions of the Internal Revenue Code to allow State legislators to treat their place of residence within their legislative district as their tax home for purposes of computing the deduction for living expenses; and waives the interest and penalties with regard to certain errors regarding underpayments of estimated tax and withholding that might be made in the tax returns for 1976. H.R. 1828—Passed House April 4, 1977; Passed Senate April 6, 1977; House agreed to Senate amendments with amendment which omitted the provisions regarding the treatment of income earned abroad by U.S. citizens April 6, 1977; Senate requested conference April 19, 1977. (100) (Note: Provisions included in Tax Reduction and Simplification which became Public Law 95-30).

Tax reduction and simplification.—Amends the Internal Revenue Code of 1954 to extend the individual and business income tax reductions enacted in 1975 and to provide tax simplification as follows:

Standard deduction and tax simplification.—Permanently changes the standard deduction to $2,200 for single returns and heads of households and $3,200 for joint returns; revises the tax tables to simplify tax computation for 96 percent of all taxpayers by building into the tax tables the personal exemption, the general tax credit, and the standard deduction;

Individual and corporate tax reductions.—Extends through 1978 the general tax credit of $35 per person or 2 percent of the first $9,000 of taxable income, whichever is larger; extends the earned income credit equal to 10 percent of the first $4,000 of earned income which is phased out as income rises from $4,000 to $8,000;

Extends through 1978 the corporate tax cuts, enacted in 1975 and subsequently extended, which reduced the tax rate on the initial $25,000 of corporate taxable income from 22 percent to 20 percent and reduced the rate on the next $25,000 from 48 to 22 percent;

Filing requirements and withholding changes.—Increases the income level at which a tax return must be filed from $2,450 to $2,950 for a single person and a head of household and from $3,600 to $4,700 for a joint return; requires modification of the withholding rates to reflect the changed standard deduction;

New jobs credit.—Provides a new jobs tax credit for 1977 and 1978 equal to 50 percent of the increase in each employer's wage base under the Federal Unemployment Tax Act (FUTA) above 102 percent of that wage base in the previous year; reduces the employer's deduction for wages by the amount of the credit, thereby reducing the maximum gross credit for each new employee from $2,100 to $1,806; limits the credit to no more than: (1) 50 percent of the incraease in total wages paid by the employer for the year above 105 percent of total wages in the previous year; (2) 25 percent of the current year's FUTA wages; (3) $100,000 for employer; and (4) the taxpayer's tax liability with provision of carrying back credit for 3 years and carrying forward credit for 7 years; provides an additional 10 percent nonincremental credit for hiring the handicapped, including handicapped veterans, who have received vocational training;

Postponement of Changes in 1976 Act.—Postpones for one year the effective date of revisions made by the Tax Reform Act of 1976 in the tax treatment of sick pay and income earned abroad; relieves individual taxpayers for periods prior to April 16, 1977, and corporations for period prior to March 16, 1977, from additions to tax and interest arising from changes in the tax law made applicable to 1976 by the 1976 Act; relieves employers from penalties for under withholding in 1976 on remuneration which became taxabale prior to January 1, 1976, as a result of the 1976 Act; lifts the exclusive use of the test in the 1976 Act for business deductions for the use of the home for day care services for children, handicapped individuals and the elderly and limits such deductible expense; extends for 1976 the election to treat a State legislator's place of residence within the legislative district he represents as his tax home for purposes of determining deductions for travel and expenses;

Minimum Tax on Intangible Drilling Costs.—Provides for taxable years beginning in 1977 that intangible drilling costs incurred in oil and gas production operations are to be subject to the minimum tax to the extent that these expenses exceed oil and gas production income;

Charitable Contributions of Conservation Easements.—Extends through June 13, 1981 the period during which deductions are allowable for charitable contributions of remainder interests iin real property exclusively for conservation purposes as well as the period during which deductions are allowable for charitable contributions exclusively for conservation purposes of easements with respect to real property, if the easement is perpetual;

Work Incentive (WIN) Program.—Authorizes an additional $435 million in each of fiscal years 1978 and 1979 for employment and supportive services for welfare recipients with no requirement for State matching funds;

Child Care Facilities Amortization.—Extends through 1981 the 5-year amortization provision for expenditures relating to child care facilities for children of the taxpayer's employees;

Retirement Income Credit Election.—Allows taxpayers over age 65 to choose between the retirement income credit as it existed before the 1976 Act and as revised by it for 1976 taxes only;

Accrual Accounting for Farm Operations.—Postpones until 1978 the effective date for requiring accrual accounting by any farm corporation if either (a) two families own at least 65 percent of the stock, or (b) three families own at least 50 percent of the stock and substantially all of the remaining stock is owned by employees or their families;

Gambling Withholding.—Modifies the 1976 requirement for withholding on gambling winnings to provide that withholding is required on proceeds of more than $1,000 from bets placed in parimutuel pools involving horses, dogs or jai alai but only if the amount of the proceeds is at least 300 times as large as the amount wagered;

Extension of Countercyclical Revenue Sharing.—Extends for 6 quarters, or until national unemployment drops below 6 percent, the current countercyclical revenue sharing legislation which expires September 30, 1977 to help State and local governments maintain services; authorizes up to $1 billion in additional funding for fiscal year 1977 for a total of $2.25 billion; authorizes up to $2.25 billion for fiscal year 1978; requires that the most recent data be used in the allocation formula and that the national amount be determined on the basis of tenths of the unemployment percentage in excess of 6 percent rather than on half percentage points; provides that each tenth of a percentage point will generate $30 million for allocation in addition to the basic $125 million; extends the program to Guam, American Samoa, Puerto Rico and the Virgin Islands;

Other Provisions.—Amends the Social Security Act to clarify the law which provides for the garnishment of Federal payment for purposes of child support and alimony; and contains other provisions. H.R. 3477—Public Law 95–30, approved May 23, 1977. (128)

TRANSPORTATION-COMMUNICATIONS

Aircraft insurance and other aviation amendments.—Extends until September 30, 1982, the authority of the Secretary of Transportation to insure certain aircraft where commercial insurance is unavailable because of war or other hostilities in foreign countries and expands his authority to situations in which insurance against risks other than "war risks" (such as hijacking or terrorism) may be needed to permit continuance of air service; permits the Civil Aeronautics Board (CAB) to approve reduced rate fares to retired persons 60 years of age or over, all persons 65 years of age or over, and the handicapped on a space-available basis; requires CAB, within 6 months of enactment to report to Congress on the feasibility of reduced rates for persons 21 years of age or younger on a space available basis; permits airlines operating wholly within the States of California or Florida to offer through ticketing and baggage service in cooperation with interstate airlines for the better facilitation of passenger and baggage movements and permits the adoption of joint fares and rates between intrastate airlines and CAB certificated airlines; requires airlines to give the public and the CAB 45 days of advance notice on tariff changes, air carriers to give 60 days of advance notice in changes of freight rates, and indirect carriers to give 45 days of advance notice in changes of freight rates, and requires that the CAB approve or disapprove such changes at least 15 days before the effective date of the tariff; requires the CAB to refund to two local service air carriers about $500,000 in subsidy for small community airline service withheld by the Board under an interpretation of law which was later overturned by a U.S. court of appeals; prohibits CAB from seeking to collect subsidy paid to a commuter airline who was awarded subterms of a subsidy program later invalidated by court action; eliminates a provision of law which prohibits aliens admitted for permanent residence in the U.S. and foreign corporations lawfully organized and doing business in the U.S. from registering aircraft in the United States; provides authority for the Administrator of FAA to exempt small aircraft operators from the requirement that they must at all times have an operative emergency locator transmitter (ELT) aboard their aircraft thus permitting operation of the aircraft without an ELT if it is being inspected, serviced or repaired; deregulates the all-cargo air transportation mode; and allows the city of Remond, Oregon to dispose of surplus airport property not needed for airport purposes. H.R. 6010—Public Law 95–163, approved November 9, 1977. (VV)

Aircraft registration.—Amends the Federal Aviation Act of 1958 to permit citizens of foreign countries lawfully admitted for permanent residence in the U.S. and corporations lawfully organized and doing business under U.S. or State laws to register aircraft in the United States provided that (1) the aircraft is based or primarily used in the U.S. thus enabling the Secretary of Transportation to condition registration on reasonable inspection by FAA personnel and (2) as at present, the aircraft is not registered under the laws of any foreign country. H.R. 735—Passed House February 22, 1977; Passed Senate amended May 11, 1977. (VV)

Communications Act amendment—Hawaii.—Amends the Communications Act of 1934, as amended, to include Hawaii within the definition of "Continental United States", thereby removing artificial restraints on the availability of telecommunications offerings, the entry of new carriers into the Hawaiian market and service integration into the mainland structure; and adds a new subsection to the Communications Act to ensure that carriers currently serving the Hawaiian market may continue to do so. S. 1866—Passed Senate August 5, 1977. (VV)

Federal Communications Commission—interim regulatory reform.—Amends the Communications Act of 1934 to provide for regulatory reform with respect to the Federal Communicataions Commission; requires the Commission to review and recodify systematically all of the rules and regulations which it has promulgated and which are still in effect and to submit to Congress within 480 days of enactment a proposed recodification designed to (a) eliminate unnecessary, redundant, overlapping, or conflicting provisions or requirements, (b) provide timely considerations of petitions, (c) provide Congressional access to information, (d) provide representation in civil actions, (e) avoid conflicts of interest, (f) provide for appointment of the chairman by the President with the advice and consent of the Senate, and (g) provide Congressional oversight through the process of an authorization of appropriations not to exceed 4 years; provides for public comment on the proposed recodification and requires the agency to submit a final proposal within 660 days which will go into effect in 180 days unless modified by Congress; applies the conflict of interest provisions to personnel GS–16 or higher; retains the independence of the regulatory agency by not subjecting supergrade positions to OMB clearance; requires that nominees be persons who by reason of training, education or experience are qualified to carry out the function of the Commission; waives the mandatory retirement provisions giving Congress the authority to decide whether a Commissioner should continue to serve over the age of 70 at the time of his confirmation; and authorizes therefor $70 million for fiscal 1978, $74 million for fiscal 1979, $80 million for fiscal 1980, and $82 million for fiscal 1981. S. 1536—Passed Senate June 28, 1977. (VV)

Federal Maritime Commission—interim regulatory reform.—Provides for regulatory reform with respect to the Federal Maritime Commission; contains the same provisions with respect to a proposed recodification of all rules and regulations promulgated by the Commission and still in effect as contained in S. 1536; and authorizes $9.424 million for fiscal 1978, $9.7 million for fiscal 1979, $10 million for fiscal 1980 and $10.4 million for fiscal 1981. S. 1532—Passed Senate June 28, 1977. (VV)

Federal Power Commission—interim regulatory reform.—Amends the Federal Power Act to provide for regulatory reform with respect to the Federal Power Commission; contains the same provisions with respect to a proposed recodification of all rules and regulations promulgated by the Commission and still in effect as contained in S. 1536; and authorizes therefor $44,549,000 for fiscal 1978, $46,410,000 for fiscal 1979, $48,373,000 for fiscal 1980, and $50,444,000 for fiscal 1981. S. 1535—Passed Senate June 28, 1977. (VV)

Federal Trade Commission—interim regulatory reform.—Authorizes funds for the Federal Trade Commission for fiscal years 1978–81 for regulatory reform with respect to the Federal Trade Commission and the Consumer Product Safety Commission; requires the agencies to review and recodify systematically all of the rules and regulations which they have promulgated and which are still in effect; requires that certain impact statements be included with the agency's submission of its recodified rules; tightens the conflict of interest provisions and protects against the "revolving door" problem (where employees go from regulatory agency to industry regulated) by prohibiting commissioners and all employees at GS-16 and above from participating in agency matters for 2 years after leaving the agency; retains the independence of the independent regulatory agencies by not subjecting super grade positions to OMB clearance; provides that nominees to a commission be persons who by reason of training, education or experience are qualified to carry out the functions of the Commission and that Commission membership be well balanced with a broad representation of various talents, backgrounds, occupations and experience; mandates that FTC actions be disposed of expeditiously by requiring that the Commission grant or deny petitions for issuance, amendment, or repeal of rules within 120 days after the date the petition is received by the Commission; prevents "forum shopping" by limiting appeals of Commission orders to the court of appeals in the circuit within which the defendant resides or maintains its prinicpal place of business; requires simultaneous transmission of budgetary and legislative recommendations to the President or the OMB and the Congress; makes cease and desist orders of the Commission effective 60 days after the issuance of such orders subject to a stay issued by the Commission or the appropriate court of appeals, or the Supreme Court when an applicable petition for certiorari is pending; and improves the Commission's ability to obtain information by compulsory process by imposing penalties for failure to reply in a timely manner with the Commission's process and providing statutory amendments reflecting decisional law on the issue of ripeness of suits to enjoin enforcement. H.R. 3816—Passed House October 13, 1977; Passed Senate amended October 20, 1977. (574)

Interim regulatory reform.—Provides for interim regulatory reform for the following independent regulatory agencies which are subject to the jurisdiction and oversight responsibilities of the Committee on Commerce, Science and Transportation: Interstate Commerce Commission (ICC), Federal Commission (FTC), Federal Power Commission (FPC), Federal Communications Commission (FCC), Civil Aeronautics Board (CAB), Federal Maritime Commission (FMC), and Consumer Product Safety Commission (CPSC); directs each agency to prepare and submit to Congress a proposed modernization, revision, and codification of all statutes and other lawful authorities administered or applied by it; and

Makes it a Federal crime to kill or forcibly assault, resist, oppose, impede, intimidate, or interfere with a U.S. judge, U.S. attorney, F.B.I. agent, or any other specified Federal official or employee while that person is engaged in, or on account of, the performance of official duties. S. 263—Passed Senate June 10, 1977. (VV)

Interstate Commerce Commission—Interim regulatory reform.—Amends the Interstate Commerce Act to provide for regulatory reform of the ICC; requires the Commission to review and recodify systematically all of the rules and regulations which it has promulgated and which are still in effect and to submit to Congress within 480 days of enactment a proposed recodification designed to (a) eliminate unnecessary, redundant, overlapping, or conflicting provisions or requirements, (b) provide timely considerations of petitions, (c) provide Congressional access to information, (d) provide representation in civil actions, (e) avoid conflicts of interest, (f) provide for appointment of the chairman by the President with the advice and consent of the Senate, and (g) provide Congressional oversight through the process of an authorization of appropriations not to exceed 4 years; provides for public comment on the proposed recodification and requires the agency to submit a final proposal within 660 days which will go into effect in 180 days unless modified by Congress; authorizes therefor $71,216,000 for fiscal 1978, $80,474,000 for fiscal 1979, $90,935,000 for fiscal 1980 and $102,755,000 for fiscal 1981. S. 1534—Passed Senate May 20, 1977. (VV)

Interstate highways.—Directs the Secretary of Transportation to apportion the sums authorized for fiscal year 1979 for immediate expenditure on the National System of Interstate and Defense Highways using specified apportionment factors. H. Con. Res. 282—Action completed September 30, 1977. (VV)

Maritime authorization.—Authorizes $553,597,000 for programs of the Maritime Administration for fiscal year 1978 as follows: $135,000,000 for acquisition, construction, or reconstruction of vessels and construction-differential subsidies, $372,109,000 for payment of ship operating differential subsidies, $20,725,000 for research and development, $5,137,000 for the reserve fleet, $14,656,000 for maritime training at the Merchant Marine Academy at Kings Point, N.Y., and $5,970,000 for financial assistance to the State marine schools which includes an increased annual student subsidy from $600 to $1,200; authorizes additional supplemental amounts to cover increases in salary, pay, retirement, or other employee benefits authorized by law and for certain expenses of the Merchant Marine Academy at Kings Point; adds a provision effective 240 days after enactment barring the payment of operating differential funds to any subsidized liner company unless its chief executive officer certifies that he has taken action to insure that no illegal rebates are being paid during the period for which the funds are received and that he will cooperate with the Federal Maritime Commission in its investigation of illegal rebating; increases from 75 to 87½ percent the amount of title XI guarantee financing available to a ferry operating solely in point-to-point transportation; and authorizes an additional Assistant Secretary of Commerce to be the principle advisor to the Secretary for Congressional relations. S. 1019—Public Law 95–173, approved November 12, 1977. (VV)

National Defense Reserve Fleet.—Amends the Merchant Marine Act, 1936, to upgrade the National Defense Reserve Fleet by authorizing the Secretary of Commerce to acquire mariner class and other vessels in exchange for obsolete vessels in that fleet which are scheduled for scrapping. H.R. 7278—Public Law 95–177, approved November 15, 1977. (VV)

Rail Reorganization.—Amends the Regional Rail Reorganization Act of 1973 to authorize an additional $13 million making a total of $23 million, for fiscal year 1978 to the United States Railway Association to cover litigation and other anticipated expenses involving the reorganization of the Northeast railroads; makes two technical amendments to the act to (1) provide authority for the special court to appoint masters, fix their compensation and assign their duties and to provide administrative and support personnel and services through the Administrative Offices of the U.S. courts, and (2) provide for direct appeal of certain decisions of the special court to the Supreme Court; and requires the Association to transmit to the President and Congress quarterly reports on the use of its funds, and current assessments of the status of its projects and activities. H.R. 4049—Public Law 95–199, approved November 23, 1977. (VV)

Tanker safety.—Amends the Ports and Waterways Safety Act of 1972 to: establish more stringent construction, design, equipment, repair, manning, maintenance, and operation standards for all tankers, regardless of flag, entering U.S. ports; provides clear authority for the Secretary of Transportation to bar substandard vessels from operating in U.S. waters; authorizes the creation of a Marine Safety Information System to identify substandard vessels and disclose the true ownership of ships; authorizes the establishment of regulations for controlling lightering (vessel-to-vessel transfer of cargo) in U.S. waters and on the high seas where a U.S.-bound vessel is involved; mandates that all self-propelled vessels of 20,000-deadweight tons or larger carrying oil in bulk be equipped by no later than June 30, 1979, with a dual radar system, a collision avoidance system, a long-range navigation aid, adequate communications equipment, a fathometer, a gyrocompass, and up-to-date charts; mandates that such vessels also be equipped, by not later than June 30, 1983, with a segregated ballast system, a gas inerting system, a transponder or other appropriate position-fixing equipment, and a double bottom if the vessel is contracted for, or construction is actually commenced, after January 1, 1978; creates an expanded inspection and enforcement program; authorizes the promulgation of improved manning and qualification standards; specifies more stringent requirements for obtaining a Federal pilot's license; and provides for study and evaluation of shore-station monitoring systems of vessels as defined in the Fishery Conservation and Management Act of 1976. S. 682—Passed Senate May 26, 1977. (VV)

Urban mass transportation.—Authorizes the use of the $500 million capital grant program under the National Mass Transportation Act of 1974 for operating as well as capital assistance costs of public mass transportation service in urbanized areas (areas with less than 50,000 population); authorizes the Secretary to make operating subsidy grants to areas other than urbanized areas; revises the method of financing the capital grant program, extends it to 1982, and adds $5.318 billion to the remaining contract authority of $3.332 billion for a total of $8.65 billion; incorporates into statute the procedures for funding major caiptal grants by authorizing the Secretary to announce approval of a multi-year project and an intent to obligate funds from budget authority to be made available in future years; sets aside $400 million annually from the capital grant program for obligation for equipment replacement programs; authorizes $125 million to restore the fiscal 1980 authorization for the formula grant program to its original level; expands the basic formula grant program by creating a supplemental source of funds for high impact areas with a total of $295 million available from (a) authorization of $50 million for each of fiscal years 1978 through 1980 and (b) estimated $145 million in "recycled authority"; creates a new second tier formula program financed by new authorized funds and the reapportionment of unobligated funds; permits the Secretary to develop a new formula for additional funds taking into account the needs of major urban areas; removes certain restrictive provisions for eligibility in the grant program providing fellowships for training of personnel employed in managerial, technical, and professional positions in the urban mass transportation field; expands the definition of "construction" in the capital grant program to include preliminary engineering of mass transportation capital projects; requires the Secretary to convert the two outstanding loans under the mass transit loan program which is no longer in existence into capital grants; requires the Secretary to provide by February 1, 1980, a detailed estimate of major capital grants to be made in fiscal years 1980–84 and by February 1, 1982, a similar estimate for fiscal years 1982–86; extends from March 15, 1978, to March 15, 1980, the 50 percent emergency operating assistance for commuter rail services affected by the reorganization of the

Northeastern Railroads and expands the assistance in the authorization; requires assurance that service will be continued for the last 12 months of the 50 percent period; and adds a new section providing $20 million in fiscal 1978 to cover up to 50 percent of the operating deficits of rail commuter services not eligible for the 50 percent Federal subsidy. S. 208—Passed Senate June 23, 1977. (VV)

Increase the percentage of Federal contribution for the last 6 months of the existing commuter rail operating assistance program from 50 to 80 percent; deletes the requirement that any applicant for assistance must provide assurance to the Secretary of Transportation that the rail service will be continued after the section 17 subsidy program terminates and extends the program for 2 years with 50 percent Federal funding and a new authorization of $30 million annually for fiscal years 1979 and 1980; and provides for a new section 18 program to provide operating assistance to rail commuter lines not eligible under section 17 of $20 million for fiscal 1979 which will be distributed under a formula to cover operating deficits of eligible commuter rail systems. H.R. 8346—Public Law 95-187, approved November 16, 1977. (VV)

TREATIES

Agreement with Canada concerning transit pipelines.—Provides government-to-government assurances on a reciprocal basis so that present and future pipelines carrying all forms of hydrocarbons (including crude oil, petroleum products, natural gas, petrochemical feedstocks, and coal slurries) owned by one country across the territory of the other will be free from interference and discriminatory taxation by Federal, provincial or state authorities particularly in regard to taxes, duties or fees unless the charge would be applicable to similar pipelines within the jurisdiction of the public authority; allows each nation to impose proper regulations for pipeline safety and environmental protection and in the case of a natural emergency, to reduce or stop the flow until the danger has passed; permits each nation to determine the route a pipeline is to take within its territory and provides that protocols may be added to apply this agreement to a specific pipeline; and contains arbitration provisions to resolve disputes which cannot be settled by negotiation. Ex. F, 95th—1st—Resolution of ratification agreed to August 3, 1977. (324)

Convention on International Civil Aviation.—Increases the membership of the Council of the International Civil Aviation Organization (ICAO) from 30 to 33 contracting states. Ex. A, 95th-1st—Resolution of ratification agreed to September 26, 1977. (407).

Protocol to Inter-American Treaty of Reciprocal Assistance (RIO Treaty).—Reaffirms the principle of "attack against one, attack against all" embodied in the RIO Treaty while restricting its applicability and resultant obligations; provides for the lifting of diplomatic, economic and military sanctions against a member state by a simple majority vote rather than by the two-thirds majority vote required for all other decisions; and revises Treaty procedures so as to provide specifically rather than by implication for binding decisions and for recommendations by the Organ of Consultation. Ex. J, 94th—1st—Resolution of ratification agreed to July 19, 1977. (300)

Treaty with Canada on execution of penal sentences.—Allows a convicted prisoner or youthful offender accused of an offense to be returned to his native country to serve the sentence imposed by the other country; limits the transfer arrangement to prisoners convicted of offenses which are criminal under the laws of both countries, who have no pending appeals, have at least six months remaining on their fixed sentences, are not domiciliaries of the nation where they are on other than political, military or immigration offenses; requires the prisoner to initiate the transfer process; permits the transfer of parolees and those persons receiving suspended sentences; makes the laws regarding parole and probation of the Nation to which the prisoner is transferred apply but provides that only the transferring State can grant a pardon or amnesty; and contains provisions to protect an offender against double jeopardy. Ex. H, 95th-1st—Resolution of ratification agreed to July 19, 1977. (301)

Treaty with Mexico on execution of penal sentences.—Allows a convicted prisoner, youthful offender or mentally ill person accused of an offense to be returned to his native country to serve the sentence imposed by the other country; limits the transfer arrangement to prisoners convicted of offenses which are criminal under the laws of both countries, who have no pending appeals, have at least 6 months remaining on their fixed sentences, are not domiciliaries of the nation where they are incarcerated and have been imprisoned on other than political, military or immigration offenses and have consented to the transfer; requires the country holding the prisoner to initiate the transfer process and provides that the prisoner may submit a transfer request for consideration; makes the laws regarding parole and probation of the Nation to which the prisoner is transferred apply but provides that only the transferring State can grant a pardon or amnesty; and contains provisions to protect an offender against double jeopardy. Ex. D, 94th-1st—Resolution of ratification agreed to July 21, 1977. (316)

VETERANS

American Ex-Prisoners of War, Inc.—Grants a Federal Charter to the American Ex-Prisoners of War, Inc., whose membership is comprised of former prisoners of war from the Spanish-American War, World Wars I and II, Korea and Vietnam, in order that the organization may be allowed to represent its members in Veterans Administration proceedings. S. 1590—Passed Senate October 11, 1977. (VV)

AMVETS.—Amends the Federal charter of AMVETS (American Veterans of World War II) to conform with the organization's practice of admitting men and women who served in the Armed Forces of the United States in the Second World War, the Korean War and the Vietnam War by changing the name of AMVETS to "American Veterans of World War II, Korea and Vietnam" and provisions of its Federal charter, where necessary, to reflect this change. H.R. 1952—Public Law 95-98, approved August 15, 1977. (VV)

G.I. education benefits.—Authorizes a 6.6 percent cost-of-living increase, effective October 1, 1977, in the education assistance allowances provided under the Vocational Rehabilitation, Veterans' Educational Assistance, Survivors' and Dependents' Educational Assistance, Correspondence Courses, On-Job Training, and Education Loans sections of the G.I. bill; establishes a program of accelerated educational assistance payments for veterans and eligible persons attending a school with yearly tuition costs in excess of $700; extends for 2 years the delimiting date for education benefits to certain veterans; extends the period of time that a veteran with a mental or physical disability or impairment has to utilize G.I. bill benefits; establishes an education loan program in connection with the accelerated benefit program; contains amendments to the G.I. bill designed to improve its administration; increases the work-study allowances for veteran students; requires the Administrator to conduct a study into specific means by which chapter 37 of title 38 benefits or amendments thereto can be used to encourage installation of solar heating and cooling and to apply other energy conservation measures; and sets up a new process by which the Women's Air Force Service Pilots and similar groups may have their service recognized as active military by the Secretary of Defense in order that they may be eligible for veterans benefits. H.R. 8701—Public Law 95-202, approved November 23, 1977. (570)

Veterans' and survivors' pension adjustments.—Amends title 38, U.S.C., to increase the rates of disability and death pension and to increase the rates of dependency and indemnity compensation for parents; provides a cost-of-living adjustment in the rates and annual income limitations applicable to pension for non-service-connected disabled veterans and their surviving spouses, for surviving parents receiving dependency and indemnity compensation, and in the annual income limitations applicable to persons receiving pension under section 9(b) of the Veterans' Pension Act of 1959; provides an increase of approximately 6.5 percent in rates of disability and death pension under current law, including the additional amount authorized for dependents; increases by approximately 6.5 percent the rates of dependency and indemnity compensation (DIC) payable to parents; increases by the same percentage the maximum income limitations applicable to pensioners and parents entitled to DIC under current law, and to beneficiaries under the protected pension law; increases by the same percentage the amount of additional pension and DIC payable to those recipients so entitled based upon aid and attendance or housebound status; and increases additional allowances for recipients of wartime death compensation by the same percentage based upon need for regular aid and attendance. H.R. 7345—Public Law 95-204, approved December 2, 1977. (VV)

Veterans' care in State homes.—Amends title 38, U.S.C., to consolidate the construction grant-assistance programs under section 644 (for State home domiciliary and hospital facilities) and under subchapter III of chapter 81 (for State home nursing care facilities) and create new statutory authority for grants for the construction of new domiciliary facilities and the expansion of domiciliary and hospital facilities, and for initial equipment in both categories; increases to $15 million the annual authorization for fiscal years 1978 and 1979; removes the 3-fiscal-year limitation on the availability of sums appropriated for the consolidated programs, making the funds available until expended; makes the allowable nonveteran population of a grant-assisted State nursing home domiciliary, or hospital facility 25 percent in order to make allowance for veterans' spouses, surviving spouses, and Gold Star mothers; sets at 33⅓ percent the limit which any one State may receive in any year of the total amount appropriated for the program; includes domiciliary and hospital projects under the statutory nursing home program recapture provision; allows the Administrator to reduce the recapture period to less than 7 years in cases of expansion, remodeling, and alteration; limits recapture to not more than the amount of grant assistance provided for the project; repeals existing statutory authority for making grants for the remodeling of State home domiciliary and hospital facilities and governing the operation of this program; provides for an October 1, 1977, effective date with a savings provision for hospital and domiciliary grants made under the section to be repealed; and gives existing nursing home program grantees the right to obtain grant modifications consistent with the new act. H.R. 3695—Public Law 95-62, approved July 5, 1977. (VV)

Veterans' disability compensation and survivors benefits.—Amends title 38, U.S.C., to provide a 6.6 percent increase in: cost-of-living for disabled veterans in basic compensation rates and in the rates payable for more serious disabilities; the additional allowances for spouses, children, and dependent parents paid to veterans rated 50-percent disabled or more; dependency and indemnity compensation (DIC) benefits payable to surviving spouses of veterans whose deaths were service-connected, including the additional allowances payable for dependent children and to those in need of aid and attendance; benefits payable to the children of veterans whose deaths were service-connected, when there is no surviving spouse; benefits payable to surviving children who have become permanently incapable of self-support prior to the age of 18; and the annual clothing allowance paid to certain seriously disabled veterans whose disability tends to tear or wear out their clothing; extends eligibility for specially adopted housing grants to permanently and totally service-connected veterans with certain specified disabilities; authorizes the Veterans' Administration to cooperate with the Department of the Treasury so that benefit payments would be automatically deposited in a recipient's account if the recipient elects payment in this manner; requires the Veterans' Administration, for any month in which the first of the month falls on a Saturday, Sunday, or legal public holiday, to mail or otherwrise transmit benefit payments so that they arrive on the Friday immediately preceding such Saturday or Sunday, or in the case of a legal public holiday, on the weekday (other than Saturday) immediately preceding the holiday; and reaffirms the intent of the Congress not to permit garnishment or attachment of VA employees' salaries except as authorized in 42 U.S.C. 659 (permitting garnishment for alimony and child support). H.R. 1862—Public Law 95-117, approved October 3, 1977. (VV)

Veterans' health care improvement.—Amends title 38, U.S.C., to improve the quality and efficiency of health care provided to sick or disabled veterans in the Veterans' Administration health care system;

Contract Care Amendments.—Clarifies the circumstances under which the VA may furnish contract hospital care and medical services in certain cases;

Physician and Dentist Special-Pay and other Pay Amendments.—Extends and makes modifications in the Veterans' Administration special-pay program to create greater incentives for physicians and dentists in certain scarce categories to agree to fulltime service in the Department of Medicine and Surgery;

Health Care Program and Eligibility.—Provides for the establishment of a new program of readjustment professional counseling, a new program in preventive health care for veterans for service-connected disabilities, and expanded treatment and rehabilitation programs for veterans suffering from alcohol or drug dependence or abuse disabilities; and

Renames the Veterans' Administration hospital in Tampa, Florida, as the "James A. Haley Veterans' Hospital" and the Veterans' Administration hospital at Bedford, Massachusetts, as the "Edith Nourse Rogers Memorial Veterans' Hospital". H.R. 5027—Passed House April 4, 1977; Passed Senate amended September 9, 1977. (VV)

Veterans' physician and dentist comparability pay.—Extends until September 30, 1978, the VA's authority to enter into special pay agreements and provides for the retroactive payment of special pay to otherwise eligible physicians and dentists who are hired between October 1, 1977, and the date of enactment and who sign such agreements within 30 days of the date of enactment; provides that an eligible physician or dentist who has previously entered into one or more special-pay agreements may enter into a new special-pay agreement if he or she is not in default of any payback requirements arising out of a failure to complete the first year of service under a prior agreement; provides that no special pay agreements may extend beyond September 30, 1981; requires the VA's Chief Medical Director to make annual redeterminations whether significant recruitment and retention problems exist in any category of physicians and dentists where he previously determined that no problems exist; requires the Director, prior to the execution of any new special pay agreements after April 30, 1978, to reevaluate the need for special pay agreements after April 30, 1978, to reevaluate the need for special pay agreements in order to recruit and retain highly qualified physicians or dentists in each category of positions in the Department of Medicine and Surgery and report to Congress by April 30, 1978; provides that the Administrator, upon the recommendation of the Director based on his reevaluation, may promulgate a regulation reducing the amount of primary special pay for any category of positions having no problems in recruiting and retaining physicians or dentists; prohibits, after January 1, 1978, the permanent or temporary appointment in any position that has direct patient-care responsibilities of any person not possessing the basic proficiency in spoken and written English needed to perform his or her responsibilities satisfactorily; requires the Administrator to submit to the Veterans' Affairs Committees of the House and Senate by April 1, 1978, a report on certain language proficiency related matters in the health-care areas; requires the Administrator, where a VA health care facility services a substantial number of veterans with limited English-speaking ability, to implement procedures to insure a sufficient bilingual staff to bridge linguistic and cultural differences; conforms the pay of podiatrists and optometrists to the appropriate levels of basic pay in the physicians and dentists schedule for the period October 21, 1976, through October 8, 1977; requires the conversion of all podiatrists and optometrists in the Department of Medicine and Surgery from employment under title 5, U.S.C., to employment in the Department's own personnel system under title 38, U.S.C.; and provides that such conversion, including payment at the appropriate 1976-1977 levels of basic pay, shall be effective retroactively to October 21, 1976, or the date the employee received an appointment in the Department, whichever is later. H.R. 8175—Public Law 95-201, approved November 23, 1977. (VV)

Vietnam veterans' discharges and benefits.—Denies entitlement to veterans' benefits to certain persons who would otherwise become so entitled solely by virtue of the administrative upgrading under temporarily revised standards of other than honorable discharges from service during the Vietnam era; requires a case-by-case review under uniform, historically consistent, generally applicable standards and procedures prior to the award of veterans' benefits to persons administratively discharged under other than honorable conditions from active military, naval, or air service;

Precludes the granting of veterans' benefits on the basis of an upgrading under special review programs implemented after January 1, 1977; requires military Discharge Review Boards to determine whether a discharge under less than honorable conditions or a clemency discharge which had been upgraded would have been upgraded under generally applicable standards and provides that if a determination is favorable the individual would be entitled to retain his or her upgraded discharge and to receive veterans benefits; places the responsibility on the Discharge Review Boards to take the initiative in making that determination under generally applicable standards in each case unless the individual, after due notification, objects; precludes the VA from changing regulations governing the standards and procedures by which it may upgrade a discharge from giving any special advantage to veterans who may have received upgraded discharges under the Special Discharge Review Program; specifies that the Act apply retroactively to deny entitlement to benefits but precludes recovering the value of any benefits already provided; and authorizes the Administrator to provide health care, on a discretionary basis, for the treatment of any disability incurred in the line of duty during active-duty service by certain persons who might otherwise not be so entitled because they were administratively discharged or hold clemency discharges. S. 1307—Public Law 95-126, approved October 8, 1977. (351)

World War I veterans auto allowance.—Amends section 1901, title 38, U.S.C., to extend to veterans of World War I and any eligible veterans who served before or after World War I those benefits entitlement to the automobile assistance allowance for the purchase of an automobile or other conveyance and provision of the adaptive equipment necessary to operate the vehicle safely. H.R. 6502—Public Law 95-116, approved October 3, 1977. (VV)

THANKS OF THE SENATE TO THE VICE PRESIDENT

Mr. ROBERT C. BYRD. Mr. President, I send to the desk a resolution and ask for its immediate consideration.

The resolution (S. Res. 340) was read, considered by unanimous consent, and agreed to, as follows:

Resolved, That the thanks of the Senate are hereby tendered to the Honorable Walter F. Mondale, Vice President of the United States and the President of the Senate, for the courteous, dignified, and impartial manner in which he has presided over its deliberations during the first session of the Ninety-fifth Congress.

THANKS OF THE SENATE TO THE PRESIDENT PRO TEMPORE

Mr. BAKER. Mr. President, I send to the desk a resolution and ask for its immediate consideration.

The resolution (S. Res. 341) was read, considered by unanimous consent, and agreed to, as follows:

Resolved, That the thanks of the Senate are hereby tendered to the Honorable James O. Eastland, President pro tempore of the Senate, for the courteous, dignified, and impartial manner in which he has presided over its deliberations during the first session of the Ninety-fifth Congress.

THANKS OF THE SENATE TO THE DEPUTY PRESIDENT PRO TEMPORE

Mr. STEVENS. Mr. President, I send a resolution to the desk and ask for its immediate consideration.

The resolution (S. Res. 342) was read, considered by unanimous consent, and agreed to, as follows:

Resolved, That the thanks of the Senate are hereby tendered to the Honorable Hubert H. Humphrey, Deputy President pro tempore of the Senate, for the courteous, dignified, and impartial manner in which he has presided over its deliberations during the first session of the Ninety-fifth Congress.

THANKS OF THE SENATE TO THE ACTING PRESIDENT PRO TEMPORE

Mr. CRANSTON. Mr. President, I send a resolution to the desk and ask for its immediate consideration.

The resolution (S. Res. 343) was read, considered by unanimous consent, and agreed to, as follows:

Resolved, That the thanks of the Senate are hereby tendered to the Honorable Lee Metcalf, Acting President pro tempore of the Senate, for the courteous, dignified, and impartial manner in which he has presided over its deliberations during the first session of the Ninety-fifth Congress.

NOTIFICATION TO THE PRESIDENT CONCERNING THE PROPOSED ADJOURNMENT OF THE SESSION

Mr. ROBERT C. BYRD. Mr. President, I send a resolution to the desk and ask for its immediate consideration.

The PRESIDING OFFICER. The resolution will be stated.

The legislative clerk read as follows:

Resolved, That a committee of two Senators be appointed by the Presiding Officer to join a similar committee of the House of Representatives to notify the President of the United States that the two Houses have completed their business of the session and are ready to adjourn unless he has some further communication to make to them.

The PRESIDING OFFICER. Is there objection to the present consideration of the resolution?

There being no objection, the resolution was considered and agreed to.

The PRESIDING OFFICER. The Chair appoints the Senator from West Virginia (Mr. ROBERT C. BYRD), the majority leader, and the Senator from Tennessee (Mr. BAKER), the minority leader, as a committee on the part of the Senate to notify the President.

AUTHORITY TO MAKE CERTAIN APPOINTMENTS AFTER THE SINE DIE ADJOURNMENT OF THE PRESENT SESSION

Mr. CRANSTON. Mr. President, I send a resolution to the desk and ask for its immediate consideration.

The resolution (S. Res. 345) was read, considered by unanimous consent, and agreed to, as follows:

Resolved, That notwithstanding the final adjournment of the present session of the Congress, the President of the Senate and the President pro tempore be, and they are hereby, authorized to make appointments to commissions or committees authorized by law, by concurrent action of the two Houses, or by order of the Senate.

Mr. CRANSTON. Mr. President, I suggest the absence of a quorum.

Mr. STEVENS. Mr. President, will the Senator withhold that?

Mr. CRANSTON. I withhold, of course.

The PRESIDING OFFICER. The Senator from Alaska.

Mr. STEVENS. Mr. President, I apologize because I have been tied up in some meetings, but I wish to say some special words of thanks to the officers of the Senate and staffs on both sides of the aisle, to Mr. Kimmitt and Mr. Hoffmann for the work they have done in this session and those from our side, Bill Hildenbrand and Howard Greene, Brian Wiggin, David Liner, and Van Hunt.

We had, I think, some very interesting times here, but one of the things that we have done on our side of the aisle was to institute a process by which we used assistant whips to perform the services on the floor when either the minority leader or I were not here, and I personally thank Senators HATCH, BELLMON, BARTLETT, HELMS, DOMENICI, GARN, LAXALT, MCCLURE, MATHIAS, WALLOP, CHAFEE, HEINZ, SCHMITT, HAYAKAWA, LUGAR, and DANFORTH for those times that they have been on the floor for me when I could not be here.

I think there needs to be special thanks to my good friend the majority whip, Senator CRANSTON. We are sort of like the people who are never seen, I think, in terms of the process of the Senate, but I have had many good meetings with my friend, and through his efforts I think the two of us have been able to carry out our functions as our respective colleagues have asked us to do.

Mr. President, I thank my good friend, the minority leader, for his confidence and the things that we have done together and for the report that he has filed on behalf of the Members on this side.

And particularly I am grateful to the Parliamentarians, the clerks, the official reporters, the doorkeepers, and the pages; in other words, I think it is time to say Merry Christmas and best wishes to everyone.

But I do think there are a lot of people around here who do a lot of work that our friends who know anything about the Senate know what they are doing but very few people in the public sphere know what they are doing.

I offer special thanks to all those affected by our ever-changing schedules, wives, family members, constituents, and especially scheduling, travel, and appointments secretaries.

I offer personal and sincere thanks to my own staff for adjusting so well to the increased demands placed on them as a result of my new leadership role.

Also I acknowledge other members of the Republican leadership who do not get the ink that Mr. BAKER and I get but are vital nonetheless: they are Senators CURTIS, TOWER, HANSEN, PACKWOOD, and staffs.

I also thank John Baldwin and Jane Ellsworth of the Republican Policy Committee. So, particularly in my own staff, and I think the Senator from California would find that his own California staff probably has increased functions and demands on them because of the duties we have taken on, I do thank everybody who has helped us in the last year and I hope we can have a similar relationship next year.

Mr. CRANSTON. Mr. President, will the Senator yield?

Mr. STEVENS. I do yield to my friend.

Mr. CRANSTON. I would like simply to thank my fellow whip for his good words and fine cooperation on so many matters. We have worked together, often behind the scenes, on matters that relate to trying to keep the Senate moving, and I have appreciated the opportunities in the past and I look forward to them in the future.

Like the Senator from Alaska, I thank all the other Members of the Senate in terms of Senators and the staff of the body for all the great cooperation we have all had.

Mr. STEVENS. I thank the Senator from California.

QUORUM CALL

Mr. ROBERT C. BYRD. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The second assistant legislative clerk proceeded to call the roll.

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

REPORT OF THE COMMITTEE TO NOTIFY THE PRESIDENT

Mr. ROBERT C. BYRD. Mr. President, in keeping with the resolution that was agreed to by the Senate earlier appointing the distinguished minority leader and me to serve as a committee of two to call on the President to inform him that the work of the session was ended, and to inquire as to whether there was any further communication from him, Mr. BAKER and I have carried out that assignment.

We said to the President that we thought the record of this Congress had been a good one, that we had not accomplished everything we would like to have accomplished, but that there is a second session, and that we expect to return in January and pursue our labors in the interests of the country; and the President indicated that he was grateful to the minority and to the majority for the cooperation that he had had from both.

He indicated that he had no further communications to the Senate, but he did wish us to express his gratitude to all of our colleagues for the work that has been done. He wished all of our colleagues, the officers of the Senate, and the officials of the Senate a very pleasant holiday, and Senator BAKER and I did the same for ourselves and the official family in return.

Mr. BAKER. Mr. President, the task of advising the President of the United States of the impending adjournment sine die is an old and traditional one that signals the end of long and diligent labor.

I was happy to join with the majority leader in making that call. The President received us in good grace and good spirts, and, as the majority leader has indicated, asked that we convey to our colleagues his best wishes for a happy holiday season and his wish for further cooperation in the next session which will begin in January.

On my part, I indicated to the President that we of the minority felt honored to have been a part of the legislative process this year. I expressed our thanks to the distinguished majority leader for his careful consideration of our position and points of view, and expressed to the President our wish that there should be a maximum of cooperative effort in the very extensive burden of work the Senate will have before it next year.

I must say in conclusion, Mr. President, that the President of the United States had the last word, as Presidents are entitled to do. In this case, it was also the best line of the conversation, if the majority leader will permit me to repeat it in that character, when he said to me that he thought the minority in the Senate had done such a good job that he hoped we would stay the minority, to which I responded that it is the permanent wish of the minority, always, to become the majority.

I expressed appreciation to the President for his many courtesies and his consideration during this session of Congress.

Mr. ROBERT C. BYRD. Mr. President, in connection with what the minority leader has referred to as the permanent wish of the minority:

> A man's reach should exceed his grasp,
> Or what's a heaven for?

Mr. BAKER. But not forever.

Mr. STENNIS. Mr. President, if the Senator will yield to me, I believe that I can speak for the other 98 of us in expressing our gratitude to the majority and minority leaders here for their valuable assistance on each side of the aisle in this long, hard year of work.

Not everyone, even here, fully realizes how much you do; but those of us who are fairly close to you know that you do plenty, and we appreciate your efforts.

Mr. ROBERT C. BYRD. Mr. President, I thank the distinguished Senator from Mississippi for his praise and his comments. Speaking for myself, the minority leader, and the distinguished majority whip and minority whip, the other elected members of the leadership on both sides, I also wish to express our gratitude to the Senator from Mississippi and the other Members of the Senate, particularly the chairmen and the ranking minority members of the Senate committees, for their diligence, patience, and hard work, which makes it possible for the minority leader and myself to do our job.

Mr. BAKER. Mr. President, I thank the distinguished Senator from Mississippi for his generous remarks, and for including me in those remarks. He is a tower of strength in this body and we look to him from both sides of the aisle for leadership and for a classical example of what a Senator ought to be.

I have earlier today reported rather extensively on minority views of this session. In them I included further reference to my gratitude to the distinguished majority leader and the distinguished majority whip, including my colleague on this side of the aisle, the assistant minority leader, for their unfailing help and assistance in the course of the year.

I will not extend those remarks except to say that never in my life have I had the opportunity to serve with individuals of such diligence and good will. I want to particularly say, as I have said once today, that I have never enjoyed a more flawless relationship and a more consistently courteous relationship than that at the hands of the majority, and the majority leader in particular. I express, in addition to those thoughts I previously expressed, my personal appreciation.

Mr. ROBERT C. BYRD. Mr. President, I thank the distinguished minority leader for his very kind remarks. He knows of the deep affection that I have for him concerning the relationship we have, and one which I think has enabled the Senate to perform a very, very good job throughout this session. I know there will be that continuing relationship in the second session.

Again I want to thank my friend, the Senator from California (Mr. CRANSTON), our whip, who has worked unstintingly and unswervingly, with great dedication; also Senator DAN INOUYE, the secretary of the Democratic Conference; Senator HUMPHREY, our very lovable and wonderful friend, the Deputy President pro tempore; the Acting President pro tempore (Mr. METCALF), and the President pro tempore (Mr. EASTLAND). I thank all of the officers, the members of the minority, the officials of the Senate, the pages, the doorkeepers. All of the employees of the Senate have worked together, and have worked hard. They have made a fine contribution to the Senate's efforts this year. I am personally very grateful to all of them. I wish that they and their loved ones have a happy holiday season, will rest from their labors, and will come back in January looking forward to a fruitful and productive session of work in the coming session of the Congress.

In expressing appreciation to all for the support and understanding and cooperation that have been accorded the majority leader, I inadvertently overlooked the Policy Committee staff.

I express appreciation to Tom Hart and Lee Williams and all the other members of the Policy Committee staff and to the members of my own staff, who have served me so faithfully and loyally and with so much dedication and high purpose. Without their good work, I could not function effectively, and I would not want to overlook the expression as to these people, whose assistance means so very much to me.

Mr. CRANSTON. Mr. President, I want to express my appreciation to the distinguished majority leader for his very pleasant words and more for his wonderful leadership and cooperation. I have had a great year in working with him. I want to thank him for his leadership, his understanding, cooperation, and generosity in helping us.

I also want to thank the distinguished minority leader for his cooperation. We have worked very well together across the aisle. Just today we were working together on one matter. It characterizes the relationship we have in this body. I thank the leaders on both sides.

APPOINTMENTS BY THE VICE PRESIDENT

Under the authority of S. Res. 345, agreed to on December 15, 1977, the Vice President made the following appointments on December 22, 1977: The Senator from Illinois (Mr. STEVENSON) to be a congressional adviser to the SALT delegation in Geneva during 1977 and 1978, and the Senator from Kentucky (Mr. FORD) and the Senator from Delaware (Mr. BIDEN) to be delegates to the U.S.-U.S.S.R. Parliamentary Visit, to be held in Washington, D.C., January 22–26, 1978.

NOTICE OF HEARINGS ON TUITION TAX CREDIT LEGISLATION

Mr. PACKWOOD. Mr. President, as the ranking member of the Subcommittee on Taxation and Debt Management of the Finance Committee, I wish to announce, on behalf of myself and the chairman of the subcommittee, the Senator from Virginia (Mr. HARRY F. BYRD, JR.), that hearings will be held on January 18, January 19, and January 20, 1978, on S. 96, S. 311, S. 834, S. 954, S. 1750, S. 1781, S. 2142, and other bills which may be introduced providing tax relief for persons paying tuition to elementary and secondary schools and colleges. The hearings will begin at 9:30 a.m. on all three mornings and will be held in room 2221, Dirksen Senate Office Building. Additional hearings will be held if necessary. The Senate has approved a tuition tax credit for higher education three times in the last 16 months, most recently Senator Roth's amendment to the social security financing bill (H.R. 9346).

S. 96, sponsored by the Senator from South Carolina (Mr. HOLLINGS), allows a credit to individuals for certain expenses incurred in providing higher education.

S. 311, sponsored by the Senator from Delaware (Mr. ROTH), provides a tax credit of $250 in 1978, $300 in 1979, $400 in 1980, and $500 in 1981 and thereafter for education expenses paid by an individual for himself, his spouse, or his dependents. In order to be eligible for the credit, individuals must be a full-time student at an institute of higher education or a vocational school. The Joint Committee on Taxation estimates a revenue loss for S. 311 in fiscal year 1978 of $175 million increasing to $1.9 billion by fiscal year 1980.

S. 834, sponsored by the Senator from Pennsylvania (Mr. SCHWEIKER), allows a taxpayer to deduct, or to claim a credit for, tuition paid for himself, his spouse, or for his dependents to elibigle institutions at all levels of education. Senator SCHWEIKER estimates the annual revenue loss to be $2 billion.

S. 954 and S. 1781, sponsored by the Senator from New Hampshire (Mr. DURKIN) and the Senator from Minnesota (Mr. ANDERSON), respectively, allow a taxpayer to deduct, or to claim a credit for, tuition paid to institutes at all levels of education.

S. 1570, sponsored by the Senator from New York (Mr. MOYNIHAN), allows a taxpayer to take a credit for tuition paid to private elementary and secondary schools.

S. 2142, introduced by the Senator from Oregon (Mr. PACKWOOD) and the Senator from New York (Mr. MOYNIHAN), provides, effective 1980, a refundable tax credit for tuition expenses paid by an individual for himself, his spouse, or his dependents. The amount of this credit will be 50 percent of tuition payments up to a total credit of $500 per student. To be eligible for the credit, an individual can be a part-time or full-time student at an elementary or secondary school, a vocational school, or college or university. The Joint Committee on Taxation estimates a revenue loss of $4.7 billion for calendar year 1980.

DEPAUW UNIVERSITY'S SERVICE PROGRAM

Mr. LUGAR. Mr. President, each year at DePauw University, a small liberal arts college in Greencastle, Ind., hundreds of students participate in an extraordinary service program which is worthy of our special consideration.

Approximately one-half of the university's 2,200 students volunteer to share their time and talents to assist church-related agencies, inner city housing authorities, and facilities for emotionally and physically handicapped persons. Last spring this service program was recognized by the Governor's Committee on Voluntary Action as the largest of its type in the State of Indiana.

The project is designed to work through the student living units, creating a healthy amount of competitive spirit and camaraderie. At the beginning of each school year, living units are paired for a specific service project. A representative from each unit is selected to serve as captain throughout the project's planning and implementation. The crews provide needed services including carpentry, painting, roofing, and general cleanup work.

The success of DePauw's program is due in no small part to the creativity and personal efforts of its director, Chaplain Fred Lamar. Under his guidance, 2 teams of 45 persons will travel to the Episcopal Mission of St. Stephen, Lake Izobal, Guatemala in January of 1978. These teams will construct medical and religious facilities and provide medical and dental care for the residents of the Guatemalan earthquake zone.

Since the program's inception 4 years ago, thousands of persons have benefited from the labors of DePauw students. Churches have been repaired, classrooms painted, campgrounds cleared, and buildings constructed. I am grateful for the opportunity to pay tribute to the students and directors who have participated in this outstanding service program. It is an excellent example of the commitment and concern displayed by our Nation's college students.

A STRONGER VOICE FOR UNION MEMBERS IN PENSION FUND INVESTMENT

Mr. METCALF. Mr. President, on October 26 I noted in Senate remarks, CONGRESSIONAL RECORD, page 35346, that within the labor movement there is a growing interest in obtaining a voice in investment of union members' money and in the voting of the common stock within union pension fund assets. As it is now, union pension funds for the most part are controlled by banks.

I am pleased to note that the AFL–CIO convention in Los Angeles early last month addressed some of these concerns. The convention resolved that union funds be entrusted to financial institutions whose investment policies are not inimical to the welfare of working people, and that a portion of union funds be invested in national programs that meet public needs and provide construction jobs, such as houses, schools, hospitals, factories, and stores.

The resolution adopted by the national AFL–CIO on December 12 was similar to one previously adopted earlier at the Union Label & Service Trades Department convention, which was described in an article in the December 10 issue of the AFL–CIO News. I ask unanimous consent to have printed in the RECORD that article and the text of the resolution adopted by the AFL–CIO.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

[From the AFL–CIO News, Dec. 10, 1977]

LABOR URGED TO PUT "UNION LABEL" ON INVESTMENT OF PENSION FUNDS

LOS ANGELES.—Investment portfolios of union pension funds must be closely reviewed to guard against the channeling of capital into firms whose policies run counter to the best interests of workers and their unions, the Union Label & Service Trades Dept. declared.

Delegates to the department's 58th convention warned that third parties handling the funds have at times used union investments to finance operations of anti-union employers or subsidize multinational corporations that export American jobs.

Noting that pension funds—with billions of dollars in assets—are the single largest holders of corporate stocks and bonds, a key convention resolution urged that the "substantial financial power of AFL–CIO unions be entrusted to financial institutions whose investment policies are not inimical to the welfare of working men and women."

It also called for increased allocation of union pension funds in government-guaranteed mortgage investment portfolios to finance the construction of union-built housing and public facilities.

Addditionally, it urged increased participation in the AFL–CIO Mortgage Investment Trust designed to stimulate union construction projects. A similar resolution was adopted earlier by the Building & Construction Trades Dept.

AFL–CIO Sec.-Treas. Lane Kirkland told the 200 convention delegates that public and private investment in job-creating programs is being drained away by runaway firms and the flood of illegal aliens.

"While importing unemployment through the sieve of our borders, we are exporting jobs by the hundreds of thousands," Kirkland stressed in noting the heavy job losses by workers in the electronics, textile, apparel and shoe industries.

Despite the destructive impact on the U.S. economy, the government continues to provide tax inducement and incentives for firms to flee overseas while imposing competitive penalties on American producers, he said.

"We very properly impose social and economic responsibilities on American producers such as minimum wage, health and safety, and environmental standards and costs," he observed, "but we leave wide a gaping escape hatch—and even encourage, ensure and promote their flight from those responsibilities . . . to countries indifferent to any social considerations or standards of human decency."

Kirkland said the faith that American trade unionists have for so long held in the free trade doctrine and reciprocal trade agreements has been shattered.

"They have been replaced by nationalized and subsidized export industries in other countries and cartelized centralized political economies dumping their problems and their products on the last great free and open market and economy left in the world.

"Growing protective barriers everywhere else have channeled a stream of goods—priced without reference to real cost, devoid of any liability for humane labor and social standards—ever more forcefully into the American market at the expense of American skills, livelihoods and choice of calling," Kirkland said.

"We are feeling the heat of our members' very real and deep concern," he noted, "and it is up to us to pass that heat on as forcefully as we can to the proper quarters: the policy-makers and international negotiators of this Administration and to the Congress."

Retired Steelworkers President I. W. Abel, following a similar theme in his address to the convention, said the time has come for the United States to retaliate in behalf of American workers.

Citing the record $3.1 billion U.S. trade deficit in October and the projected $30 billion deficit for all of 1977, Abel said that curbing the free flow of imports could bring a more realistic balance in trade.

Zeroing in on the import problems affecting USWA members, he charged that the Trans-Alaska pipeline was built entirely with Japanese pipe; not one pound of American-made steel was used in the construction of New York's World Trade Center, and imported steel is even being used in the construction and repair of U.S. Navy ships.

On internal matters, the convention adopted guidelines for Union Label & Service Trades Councils on advertising in labor-related publications. It noted that some irresponsible publishers of labor papers, yearbooks and directories have at times "exploited the name and good reputation of the AFL–CIO to further their own selfish ends, and to the detriment of the best interests of organized labor."

In the executive board report to the convention, President Joseph D. Keenan and Sec.-Treas. Earl D. McDavid reported the successful conclusion of four consumer boycotts during the past two years that were instrumental in winning new contracts or representation rights for workers. They involved the rubber workers boycott against Firestone Tire, Musicians against Ringling Bros. circuses, Bakery & Confectionery Workers against Russell Stover Candies, and the Paperworkers against Old Fitzgerald Distilleries.

In addition to reaffirming support for continuing boycotts, the convention called for the addition of two firms to the boycott list. They are Bartlett-Collins Co. of Sapulpa, Okla., which is being struck by the Flint Glass Workers, and Charles Manufacturing Co. of Dothan, Ala., where the Furniture Workers are striking for a first contract.

Among major resolutions adopted at the two-day convention, delegates urged Senate approval of the House-passed labor law reform bill, reform of the Federal Reserve Board, a comprehensive urban mass transit program keyed to energy conservation, and renewed efforts to enact equity legislation to help preserve the U.S. merchant fleet.

The convention elected two new vice presidents to fill vacancies on the department's executive board. They are Vice President John E. Mara of the Retail Clerks and President William M. McClennan of the Fire Fighters.

Final Version of the Resolution as It Was Adopted by the AFL–CIO

INVESTMENT PROGRAMS FOR UNION PENSION FUNDS

Resolution No. 240—By Delegate Earl D. McDavid, Union Label and Service Trades Department.

Whereas, Pension funds are the single largest holders of corporate stocks and bonds, and the assets of pension funds are measured in billions of dollars, and

Whereas, Two-thirds of all workers in the private sector who have pension plans are covered by negotiated plans.

Whereas, The cyclical swings of the construction industry, which impose a severe hardship on members of the building trades, are intensified by government fiscal and economic measures which artificially reduce the capital funds required to finance needed housing, social, commercial and industrial building, and

Whereas, To offset such government action requires that there be a large and steady flow of capital into the mortgage investment field, and

Whereas, It has been the policy, throughout the years, of many labor organizations to invest their funds and to encourage the investment of funds by related Pension Plans in construction and mortgage loan programs. This investment has historically given to such funds both an adequate return by way of income and the required high degree of protection and security found in conventional guaranteed mortgages; therefore, be it

Resolved: That the substantial financial power of AFL–CIO unions and negotiated pension plans be entrusted to financial institutions whose investment policies are not inimical to the welfare of working men and women, and be it further

Resolved: That to vitalize national programs to provide U.S. and Canadian citizens with the houses, schools, hospitals, factories, stores and other construction needs for a growing population—and at the same time consistently provide jobs for our members—we urge the AFL–CIO and its affiliated unions when investing their funds to consider participation in guaranteed mortgage funds which are designed to stimulate union construction, and further urge the trustees of related pension funds to allocate at least ten percent (10%) of the monies available for investment in appropriate government guaranteed mortgage investment portfolios or individual regular guaranteed mortgages, and be it further

Resolved: That at the same time we recognize that many local unions and their related funds do not have the financial resources to meaningfully participate in or administer mortgage investments on an individual basis. We, therefore, particularly recommend to these organizations such programs as the AFL–CIO Mortgage Investment Trust, established by the Executive Council of the Federation in 1964, to provide a secure investment program for all affiliates and qualified labor-management pension and retirement plans. The trust is a fund for investment in federally-insured or guaranteed construction loans and term mortgages. All of the trust's investment activity has been in projects built by union craftsmen, be it further

Resolved: That the AFL–CIO consider the enunciation of such a policy for all of organized labor and to explore the feasibility of legislation which would achieve the intent of this resolution.

OCCUPATIONAL ALCOHOLISM PROGRAMS

Mr. HATHAWAY. Mr. President, I commend to my colleagues' attention an article written by Mike Sheridan, titled "Contrary to Common Belief: Business and Alcoholism," which appeared in the December 1977 issue of New England magazine. This article represents an excellent summary of the tremendous problem which alcoholism poses to our society and economy, and the equally tremendous promise which occupational alcoholism programs have demonstrated in combating and limiting this problem.

The cases cited in this article underline the findings of the Subcommittee on Alcoholism and Drug Abuse that these programs are cost effective to the firms involved, and appear to be one of the most effective means of providing help to victims of this often fatal disease.

The subcommittee has held hearings on these issues in connection with S. 1107 and intends to pursue further legislative initiatives to encourage and promote the development of a greater number of occupational alcoholism programs throughout business and industry.

Mr. President, I ask unanimous consent that the text of this article be printed in the Record at this point.

There being no objection, the article was ordered to be printed in the Record, as follows:

Contrary to Common Belief: Business and Alcoholism

(By Mike Sheridan)

Drinking employees are driving up the cost of doing business in New England. The alcoholic worker—who is frequently late for work, absent several days per month, and who repeatedly makes on-the-job mistakes—is costing business and industry in the six-state region $500-million a year, officials estimate.

Alcoholics on the job are no longer confined to just one or two workers. An estimated 4.5-million alcoholics are employed in industry today—roughly 5% of the nation's work force, reports the National Council on Alcoholism (NCA).

Benjamin H. Ticknor, a field consultant for NCA, believes that industry must be charged with the responsibility of the disease because government is supported by taxes on alcohol—to the tune of some $15 billion yearly. "We have an alcohol-supported government," Ticknor says. "The government may pay lip service, but the paltry $100-million they throw at it isn't going to do any good. Industry has the clout—through the payroll, though their ability to talk from an authoritative standpoint. There's a morale factor, too. After all, a man has one half to two thirds of his life tied up in business."

The cost of keeping an alcoholic employee on the payroll, experts estimate, is 25% of the worker's annual wage. Research groups have said that cost averages out to $2,500 a year per alcoholic employee.

"It's dearly costing the company that ignores the problem," says Charles Pilkington, of the Special Services Division of Pratt & Whitney Aircraft Group, the largest employer in Connecticut. "The problem exists and must be reckoned with."

On the average, each alcoholic employee loses 22 days of work a year as the result of his drinking and its physically debilitating results.

Studies show that, compared with the norm, alcoholic employees:

Function at 67% of their work potential.

Have an accident rate three times higher.

Are involved repeatedly in grievance procedures.

File five times more compensation claims.

Ticknor emphasizes the alcoholic cost at the highest level of management is the most damaging. "It's my belief that the biggest cost of all is bad decisions to cover up, and I am more aware of this because I was in an executive position as an alcoholic. Alcoholics hide, they make bad decisions. You've got to keep hitting at the executive branch of business," Ticknor, who was president of Industrial Molasses Corp. for 35 years, now owns a guest house in Dublin, N.H., that caters to the recovering alcoholic.

Ticknor relates from his own experience the typical alcoholic's day: "The alcoholic starts the morning sick and dull. After a martini lunch he sparkles, maybe attends a meeting . . . has lots of great ideas. Then he begins to tire, starts needing another drink. . . . He says, 'Let's get the business over,' before all the evidence is in. That's when the bad decisions come in. He's apt to call the meeting off, walk out before the meeting is over."

Moreover, Ticknor says, the drinking executive can be a great stumbling block in the company's attempts to treat alcoholics. "He will pooh-pooh the program," Ticknor explains. "He doesn't want it. It may interfere with his drinking."

Who is the alcoholic employee? Contrary to common belief, the problem drinker is not the skid-row bum. Studies show him to be a skilled or semi-skilled person, varying in age from 35 to 50, who has been at least seven years with the company, married, owns his own home, and usually has two or more children. In short, he is a respected member of the community.

"There is no typical alcoholic," says one business executive. "If you accept the concept that alcoholism is a disease, then a disease knows no boundaries. It can't read a paycheck or an address."

No business or industry is immune to the alcoholic and the cost of his addiction; and small businesses often have more to lose than large corporations. But it is the large company which has taken the initiative in alcohol treatment.

Fred Stevens, coordinator of special services for Textron, Providence, R.I., is a direct man with a down-to-earth approach. "It's called special services," he says with a grin, "but it means alcohol."

Stevens' job takes him all over the country, to Textron's many divisions, working to set up alcohol-treatment centers in each of the plants.

"I can walk into a place and say, 'How many alcoholics do you have?' and they'll say, 'Well, out of so many, we've only had three people hospitalized for alcohol in the past five years.'

" 'Three!' I'll say. 'That's not many. Well, what other illnesses are on the record for those three people; gastroenteritis, nervous anxiety, and non-surgical back pain, right?'

" 'How did you know? Did you see the records?'

" 'No, I didn't see the records. Now look and see how many were hospitalized for those things. . . .'

"I know," Stevens says bluntly. "I used to go to the doctor and say, 'Doc, you've got to give me something. . . .' and he'd prescribe something for gastroenteritis. Now that's not saying that everybody with gastro is an alky. . . .

"We checked the records on drinking people. At a minimum he's hospitalized three times. Seven at the maximum. He takes 35 weeks off during a three-year period. Now, the man looks at that figure and says, 'No, Fred,' but what he doesn't realize is that doesn't mean a week off at a time. That's a day here, a day and a half there. . . .

"The executive can get away with it. If the employee takes the day off, he gets docked. An executive says, 'I'm going to Boston for a few days,' and nobody questions him. He could be around the corner, dead drunk in a hotel room, and nobody would know the difference. . . .

"I think half the time psychiatrists hurt more than they help. They give people excuses to drink. What difference does it make if you've got a problem mother—everybody's got problems. . . . Your problem is alcohol, and there's only one way you can handle the problem: Don't drink."

Alfred Van Sinderen, president of the Southern New England Telephone Co., estimates that the more than 600 alcoholics in the firm will cost SNET $500,000 this year. "Alcoholism is a very strange disease," Van Sinderen explains. "People who have it don't want to admit they do. They don't want to be cured. They don't want to be helped. Only people who are recovered alcoholics really understand the nature of the illness."

James S. Kemper, Jr., president of the Kemper Insurance and Financial Companies, says employers who say they have no problem drinkers in their organizations are similar to the employed alcoholic who insists he has no drinking problem. "Neither is facing the realities of the situation," Kemper says. They are alike, too, in that both are paying a heavy and needless penalty for their illusions. According to our studies, the most expensive way to handle the problem drinker is to fire or ignore him or her, the most profitable and effective way is to help the employee recover."

Paul McGuire, of Century Brass, agrees, saying a firm gains nothing by firing alcoholic employees upon discovery. "A firm has an investment in the employee and has spent time in training him," says McGuire. "With a little bit of effort the employee will, hopefully, recover. If the worker is fired, he'll probably go away and get another job, and then it's someone else's problem."

A good recovery program, on the other hand, may have a success rate of 50%–70%. "Why sure!" Ticknor concurs, emphatically. "A recovering alcoholic is one of your most valuable employees. He's a worker . . . he's got a conscience."

But fear of losing jobs forces many alcoholics to "mask" their problems while on the job. Thus alcoholism is detected only in its very late stages where chances of recovery are minimal.

"A social stigma has been attached to alcoholism," relates Frank O'Callaghan of the Massachusetts Council on Alcoholism. "For a long time, alcoholism was viewed as being symptomatic of other problems. People felt that if those problems were cleared up, the drinking would too."

Steps have since been taken to place alcoholism in the proper light. In 1956 the American Medical Assn. classified alcoholism as a disease. It is now viewed as a medical problem rather than a moral one by the insurance companies as well.

As alcoholism among industry employees spread, a few large corporations such as Kodak and DuPont—sensing the physical and financial losses from alcoholic employees—tried to do something about it. The firms pioneered occupational alcoholism programs to identify and to assist persons with alcohol-related problems. A large percentage of alcoholic employees were successfully rehabilitated.

But Ticknor says that some progress in the private sector has been discouraged by government funding. "Since the federal government has come into this, grant money is so free that people think we don't need the private sector. But what it did was disrupt the private sector. With government money, you spend half your time reporting what you did with it, half the time getting the money. You end up with a lot of little bureaucracies."

The success of some private programs, however, has been encouraging:

One study of 25 alcoholics at General Motors Corp., based on one year's comparison before and after enrollment, showed 66% reduction in lost man-hours, 59% reduction in sickness and accident benefits, 39% reduction in on-the-job accidents, and 25% reduction in medical department visits.

At the former Scovill Manufacturing Co. (now Century Brass Products), in Waterbury, Conn., officials estimated several years ago that they saved $186,550 over a three-year period through their alcohol treatment programs.

A comparative study of 402 employees at Illinois Bell Telephone Co.—five years prior to referral against five years after referral—showed a 46% reduction in sickness disability resulting in savings of $459,000, and a rehabilitation rate of 72%.

Officials at the Kennecott Copper Co. found sickness and accident costs for identified alcoholics, compared with the average, to be more than 5 to 1; hospital, medical, and surgical costs were more than 3 to 1. After a year into the program, hospital, medical, and surgical costs decreased 55%.

Insurance companies have estimated that for every dollar spent in rehabilitating the alcoholic employee, $5 will ultimately be saved.

How does an alcoholism treatment program "save" money?

To illustrate the benefits of an occupational program, the Massachusetts Council on Alcoholism uses as an example a fictional company which employs 1,000 individuals at an average annual wage of $10,000. Since an estimated 5% of the workers are alcohol abusers (50 employees), the payroll for alcohol abusers would be $500,000.

The alcoholic employee will be absent more often, have more accidents, and will file more compensation claims—so the company will spend 24.8% of the employees annual wage additionally. The cost of alcohol abuse in the company, then, is $124,000.

During the first year of operation, an occupational program will deal with 20% of the alcohol abusers. Thus, in the fictional company with 50 alcohol abusers, 10 would be identified and offered assistance during the first year.

Since the company aiding the individuals is no longer spending the 24.8% that was the cost of their unidentified alcoholic abusers, it will realize a reduction in added operation cost of $17,360.

Training costs for supervisory personnel would be about $1,800, while educating employees about the program would cost $1,120, and treatment of the 10 individuals would run about $8,000. But most group health insurance policies will, after $100 deductible, cover 80% of the treatment costs. So, the net treatment cost for the 10 identified alcoholic individuals would be $2,400.

Thus, the total cost of running the first year program would be $5,320.

Subtract $5,320 from the reduction of operating costs mentioned previously ($17,360), and the first year net reduction in operating costs is $12,040, representing a savings equal to 2.26 times the cost of the program generating the savings.

During the first year of its program, Pratt & Whitney Aircraft saved $500,000, Pilkington reports. "Saved" is a misnomer, he adds. "I prefer to call it a 'cost avoidance'—you avoid extra costs for absenteeism, sick benefits, and the like."

The company received $3.72 in cost avoidance for every dollar PWA expended in the alcoholism treatment program, and during its first year, 451 persons were referred for treatment.

One of the problems a firm is faced with is training the supervisors in such a program. Ticknor believes that a valuable resource is being overlooked in company personnel directors.

"The personnel director is looked upon as a sort of rubber stamp in some companies, a hirer and firer of the lowly. . . . While if there's a real problem, they go to the vice-president. Actually, he's the only one of the company who can speak to everyone."

Because of the daily contact, a supervisor is also in an excellent position to spot drinking problems. And a supervisor has legitimate, explicit expectations for the employees in the performance of their roles without slip-ups.

Part of the problem is getting the employee to admit to the drinking problem and to realize that alcohol is affecting his job. Personnel try to point out that problems at work would probably go away if the alcohol problem were cleared up.

Ticknor says that many companies are now implementing what is called a "troubled persons program." It may deal with problems ranging from athlete's foot to an overspending wife, he says, "but it is there that the alcohol problems surface. Eighty-three per cent of the problems turn out to be alcohol-related."

However, it is usually on the basis of job performance—not alcohol—that the employee is confronted.

Joseph Sheehan, occupational consultant for the Connecticut Alcohol Council, says that confronting the employee is the difficult part of the rehabilitation process. "No matter how you cut it, there has to be a confrontation," he continues. "Supervisors may postpone it because it's a difficult thing. But it has to happen."

Because of the confrontation factor, Pilkington reports, gaining acceptance from supervisors is far from easy. "We had to show them the program was good, and that we would not only be helping the employee, but also the supervisors," says Pilkington. We pointed out that with less employee absenteeism and better productivity, it would make the job easier.

If an employee persists in drinking, the company's course is obvious. After trying to persuade the employee to accept treatment, PWA's Pilkington says, "It's like you've got a broken hand and don't want to get it fixed. We're going to send you home."

"If an employee fails to take advantage of the offered treatment plan at Century Brass," says McGuire, "that worker is eventually dismissed because of poor work performance."

At Century Brass, however, the company will take the dismissed worker back after a year as a probationary employee, and will give the recovered employee one third of the benefits due him.

"For some," says McGuire, "it is the jolt they need. . . ."

REEDUCATION ON THE SOVIET UNION

Mr. McGOVERN. Mr. President, Professor and former Ambassador George

Kennan is unquestionably one of the country's leading authorities on the history, the leadership, and the behavior of the Soviet Union. It is particularly noteworthy, therefore, that in a speech to a Council on Foreign Relations meeting here in Washington on November 22, Mr. Kennan called for a process of "reeducation" on those subjects among all people, himself included, who assert a role in shaping our policy toward the Soviet Union.

I concur heartily with Mr. Kennan, and his suggestion could not come at a more opportune time. Within the next several months we expect that a new strategic arms limitation agreement will be presented to the Senate. That proposal will likely succeed or fail, not so much on the basis of its terms, but on the basis of assumptions about the other side—many of the same assumptions which were formed decades ago, with virtually no serious reexamination since.

Mr. Kennan suggests "that the angry controversies over policy toward Russia that are now marring our public debates and threatening the success of any and all American policies toward that country are not to be solved within the terms of the argument as it is now being conducted—that a solution lies only in the confession that none of us knows too much about what he is talking about—only in the willingness to stop at this point and to learn a little more before we shout each other down."

Because his message should be of value to all Members of the Senate as we approach the SALT II debates, I ask unanimous consent that Ambassador Kennan's remarks be printed in the RECORD at this point.

There being no objection, the remarks were ordered to be printed in the RECORD, as follows:

A CURRENT ASSESSMENT OF SOVIET-AMERICAN RELATIONS

Before we move to the substance of this evening's discussion, I have to note a certain symmetry in the dates that relate to this occasion. It was just 60 years ago, as we are all aware, that there came into being the political regime in Russia with which we are now concerned. And it was exactly at the half-way point of that span of time—30 years ago—that I chanced to deliver, also at a meeting of the Council on Foreign Relations, a talk on this same subject which became the basis for an article in the magazine Foreign Affairs signed by the pseudonym X. This article, as many of you will recall, attained a certain melancholy notoriety and has dogged my footsteps ever since, like a faithful, but unwanted and somewhat embarrassing animal.

I trust this occasion will not have similar consequences; but this coincidence of chronology naturally leads me to reflect on the changes that have occurred since that year of 1947 in the background against which Soviet-American relations have had to proceed. The Russian political scene was then dominated by a single great personality—a man whom Churchill very aptly called a "crafty giant"—a man of enormous political-tactical genius—a formidable opponent on anyone's terms, but who in a portion of his psychic make-up was paranoiac and whose combination of paranoia with cruelty and political mastery had then served to create one of the great totalitarian monstrosities of our time: a personal despotism as ruthless and far-reaching as anything the modern world has ever known. By 1947 this despotism had already cost the Soviet peoples several millions of lives. And it had not stopped at the old Russian borders but had been extended—and this with our tacit blessing—to nearly one-half of the remainder of the European continent. And no one could be sure, in 1947, that it would stop there. The danger was not one of further military conquest. (Actually, it never has been that.)

The problem was that Western Europe, still dazed, shaken and jittery from the effects of the Hitlerian conquest, did not know what to expect. Its peoples lacked confidence in themselves. They had a tendency to rush for safety to the side of whoever they thought was likely to win in the end. They would have been quite capable of throwing themselves into the arms of their own Communist Parties—to commit suicide, as my friend Bohlen used to say, for fear of death—if they gained the impression that those Communist Parties represented the wave of the future. And to this had been added the fact that the Moscow center, and Stalin personally, enjoyed at that time a total monopolistic control over the world Communist movement—a control which meant that any success by any Communist Party anywhere in seizing power within its own country had to be regarded as equivalent in its effects to a military conquest by the Soviet Union.

It is enough to cite these circumstances, I think, to make clear the magnitude of the changes that have occurred in this 30-year interval. The Soviet Union remains, of course, an authoritarian state—much as was the pre-revolutionary Tsarist Russia; but there is very little to be seen today of the terror that prevailed in Stalin's time; and the regime is headed by a moderate, in fact, conservative man; a man who, whatever other failings of outlook he may have, is a man of the middle, a skilled balancer among political forces—a man confidently regarded by all who know him as a man of peace.

Moscow's monopoly of authority over the world Communist movement has been thoroughly disrupted—so much so that even in the case of those Communist parties that still ostensibly recognize the Soviet leadership, the lines of authority leading from Moscow are tenuous and incapable of bearing much weight. It is a case where the semblance of authority can be retained only by the sacrifice of much of the reality.

And finally, in place of the anxious, jittery Western Europe of 1947 we now have an area which is unquestionably the seat of some of the most successful civilization, economically and socially, that the modern world has to show. The change, to be sure, has not been complete. People have not fully overcome the trauma of two world wars. Many still lack confidence in themselves, see dangers on every hand, require to be reassured periodically, like frightened children. This situation has its military implications, and plays a part, of course, in Soviet-American relations. But it cannot be compared in seriousness and danger to the situation we faced in 1947.

Now all these changes, and others I might cite, have run in the direction of an improvement in the objective possibilities for a better Soviet-American relationship. This does not mean, of course, possibilities for a complete normalization of those relations. For that there remain too many obstacles, historical, psychological and ideological. There has always been, and remains today, an area in which no complete political intimacy is possible, where interests must remain competitive and in part conflicting.

But there is also another area, an area in which interests largely coincide and limited collaboration is possible. In the light of the changes we have just had occasion to note, this latter area has tended, slowly but steadily, to grow. And where sensible efforts have been put forward on both sides to take advantage of this situation, where people have tried, in other words, to create a balanced, business-like and realistic relationship between two very disparate political systems—the results, given patience and persistence, have not been discouraging. This was true, among others, in the period of the Nixon-Kissinger detente. Progress was made in a number of fields which was more than negligible and from which both sides are continuing to benefit today. The fact that these achievements were somewhat over-dramatized, that they lead to unreal expectations, and gave rise to some disillusionment when these expectations were not met, should not blind us to their positive residue.

Nevertheless the effort to pursue a balanced and useful middle course in the relationship with Russia has never been an easy one for American policymakers to follow; and one of the main reasons why this has been so difficult is that seldom, if ever, have we had an adequate consensus in American opinion on the nature of the problem and the most promising ways of approaching it.

Prior to the late 1940's—prior, that is, to the Korean War and the death of Stalin—the difficulty seemed to come primarily from the left: from people who had a naive, over-idealistic view of what was then Stalinist power—people who thought it really possible for this country to ingratiate itself with the Stalin regime by various one-sided gestures of confidence and generosity and reproached our government for not doing so. It was, incidentally, against this sort of Left-wing deviation that the X article, and the policy of containment, were directed.

But since Stalin's death, the opposition to an even-handed and realistic policy toward Russia has tended to come from the opposite end of the political spectrum: from people who were unable to see the curious mix of the negative and the positive, of the discouraging and the hopeful, in the Soviet political personality—people who could see only the negative, and who feared the consequences of anything less than a total rejection and hostility from our side. There has never been a time in these last 25 years, it seems to me, when this opposition has not made itself felt. There has never been a time when American statesmen concerned to find and develop a constructive middle-ground in relations with Russia have not felt their efforts harassed from that direction.

And the harassment has not been minor in intensity or in power. Every administration has been to some extent afraid of that hard-line opposition. It has behind it the power of chauvinist rhetoric as well as that of strict military logic. It has the capability of hurling at any and all opponents the charge of being "soft on Communism"; and however meaningless this phrase may be, it is a formidable weapon in a society unhappily vulnerable to the power of the slogan.

In the heyday of the Nixon-Kissinger detente, this opposition was almost silenced—partly by Mr. Nixon's formidable credentials as a hard-liner, which bewildered many critics; and partly by Henry Kissinger's diplomatic fireworks, which dazzled them. But the resulting silence was one of frustration, not of acceptance. When Watergate drained the authortiy of this political combination, the opposition broke forth once again with redoubled strength and violence. It has raged over the entire period from 1975 to the present. It sufficed to knock out the 1974 trade agreement and to lower the level of Soviet-American trade. It sufficed to delay the approach to a new SALT Agreement. And it has achieved today, against the background of a new administration and a somewhat unstructured Congress, a power it never had before. It now claims to have—and for all I know it does have—the power to veto any Soviet-American agreements in the military or the economic field that do not meet with its requirements; and such are its requirements that I come increasingly to suspect that this means in effect: any conceivable agreements at all.

I have made my best efforts to understand the rationale of this opposition. Many of the bearers of it are my friends. I know them as honorable people. I do not suspect, or disrespect their motives.

It is clear that we have to do here with a complex phenomenon, not a simple one. This body of opinion embraces some people whose trouble seems to be that they are unaware of the changes to which I referred a few moments ago as between 1947–1977, who talk of the problems of Soviet-American relations in terms identical with those used at the height of the Cold War—who sometimes seem in fact unaware that Stalin is dead.

Then, there are others whose emotions have been aroused over the question of Human Rights or Jewish emigration and who would like to see American policy directed not to an accommodation to Soviet power as it is but to the changing of the very nature of the Soviet regime.

More important, however, than either of these are the people who view the relationship exclusively as one of military rivalry—who see in it no significant values or issues or possibilities other than ones relating to the supposed determination of the Soviet leadership to achieve some sort of decisive military ascendancy over the NATO coalition—and this, of course, with the most menacing and deadly of intent. These include outstandingly the military planners, whose professional obligation it is to set up a planner's dummy of any possible military opponent, to endow that dummy with just the motivation I have described, and then to treat it as if it were real. But this group also includes many non-military people who, accepting this dummy as the reality, lose themselves in the fantastic reaches of what I might call military mathematics—the mathematics of possible mutual destruction in an age of explosively burgeoning weapons technology.

Like many of the rest of you, I have made my efforts to understand the arguments of these military enthusiasts. I have tried to follow them through the mazes of their intricate and sophisticated calculations of possible military advantage at various future points in time. I have tried to follow them in their recital of the letters and numbers of various weapons systems, some real, some imagined, their comparisons of the reputed capacities of these systems, their computations of the inter-actions of them in situations of actual hostility.

I come away from this exercise frustrated, and with two overpowering impressions. The first is that this entire science of long-range massive destruction—of calculated advantage or disadvantage in modern weaponry—has gotten seriously out of hand; that the variables, the complexities, the uncertainties it involves are rapidly growing beyond the power of either human mind or computer.

But my second impression is that there is a distinct unreality about this whole science of destruction—unreality, that is, when you view it as the plane on which our differences over policy have to be resolved. I doubt that we are going to resolve our problems by trying to agree as to whether the Russians will or will not have the capability of "taking out" our land-based missiles at some time in the 1980s. I doubt that this is the heart of the problem. I suspect that something deeper is here involved. And if I had to try to define that deeper something, I would have to say that it is the view one takes of the nature of the Soviet leadership and of the discipline exerted upon it by its own experience, problems, and political necessities.

There are basically two views of leadership: two ways in which it is seen in this country. In one of these views, the Soviet leaders appear as a terrible and forbidding group of men—monsters of sorts, really, because lacking in all elements of common humanity—men totally dedicated either to the destruction or to the political undoing and enslavement of this country and its allies—men who have all internal problems, whether of civic obedience or of economic development, essentially solved and are therefore free to spend their time evolving elaborate schemes for some ultimate military showdown—men who are prepared to accept the most tremendous risks, and to place upon their people the most fearful sacrifices, if only in this way their program of destruction or domination of ourselves and our allies can be successfully carried forward.

That is one view. In the other view, these leaders are seen as a group of quite ordinary men, to some extent the victims, if you will, of the ideology on which they have been reared, but shaped far more importantly by the discipline of the responsibilities they and their predecessors have borne as rulers of a great country in the modern technological age. They are seen, in this view, as highly conservative men, perhaps the most conservative ruling group to be found anywhere in the world, markedly advanced in age, approaching the end of their tenure, and given to everything else but rash adventure. They are seen as men who share the horror of major war that dominates most of the Soviet people, who have no desire to experience another military conflagration and no intention to launch one—men more seriously concerned to preserve the present limits of their political power and responsibility than to expand those limits—men whose motivation is essentially defensive and whose attention is riveted primarily to the unsolved problems of economic development within their own country.

They are seen as men who suffer greatly under the financial burden which the maintenance of the present bloated arsenals imposes on the Soviet economy, and who would like to be relieved of that burden if this could be accomplished without undue damage to Russia's security and to their own political prestige. They are seen, finally, as men who are, to be sure, seldom easy to deal with, who care more about appearances than about reality, who have an unfortunate fixation about secrecy which complicates their external relations in many ways, but who, despite all these handicaps, have good and sound reason, rooted in their own interests, for desiring a peaceful and constructive relationship with the United States within the area where that is theoretically possible.

I would submit that it is these conflicting views of the Soviet leadership that lie at the heart of the conflict between those in our government who are attempting to make progress in our relations with the Soviet Union and those who are attacking this effort from the Right. And the burden of what I have come here today to say is that I think we can no longer permit this great conflict of outlook and opinion to go on in so large degree unreconciled as it has gone in recent years—that the moment has come when we can no longer carry on safely or effectively in our relations with the Soviet Union without the creation of a much wider consensus of opinion behind our policies of the moment than anything we have known in this recent period.

We stand, as you know, at a crucial point in Soviet-American relations. The expiration of the 1972 SALT Agreement has confronted us with fundamental decisions. Either we move forward, boldly, confidently, and imaginatively to the creation of a new relationship with that country in the military field, or we deliver up ourselves and the rest of the civilized world to the appalling dangers of a nuclear weapons race totally out of control—a development devoid of any visible hopeful end, devoid of any imaginable end at all other than a wholly disastrous and apocalyptic one.

But our ability to pursue the more hopeful of these alternatives is today seriously jeopardized by lack of the consensus to which I just referred. The opposition now being brought to bear against the efforts of the President and the Secretary of State to carry forward negotiations in the field of the limitation of armaments has reached a degree of intensity that seems to me to exceed anything we have known in the past. Powerful efforts are being made—the tendency of which is not to bring about the failure of ratification of instruments already negotiated (nobody could object to that as a matter of procedure) but to discredit the very process of negotiation, and this at a very early stage. People are being attacked not for what they are known to have done in the negotiating process but for what they are presumed capable of doing—presumed capable on the basis of rumor or of calculated leak. They are being attacked, in other words, not for their actions but for their supposed intentions.

I am not questioning the motivation for these attacks. I can conceive that it may be, in many instances, of the highest. But I find myself wondering whether effective negotiations can be conducted in the face of opposition of this nature, particularly when we, as well as our Soviet counterparts, are being assured daily that the people who carry forward this opposition have not only the political power to torpedo any agreements or understandings that might realistically be arrived at, but also the firm intention to do so. Negotiating policy is seems to me cannot be effectively made or implemented against such a background.

And this present moment is one at which we simply cannot afford to have the force and momentum of our policy lamed in this manner. The stakes are too high. The penalties of failure are too serious. The implications of such a failure would carry even farther than just the prospect of an unlimited weapons race. A breakdown of the relationship on the military level could not fail to have—indeed, has already had to some extent—effects on other levels as well. And here, too, we have—and the world has—too much to lose to permit such a failure to occur.

We face in this coming period a tragically high probability of deepening crises in Southern Africa and in the Middle East. It may well be that the peace of the world will depend, as these crises develop, on the ability of the American and Soviet governments to remain in close communication, to give each other reasonable reassurance as to their intentions, and to coordinate their actions with a view to preventing local conflicts from growing to global dimensions.

Beyond this, we have the fact that these coming years are bound to see extensive changes in political leadership at the Soviet end. Nothing could be more unfortunate, surely, than that a new and inexperienced team of leaders should come into power in the Soviet Union confronting what would appear to be a blank wall of hostility and rejection at the American end—a situation in the face of which they would see no choice but to look for alternatives other than those of good relations with the United States. This is no time to foreclose other people's options, and particularly not the options of people new to the experience of power and obliged to define new lines of policy that may represent commitments for many years to come.

These, then, are the reasons why it appears to me as an inescapable necessity that we should move promptly and resolutely to the achievement of a more workable consensus behind our policy toward the Soviet Union to take the place of the resounding disagreements that affect, and threaten to paralyze, the formulation and execution of policy in this field today.

I realize, of course, that it is easier to call attention to the need for such a consensus than to chart out the ways in which it could be achieved.

I realize, too, that behind a certain portion of this critical opinion there are commitments of an emotional or political or professional nature which are unlikely to be overcome by appeals to mere reason, and which will have to be confronted, as a political problem, by the responsible political leaders.

But in another portion of this spectrum we have to do with sincerely held and rational opinions, with conclusions drawn from what people believe to be the facts—from the spectrum of facts, or supposed facts, that they now have before them, and I wonder whether, in the case of these people in particular, approaches and devices could not be found—approaches and devices of a basically intellectual nature which would help us importantly, and possibly even decisively, to get on with the solution of this problem. The problem is, after all, a cognitive one; and there is no reason why men of good will should not be able to come to some elements of agreement on the implications for policy of a given body of factual material if they can be brought to a common acceptance of its validity.

And here there are, as I see it, two requirements. First of all, I would propose that we lay aside completely, at least for the moment and for purposes of this exercise, the whole question of the military relationship and all the arguments about who could conceivably do what to whom if their intentions were of the nastiest; and that we elevate our vision, at least for the time being, to the question of the real nature and situation of the particular foreign power we are dealing with.

And then, starting with that resolution, it seems to me that I can see in my mind's eye a series of private gatherings in which would be included not only high-level policymakers of the moment but leading figures of this opposition as well as possibly a few of the others of us who are interested in Russian affairs—gatherings where we would come together not primarily to discuss matters among ourselves—not to air our prejudices and convictions on the basis of our present knowledge and our present ignorance, but where we would all listen humbly to what could be told to us by the most experienced and knowledgeable people who could be found in the respective fields—I avoid the word "expert" because it implies something more narrow than what I have in mind.

What I am thinking of, in other words, is a certain process of re-education in the realities of Soviet power and leadership—a common effort on the part of all of us who have been prominently involved in this debate—a process in which we would check our existing views at the door, together with our hats, and would listen and ask questions and try to get a new view of the facts before we drew conclusions. I suspect that in an experience of this nature, designed not to promote the clash of old views but to make possible the common development of new, more realistic and more up-to-date ones, we would come closer than in any other way to the composing of our differences.

And there is room for this, I assure you, because no more in the Soviet Union than anywhere else have things been standing still. There are available to us today masses of new factual material on conditions in the Soviet Union—material which, given the rather low state of Soviet studies in our country, have scarcely been digested by the scholars, much less by the policy-makers, the critics, and the old-timers in this field of expertise. And in this latter category, I include myself, I am much aware that it is exactly fifty years ago this year that I entered on my own career as a so-called Russian expert, and I think that because of this long preoccupation with the subject—not despite it, mark you, but precisely because of it—it is time that my ideas, too, were taken thoroughly apart and put together again with relation, this time, to the present scene, and not to all the memories I cherish, and all the anecdotes I have been accustomed to telling, about the earlier years.

Such seminars would not, I think, serve their purpose unless they were the product of very high-level initative and enthusiasm within the Administration. But if that initiative and enthusiasm were there, the institutional facilities to organize and accommodate them would not be hard to find.

That, gentlemen, is the burden of the song I have come to sing this afternoon. I am suggesting that the angry controversies over policy towards Russia that are now marring our public debates and threatening the success of any and all American policies towards that country are not to be solved within the terms of the argument as it is now being conducted—that a solution lies only in a common act of humility—only in the confession that none of us knows too much about what we are talking about—only in the willingness to stop at this point and to learn a little more before we shout each other down. Only in this act of humility will we find the way to a future of Soviet-American relations that offers hope rather than horror.

PROPOSED ARMS SALES

Mr. SPARKMAN. Mr. President, section 36(b) of the Arms Export Control Act requires that Congress receive advance notification of proposed arms sales under that act in excess of $25 million or, in the case of major defense equipment as defined in the act, those in excess of $7 million. Upon such notification, Congress has 30 calendar days during which the sale may be prohibited by means of a concurrent resolution. The provision stipulates that, in the Senate, the notification of proposed sale shall be sent to the chairman of the Foreign Relations Committee.

In keeping with my intention to see that such information is immediately available to the full Senate, I ask unanimous consent to have printed in the Record at this point the notification I have just received.

There being no objection, the notification was ordered to be printed in the Record as follows:

Defense Security Assistance
Agency and Deputy Assistant
Secretary (Security Assistance), OASD/ISA,
Washington, D.C., December 22, 1977.

In reply refer to: I-11577/77ct.

Hon. John J. Sparkman,
Chairman, Committee on Foreign Relations,
U.S. Senate, Washington, D.C.

Dear Mr. Chairman: Pursuant to the reporting requirements of Section 36(b) of the Arms Export Control Act, we are forwarding herewith, Transmittal No. 78-7, concerning the Department of the Army's proposed Letter of Offer to Canada for major defense equipment, as defined in the International Traffic in Arms Regulations (ITAR), estimated to cost $13 million. Shortly after this letter is delivered to your office, we plan to notify the news media.

Sincerely,

H. M. Fish,
Lieutenant General, USAF.

[Transmittal No. 78-7]

Notice of Proposed Issuance of Letter of Offer Pursuant to Section 36(b) of the Arms Export Control Act

(i) Prospective purchaser: Canada.

(ii) Total estimated value: Major defense equipment*, $13.0 million; other, 0.0; total, $13.0 million.

(iii) Description of articles or services offered: One thousand, seven hundred, twenty-eight (1,728) TOW anti-armor guided missiles.

(iv) Military Department: Army.

(v) Sales commission, fee, etc. paid, offered or agreed to be paid: None.

(vi) Date report delivered to Congress: December 22, 1977.

PRELIMINARY NOTIFICATION PROPOSED ARMS SALES

Mr. SPARKMAN. Mr. President, section 36(b) of the Arms Export Control Act requires that Congress receive advance notification of proposed arms sales under that act in excess of $25 million or, in the case of major defense equipment as defined in the act, those in excess of $7 million. Upon receipt of such notification, Congress has 30 calendar days during which the sale may be prohibited by means of a concurrent resolution. The provision stipulates that, in the Senate, the notification of proposed sales shall be sent to the chairman of the Foreign Relations Committee.

Pursuant to an informal understanding, the Department of Defense has agreed to provide the committee with a preliminary notification 20 days before transmittal of the official notification. The official notification will be printed in the Record in accordance with previous practice.

I wish to inform Members of the Senate that such a notification was received on December 22, 1977.

Interested Senators may inquire as to the details of this preliminary notification at the offices of the Committee on Foreign Relations, Room S-116, in the Capitol.

I ask unanimous consent to have the notification printed in the Record.

There being no objection, the notification was ordered to be printed in the Record, as follows:

Defense Security Assistance Agency and Deputy Assistant Secretary (Security Assistance),
OASD/ISA
Washington, D.C., December 22, 1977.

In reply refer to: I-12390/77ct

Dear Mr. Richardson: My letter dated 18 February 1976 indicated that you would be advised of possible transmittals to Congress of information as required by Section 36(b) of the Arms Export Control Act. At the instruction of the Department of State, I wish to provide the following advance notification.

The Department of State is considering an offer to a NATO country tentatively estimated to cost in excess of $25 million.

Sincerely,

H. M. Fish,
Lieutenant General, USAF.

FINANCES OF THE U.S. GOVERNMENT

Mr. CURTIS. Mr. President, we are facing a new year. I am sure that many wonderful things will happen during the coming year and that mankind will be the beneficiary of advances made in many fields. This is our hope and our prayer for all mankind.

---

*As included in the U.S. Munitions List, a part of the International Traffic in Arms Regulations (ITAR).

Many good things will come to the United States in 1978 I am sure; however, those who hold public office have a very grave responsibility, for if they fail to do what is sound and necessary, a bright future can turn to chaos.

Mr. President, I am speaking of the finances of the U.S. Government. Expenditures and taxes are astronomically high. In spite of the heavy burden that our taxpayers must bear, the U.S. Government runs a huge and inexcusable deficit of about $60 billion. This cannot go on.

Mr. President, if we look at the rising deficits of the past several years we can see the basic cause for the inflation. All prices go up and up, and many wages and salaries follow. The income of many people is more or less fixed, and they have no way to cope with the near uncontrollable inflation now rampant in this country. When we consider the effects of this inflation on life insurance programs, on pensions, and other values, it is no less than frightening.

Mr. President, while it is vitally necessary that we practice economy in every activity of the Government, it is equally important that we look at the basic cause of the great increase in the budget of the United States. The budget for the current fiscal year calls for spending in a total sum of $459 billion. Compare this with the amount of the budget for the last full fiscal year of the Eisenhower administration of $92 billion. We cannot blame this on defense costs, neither is this great increase caused by expenditures for the necessary functions of Government as was originally planned by the founders of our Government. It cannot be blamed upon the development of our natural resources. The cause of this huge budget is basically the welfare state. The cost of governing and regulating and policing is not what is bringing about the huge expenditures. It is that role of the Government which can best be described by the word "provide."

Much of the legislation involving the welfare state which is now so costly was enacted in the thirties and forties. Many additional programs were enacted in the period of 1961 to 1969. Here is what these programs are costing this year: Food, $8.955 billion; housing, $6.8 billion; education, $19.6 billion; assistance to local and State governments; $81.17 billion; medical and health programs, $56 billion; unemployment compensation, $10.6 billion; and retirement and disability, $122.44 billion.

Mr. President, bills are introduced in this body and speeches are made to add to the welfare state. For instance, let us look at the medical field. We have medicare for the aged, and we have medicaid for the poor. The drive for national health insurance results, then, in a drive to have the Government pay the medical and hospital bills of individuals who are neither aged nor poor. The Federal Government cannot take on such a burden. Furthermore, private insurance and labor contracts have taken care of a great portion of the problems and those programs are increasing day after day.

Another example relates to the field of education. There are many proposals for new educational programs, but let us look at what has happened. In my State of Nebraska, the Federal Government pays estimated 10 percent of the total cost of all education in the State, yet the Federal Government comes near exercising 100 percent authority in running our schools. It has not been a good deal for the taxpayers or the students.

The welfare state has failed. It costs more than we can pay. It does not meet our problems. We have had public housing for decades; we have spent billions and billions of dollars on public housing. The need for housing is perhaps greater now than it ever was. Once the Federal Government subsidizes a housing project in a community, the community then becomes eligible for an additional grant in aid for schools because the public housing is not taxed.

Mr. President, when are we going to return to the basic principle that the Government should not provide the things that individuals need when they are not victims of ill health, disaster, or advanced age, but rather, it is the responsibility of the Government to maintain an economic system that provides an opportunity for the able bodied to produce, earn, and acquire the things they need. There are those who say it cannot be done. I refuse to accept the premise that self-government and individual freedom are so deficient.

Mr. President, we should, with great care, weigh every proposal that comes before us in this year and in all future years. The voices of error are rampant in the land. Some of these voices are found in government. The Director of the Congressional Budget Office, Ms. Alice Rivlin, has been quoted by the press as favoring increased expenditures and increased tax reduction, which would mean an increased deficit. The press states that her reason is to spur the economy. Mr. President, if increasing spending and enlarging the deficit would spur the economy in any true sense, we would not have an economic problem in the United States. We must realize that big government has failed.

Winston Churchill said you cannot unscramble eggs. This statement embodies a great truth. We cannot, and I do not advocate it, abolish all of these programs which I have labeled as the welfare state. We should stop enlarging the welfare state. There are some programs that ought to be ended, there are others that should be drastically changed, and we need to establish some priorities.

Among the social programs that in my opinion must have a high priority are those where we have a moral obligation to fulfill the Government's commitment. Social security was enacted to provide a retirement benefit for our people. We should confine it to such a program. Millions of individuals have paid and paid into the social security program; we cannot fail them. The social security tax is going to be difficult. It will take a courageous Congress to collect enough revenue to pay for it. The alternative is repudiation of the commitment to our people, and this is unthinkable. On the subject of social security, I do feel that we should take a look at medicare being paid through the social security tax. Individuals of modest means are being taxed to pay the hospital and medical costs of individuals regardless of wealth and income if they happen to be 65 years of age. We should also take a look at the disability program and the survivor program to see what gradual changes can be made in our social security system that will meet the intended goal for retirement with tax rates that our people can stand.

Reducing the size of the Government is an enormous task. It calls for intelligence, hard work, establishment of priorities, and above all, men and women of courage who are deeply concerned about the future.

No one objects to balancing the budget of the U.S. Government. Most people say, "not now." In the meantime the programs grow and the problem gets worse. We need fiscal discipline in our system of government. Most of our States have a constitutional provision which either prohibits deficits altogether or limits them. We must have the same idea incorporated into our Federal Constitution.

Mr. President, I have for several decades advocated a constitutional amendment to require a balanced budget and bring an end to deficit spending. The constitutional amendment that I have pending in this Congress is Senate Joint Resolution 26.

This constitutional amendment is clear and understandable. It requires Congress to balance the budget. If Congress fails to balance the budget, a procedure is set up for an automatic surtax to go into effect the following year to recoup the deficit. It has a provision whereby in time of war or a declared national emergency by Congress the requirements of the amendment can be set aside a year at a time.

This constitutional amendment is a stern procedure; it does have teeth in it. If Congress spends more than the Government takes in, the taxes automatically go up. If Congress is faced with the alternative of reducing spending or increasing taxes, I predict that they will reduce spending. If Congress fails to reduce spending and everyone's tax is increased with a surtax of 3 percent, or 10 percent, or 20 percent, whatever is needed, the taxpayers will know about it, and they have a remedy at the ballot box. A constitutional amendment which is a mere declaration of a requirement to balance the budget and which is not self-enforcing will not do the job. Mr. President, the public polls indicate that a majority of the American people want a balanced budget. A sizable list of our State legislatures have acted to bring about a balanced budget on the part of the Federal Government. There are over 20 cosponsors to the amendment that I introduced, Senate Joint Resolution 26. There are other constitutional proposals that are pending. All in all, more than 100 Congressmen and Senators in this Congress have either introduced such a constitutional amendment or have cosponsored an amendment of their colleagues.

I appeal to the majority leadership of this Congress to schedule Senate Joint Resolution 26 for passage this year. Hearings have been held, and the time is now.

CHILD CARE SERVICES

Mr. HAYAKAWA. Mr. President, I have recently participated in two hearings sponsored by the Subcommittee on Child and Human Development held in my home State of California. The purpose of these hearings was to learn from people who have a personal involvement in child care. With more and more parents working, day care for children commands an ever-increasing amount of attention. As parents and concerned citizens, we must all give serious thought to the types of day care we want made available. No one disputes the need for quality child care services; only the methods of delivery and payment are arguable.

I have learned that many people would like to see the Federal Government involved in the extension of child care services. Others would rather fend for themselves, and assume the responsibility of finding good day care for their children. The hearings were far from conclusive, and the door remains open for all suggestions. I hope the Subcommittee on Child and Human Development will hear more from people who have good ideas regarding the delivery of child care services.

A pertinent article by Alan L. Otten appeared in the August 11, 1977, issue of the Wall Street Journal. I agree with his conclusion that parents want to evaluate their own needs for day care services, and choose the appropriate delivery system. Parents know best what are the needs of their children, and how best to care for these needs.

Mr. President, I ask unanimous consent that this article be printed in the Record at this time.

There being no objection, the article was ordered to be printed in the Record, as follows:

Politics and People

(By Alan L. Otten)

DAY CARE

Washington.—Articles in learned journals don't get much general public attention, and most of the time, rightly so.

They're usually abstruse, irrelevant, jargon-ladden. Every so often, though, an academic periodical publishes a piece that merits wider notice. A good example appears in the spring issue of Daedalus, the quarterly of the American Academy of Arts and Sciences, and it deserves careful consideration for two reasons.

One is that it sets forth quite persuasively the case against any big new program of federal subsidies for institutional day care centers for children. Available evidence, the article demonstrates fairly conclusively, indicates that most parents far prefer informal arrangements for child care—at home or near home, with a relative, friend or neighbor.

The other reason for paying attention is that the article's author is now in position to argue her case personally with government policymakers. She is Suzanne H. Woolsey, a 35-year-old psychologist who did the research last year at the Urban institute but is now a key Carter administration official: Associate Director of the Office of Management, with particular responsibility for such "human resource" problems as child day care.

The public debate over day care for children, Mrs. Woolsey writes, has been "carried on at high volume for at least a decade, with remarkably little progress in either defining the issues or analyzing the evidence."

She notes that the coalition pushing for greater government support of institutional day care consists of some very strange allies: feminists who think mothers should get out of the home and into "more rewarding" work; entrepreneurs looking for a new growth business; unemployed teachers eyeing job opportunities; child development professionals who believe the institutional setting develops children more fully"; and fiscal conservatives who want welfare mothers to work so as to cut welfare costs. Yet each group ignores evidence against large institutional programs.

For example, Mrs. Woolsey cites several surveys that uniformly found incredibly high percentages of working mothers—particularly poor, near-poor, black and Spanish-speaking ones—using their relatives or neighbors to take care of the kids. One survey showed half of all working mothers relying on family members, with another fourth using a friend or sitter.

Obviously, the low cost is an important element in these decisions. Yet surveys also revealed that convenience, flexibility of hours, and willingness to care for a sick child all reenforced cost in impelling parents to prefer home care or informal neighborhood arrangements to more formal institutional care.

Actual experience is even more convincing. When free or low-cost care has been offered in centers by government experiments or large-scale employers, the takers have been far below expectations.

"Evidence accumulates," Mrs. Woolsey states, "to indicate much less interest on the part of parents in formal day-care centers than the public debate implies."

Perhaps, though, the decision shouldn't turn on parental preference, but on larger issues, such as the feminists' contention that wider availability of day care will permit more women to work who want to work. Again, Mrs. Woolsey finds the facts otherwise.

Upper-middle-class women may decide to work or not to work on the basis of the quality of day care available for their children, she says, but opinion surveys and actual experience indicate that for welfare mothers and other poor and lower-middle-class mothers, the decisive factor is the availability of a job. If they can find a job, they arrange their own day care, again usually informal home or family-based arrangements. When the day care center closed in one low-income experiment in the South, practically every mother continued to work, quickly making other child care arrangements.

As for the argument that formal day care is better for the child, Mrs. Woolsey is frankly skeptical. Research is bulky but inconclusive, she reports, and results "do not provide one with much confidence that children's development is markedly improved by one form of care or another."

Decisions on the best type of care "are made with great uncertainty even by the most sophisticated," she says, and cites her own experience. She and her husband, a lawyer now Under Secretary of the Navy, have a live-in housekeeper for their two small children—a third is well on the way—and recently wanted a nursery school for the older child, who is 3½.

"I looked at a dozen schools," Mrs. Woolsey relates. "I have a Ph.D. in psychology, and you'd think I'd be able to make very intelligent judgments on which school would be best. I finally picked the one that was above ground-level and closest to home.

Just why does the day care debate pay so little attention to the method actually used and preferred by parents—within the household or extended family? The likely answer, Mrs. Woolsey suggests, is that so much of the argument is carried on by upper-middle-class whites, people who've moved often in pursuit of education and career and who forget that poor and lower-middle-class people move less and still have extended families to rely on.

The best solution to the child care problem, she believes, is some kind of "demand subsidy." Working parents who need financial help to arrange day care for their kids would get government money—through tax credits or extra welfare subsidies—and then they would decide whether to pay a relative or neighbor to care for the kids at home or nearby or to send them to some day care center. Mr. Carter's new welfare plan moves in this direction, and his coming tax law changes could also.

"The basic fact," Mrs. Woolsey says, "is that parents know better than the professionals what form of care is best for their own kids."

"HAWAII FIVE-O" IS 10 YEARS OLD

Mr. INOUYE. Mr. President, I wish to bring to the attention of my colleagues that this year marks the 10th anniversary of a television show that has consistently been in the top of the Nielsen ratings, and one that has been filmed in its entirety in Hawaii—"Hawaii Five-O."

Most of the staff are residents of Hawaii, and our local community takes considerable pride in "Hawaii Five-O's" many accomplishments.

I understand that these weekly episodes are presently aired in 73 countries, and in Canada is shown in both the English and French languages. It is translated into seven languages: French, Portuguese, Spanish, German, Iranian, Italian, and Japanese. It is subtitled in five countries: Arabia, People's Republic of China, Holland, Bangladesh, and Greece.

In my judgment, "Hawaii Five-O's" longevity and overwhelming popularity reflect the truly extraordinary talent, dedication, and sensitivity of Jack Lord and his many fine staff.

I am sure that each of us and our families look forward to viewing another decade of this highly entertaining show.

AMENDMENT TO THE FEDERAL WATER POLLUTION CONTROL ACT

Mr. CHAFEE. Mr. President, Congress recently completed and the President signed amendments to the Federal Water Pollution Control Act. These are important amendments and much time and hard work were invested by members of both the House and Senate to get a bill that will assure protection of the environment.

One provision of this bill, the section 404 provision which sets the groundwork for a national program to protect our dwindling wetlands, was of great interest to me. I strongly favor such a program because of the tremendous environmental importance of wetland areas.

I would, however, like to clarify for the record one point concerning State programs under section 404. Question has been raised as to the applicability of other Federal statutes, particularly the National Environmental Policy Act and the Fish and Wildlife Coordination Act, to discharges of dredged or fill material subject to regulation under an approved State program. To clarify this question I wrote to Senator MUSKIE, chairman of the Senate Environment and Public Works Committee's Environment Subcommittee and of the recently completed conference between the House and Senate. I believe that his response to me on this subject answers my questions and clarifies completely the intent of the majority of the conferees.

I ask unanimous consent to have printed in the RECORD my letter and Senator MUSKIE'S response.

There being no objection, the letters were ordered to be printed in the RECORD, as follows:

COMMITTEE ON
ENVIRONMENT AND PUBLIC WORKS,
Washington, D.C.

Hon. EDMUND S. MUSKIE,
Chairman, Subcommittee on Environmental Pollution, Committee on Environment and Public Works, Washington, D.C.

DEAR ED: It has come to my attention that there may be some misunderstanding concerning the amendments to section 404 of the Federal Water Pollution Control Act which were recently approved by the Congress. Statements have been made which suggest certain Federal environmental laws including the Fish and Wildlife Coordination Act would not be applicable to actions taken by states to regulate the discharge of dredged or fill material under approved state programs, since these Acts only apply to actions taken by Federal agencies.

I am disturbed by statements of this sort since neither I nor a number of other conferees intended this to be the result of the provisions to authorize States to implement the wetland protection program in most areas.

I wish you would give me your views on this matter in order that I might clarify for myself and others the uncertainty here.

Sincerely,

JOHN H. CHAFEE.

COMMITTEE ON
ENVIRONMENT AND PUBLIC WORKS,
Washington, D.C.

Hon. JOHN H. CHAFEE,
U.S. Senate, Washington, D.C.

DEAR JOHN: I will be happy to clarify for you and the record what I believe the conferees intended regarding the applicability of the National Environmental Policy Act and the Fish and Wildlife Coordination Act to discharges of dredged or fill material subject to regulation by an approved State program under section 404.

It was the intent of the conferees that any State permit program for the discharge of dredged or fill material approved by the Administrator must, as in State permit programs approved under section 402 of this Act, have demonstrated itself capable of accomplishing the same objectives as the Federal permit program. The State program must include enforcement authority comparable to the Federal program, adequate resources including staff and funds, and ensure full and complete coordination with all related Federal, State and local programs. A State permit program must include substantive decision-making criteria at least as stringent as 404(b) guidelines, and follow-up procedures to assure compliance with the permits that are issued.

Section 67(b) of the conference bill adds a new subsection (h) to section 404 which establishes criteria which must be met by a State section 404 permit program submitted to the Administrator for approval. These State programs must assure that the Administrator, the public and affected States are afforded notice and opportunity for public hearing on each permit application and that there will be continued cooperation with Federal and Federal-State water-related planning and review processes. This latter coordination requirement would include comments from all agencies such as the Fish and Wildlife Service and State fish and wildlife Coordination Act—and any other appropriate public or private agency that customarily comments on proposed Federal actions which have a significant environmental impact.

The Administrator is expected to assure that these coordination processes exist and will continue before he approves a State program, or before he approves the best management practices program submitted under the section 208 amendments which contain similar coordination requirements. The Administrator is further expected to assure that similar coordination exists for Federal permit applications and proposed general permits as provided in the new section 404(j) of the conference bill.

I hope this discussion clarifies the issues with which you are properly concerned.

Sincerely,

EDMUND S. MUSKIE,
Chairman, Subcommittee on Environmental Pollution.

ANNUAL REPORT: COMMITTEE ON ENVIRONMENT AND PUBLIC WORKS

Mr. RANDOLPH. Mr. President, the Committee on Environment and Public works was extremely active during the 1st session of the 95th Congress. We developed and saw enacted legislation in several areas of our responsibility. Major bills which the committee developed which became law during the year were the Clean Air Act Amendments of 1977 (P.L. 95–95), Clean Water Act of 1977 (P.L. 95–217) and Public Works Employment Act (P.L. 95–28).

The committee revised its internal structure to accommodate new jurisdictions assigned as part of the general reorganization of the Senate Committee System. We produced legislation in these new areas as well as those for which we were previously responsible.

The reorganization of the Senate committee system gave the committee a new name by adding the word "environment" to its title. This was largely a recognition of the committee's function, for we have been the principal environmental committee of the Senate in addition to our responsibility for programs related to traditional public works and development activities. The general reorganization of the Senate gave to us additional environmental duties and also assigned to the committee responsibilities for programs of the Fish and Wildlife Service, regulation of nuclear energy and expanded authority in the field of water resources.

To accommodate these new responsibilities, the committee organized itself in six subcommittees of seven members each as follows: Subcommittee on Environmental Pollution, Subcommittee on Water Resources, Subcommittee on Transportation, Subcommittee on Regional and Community Development, Subcommittee on Resource Protection, and Subcommittee on Nuclear Regulation.

The new jurisdictional assignments have been reflected in the committee's workload during the year. During the first session, a total of 148 bills were introduced in the Senate and referred to the committee. This compares with 130 bills referred during the 1st session of the 94th Congress. Ninety-seven days of hearings were held, including 15 outside Washington.

A total of 21 measures which became law this year were reported or otherwise considered by the Committee on Environment and Public Works. Nine of these were in new areas of jurisdiction. Only one legislative proposal reported by the committee had not been enacted at the end of the year. This bill, the Water Resources Development Act, is expected to receive new attention by the Congress early in the second session.

The committee also received 29 nominations by the executive branch during the first session. Of these 5 were related to our new jurisdictional areas. Action was taken on all of the nominations except one which was received late in the session, that of Stephen J. Gage to be an assistant administrator of the Environmental Protection Agency. The committee will consider this nomination early in 1978. Nominations approved by the committee and confirmed by the Senate were: Robert T. Hall, Assistant Secretary of Commerce for Economic Development; Douglas M. Costle, Administrator of the Environmental Protection Agency; Barbara Blum, Deputy Administrator of EPA; Charles H. Warren, member of the Council on Environmental Quality; Robert L. Herbst, Assistant Secretary of the Interior for Fish and Wildlife; James G. Speth, member of the Council on Environmental Quality; William M. Cox, Administrator of the Federal Highway Administration; Robert W. Scott, Federal co-chairman of the Appalachian Regional Commission; Thomas C. Jorling, Assistant Administrator of EPA; Claud Anderson, Federal co-chairman of the Coastal Plains Regional Commission; J. Joseph Grandmaison, Federal co-chairman of the New England Regional Commission; Patsy Ann Danner, Federal co-chairman of the Ozarks Regional Commission; William R. Bechtel, Federal co-chairman of the Upper Great Lakes Regional Commission; F. Kenneth Baskette, Jr., Federal co-chairman of the Four Corners Regional Commission; George D. McCarthy, Federal co-chairman of the Old West Regional Commission; Patrick J. Vaughan, Federal co-chairman of the Pacific Northwest Regional Commission; Cristobal P. Aldrete, Federal co-chairman of the Southwest Border Regional Commission; William Drayton, Jr., Assistant Administrator of EPA; Joseph Mallam Hendrie, member of the Nuclear Regulatory Commission; Peter Amory Bradford, member of the Nuclear Regulatory Commission; Simon David Freeman, member of the Board of Directors, Tennessee Valley Authority; Maj. Gen. Robert Creel Marshall, member and president of the Mississippi River Commission; Marvin B. Durning, Assistant Administrator of EPA; Brig. Gen. William Edgar Read, member of the Mississippi River Commission; Steven D. Jellinek, Assistant Administrator of EPA;

and Col. Donald Michael O'shei, member of the California Debris Commission.

Two nominations, those of Kent F. Hansen to be a member of the Nuclear Regulatory Commission and Marion Edey to be a member of the Council on Environmental Quality, did not receive favorable action by the committee.

Mr. President, I will now review in detail the activities of the subcommittees during 1977:

SUBCOMMITTEE ON ENVIRONMENTAL POLLUTION

As a result of the reorganization of Senate committees, the Environmental Pollution Subcommittee, chaired by Senator EDMUND S. MUSKIE, was assigned new jurisdiction in the 95th Congress. The new jurisdiction covers safe drinking water and toxic substances legislation. As a result, the subcommittee is responsible for air pollution, water pollution—including oil pollution—drinking water, ocean dumping, Outer Continental Shelf protection, and toxic substances. Solid waste, noise pollution, and environmental research and development were transferred from the Environmental Pollution Subcommittee to a newly created Subcommittee on Resource Protection.

During 1977, the activities of the Subcommittee on Environmental Pollution were focused on amendments to the Clean Air Act and the Federal Water Pollution Control Act.

Although a conference agreement on clean air amendments was reached at the end of the 94th Congress, a filibuster prevented approval prior to adjournment.

The committee commenced activity on clean air amendments at the beginning of the 95th Congress. The bill passed by the Senate the previous year was reintroduced as S. 252, and became the working document for consideration of amendments.

Four days of hearings were held on the bill on February 9, 10, 11, and February 15—in Denver, Colo. Nine committee markups followed, and S. 252 was reported to the Senate on May 10, 1977. The Senate approved the bill on June 10, 1977. Ten conference sessions with the House Interstate and Foreign Commerce Committee resulted in a conference agreement which was approved by both the House and the Senate on August 4, and signed into law on August 7. The Clean Air Amendments of 1977 became Public Law 95–95.

Major provisions of the law deal with auto emission standards and deadlines, delayed compliance orders for industrial facilities, nondegradation, nonattainment, and new source performance standards.

The amendments give the auto manufacturers until 1981 to achieve final auto emission standards. This was one of the most difficult issues confronting the two Houses, and negotiations consumed a considerable amount of time. The most important aspect of the conference agreement on this issue is its finality with respect to the achievement of the ultimate standards required for public health, by a specified date.

Limited waivers are available. The 1981 carbon monoxide standard may be waived for any model line of vehicles in 1981 or 1982 if the Administrator of the Environmental Protection Agency finds that public health does not require the statutory standard in 1981, as well as other specific findings.

In addition, a single waiver of the 1981 standard for oxides of nitrogen is available for any 4-year period beginning in 1981. Candidates for the waiver are diesel engine vehicles and innovative technologies.

With respect to the approximately 1,400 of 23,000 major emitting facilities not in compliance with clean air requirements, Public Law 95–95 adopts an expeditious cleanup schedule.

A procedure is established allowing the issuance of administrative orders which extend compliance deadlines for a maximum of 3 years. A source wishing to comply by using innovative technology may be granted up to 5 years to achieve final compliance.

A noncompliance penalty is automatically triggered if compliance has not been achieved. The penalty will reflect the financial savings realized as a result of noncompliance with the law.

The law contains provisions to prevent the significant deterioration of air which is presently cleaner than existing ambient air quality standards. A three-class scheme was adopted. Specific increments of pollution which can be added in clean areas are specified in the statute.

The lands included in mandatory class I areas where little change can occur are national parks, international parks and wilderness areas. Procedural mechanisms are established for the reclassification of areas, and for the granting of a limited variance from the class I increments for sulfur dioxide.

The amendments also provide a mechanism by which development activity may take place in areas which still have not achieved the air quality standards.

Any such area must submit a revised implementation plan no later than January 1, 1979, which provides for achievement of national standards by July 1, 1982. In the case of automotive-related pollutants, the State plan may provide for a two-phase submission, the final submission coming due in January 1982. This revision must provide for cleanup no later than December 31, 1987.

This provision also allows the construction of new and modified stationary sources only in conformity with requirements of the revised State implementation plans.

With respect to new source performance standards, section 111 of existing law was clarified to reflect congressional intent. The requirement for best available control technology was more narrowly defined as the best technological system of continuous emission reduction. Where control technology to accomplish a substantial degree of pollution removal exists, no source may comply simply by burning untreated fuels. All new source performance standards must be revised to reflect this change within 1 year after enactment. However, in requiring a percentage removal standard, EPA is authorized to give credit for minemouth and other precombustion fuel treatment processes.

The Administrator of EPA is also given the flexibility to set a range of pollutant removal based on varying fuel characteristics.

The review of the Federal Water Pollution Control Act involved 15 days of hearings at which 159 scheduled witnesses and over 75 unscheduled witnesses appeared. These hearings included numerous field hearings.

In addition, a 3-day field investigation of wetland protection problems was conducted by committee staff.

To expedite consideration of legislation, all markup sessions to develop legislative amendments were conducted by the full committee. A total of seven markup sessions were held. The committee unanimously voted to report S. 1952. That bill was considered and passed by the Senate on August 4, 1977.

The House of Representatives also passed legislation (H.R. 3199) amending the Federal Water Pollution Control Act of 1972. House and Senate conferees began meeting on October 4 and conducted eight sessions. A conference report was filed on December 6. The conference report was approved by the House and Senate on December 15, 1977.

The following is a summary of the major provisions of the 1977 amendments dealing with water pollution.

The law provides authorizations for EPA's nonresearch operating programs for fiscal years 1978, 1979 and 1980. It allows some communities to continue to collect operation and maintenance costs for treatment works for nonindustrial users through an ad valorem tax system if that system results in proportionate distribution of costs. It continues to require proportionate user charges from industry while allowing administrative designation of certain small industries and commercial establishments to continue to use ad valorem taxes.

The new law authorizes $4.5 billion for fiscal year 1978, and $5 billion for each of fiscal year 1979, 1980, 1981, and 1982, plus an authorization for minimum allocation States. It authorizes reservation of up to 2 percent of a State's construction grant allotment, but no less than $400,000, for use by the State in administering any aspects of the construction grant program. States are given exclusive control over the priority of projects for Federal funding, so long as those priority lists reflect the enforceable requirements of the act.

The law requires the setting aside of 4 percent of construction grant funds allotted to a rural State—States with a rural population of 25 percent or more of the total population of the State—for use only for alternative or unconventional systems for communities of 3,500 or less.

The law revises the procedures for establishing and publishing a toxic pollutant standard and extends the period for compliance from 1 to up to 3 years.

An extension of the July 1977, requirements until July 1, 1983, is provided for municipal treatment works where construction cannot be completed or where Federal funds have not been made available. The law provides an extension for industries discharging into municipal systems where a permit was issued or there was an enforceable contract, or the tie-in was recognized in a grant application.

Two new enforcement options for violations of the 1977 best practicable technology requirement for industrial discharges are provided. The first option authorizes the issuance of an enforcement order requiring a "reasonable" time for compliance, reserving the 30-day requirement for violation of operation and maintenance requirements and interim compliance schedules. The second option authorizes up to a 21-month extension of the 1977 deadline where the Administrator finds that the discharger acted in good faith; that a serious commitment to achieve compliance had been made; that compliance will occur no later than April 1, 1979; that the extension will not impose additional controls on other sources; that an application for a permit was filed before December 31, 1974; and that the necessary abatement facilities are under construction.

The law provides for a waiver from the secondary treatment requirement for any conventional pollutant in a discharge into marine waters from existing municipal sources if it can be shown that the modification will not interfere with protection of public water supplies and the attainment or maintenance of the national water quality standard, will not require additional controls on any other source, assures enforcement of all applicable pretreatment requirements, and assures that there will be no substantial increase in the volume of the discharge. Procedures for obtaining a waiver from secondary treatment and best available technology are provided. Also provided is a 2-year extension of the best available technology requirement for sources utilizing innovative technology.

The new law requires at a minimum best available technology by 1984 for all toxic pollutants listed in section 307(a). It establishes new requirements to be met by 1984 for conventional pollutants, based on a reasonable test. Best available technology need not be used to control nonconventional, nontoxic pollutants until 3 years after promulgation of guidelines, but not later than 1987, and a waiver is provided based on the national water quality standard.

This law amends section 311 to extend liability for cleanup under this section out to 200 miles; to raise the limits of liability for cleanup of oilspills from vessels to $150 per gross ton; to raise the limits of liability for cleanup of oilspills from onshore and offshore facilities to $50 million (can be administratively lowered); to authorize the use of contingency funds for protection against threatened discharges; to permit immediate recovery of cleanup costs from oil cargo vessels or oil storage or handling facilities in the event of third-party fault, reserving rights of subrogation; and to permit the recovery of costs expended by the Federal or a State government in restoring or replacing natural resources damaged by an oilspill.

The law amends section 402, national pollutant discharge elimination system, section 404, dredge and fill permit program, and section 208, areawide waste treatment management, to modify the existing program for controlling the disposal of dredged and fill material. The bill amends section 402 to provide a mechanism for approving permit programs of States designed to meet their particular needs. Section 404 of the act is amended to provide specific exemptions from any permit requirement for certain activities. This amendment also provides for the use of general permits as a mechanism for eliminating the administrative burdens and delays associated with this program.

A third provision amends section 208 (b)(4) to provide that the placement of fill material associated with activities which a State chooses to regulate by requiring best management practices under this section, is also exempt from any permit requirement under section 404 or 402.

A fourth provision exempts Federal projects specifically authorized by Congress for which a final environmental impact statement was prepared and submitted prior to authorization and appropriation, if the effects of the discharge of dredged and fill material were included, and a judgment of environmental impact similar to that required in section 404 was made.

On November 16, the President signed Public Law 95–190, the Safe Drinking Water Act Amendments of 1977. The Senate had previously passed S. 1528, which was later amended by the House. Those amendments were returned to the Senate, approved, and sent to the President on November 1, thereby avoiding the necessity of a conference committee.

The principal purpose of these amendments was to extend and increase authorizations under the Safe Drinking Water Act. This measure also contained technical and clarifying amendments to the Clean Air Act Amendments of 1977 which had become law on August 7.

In the fall of 1977, committee began staff review of the Toxic Substances Control Act and implementation of that law. Meetings were held with environmental groups, industry, technical experts, and Federal agency personnel. The staff review will continue into the 2d session of the 95th Congress.

In the fall of 1977, the Senate passed S. 1531, a bill amending the Toxic Substances Control Act in a limited number of ways. The legislation was principally within the jurisdiction of the Environment and Public Works Committee, and was held on the Senate Calendar after being reported as an original bill by the Commerce, Science and Transportation Committee. After agreement was reached as to the content of S. 1531, modifications were adopted on the floor and the Senate subsequently passed the bill.

SUBCOMMITTEE ON WATER RESOURCES

During the first session of the 95th Congress, the Subcommittee on Water Resources, chaired by Senator MIKE GRAVEL, held 15 days of hearings on legislation and water-related issues, and conducted three markup sessions. Three full committee meetings also were devoted to these subjects.

This subcommittee has responsibility for the civil works program of the U.S. Army Corps of Engineers and certain Soil Conservation Service projects of the U.S. Department of Agriculture. The corps program includes the study, construction, operation, and maintenance of projects for improvements of the Nation's waters in the interests of navigation, flood control, municipal and industrial water supply, beach and streambank erosion control, hydroelectric power and recreation. The Soil Conservation Service program provides for Federal assistance in the installation of small upstream dams and other flood and soil erosion prevention works in small watershed areas. It also provides for the installation of measures for irrigation, drainage, municipal and industrial water supply, recreation, and fish and wildlife development.

Pursuant to the reorganization of Senate committees, the jurisdiction of the Water Resources Subcommittee has expanded to include water resources research, an area previously handled by the former Committee on Interior and Insular Affairs (now the Committee on Energy and Natural Resources).

The subcommittee focused considerable attention during the year on the continuation of consideration of the replacement of locks and dam 26 on the Mississippi River and waterway user charges. Extensive hearings were held on these items in 1976, and language was incorporated into the Water Resource Development legislation of that year which authorized both the replacement of locks and dam 26 and initiation of waterway user charges. That language was deleted from the bill in the Senate during debate on the measure.

Additional hearings were held by the subcommittee on these issues on April 1, 19, 20, and May 2, 1977. A subcommittee meeting was held on May 3, and on May 5, 1977, the full committee ordered reported S. 790, the Inland Navigation Improvement Act of 1977. This measure contained an authorization for replacement of locks and dam 26 with a new dam and a single 1,200-foot lock, with contingencies for a second lock, at an estimated cost of $421 million. S. 790 also established, for the first time in the Nation's history, a system of user charges to be paid by the commercial cargo vessels using federally built and maintained shallow-draft inland waterways. The schedule of charges authorized, to be implemented in phases over a 10-year period beginning October 1, 1979, would eventually recover 100 percent of waterway operation and maintenance, and 50 percent of new construction costs, based on appropriations in the preceding fiscal year.

A joint report on S. 790 was issued by the Committee on Environment and Public Works and the Committee on Commerce, Science and Transportation on May 16, 1977 (S. Rept. 95–215).

On the same day, the Committee on Environment and Public Works reported S. 1529, the Water Resources Development Act of 1977 (S. Rept. 95-191). Water Resources Subcommittee hearings had been held on items for possible inclusion in this bill on April 25 and 26, subcommittee markup sessions on April 28 and 29, and full committee markup considerations on May 5, 10 and 12. Title I of S. 1529 contained either phase I or construction authorizations for 15 projects developed by the Corps of Engineers, modifications to several previously authorized projects and general legislative items. Title II authorized increased monetary authorizations for 11 river basins to cover anticipated funding requirements for fiscal year 1978. The total estimated Federal cost of the bill was $740 million.

S. 1529 was considered on the floor of the Senate on June 22, 1977. In the course of that consideration, an amendment was accepted (by a rollcall vote of 71 to 20) to include in the omnibus measure authorization of locks and dam 26 and a waterway user charge basically as presented in S. 790. Twenty other amendments on other water resources matters were also adopted, and the entire bill was approved by a vote of 81 to 9.

Immediately following passage of S. 1529, the Senate took up a House-passed river basin bill (H.R. 5885), struck all after the enacting clause, and substituted the text of S. 1529. H.R. 5885 was then sent back to the House. The bill was held at the Speaker's desk and has not been acted upon.

On July 28, 1977, The House Committee on Public Works and Transportation and the Committee on Ways and Means jointly reported H.R. 8309, the Navigation Development Act. Title I of this bill authorized replacement of locks and dam 26 in a manner almost identical to that passed by the Senate. Title II, developed by the Ways and Means Committee, imposed a tax on fuel used in commercial transportation on inland waterways, at a rate starting at 4 cents per gallon in fiscal year 1980 and moving to 6 cents per gallon in fiscal year 1982. Title III authorized a 3-year study of types and levels of waterway user charges.

H.R. 8309 was passed by the House on October 13, 1977. The measure was placed on the Senate Calendar on October 18. The Senate did not consider H.R. 8309 during the remainder of the first session of the 95th Congress. Action on this measure is expected early in 1978.

Prior to 1977, the Water Resources Subcommittee had jurisdiction only over the civil works program of the Army Corps of Engineers and certain watershed projects of the Soil Conservation Service. With the Senate Committee reorganization in the opening days of the 95th Congress, its jurisdiction was expanded to include water resources policy.

This is a nondefinitive Federal effort fragmented among many agencies, and not a specific program. Its fragmentation is reflected at the State and local level, and at the regional level as well.

The subcommittee held a series of hearings early in 1977 to assess the existing policies and problems with respect to water resources in an effort to determine future actions. Hearings began on March 31 in Washington, and continued on April 6 in San Francisco, Calif.; April 7 in Denver, Colo.; April 11 in Albuquerque and April 12 in Roswell, N. Mex.; April 14 in Boise, Idaho and ended on April 18 in Washington, D.C.

Testimony was received from a broad spectrum of Federal, State, and local officials and from environmental groups and representatives of various water user constituencies. The hearings form a basis on which to take action in the future on water resources policy.

In the course of the water policy hearings, it became evident that current Federal water research efforts are underfunded and ineffective. In an effort to remedy this situation, the committee reported S. 846 on May 16, 1977. This bill, the Water Resources Research and Technology Development Act of 1977, reestablished the Water Resources Research Act (Public Law 88-379) and the Saline Water Conversion Act of 1971, and also authorized a demonstration program for the development of saline aquifers. The bill was passed by the Senate on May 25, and the text was substituted for the text of a similar House-passed bill, H.R. 4746, on the same day.

The House disagreed to the Senate amendment to H.R. 4746 and a conference was held on June 29. The conference agreement authorized fiscal year 1978 appropriations for saline water conversion research and development. The desalination demonstration program from the Senate bill was included. The measure was signed on August 2, 1977, and became Public Law 95-84.

The subcommittee expects to conduct oversight hearings on these programs in the next session of Congress.

The new subcommittee jurisdiction included a transfer of authority over the Water Resources Council from the Committee on Energy and Natural Resources to the Committee on Environment and Public Works. That transfer of jurisdiction was complete with the exception of one item of legislation still under consideration by the Energy Committee. This bill, S. 186, contains a reconstitution of the Council. When reported by the Energy and Natural Resources Committee, it will be rereferred to the Committee on Environment and Public Works.

Existing authorization for the Water Resources Council was scheduled to expire at the end of fiscal year 1977. Since S. 186 had not been acted upon by the Energy and Natural Resources Committee, this committee decided to authorize specific amounts for Council activities through fiscal year 1978 only. This action thus gave the Energy Committee time to complete consideration of S. 186, and will enable this committee to consider suggested revisions of the Council and its activities prior to next year's budget cycle.

Legislation, which became Public Law 95-41, authorized a total of $11,905,000 for Water Resources Council activities for fiscal year 1978 only.

The committee acted to increase river basin monetary authorizations three times in 1977. On March 25 the administration suggested legislation to the Congress requesting increased monetary authorizations for 14 river basins through fiscal years 1978 and 1979, at a total figure of $824 million. As a result of the President's cutbacks and modifications announced in April, that request was subsequently modified to $802 million.

Hearings were held on the administration request on April 25. The committee subsequently determined to approve continued monetary authorizations for 1 year only, through fiscal year 1978. Accordingly, title II of S. 1529, the Water Resources Development Act of 1977, authorized a total of $443 million for activities in 11 river basins. That measure was passed by the Senate on June 22, but was subsequently delayed in the House as discussed above.

The situation in the Brazos and San Joaquin River basins reached an emergency stage in August. Legislation was needed to permit contractors to proceed with ongoing work. Senator **Bentsen** introduced an original bill, S. 2001, authorizing $13,500,000 for these two basins. The Senate passed the measure on August 3 and it was signed by the President on August 15, becoming Public Law 95-104. It was anticipated at that time that omnibus legislation would be enacted by the end of the year that would fund all the other basins for another fiscal year.

When it became apparent that the omnibus water resources legislation would not be enacted this year, the committee acted again to approve interim funding for nine river basins through March 31, 1978. S. 2281, authorizing $215 million for these basins, was passed by the Senate on November 3, and was signed into law on November 16 (Public Law 95-189).

The subcommittee has jurisdiction over certain projects of the Soil Conservation Service under the small watershed (Public Law 566) program. These projects are approved by committee resolutions of both the House Committee on Public Works and Transportation and the Senate Committee on Environment and Public Works.

Based on hearings held prior to the beginning of the 95th Congress, the committee approved the Little River Watershed project, Iowa on March 7, 1977.

The subcommittee held hearings on 20 other watershed projects on June 8 and 9, 1977. Due to the press of other legislative activities, committee disposition of these projects was put over until next year.

Section 12 of the Water Resources Development Act of 1974 (Public Law 93-251), as amended, directed the Corps of Engineers to forward to the Congress on an annual basis a list of authorized projects which had not received funding in at least 8 years and which the Chief of Engineers determined should no longer be authorized. Projects on this list would automatically be deauthorized at the end of 90 days of continuous session of Congress, unless either the Committee on Environment and Public Works of the Senate or the Committee on Public Works and Transportation of the House adopted a resolution stating that selected projects should not be deauthorized.

Under this procedure, 275 Corps of Engineers projects were deauthorized on August 5, 1977, and 41 additional projects were deauthorized on November 6.

SUBCOMMITTEE ON TRANSPORTATION

During the first session of the 95th Congress, the Transportation Subcommittee, under the chairmanship of Senator LLOYD M. BENTSEN, held 7 days of hearings on various transportation issues in preparation for developing a 1978 highway bill, in addition to its other activities.

At a hearing on March 9, 1977, the subcommittee considered the budget recommendations of the Department of Transportation for the fiscal 1978 Federal-aid highway program. The budget, which was transmitted to Congress by the outgoing administration, proposed an obligation limitation of $6.5 billion on Federal-aid highway programs for fiscal 1978. In its amendments to the budget, the new administration recommended an obligation ceiling of $7.2 billion for regular highway activities and continued exemption from the ceiling of three categories: Urban high density, special bridge replacement, and emergency relief. In total, these funds represent a potential program level of $7.5 billion as compared with obligation ceiling of $7.6 billion for the fiscal 1977 Federal-aid highway program.

The administration also proposed an increase for the off-system rail-highway crossing program from $25 million to $75 million.

The subcommittee recommended that the Budget Committee accept the Department of Transportation's proposed budget as part of the first concurrent resolution of fiscal 1978.

On May 21, 1977, the subcommittee conducted a hearing in Ankeny, Iowa, to discuss S. 394, the Bridge Replacement and Rehabilitation Act of 1977. Introduced by Senators CULVER, RANDOLPH, CLARK, and CHURCH, the legislation was proposed in response to the growing national bridge problem. The Federal Highway Administration estimates that over 100,000 deficient bridges exist across the country requiring $23 billion for replacement. To address this situation, the bill increases the annual authorization of the special bridge replacement program from $180 million to $600 million and raises the Federal share for two-thirds of the increase from 75 percent to 90 percent.

In addition, the legislation permits the use of such funds for rehabilitation as well as replacement of physically inadequate bridges. Finally, S. 394 specifies that not less than 15 percent of bridge renovation funds allocated to each State may be used for work on structures which are under the sole jurisdiction of county government.

The bill is pending in the subcommittee and will be considered as part of the comprehensive Federal-Aid Highway Act of 1978.

"Financial Alternatives for Accelerated Interstate Highway System Completion," a study prepared by the Department of Transportation in accordance with the Federal-Aid Highway Act of 1976, was the subject of a hearing on July 26, 1977. The 42,500-mile Interstate System is over 90 percent complete, however, 36 percent of the system remains to be financed. The total cost of the system, originally calculated in 1956 to be $40 billion, has more than doubled. It is now estimated at over $100 billion. Originally scheduled for completion in 1972, at the present rate of financing, eight States will require at least 15 years to complete their designated interstate mileage.

There are States which are ready to construct major interstate segments but are without the funding authority to do so. The administration's study analyses several options for accelerated financing, including higher interstate authorizations, a revolving fund, loan of authority from slow to fast-spending States, and optional bonding.

The subcommittee will evaluate the administration's recommendations during consideration of the 1978 highway bill.

On October 5, 1977, the Executive Director of the Congressional Budget Office and representatives of the American Public Transit Association appeared before the subcommittee. The topic of discussion was "Urban Transportation and Energy," a study conducted by the Budget Office at the request of Senator BENTSEN, which evaluates the energy efficiency of various forms of urban transportation.

Because transportation annually consumes 60 percent of the Nation's petroleum and 25 percent of its total energy supply, it is vital to understand the energy savings associated with alternative modes when setting transportation policy. In its study, the CBO considered propulsion—that is, fuel required to operate vehicles per passenger miles—and nonpropulsion—station construction and maintenance, access energy, circuity—energy requirements of various transportation modes. The study concludes that when all of these energy drains are taken into account, highway-related forms of public transportation—vanpools, carpools, buses—make the greatest contribution to energy savings on a per-mile basis. The Budget Office went on to state that although rapid rail ranks among the most energy efficient of all modes in terms of operating energy per passenger-mile, when construction and access energy are computed, new rail systems are actually among the least energy efficient of public transit modes.

The final 3 days of the subcommittee centered around future options for the highway and transportation programs as developed by the Department of Transportation. At the hearings, the Secretary of Transportation, followed by representatives of State and local government and interest groups, discussed elements of the administration's "option paper." In its report, DOT outlined several possible approaches to Federal highway and public transportation programs. Where corresponding Federal Highway Administration and Urban Mass Transit Administration programs exist, the alternatives ranged from standardization of requirements while maintaining separate highway and transit programs to total integration of the two. For the highway program, the options generally encompassed increased funding for existing programs and elimination and consolidation of various program categories.

The testimony from these hearings and hearings planned for early 1978 will be carefully analyzed and evaluated as the Transportation Subcommittee and the full committee prepare a new Federal-aid highway bill for passage in 1978.

SUBCOMMITTEE ON REGIONAL AND COMMUNITY DEVELOPMENT

The Subcommittee on Regional and Community Development, chaired by Senator QUENTIN N. BURDICK, is responsible for legislation and oversight of Federal economic development programs, disaster relief and the Tennessee Valley Authority. During the first session it also had jurisdiction over public buildings and grounds.

ECONOMIC DEVELOPMENT

The Public Works and Economic Development Act of 1965 was extended by the Congress during 1976 through September 30, 1979. The programs of the Economic Development Administration and the regional action planning commissions are authorized by this legislation. The programs of the Appalachian Regional Development Act of 1965 were extended during 1975 for the period ending September 30, 1979. Legislation in these two areas, therefore, was not required during the first session of the 95th Congress.

The principal legislative activity of the subcommittee during 1977 was the $4 billion Public Works Employment Act of 1977 (S. 427), a modified version of the $2 billion 1976 Public Works Employment Act—sometimes called the Local Public Works Act.

The 1977 legislation was introduced by Senator RANDOLPH (chairman of the Committee on Environment and Public Works) and Senator BURDICK on January 28, 1977. Additional cosponsors were Senators CULVER, DECONCINI, GRAVEL, HART, HEINZ, HUMPHREY, KENNEDY, STAFFORD, and RIEGLE. Three days of hearings on the bill in February focussed largely on the administration of the 1976 act and deficiencies in that law. The 1976 act was designed to create job opportunities targeted to high unemployment areas through the construction of local facilities such as municipal buildings, schools, and related facilities. It was designed to insure quick initiation of public works construction projects.

The 1976 law was the first full-scale public works countercyclical program enacted by Congress since the Accelerated Public Works Act of 1962. The 1977 extension of the program eliminated the 70/30 distribution of funds within each State in favor of a substate distribution based on unemployment distress. The authorization of $4 billion was subsequently appropriated and the funds were obligated on more than 8,500 projects by September 30, 1977.

Mark-up sessions on S. 427 of the full committee occurred over 4 days. The bill was reported to the Senate on March 4 (S. Rept. 95–38). Included as title II of the bill were the provisions of S. 306, a bill to authorize a program for employment of teenaged youth in community improvement projects, introduced in January by Senators STAFFORD, RANDOLPH, BAKER, DOMENICI, GRAVEL, HART, HEINZ, and MCCLURE. (This title was later detached from the bill and subsequently was largely incorporated as title II into the Youth Employment and Demonstration Projects Act of 1977 (P.L. 95–93)).

The public works employment measure was debated and passed in the Senate on March 10 by 74 to 11. Significant amendments to the committee bill included a minimum of $30 million or three-fourths of 1 percent of the total allocation to each State, special consideration to energy conservation projects and projects accessible to the handicapped, a requirement that 10 percent of project costs be allocated to minority business enterprises, provision for preference hiring of Vietnam veterans, and a study of the impact of public works. A separate title was an amendment by Senator JOHNSTON having the effect of negating prospective action of the executive branch with respect to discontinued funding for certain water projects.

Meetings of the conference committee occurred on 6 days between April 6 and April 26. The Senate agreed to the conference report by 71 to 14 on April 29, the House agreed on May 3 by a vote of 335 to 77. The bill (H.R. 11) became Public Law 95–28 on May 13, 1977.

Senator GARY HART, a member of the committee, introduced S. 1493, the Inland Energy Development Impact Assistance Act on May 11, 1977. The bill provides for a comprehensive program of technical and financial assistance to States, local governments, and Indian tribes to manage and control the adverse effect of energy development activities.

Hearings were held by the subcommittee on August 2 with testimony from two Governors, five mayors of impacted communities, and county and regional planning officials. A second day of hearings was held in Albuquerque, N. Mex., on August 27. Further hearings were postponed pending completion of the administration's proposals for energy impact assistance which are expected early in the 1978 session.

The full committee under the chairmanship of Senator RANDOLPH held an oversight hearing on progress and planning for the White House Conference to be held on January 29 to February 2, 1978. The conference was authorized in title II of the 1976 extension of the Public Works and Economic Development Act as a committee amendment to the legislation. Reviewed with Secretary of Commerce Juanita Kreps and Conference Director Dr. Michael Koleda were the method of determining delegates, the agenda, planned preliminary conferences at State and regional levels, the composition of the advisory committee, and the expectations of the members of the Committee on Environment and Public Works.

On August 2, 1977, the Senators from Ohio and Alabama proposed an amendment to the Appalachian Regional Development Act to extend the 5-year limitation on authorized child development demonstration projects an additional 2 years. Of concern was the expected termination of such projects in a number of Appalachian States because of local inability to secure sufficient funds from other sources than the Appalachian Regional Commission to continue operations. A version of the bill (H.R. 8777) was acted upon in the House on November 1 and passed the Seante on November 3. It became Public Law 95–193 on November 18. The new law permitted a 2-year extension of such projects and directed the Appalachian Regional Commission and the Department of Health, Education and Welfare to study the feasibility of alternate funding sources and make recommendations to Congress on their findings.

DISASTER RELIEF

The subcommittee held oversight hearings on the implementation of the Disaster Relief Act of 1974. In reviewing the Federal response to natural disasters under the auspices of this act, the committee found that its goal of reacting disasters in a uniform and comprehensive way was being met by the Federal Disaster Assistance Administration. This subcommittee, in recommending an extenson of the act, found that permanent legislation has enabled the Federal Government to more effectively deal with natural disaster phenomena and function effectively in its supplemental role to States and local governments in mitigating disaster impact.

The subcommittee, with the concurrence of the full committee, recommended amending section 606 of the act to provide an open-ended authorization for the disaster program. At the insistence of the House of Representatives, however, the extended authorization was limited to 3 years. This legislation became Public Law 95–51 on June 20.

In addition to holding hearings concerning the reauthorization, the subcommittee held 2 days of hearings to consider other substantive amendments to the act. The subcommittee decided to postpone action on these proposals.

A review of Federal action under the auspices of the Federal Disaster Relief Act in 1977 will give some indication of the breadth of this program. Through November 1977, 21 major disasters were declared by President Carter, and $358.-445 million was spent from the President's disaster fund which is administered by the Federal Disaster Assistance Administration (FDAA) to aid victims of natural disasters. During these major disasters, over 104,000 individuals received assistance at the disaster assistance center registration offices. Over 20,000 individuals were recipients of temporary housing assistance under the act.

Thirty-four emergencies were declared by the President. This entailed the expenditure of an additional $21.8 million from the President's disaster fund. In addition, the Federal Disaster Assistance Administration made five fire suppression grants totaling $831,000.

On March 23, 1977, the President transmitted a message to Congress requesting legislative authority to deal effectively with the results of severe drought in the western and plains States. Through loans and cost-sharing programs, the Federal Government had begun to address the needs of those in the drought areas; however, it was clear that supplementary programs were necessary. The Committee on Environment and Public Works had legislative jurisdiction over only the portion of the President's plan which was administered by the Economic Development Administration. The resulting act, Public Law 95–31, provided a temporary program of loans and grants to cities and counties of more than 10,000 population, States, Indian tribes, and nonprofit organizations including water districts. The basic goals of the act were augmenting community water supplies, providing aids for the purchase and transportation of water, a well as promoting water conservation.

The act authorized $225 million for the EDA portion of the drought program. A total of $175 million was appropriated for this purpose, of which $109 million was used for loans and $66 million for grants.

Two hundred sixty-eight projects were approved under this program. Applicants include communities in 28 States and Puerto Rico as well as 145 counties. Eighty-four percent of the project funds were invested in water system components, including new construction and repairs. Ten percent of the funds were spent for the purchase and transportation of water, with the remainder for water conservation and fire protection programs.

BUILDINGS AND GROUNDS

In February 1977 the former Buildings and Grounds Subcommittee became part of the new Regional and Community Development Subcommittee. As such, the unit is responsible for activities pertaining to Federal agency space needs and related legislation. This involves monitoring and oversight of the Public Buildings Service of the General Services Administration, whose function is to provide required space through construction, purchase, or leasing as appropriate, and exercise maintenance responsibilities. Such transactions have governed by numerous public laws, executive orders, and Federal regulations, which become increasingly complex each year due to changing construction and management techniques, environmental and energy conservation requirements, inflation, budgetary restraints, and other developments.

During 1977 an effort was directed toward implementation of improved review and expediting procedures for building prospectuses. As a result, formats are being revised to reflect more detailed substantiating data for guidance of Members during their analysis of projects. Particular attention has been focused upon major policy considerations during this period, including fire prevention, aids for the handicapped, environmental factors, energy conservation, leasing versus Federal construction, cooperative building use permitting occupancy by commercial and non-Government tenants, and art implementation.

Among legislative activities during 1977 was the development of a bill (S. 521), that authorized funds to repair architectural and structural defects at the John F. Kennedy Center in Washington, D.C., which became Public Law 95-50 on June 20, 1977.

S. 385, designating a Federal building in Grand Rapids, Mich., as the Gerald R. Ford Building, became Public Law 95-25 on May 4, 1977. A similar bill, S. 2169, designating the new Department of Health, Education, and Welfare building in Washington as the Hubert H. Humphrey Building, became Public Law 95-141 on October 23. H.R. 8992, changing the designation of the Executive Protective Service to U.S. Secret Service, Uniformed Division, became Public Law 95-179 on November 15, 1977.

Pending at the time of recess was S. 492, a bill that would convert the National Visitor Center in Washington to primary use as a transportation center. S. 672, S. 800, and S. 823 are also pending, which would insure that buildings financed with Federal funds utilize the best practicable measures for conservation of energy, implementing innovative technology in design, construction, repairs, maintenance, and operation, including retrofitting with solar devices, and initiating demonstration programs. Others are S. 847, that would assure more thorough analysis in the selection of building sites, S. 1972 that would encourage more intensive use of public transportation by Federal employees, S. 2308 that would implement revised financing techniques to accelerate the retirement of obligations outstanding against the Kennedy Center in Washington, through establishment of a Performing Arts Fund, and H.R. 8993 that would designate a facility in Beltsville, Md., the James J. Rowley Secret Service Training Center.

A committee resolution on May 12, 1977, directed the General Services Administration to conduct a survey and determine space requirements of the Nuclear Regulatory Commission in the Washington area. Building project surveys initiated by others were also conducted to determine the need for new Federal buildings in Waynesboro, Ga.; Jefferson City, Mo.; Altoona, Pa.; Chattanooga, Tenn.; Texarkana, Tex.; and Rock Springs, Wyo.

During 1977, eight subcommittee meetings were held to discuss proposed legislation and other matters. In addition, formal conferences were conducted with officials of General Services Administration, General Accounting Office, Departments of Defense and Interior, Nuclear Regulatory Commission, and others.

A public hearing was held January 24, 1977, on the need for improved architectural design of public buildings. Additional hearings on building prospectuses were conducted February 7, June 7, June 24, September 20, and October 17, respectively, and on March 2 pertaining to GSA's annual budget.

During 1977 three new construction projects were approved totaling $51,043,000. Forty-two repair and alterations projects totaling $218,040,345 were also approved, as were 10 lease proposals totaling $13,158,460 for the first year's payment only. Pending at the time of recess were three new construction projects estimated at $222,487,000 and three repair and alterations projects totaling $13,005,460. Three lease proposals were also pending that total $7,623,300 annually.

Following is a summary of projects approved during the year:

New Construction

Cal., San Jose—C.H. & Fed. Ofc. Bldg.	$34, 130, 000
Mass., Springfield—C.H. & FOB	14, 783, 000
Me., Ft. Kent—Border Station	2, 130, 000
	51, 043, 000

Repairs and Alterations

Alaska, Juneau—C.H., FOB, & P.O.	2, 609, 000
Alaska, Ketchikan—Fed. Ofc. Bldg.	1, 355, 000
Ariz., Phoenix—C.H. & FOB	1, 303, 000
Cal., Menlo Park—U.S.G.S. Bldg. No. 2	1, 610, 900
Cal., Sacramento—C.H. & FOB	1, 592, 000
Cal., San Bruno—Records Center	5, 013, 000
Cal., San Francisco—C.H. & P.O.	1, 990, 000
Cal., San Francisco—Customhouse	1, 036, 000
Conn., Hartford—C.H., FOB, & P.O.	1, 450, 000
D.C.—Agr. Building (South)	13, 200, 000
D.C.—Auditors Bldg. Complex	12, 050, 000
D.C.—Old Post Office	18, 011, 000
D.C.—Federal Bldg. No. 6	1, 340, 000
D.C.—HEW (North)	9, 078, 000
D.C.—Lafayette Building	2, 461, 000
D.C.—Mary Switzer Bldg. (HEW)	7, 574,000
Fla., Tallahassee—U.S.P.O. & C.H.	978, 000
Ind.,—S. Bend—C.H. & FOB	2, 722, 300
Mass., Boston—U.S. Appraisers Stores	4, 010, 000
Mich., Detroit—Border Station	2, 559, 000
Mo., St. Louis—U.S. Customhouse	14, 970, 500
Mo., Independence—Truman Library	2, 667, 100
Mo. Kansas City—2306 Bann. FOB	1, 669, 000
Mo., Kansas City—1500 Bann. FOB	4, 976, 300
Mo., Kansas City—911 Walnut FOB	645, 000
Mo., St. Louis—No. 103 Goodfellow	7, 772, 045
Mo., St. Louis—No. 105 Goodfellow	9, 313, 000
N.J., Camden—C.H. & FOB	3, 520, 000
N.J., Newark—Fed. Ofc. Bldg.	2, 340, 000
N.J., Trenton—C.H. & P.O.	1, 242, 000
N.Y., Manhattan—C.H. (Foley Sq.)	5, 333, 000
N.Y., Manhattan—Varick FOB	23, 150, 000
Ohio, Shelby—GSA Stores Depot	766, 600
Ore., Portland—Court House	1, 648, 000
Penna., Phila.—Fed. Ofc. Bldg.	2, 198, 000
R.I., Providence—C.H. & FOB	1, 665, 000
Va., Arlington—Pentagon	21, 288, 900
Va., Arlington—Htg. & Refrig. Plant	3, 700, 000
Va., Franconia—GSA Stores Depot	6, 141, 000
Va., McLean—CIA Headquarters	6, 317, 700
Wash., Seattle—Fed. Ctr., South	2, 887, 000
W. Va., Wheeling—C.H. & FOB	1, 888, 800
	218, 040, 345

Lease	P/A	Full term
Alaska, Anch.—Hill Bldg., 3 yr	$958,700	$2,876,100
D.C.—Penn 17 Bldg., 5 yr	970,000	4,850,000
D.C.—1441 L St., NW., 10 yr	993,800	9,938,000
D.C.—2000 M St., NW., 5 yr	1,552,000	7,760,000
D.C.—2025 M St., NW., 6.5 yr	1,158,859	7,532,584
D.C.—1919 M St., NW., 10 yr	2,023,410	20,234,100
D.C.—Thomas Circle, So., 10 yr	892,679	8,926,790
Ga., Atlanta—Peachtree, 10 yr	2,149,000	21,493,150
Md., Balto.—707 N. Calvert, 2.5 yr	867,593	2,168,983
Va., Arl.—Pomponio Pl., 5 yr	1,592,419	7,962,095
Total	13,158,460	93,741,802

SUBCOMMITTEE ON RESOURCE PROTECTION

The Subcommittee on Resource Protection, chaired by Senator JOHN C. CULVER, was created in early 1977 following reorganization of the committee structure which expanded the jurisdiction of the Committee on Environment and Public Works. During the first session of the 95th Congress, the subcommittee focused its attention primarily on fish and wildlife issues and environmental research and development. The jurisdiction over fish and wildlife was new to the committee following Senate reorganization, and it promises to be a major center of activity for the subcommittee.

Legislative hearings were held on several bills dealing with fish and wildlife. The subcommittee received testimony on S. 1237, a bill to extend funding through fiscal year 1980 for the San Francisco Bay National Wildlife Refuge in California, the Great Dismal Swamp National Wildlife Refuge in Virginia, and the Tinicum National Environmental Center in Pennsylvania. Witnesses included representatives of the Departments of the Interior and Commerce, as well as a spokesman for the International Association of State fish and wildlife agencies. Based on recommendations from the subcommittee, the full committee amended the bill and ordered it to be reported. The Senate agreed with the House on H.R. 2817, a bill to provide for a 3-year authorization and authority for certain boundary modifications for the Tinicum National Environmental Center. That bill became Public Law 95-152 on November 4, 1977. Authorization for the San Francisco Bay and Great Dismal Swamp Refuges is pending before the House.

Hearings were also held by the subcommittee on S. 1316, a bill to authorize funds for State cooperative programs under section 6 of the Endangered Species Act of 1973. The full committee agreed to subcommittee amendments authorizing a total of $9 million to the Department of Interior and $3 million to the Department of Commerce through fiscal year 1980 for assisting States which have developed programs for endangered species. In conference with the House, the Senate agreed to a 4-year authorization for this section 6 program and accepted a House amendment that provides the necessary flexibility by the State in meeting the procedural requirements of this cooperative program. The bill became Public Law 95–212 on December 19.

In July, the subcommittee conducted 4 days of oversight hearings on the Endangered Species Act of 1973, receiving testimony from representatives of the Department of the Interior, the General Accounting Office, State agencies, citizens' groups, and private individuals. In addition to general concerns about the administration of the act, a major aspect of this review dealt with the impact of the Endangered Species Act on the Tellico Dam project in Tennessee. The subcommittee is now reviewing the hearing record to determine whether administrative or substantive changes in the law are warranted.

Though final action was not completed on S. 1140, the subcommittee conducted a hearing on this legislation which encourages and assists States to develop improved programs for the conservation of nongame species, of native fish, and wildlife. It is expected that the committee will consider this bill early in the second session.

In preparation for reauthorization of the Sikes Act in 1978, the subcommittee held an oversight hearing in November. The act authorizes the Departments of Defense, the Interior, and Agriculture to work with individual States to establish programs which enhance public resources and protect endangered species on Federal lands. The hearing focused on the strengths and deficiencies of programs established under the Sikes Act, and will provide the basis for committee action early in the second session.

In May, the subcommittee considered S. 1417 which reauthorized the environmental research and development program conducted by the Office of Research and Development of the Environmental Protection Agency and earmarked specific funding for long-term research. Several witnesses from EPA were heard, along with Dr. John Neuhold of Utah State University, who chaired a National Academy of Sciences study committee on EPA research. The testimony contained several recommendations of improvements in the EPA research program, including the need for greater research to anticipate emerging environmental problems. After being amended by the full committee, the bill passed the Senate and, after conference with the House, was signed into law as Public Law 95–155 on November 8, 1977. The act provides $253,603,000 for environmental research. Together with funds authorized in other legislation this makes available a total of approximately $460 million for EPA research.

The Resource Protection Subcommittee is also responsible for legislation dealing with noise pollution. Subcommittee staff prepared legislation reflecting the administration's request for a 1-year reauthorization for the Noise Control Act of 1972. Following markup by the full committee, the bill (S. 1511), was reported to the Senate, which passed it on May 18, 1977. Action is now pending in the House. The subcommittee expects to conduct extensive hearings and take more comprehensive action on amendments to the Noise Control Act early in the second session.

SUBCOMMITTEE ON NUCLEAR REGULATION

The Subcommittee on Nuclear Regulation, chaired by Senator GARY HART, was formed in 1977 as a result of Senate Resolution 4, which gave to the Committee on Environment and Public Works a new jurisdiction: nonmilitary environmental regulation and control of nuclear energy, a jurisdiction which formerly had rested in the Joint Committee on Atomic Energy.

The first action under this new jurisdiction was a full committee hearing on March 10, 1977, on the fiscal year 1978 budget for the Nuclear Regulatory Commission. Witnesses included the Chairman of the NRC and numerous members of the NRC staff. As a result of that hearing, the subcommittee contributed the NRC section to the report of the Budget Committee on March 15, 1977.

In preparation for action on the authorization for the Nuclear Regulatory Commission for fiscal year 1978, the subcommittee held 4 days of hearings in March and April. Witnesses included the Executive Director for Operations and the Directors of each of the major offices within the Commission: Nuclear Regulatory Research, Nuclear Material Safety and Safeguards, Nuclear Reactor Regulation, Inspection and Enforcement, and the Office of General Counsel. In addition, representatives of public interest groups testified. On the basis of these hearings, the subcommittee held 2 days of markups and the full committee held 1 day of markups on the authorization bill (S. 1131). It was reported on May 16, 1977, and passed by the Senate on May 25, 1977. The conference report on this bill was passed by the House on November 3 and the Senate on November 29 and signed into law (Public Law 95–209) on December 14.

On July 11, 1977, the subcommittee held oversight hearings on environmental and safety aspects of the Clinch River breeder reactor. This hearing was held at the time of Senate consideration of the ERDA authorization bill for fiscal year 1978 which contained authorization for the Clinch River plant. The subcommittee heard testimony from the Executive Director for Operations of the NRC; the Director of the Division of Reactor Development at ERDA; the vice president of Burns & Roe, the architect-engineers for the project; and witnesses from public interest groups.

When the committee assumed jurisdiction over the Nuclear Regulatory Commission there were two vacancies on the Commission, which increased to three with the expiration of the term of Chairman Marcus Rowden on June 30, 1977. The committee conducted 2 days of hearings, July 18 and 25, and heard testimony from nominees Joseph Hendrie, Kent Hansen, and Peter Bradford, as well as from representatives of public interest groups. On August 2, 1977, the Committee on Environment and Public Works recommended confirmation of Joseph Hendrie and Peter Bradford. An additional hearing on the nomination of Kent Hansen was held on October 6, with Dr. Hansen as the only witness. On October 17, the committee voted not to report Dr. Hansen's nomination favorably. The Senate voted to confirm the nominations of Joseph Hendrie and Peter Bradford on August 3. By these actions a quorum was restored to the Nuclear Regulatory Commission, although one vacancy does remain on the five-member Commission.

On October 13, 1977, the subcommittee held oversight hearings on the handling by the NRC of a license application from the Virginia Electric Power Co. for four nuclear powerplants at North Anna, Va. The plants are situated on a geological fault, which was discovered after excavation. The NRC subsequently determined the fault to be "not capable," and therefore licensing and construction activities have proceeded. Witnesses at the hearing included the Assistant Attorney General for the Land and Natural Resources Division of the Department of Justice, the chairman and staff members of the Nuclear Regulatory Commission and the president of the North Anna Environmental Coalition, public intervenors in the licensing proceedings.

The subcommittee staff also worked with the staff of the Committee on Energy and Natural Resources on the bill dissolving the Joint Committee on Atomic Energy and dispersing its jurisdiction in the Senate. That bill (S. 1153) was passed by the Senate on March 31, and in revised form was passed by the House and Senate on August 5 and became law on September 20. At the same time, the Senate passed Senate Resolution 252 which established certain procedures for handling of classified documents formerly in the possession of the Joint Committee on Atomic Energy.

12TH ANNUAL QUESTIONNAIRE

Mr. SCOTT. Mr. President, we are presently sending our 12th annual questionnaire to Virginia constituents. Obtaining the views of constituents on current issues is very helpful to me personally, and it may be that the questionnaire would also be of value to colleagues. Therefore, I ask unanimous consent to have a copy of the 12th annual opinion poll printed in the RECORD.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

12TH ANNUAL QUESTIONNAIRE

In order to better represent the views of Virginians on issues confronting the Congress, I have taken an opinion poll of constituents each year and the responses have always been helpful. Of course, Virginia now has more than five million people, and it would not be possible for constituents to agree on every issue. Nevertheless, it is beneficial to obtain the point of view of as many citizens as care to share their thoughts on vital domestic and international issues.

Last year our survey was prefaced by a short factual statement regarding measures considered likely to come before the Senate, and comments on the format were favorable. Therefore, the same form is being utilized again, with the knowledge that a number of the proposals are complex and statements may well be oversimplifications. But the collective responses will materially help in knowing the general views of Virginians and additional space is provided on page four for further comment.

SOCIAL SECURITY

Congress has passed legislation intended to put the Social Security system on a sound financial basis. Many reasons have been cited for its financial problems, including increased benefits, increased life span, and a lower birth rate resulting in higher ratio of older people receiving benefits than those contributing to the fund. The new law will increase the tax rate for employers and employees equally over the next several years and raise the amount of income upon which Social Security taxes are paid. It also will increase the earnings limit for retirees 65 to 71 from $4,000 this year to $6,000 by 1982. Other suggestions to further improve the financial soundness of the system are to change the optional retirement age from 62 to 65 and to raise the regular retirement age from 65 to 68.

Question: Do you favor increasing (a) optional retirement age—Yes— No—; (b) regular retirement age Yes— No—?

TRADE DEFICIT

The end of 1977 may find our country with a record trade deficit as high as $30 billion or with Americans paying out this much more for imports than they receive for exported goods. Many factors appear to contribute to this substantial deficit including the enormous oil imports and considerable imports of steel, textiles, shoes and other materials. Some contend that the country is losing its competitive edge in the world market because of lower foreign production costs. However, others believe unnecessary government burdens on domestic producers, including environmental constraints, regulations, and paperwork, plus excessive wage demands, make it increasingly difficult for our industries to successfully compete in the world market.

At the same time foreign trade experts do not believe that the United States can solve its balance of payment problems by imposing heavier tariffs, that counter measures would be taken by other nations and higher prices would be paid by American consumers. It may be that the Executive Branch of Government could negotiate with other nations to prevent dumping or sales in the United States below prices in the producing nations. Yet, a partial solution might be to require the possible adverse effect upon the costs of American production to be considered in all legislative proposals.

Question: Would you favor such legislation? Yes— No—.

SALT II TREATY

Negotiations are currently being conducted between the United States and the Soviet Union for a new strategic arms limitation agreement. In the event an agreement is reached, the treaty must be ratified by two-thirds of the Senate before it becomes binding on the United States. In the past our top military leaders have considered the capacity to launch intercontinental ballistic missiles by land, air, and sea to be a necessary deterrent to nuclear war. Recently, however, the President has rcommended against the construction of the B–1 missile launching aircraft in favor of modernizing older B–52 bombers.

The Soviet Union insists that its most modern Backfire bomber is only a medium range aircraft that poses no threat to the United States. However, our Defense Department indicates that the bomber can fly more than five thousand miles without refueling, which would permit it to fly from Russia to the United States, unload its missiles, and land in Cuba, or be refueled in the air and return to the Soviet Union. It is understood that Russia will not agree to include the Backfire bomber in ceilings to be imposed on our bombers and our land or submarine-based missiles.

In the event the treaty is presented to the Senate for ratification, it would be helpful to know whether you believe (1) the Russians would adhere to the terms of any strategic arms limitation treaty; (2) the Senate should ratify a treaty regardless of any imbalance in numbers in order to obtain a limitation on the growth of strategic arms; or (3) we should allow the Soviets to have numerical superiority in some fields to compensate for our more sophisticated weapons in other areas.

Question: Do you favor (1) Yes— No—; (2) Yes— No—; (3) Yes— No—.

WELFARE REFORM

The President has proposed that the Federal Government take over a substantial portion of state welfare costs and create a national standard of eligibility for public assistance. Critics of his proposal say that this would actually increase the cost of welfare, which should be handled on the local level.

Question: Do you favor a national welfare system, rather than a state-by-state system? Yes— No—.

ABORTION

In the past the conditions under which a woman could obtain an abortion have been determined by state governments under their police power. However, a few years ago the Supreme Court set guidelines deciding the circumstances under which an abortion could or could not be performed. Since that time, there has been considerable controversy and delay in the Congress regarding the use of federal funds under the Medicaid program for abortions. I have proposed a constitutional amendment providing that the power to regulate the circumstances under which pregnancy may or may not be terminated shall be reserved to the respective States and territories. This would remove the Federal Government from further consideration of the abortion question.

Question: Do you favor such a proposal? Yes—. No—.

FOREIGN AID

Total appropriations for foreign aid this fiscal year will reach almost $9 billion, of which approximately $6 billion is economic and development assistance and about $2.6 billion is military aid, not including military sales credits. The Food for Peace and the Peace Corps programs account for the remainder of the $9 billion. Not included in this total, however, is an additional $1 billion in loans by the Export-Import Bank.

About two-thirds of the military assistance goes to nations in the Middle East, with the largest amount for Israel in direct aid and credits. Most of the direct economic assistance is to aid the nutrition and health needs of the world's poorest countries, while a major portion of the development loan money is channeled through the international financial institutions.

Question: Do you believe foreign aid should be (a) increased—; (b) decreased—; (c) kept about the same—; or, (d) eliminated entirely?—.

DEFENSE BUDGET

For Fiscal Year 1978, the Congress has appropriated approximately $110 billion for the Department of Defense. This is the amount the Congress decided was required to maintain and support a military establishment of somewhat more than 2 million men and women in uniform and a civilian work force of approximately 1 million. These funds will also be used for research and development programs and the purchase of the necessary tanks, ships and planes required to keep our forces combat ready. The personnel related portion of our defense dollar (including salaries, quarters, hospitalization and retirement) ranges from 55 to 60 percent of the entire amount spent for defense. Over the past several years these personnel costs have been increasing, with the result that there has been a reduced amount available to buy the required amounts of military hardware. Of course we need to be fair to military personnel but do not want to price ourselves out of the ability to defend the country.

Question: Should decreases in the ratio of the defense dollar be made in: (a) the people area?—; (b) the hardware area?—; (c) retain present ratio?—.

HATCH ACT

Since 1939, many government employees have been prohibited by law from participating actively in partisan political activities. However, from time to time since then there have been various proposals to amend or repeal this legislation commonly known as the Hatch Act.

Employees generally have the right to vote, to privately express political opinions, to make political contributions to their party, to engage in nonpartisan political activities, and even to participate in partisan politics at the local level in specified areas where a majority of residents are federal employees.

The House of Representatives has passed a measure tantamount to repealing the Hatch Act and government employees' unions are urging Senate action to repeal the Act. However, some citizens within and without the government believe the repeal would damage the merit system and subject federal employees to undesirable political pressure.

Question: Do you favor repeal of the Hatch Act? Yes— No—.

ELECTION DAY REGISTRATION

The Administration has recommended that voting registration laws be changed to allow citizens who fail to register before election day to register and vote on election day. They argue this will simplify and open up the voting process to millions of Americans. However, opponents contend that it will create confusion and delay and be an open invitation to voter fraud, especially in the big cities.

Question: Do you favor election day voting registration? Yes— No—.

PANAMA CANAL

It appears that the Senate will be called upon within the next several months to ratify or reject treaties to transfer the future ownership and control of the Canal Zone. Proponents indicate that the present treaty is archaic, that the importance of the canal has diminished over the years, that the new treaties will improve our relations with Panama and other Latin American countries and will prove to the world that we no longer practice colonialism. Opponents insist that giving up ownership and control of the Canal Zone will jeopardize the future control of the Caribbean, that the canal is vital to our commerce and national defense, that we purchased the rights of Panama, Colombia, the French company which started construction, paid individual citizens for privately owned rights, conquered tropical diseases, constructed the canal, and have since operated it at cost for the benefit of all nations. They insist that permitting a small unstable nation to pressure us into transferring title and control to Panama would be against our national interest and that of the free world.

Question: Would you vote to ratify the proposed treaties? Yes— No—.

OTHER ISSUES

Of course there are numerous other issues that may come before the Congress this year that space would not permit being included. Some of them may relate to energy, taxes, full employment, labor law reform, national health insurance, direct election, illegal aliens, immigration laws and other matters. Your views on these or other problems that may confront the Congress from time to time are always welcomed.

When completed, return your response to Senator William L. Scott, 2311 Dirksen Senate Office Building, Washington, D.C. 20510

ADDITIONAL FEDERAL JUDGES

Inasmuch as the House Judiciary Committee has now acted favorably upon a Senate-passed bill, it appears that Virginia will obtain four additional federal trial judges as a part of an Omnibus Judgeship Bill. Of course, the President nominates lawyers for these positions, and we are of different political parties; yet, as a member of the Senate Judiciary Committee which must confirm the nominations, my recommendations may be persuasive. Therefore, the views of bar associations and others regarding experienced and competent lawyers, having proper judicial temperament would be welcome so that our office can submit names for consideration by the Attorney General and the President.

RICHMOND VISIT

I plan to be in the Richmond office throughout the day on January 13 and would welcome any constituent desiring to discuss a problem or any issue. The office is located in the Federal Building at 400 North 8th Street; and you may call 649-0049 in advance for an appointment if you desire, but this is not essential. Of course, you may visit the principal office in the Dirksen Senate Office Building in Washington at any time, and mail should be addressed to the Washington office.

William L. Scott,
U.S. Senator.

SHORTAGE OF CAPITAL CAUSING FLIGHT OF U.S. TECHNOLOGY TO FOREIGN COUNTRIES—OVERHAUL OF TAX AND CAPITAL FORMATION POLICIES URGENTLY NEEDED FOR SMALL BUSINESS

Mr. NELSON. Mr. President, a series of recent buy-outs of high-technology small American businesses by foreign companies has underscored the problems of small U.S. firms in obtaining capital in this country, and raised serious questions about the viability of the free private enterprise system, the preservation of U.S. technical leadership, and the Nation's defense posture.

The technologies acquired by foreign purchasers included the next generation of computers—beyond present IBM systems—high-speed copying, advanced electronics for vehicles and telecommunications, data entry systems to replace keypunching, and intelligent terminals for sophisticated on-site data-processing.

The enterprises involved, which are listed below, are innovative technical companies conceived and nurtured in this country and, according to officials of professional investor organizations, such as the National Venture Capital Association and the National Association of Small Business Investment Companies, represent the cream of the next generation of technological achievement.

Association executives in so-called glamor fields, such as computers and electronics, have told the committee that the inability to raise capital has reached crisis proportions for their member firms.

These difficulties, experienced by the most promising U.S. small enterprises and industries, constitute convincing evidence of the drying up of U.S. capital markets for new and small enterprises generally.

The foreign acquisitions, most of which took place during the past 6 months, will enable the buyers to take these new products and their technology and exploit them abroad for the benefit of foreign jobs, foreign profits, foreign exports and foreign economic and military strength.

Earlier this year, I discussed with the President seven of these advanced companies in which control or near-control had passed to foreign direction within the past several months.

Mr. President, I ask unanimous consent that the information presented at that time be printed in the Record.

There being no objection, the information was ordered to be printed in the Record, as follows:

RECENT ACQUISITIONS IN U.S. HIGH TECHNOLOGY COMPANIES BY FOREIGN CAPITAL

U.S. company	Product description	Interest purchased	Acquiring company (nationality)
Advanced Micro Devices (California).	Design, manufacture, and marketing of advanced integrated circuits, notably microprocessors.	17 pct (largest stockholder).	Siemens AG (West Germany).
Solid State Scentific (Pennsylvania).	Producer of advanced C/MOS and other semiconductors.	25 pct	VDO Adolf Schindling AG (West Germany).
Litronix (California)	Advanced semiconductors	$7,500,000 for "controlling interest".	Siemens AG (West Germany).
American Microsystems (California).	Integrated circuits for automotive industry	25 pct	Robert Bosch GmbH (West Germany).
Intersil (California)	Large-scale integrated circuits for telecommunications equipment.	$2,400,000 "equity buy-in".	Northern Telecom (Canada).
Amdahl Computer Co. (California).	Large-scale computers, more powerful than top of IBM line.	36 pct	Fijitsu (Japan).
System Industries (California).	Unique imaging technology to convert electronic signals to images on plain paper for copying, facsimile, and computer output.	$5,000,000 for 50 pct (of subsidiary, Silonics, Inc.).	Konishinoau (Japan).

Sources: "AMD, Solid State Scientific in Stock Accords With German Firms," Electronic News, Oct. 10, 1977, p. 1; Western Electronic Manufacturers Association; National Venture Capital Association; Edwin Zschau, president of System Industries of California-

Mr. NELSON. Mr. President, since the October 26 White House meeting, the committee has learned of additional recent acquisitions of this kind. I ask unanimous consent that this information be printed in the Record.

There being no objection, the information was ordered to be printed in the Record, as follows:

RECENT ACQUISITIONS IN U.S. HIGH TECHNOLOGY COMPANIES BY FOREIGN CAPITAL

U.S. company	Product description	Interest purchased	Acquiring company (nationality)
Entrex (Massachusetts)	Data entry subsystems (replacement of keypunching).	$22,000,000 for 100 pct.	Nixdorf (Germany).
Sycor (Michigan)	Intelligent terminals, interconnection of computers.	$77,000,000 for 100 pct.	Northern Telecom (Caada).
Data 100 (Minnesota)	Intelligent terminals (onsite processing)	$15,000,000 for 12 pct, plus option to buy a total of 35 pct.	Do.
Dan Ray (Texas)	Sophisticated electronic telephone switching	100 pct	Do.

Mr. NELSON. Mr. President, conversations with persons familiar with the circumstances reveal that the overriding reason for the sale of these promising technologies is that the small companies could not raise the needed capital in the United States. The president of one acquired company reportedly sought funds from 80 potential U.S. sources, and came away emptyhanded. Subsequently, Japan bought 50 percent of this company for $5 million. The conclusion from looking at the amounts of capital involved—$2.5 million, $5 million, $7.5 million—underscore the blackout in investment in new, small and independent enterprise, even those which have been in existence for some time and have shown great promise. For new companies with new ideas, raising such venture capital is proving to be virtually impossible.

Associations representing small and independent firms in the industries with the brightest prospects in future years have told us that institutional investors will not even look at companies with less than $50 million in net worth. To reach individual investors in the public market, our information is that it takes a minimum of a million dollars in profits for a national broker to agree to help a firm sell its stock.

The statistics which I have previously reported to the Senate confirm that, between 1974 and 1976, only 41 firms with net worth of less than $5 million were able to sell equity securities ("Small Businesses Disappearing from Nation's Securities Markets," September 27, 1977, page 31199). Altogether these small companies raised $150 million, less than 1 percent of the $16.5 billion of equities sold to the public during that period. From these preliminary studies, we are left with the conclusion that the inability of new and small firms to raise capital is undermining the dynamism and technical progress of the economy and consequently the future defense posture of the Nation.

The committee has been urging attention to these problems at the highest levels of Government. We were gratified that Secretary of Treasury Blumenthal on November 21 and Assistant Secretary Carswell on November 30 recognized the vital importance of this problem. Early next year the Senate Small Business Committee will commence a series of public hearings aimed at a careful delineation of the problems which are involved for businesses of different sizes, with the hope that there will emerge sound and practicable remedies which will be acceptable to Congress and the executive branch.

BACKGROUND

As a matter of historical background, it must be noted that the small business community has always been the heart and soul of the American free enterprise system.

It has been the point of entry to a better life for generations of immigrants and citizens, a wellspring of creativity and innovation, an engine for mobilizing the most extraordinary initiatives and efforts of our people. Small business owners devote untold hours of time to the community causes in towns and cities. The system which allows birth and growth of new businesses with new ideas is at the foundation of this country's high standard of living and national character.

However, during the past quarter-century economic forces and public policy have resulted in overwhelming problems for these ventures: increasing barriers to capital formation, massive and unnecessary paperwork, proliferating regulation, the spread of anticompetitive practices, and unequal treatment under the law. These conditions threaten the future of small enterprise in this Nation.

The Small Business Committee has stated in its most recent annual report (S. Rept. 95–30) and in reporting to the Senate the Resolution on the White House Conference (S. Rept. 95–65, Mar. 24, 1977) that the overall approach to the complex, interrelated obstacles faced by new and small businesses would be a "White House Conference on Small Business." Such an event would raise the visibility of these issues to the public and to Government officials on all levels who must deal with them. A conference of that kind could attract the best experts from business, small and large, labor, the economics profession, the universities, and government. Its report could carefully defer the problems and outline the steps that could be taken by the executive branch, Congress, State and local governments and others to resolve these difficulties and to preserve a climate in which the American dream of business ownership can continue to be a daily reality.

WHAT IS SMALL BUSINESS AND WHY IS IT IMPORTANT?

There are about 14 million business enterprises in the United States and 97 percent of them are "small business" according to the standards of the Small Business Administration. The most recent Internal Revenue Service figures from 1974 show:

Corporations	1, 987, 059
Subchapter S Corporations (part of above total)	(330, 418)
Partnerships	1, 062, 282
Sole proprietorships	10, 873, 822
Total	13, 914, 163

The small business community is important because it accounts for almost as much of the U.S. economic activity as big business—55 percent of the jobs in the private labor force—59 percent if farming is included—48 percent of the business output, and 43 percent of the gross national product.

The diversity of the small business community is as varied as the economy itself. It includes the following elements:

NEW BUSINESSES

Men or women fulfilling their individual dreams of going into business, either after graduation, at midcareer, or following retirement.

A firm which is just entering the marketplace * * * anywhere from a part-time enterprise to generate a second income to a full-scale manufacturing plant to produce a new invention.

A fledgling business in its early years * * * facing the fact that 30 percent of the new enterprises fail in the first year and 50 percent within 2 years. Department of the Treasury figures show that of the 4 million corporations originating between 1956 and 1973, only about 1 out of 4 survived.

EXISTING FIRMS

The stable one or two location main street businesses which provides merchandise, products, or services to its community and furnishes jobs and income to its locality through purchase of supplies, use of banks, accountants, and lawyers.

GROWTH FIRMS

The expansion company, which was fortunate enough to become established, and seeks to become a regional, national, or international competitor.

A high technology or other company which could create the foundation of a new industry.

This outline illustrates the diversity and independence that makes it so difficult to define and which accounts for the diversity of views on major policy matters among the small business universe.

THE COMPETITIVE ENVIRONMENT

In further distinguishing small business from big business, it may be helpful to observe that:

There were 2,518 corporations listed on the two major stock exchanges (12/76); and 2,627 additional corporations whose stock is traded nationally over the counter.

The 100 largest manufacturers (roughly those with sales over $1 billion) accounted for 44½ percent of manufacturing profits in 1974.

The sales and profits figures for 1975 of a few of the Nation's largest corporations provide a useful perspective:

FORTUNE

Corporation	Rank	Sales	Net income
Exxon	1	$44, 900, 000, 000	$2, 500, 000, 000
General Motors	2	35, 700, 000, 000	1, 300, 000, 000
IBM	7	14, 400, 000, 000	2, 000, 000, 000
General Electric	9	13, 400, 000, 000	581, 000, 000
I.T. & T	11	11, 400, 000, 000	398, 000, 000
United States Steel	13	8, 200, 000, 000	560, 000, 000
Caterpillar Tractor	29	5, 000, 000, 000	399, 000, 000
Carnation	100	2, 100, 000, 000	88, 500, 000
Washington Post	486	309, 000, 000	12, 000, 000
Economics Laboratory (St. Paul)	500	279, 000, 000	15, 700, 000

Source: Fortune Magazine, May 1976, pp. 318 et seq.

Faced with competition from such giants, the vitality of small and new business is remarkable and enduring testimony to the strength of traditional American ideals of independence, self-reliance and hard work.

Almost 150 years ago the keen foreign observer, de Tocqueville, remarked the American economy was to be characterized not by great projects such as the turnpikes and canals, but the "innumerable multitude of small undertakings."

THE VALUE OF SMALL ENTERPRISE TO AMERICAN SOCIETY

The opportunity to begin, or engage in, a small enterprise permitted waves of immigrants to gain financial security, self-respect, and often affluence. This spirit of individual enterprise has paid our Nation handsome dividends, both as to material wealth and national character. Thomas Jefferson perceived the value to democratic government of economically self-reliant farmer-businessman. Americans take as commonplace the glory of the system that permits new ventures as a vehicle for upward mobility in this "land of opportunity." As the statistics show, from year to year, the power of the American dream is undiminished.

It is even more remarkable that small business, including individual inventors have consistently accounted for more than half of all inventions, including heavy industry, light industry, commerce, and consumer goods. Examples are: the airplane, the helicopter, catalytic oil refining, oxygen steel-making, photocopying, the automatic transmission, power-steering, air conditioning, instant camera, the zipper, dacron-polyester fiber and many other commercial and household items. A partial list of such innovations, compiled by the U.S. Department of Commerce, and a second list of inventions conceived in Canada but not developed there, are attached.

In the past, conditions in this country have made it possible to launch many new ventures to produce such innovations. When this happens the contributions, in terms of growth, employment, efficiency, and international competitiveness are enormous. The MIT Foundation recently compared five young technology companies (Data General, National Semiconductor, Compugraphic, Digital Equipment, Marion Laboratories) with six mature companies (Bethlehem Steel, DuPont, General Foods, General Electric, International Paper, and Proctor and Gamble) all of which are among the largest 100 corporations. The study reveals the following for the 5-year period 1969–74:

Compound Annual Rate of Increase in Percent

	New Companies	Mature Companies
Jobs	40. 7	0. 6
Sales	42. 5	11. 4
Taxes	34. 1	7. 8

What a single company of this kind can accomplish is illustrated by the story of Mostek Corp. of Carrollton, Texas.

Mostek was created with $5 million of venture capital in 1969 to produce integrated circuits by implanting them chemically upon silicon chips. This one company became the hinge upon which the leadership of the semiconductor and electronic industries has swung back to the United States. It has made Dallas, Tex., the world capital of the wristwatch industry. It has made possible the introduction of the minicomputer and the hand-held calculator. The company now employs about 2,350 people in the United States. Mostek has paid a total of $15.2 million in Federal corporate taxes in the 8 years since it was founded. Its employees pay another $4 million in individual income taxes each year. Last year, 1976, the company's export sales earned more than $16 million to help the U.S. balance of payments.

It is breakthroughs of this sort that are at stake in the effort to preserve the climate for creation and growth of new and small enterprises.

Professional venture capital investors have testified to the Senate Small Business Committee that they were accustomed to financing the creation of between 12 and 15 new technical companies such as Mostek each year; but, in the past 4 years, they say they have been lucky to have financed any at all.

TAX PROBLEMS OF SMALL BUSINESS HAVE BEEN ACCUMULATING

Small businesses must compete with large corporations having access to national capital markets, national and international marketing, nationwide advertising and personnel recruiting. Their struggle has been made more difficult by a generation of governmental neglect.

The Federal tax system, since World War II, has seriously discriminated against small- and medium-size businesses. For a quarter century (1950–75) smaller corporations were escalated into the top corporate tax rate of 48 percent at the level of $25,000 in taxable income.

In 1975, the level at which the top rate applied was temporarily (until 1978) raised by statute to $50,000, and the smallest companies received a temporary rate reduction to 20 percent, the level recommended by Arthur Burns' Cabinet Committee on Small Business in 1956. The largest corporations, meanwhile, have found ways to legally but substantially reduce their effective tax rates. A Merrill-Lynch study found that one out of every five big companies had an effective rate of less than 43 percent. Others, including Representative VANIK, have suggested that the 100 largest corporations pay an effective rate of around half of the 48 percent paid by the average medium-sized corporation.

Thus, permanent reform is needed to bring equity to the structure of business tax rates, as much as in the area of individual tax rates. It is unfair for a local small business to pay taxes at twice the rate, or even at the same rate, as a multibillion dollar, multinational giant.

The estate tax exemption of $60,000 remained constant in the law from 1942 until 1976. During this period, inflation of approximately 300 percent made the law obsolete, raising the estate tax bill on farms and small business so high that the owners or their estates had to sell or merge them with larger firms to pay or avoid the taxes. It became virtually impossible to keep them in the family. This was partially remedied by the Tax Reform Act of 1976, which raised the exemption to $175,000 for the children and $425,000 for a surviving spouse. Further reform is needed in this area of permitting the transfer of businesses from the older to the younger generation.

CAPITAL RECOVERY (DEPRECIATION) IS OVERLY COMPLICATED

A series of studies in 1954, 1959, 1963, and 1971 have shown conclusively that smaller businesses which possess depreciable assets lag far behind in utilizing the special capital recovery provisions of the law ("An Analysis of Tax Provisions Affecting Business Investment: Depreciation and the Investment Credit," Congressional Research Service, August 14, 1974, pages 10, 19–20).

Complexity results from the interaction of rules contained in the statute, regulation, and accounting convention, such as bonus depreciation investment credit; rapid depreciation methods including: First, double declining balance (or 150 percent) for machinery; second, 150 percent or 125 percent for real estate; and third, sum of the digits method; and also 5-year amortization in certain special areas; ADR; recapture, salvage value; and half-year and half-month conventions. The consequent need for expert, and therefore expensive, tax planning and accounting services, has grown geometrically, and therefore beyond the reach for most new and smaller companies.

Current examples include the Asset Depreciation Range (ADR) provision which allows a 20 percent shortening of "useful life" of machinery. According to the Treasury Department, ADR is used by 63 percent of the businesses with $1 billion in assets, 33.5 percent of the firms over $100 million in assets, and 0.9 percent of the businesses with under $500,000 in assets.

As to the investment- or equipment-credit firms, over $100 million in assets account for three-fourths of the total credit, while those under $500,000 in assets claim only 0.8 percent, as reflected in the table attached.

Capital recovery thus presents a prime possibility for simplification and reform for the benefit of the great majority of business enterprises.

In the capital asset area, the tax law gives investors little incentive to invest in smaller, riskier ventures.

If the enterprise fails, the maximum ordinary deduction was raised in 1976 to $3,000 per year for an incorporated venture; and for certain corporations, $25,000 (an amount that has not been changed in 20 years).

If the enterprise succeeds, past tax reforms have raised the present effective Federal capital gains tax to about 50 percent. The total tax burden is greater in some States which now tax 75 percent or 100 percent of capital gains. The experts estimate that it takes several years for any business to "turn the corner" to profitability, and 7 to 8 years before an investment in a growth company becomes "liquid" as a result of a public stock sale. With a 50 percent tax rate and inflation at even 5 percent for 10 years, investors with a nominal 100 percent gain can emerge with less purchasing power than when they started.

For a new enterprise, recruitment of experienced managers is vital. Yet, incentives used in the past, such as stock options and the differential between ordinary income and capital gain, were eliminated or drastically reduced in 1969 and again in 1976.

As an example, we could set forth the actual case of a small (sales of $300,000) microprocessing (electronic) company which currently needs a chief executive to take advantage of a new market estimated at $4 million in 1978, $9 to $10 million in 1979 and a 30- to 40-percent annual growth thereafter. The young engineer who can put the pieces together, is secure in a $2 billion stock exchange firm. He wants 8 percent of the company's stock as an inducement to take the additional risks. But, he cannot afford to buy it—the stock would cost $180,000 and the engineer has a net worth of less than $50,000. Will this company get off the ground?

The present situation is bad enough. If capital gain treatment were to be eliminated for the growth business, our electronics company, and all other such ventures, would be gravely disadvantaged in their recruitment efforts.

Then, the capital, the top talent, and the opportunities in the American and world markets will increasingly gravitate to big business in this country or abroad. Predictably, labor and government will grow to keep pace. To the extent this happens, our fellow citizens can prepare for increasing complaints about the curse of bigness and impersonality in their daily lives, and a commensurate decline in their standard of living.

ACUTE PROBLEMS OF CAPITAL FORMATION

A related problem is that small businesses have virtually disappeared from the Nation's securities markets. The statistics in this area are alarming, but they do not tell the whole story. Between 1972 and 1976, first-time stock offerings (by new, young, or mature enterprises going to the public market for the first time) fell as a proportion of SEC-registered stock offerings to 62.05 percent to 16.37 percent.

Registered stock offerings by firms with less than $5 million in assets dropped from a high of 698 in 1969 to a low of three in 1975, and only 41 for the 3 years, 1974 through 1976. Similarly, "Regulation A" stock issues, which are subject to less formal controls than full registration, shrank from 817 in the prerecession year of 1973 to 240 in 1976.

Sales of bonds and commercial paper—in multimillion dollar amounts—are far beyond the scale of infant enterprises. The statistics on long-term credit are much less definite. Here too, the indications are that in our capitalist economy, where it takes money to make money, new and small firms have been practically out of the ballgame. A recent survey of underinvestment in the U.S. economy by Business Week magazine summarizes:

> Access to the capital market has been pretty much open only to the nation's big companies for years now. And some contend that the top 1,000 or so corporations—the ones that can borrow—have been less innovative and less willing to commit funds to risky projects than they have in the past. The smaller companies, the argument goes, are willing to take the risks but cannot get the money. (October 17, 1977, p. 63.)

As I indicated above, conditions in securities and credit markets, including the structure of these markets is shutting off the traditional flow of risk capital to smaller firms. These conditions underscore the necessity of a tax system which allows small firms to retain more of the dollars they earn.

But the main question raised by these developments is whether our capitalistic system has ceased to function for the great majority of our citizens and businesses.

Some indication of the answer is that once there were 31 million stockholders owning a share of American industry—now there are only 26 million. We are not expanding the base of ownership and understanding of business. On the contrary, we seem to be in broad retreat from this desirable goal.

If the individual investor and small business are driven from the market, what kind of a capital market are we going to have in this country?

We believe more attention to the interrelated problems of small investors, small brokers and small businesses is required if the system as we have known it—with all its manifold benefits—is to be preserved.

THE IMPACT OF REGULATIONS

These conditions underscore the necessity of a tax system which allows small firms to retain more of the dollars they earn.

A tidal wave of regulations has swept over small businesses in the past few years. The Small Business Administration study, "The Impact on Small Business Concerns of Government Regulations that Force Technical Change," September 1975, tabulated 47 Federal consumer protection laws affecting business, 35 of which have been enacted since 1947, and this list did not include environmental protection and pollution standards which mandate extensive plant facilities and equipment, often under short-term deadlines. Regulations implementing the Occupational Health and Safety Act (OSHA) extended to 330 pages; and forms and regulations under ERISA, the Employee Retirement Income Securities Act of 1974, were the subject of a special report of the Commission on Federal Paperwork. Two bills, S. 1745, and S. 901, presented before the Senate Finance Committee seek to mitigate the pension problems.

Paperwork has accumulated in massive amounts as typified by Federal form 941, on employment, which listed the name of every employee, and which each business has been required to file quarterly. Congress has voted to consolidate form 941 into an annual form, beginning in 1978. This will eliminate a stack of reports almost 2 miles high each year.

About 40 percent of small business paperwork is tax forms. The smaller a business is, the less it is able to afford accounting expertise. Accordingly, simplification of tax forms is an essential part of tax reform for small business.

SMALL BUSINESS HAS A SMALL VOICE IN GOVERNMENT

The lack of representation for small business in the governmental process of developing regulations, forms, and technical rulings has been chronic. The proposed ERISA report forms of 1975, which were ultimately withdrawn, constitute such a classic case of regulations and paperwork conceived without meaningful input from small businesses affected. A bill, S. 1838, proposes "fair representation" for small business on Federal advisory bodies.

Most critical, there has been an absence of any comprehensive strategy for preserving and encouraging new, small, and independent business as a vehicle for the values which our society prizes most highly: initiative, freedom, diversity, pride in craftsmanship, competitiveness, efficiency, venturesomeness, and rewarding risk taking and hard work.

OPPORTUNITY TO DEVELOP COMPREHENSIVE ENTERPRISE TAX AND CAPITAL FORMATION POLICIES

Because of the Carter administration's interest in the fundamental matters of tax reform and capital markets, we have a rare opportunity to develop systematic policies for the preservation of a climate congenial to new, small, local, family, independent and medium-sized businesses in the tax and capital formation areas.

In this regard, the Small Business Committee has sought to participate in three ways:

STUDIES

First, the committee has sought to work with the executive branch in making available the results of its intensive 10-year study of various facets of small tax reform. We have conducted more than a dozen public hearings, presented testimony before the House Ways and Means and the Senate Finance Committees, and have underway the following series of studies which may be of assistance in the deliberation of tax policies of the next few years:

First. Impact of the 1975 tax reductions on small business (which has been performed with the assistance of computer analysis and experts in the Government and private sectors);

Second. Effective tax rates of business by size (which is presently being completed with the cooperation of the FTC, SEC, and U.S. Treasury Department);

Third. Impact of accelerated depreciation of equipment on the economy (performed by Wharton Econometric Associates under contract with the Small Business Committee);

Fourth. The congressional intent as to the application of the antitrust laws to involuntary mergers (done by the Congressional Research Service of the Library of Congress); and

Fifth. Tax treatment of small business by other industrialized nations (a Committee study).

TAX RECOMMENDATIONS

Second, the committee is formulating a series of specific proposals for inclusion in the forthcoming Administration tax reform package in the interest of the small business community.

We were fortunate enough to be able to discuss these matters with President Carter and Vice President Mondale at the White House, as I have said. These recommendations and further supporting rationale are contained in the memorandum which follows, and I ask unanimous consent that it and all related exhibits be printed in the RECORD following my statement.

The PRESIDING OFFICER. Without objection, it is so ordered.

(See exhibits 1 through 7.)

Mr. NELSON. Mr. President, I turn now to the subject of a White House Conference.

Third, in order to promote the evolution of an overall enterprise program in the areas of tax and other fields of Federal policy, the Small Business Committee has proposed and the Senate has adopted, a recommendation that there be a White House Conference on Small Business (S. Res. 105, Mar. 28, 1977).

This would be a forum of sufficient prestige to gain the attention of leaders in many quarters of public and private life and concentrate their thoughts on the tax and other problems of small enterprises. A balanced exploration of these questions could mark out avenues through which smaller business can improve the quality of our lives as well as the quantity of our goods.

We would hope that such a conference could be developed with adequate planning and presented so that the manifold specific short-range and long-range difficulties of small enterprise can be carefully identified and a coordinated strategy for their solution can be laid down for action over the next decade by Federal, State, and local governments, as well as other institutions which are involved.

CONCLUSIONS

The Senate Small Business Committee is strongly committed to and capital formation assisting in the formulation and advancement of equitable tax reform packages from the small business standpoint. It wishes to render maximum assistance in a White House Conference on Small Business, and to assist in any other actions which will raise the visibility of the small business community and promote the solution of their problems, so that small business can reach its maximum potential for benefiting our economy and society.

EXHIBIT 1

SENATE SMALL BUSINESS COMMITTEE TAX RECOMMENDATIONS FOR INCLUSION IN THE ADMINISTRATION'S 1977 TAX REFORM MESSAGE

FAIR PROPORTION OF TAX REDUCTIONS TO THE SMALL BUSINESS COMMUNITY

It is possible to compute the portion of benefits that will be going to various income categories for each item and for the overall package. For example, in 1975, the Administration's proposal would have given 25 percent of the revenues of the economic stimulus package to small business. Congress, however, decided that this proportion should be raised to 33 percent.

"Small business" accounts for 97 percent of the number of U.S. enterprises, 55 percent of all private employment, 48 percent of the business output, 43 percent of the GNP, and over half of all inventions and innovations.

Accordingly, the Committee's proposal is that one-half of the overall business tax reductions, including rates, capital recovery "integration" or whatever other measures are proposed, be allocated to "small business." A tentative definition for this purpose might be taxable income of less than $100,000.

CORPORATE RATES

The Committee believes there should be at least some reduction for the smallest corporations of less than $25,000 in earnings, since this would assist the great majority of companies whose owners are attempting to earn a livelihood for one or a few families. To encourage growth, innovation, and competition, the recommendations would extend to some tax reductions at the $50,000, $75,000 and $100,000 levels. The magnitude of these cuts should be dependent on the revenue available and in relation to balance of the entire proposal in accordance with the 50 percent share of total business benefits for the smaller firms.

CAPITAL TRANSACTIONS

To preserve the incentive to invest and therefore sacrifice immediate satisfactions, this suggestion would be to retain capital gains for family (primary) residences, family farms and family and small businesses. A tentative definition of small business limited to this context might be enterprises with less than 500 employees, which is the lowest boundary of the SBA's definition of manufacturers, and which is an administrable standard. This recommendation contemplates adequate safeguards to protect against abuse. For example, the requisite holding period could be lengthened to 5, or even 7 years.

The Committee also advocates increasing significantly the amount of actual losses which an investor can deduct against ordinary income if a small business in which he invested suffers losses or fails.

CAPITAL COST RECOVERY

Because most small businesses use straight-line depreciation, the Committee proposes an optional simple straight-line depreciation system, with a shorter useful life—perhaps three years—for investments in new or used equipment up to an appropriate level (perhaps $100,000 to $200,000). Where this system is elected, it would eliminate the complicated combination of bonus depreciation, ADR, and rapid depreciation and amortization methods, investment credit, salvage value, disputes about useful life, and recapture provisions for smaller businesses. It would relieve much of the pressure for "indexing" depreciation or substituting replacement-cost accounting in the future. It is contemplated that this benefit would be available to businesses of all sizes, but that it would be simple and understandable and therefore attractive to, and most used by, the great majority of small enterprises, for whom it would constitute a true reform in this important area.

UNINCORPORATED BUSINESSES

The Committee recommends that there should be an affirmative program of encouragement and assistance for unincorporated firms, which constitute about 85% of all U.S. enterprises, including:

a. A reduction in individual income tax rates which is sensitive to the problems of the sole proprietors and partners in supporting their families. The Schedules C and F, filed by individual businesspersons, should be closely examined to see what might be done to help these enterprises;

b. An optional use of "cash accounting" for small businesses up to an appropriate level of inventories or gross receipts (perhaps $1–$2 million). The current law requires any businessman having inventories (every merchant) to use the accrual method of accounting. According to a spokesman of the National Federal of Independent Business this could save such businesses accounting fees of up to $500 a year, and allow them to fill out their own tax returns. It is also the simplest method—used by most individual taxpayers—and would assist business in complying with the law. For these reasons, it is understood that the Internal Revenue Service does not object to such a proposal.

c. Full utilization by unincorporated businesses of the limited accelerated depreciation provisions, including full extension to used equipment.

Cellophane, Jacques Brandenberger.

Tungsten Carbide, Karl Schroeter.

Bakelite, Leo Baekeland.

Oxygen Steelmaking Process, C. V. Schwarz/ J. Miles/R. Durrer.

It goes without saying that the United States could not depend solely on the innovative contributions of small firms. The large firms are indispensable to technological and economic progress. From a number of different points of view, however, we are persuaded that a unique cost-benefit opportunity exists in the provision of incentives aimed at encouraging independent inventors, inventor-entrepreneurs, and small technologically based businesses. The cost of special incentives to them is likely to be low. The benefits are likely to be high.

EXHIBIT 4

SMALL BUSINESS—BUILDING A BALANCED ECONOMY

Processing of kerosene oil was developed by Abraham Gesner in Prince Edward Island in 1846. The screw propeller was invented by John Patch in Nova Scotia in 1833. The first steam operated foghorn was invented by Robert Foulis in New Brunswick in 1853. The rotary snowplough was invented by J. W. Elliott in Toronto in 1869. The piston valve was invented by Samuel Decker and W. S. Jensen between 1900 and 1905. The first half-tone reproduction of photographs was developed by George Desharats in Montreal in 1869. The telephone was invented by Alexander Graham Bell in Brantford, Ontario in 1876.

The ice skate was invented by John Forbes in Wartmouth, Nova Scotia in 1854. The variable-pitch propeller was invented by W.R. Turnbull in New Brunswick in 1922. Red Fife wheat was developed by David Fife in Peterborough, Ontario in 1843. The election microscope was invented by James Hillier in Brampton, Ontario, and Albert Prebus in Edmonton, Alberta between 1935 and 1939. The McGinnis starting gate for horse racing was invented by Philip McGinnis. The first successful radio newspaper photo was transmitted by William S. Stephenson in 1923.

The first commercial alternating-current (AC) tube was invented by Edward Rogers in Toronto in 1927. The anti-G suit was developed by W. R. Franks between 1940 and 1945. The rubber oxygen mask was invented by J. K. W. Ferguson and Fred Frye between 1940 and 1942. The portable oxygen tank was developed by Berton and Shortreed in the early 1940s. The walkie talkie was invented by Donald L. Hings in North Burnaby, British Columbia in 1940. Pablum "the breakfast for babies" was developed by Dr. F. F. Tisdall, Dr. T. G. H. Drake and Dr. A. Brown in Toronto during the late 1930s.

The R-theta computer system for air navigation was invented by J. G. Wright in Liverpool, Nova Scotia in 1958. The cobalt bomb cancer treatment was invented by Dr. Harold John in Saskatoon in 1951. The Laser sailboat was invented by Bruce Kirby, Hans Fogh and Ian Bruce in 1970. The first commercial oil well was developed by James Miller Williams in Hamilton, Ontario in 1858. Degradable/disintegrating plastics for garbage recycling was developed by Dr. James Guillet in Toronto in 1971.

The first usable pulp newsprint was developed by Charles Fenerty in Nova Scotia in 1838. The table hockey game was invented by Don Munro, Sr. in Toronto in 1932. The tuck away beer carton handle was invented by Steve Pasjack in Vancouver in 1957. The paint roller was invented by Norman Breakey in Toronto in 1940. The basketball was invented by James Naismith in Almonte, Ontario in 1891. The modern zipper was invented by Gideon Sundback in the early 1900s. The McIntosh apple was developed by John McIntosh in Dundas County, Ontario in 1811.

The Jiger all-terrain vehicle was invented by John Gower in Manitoba during the late 1950s. The first practical electric street railway was developed by J. J. Wright in Toronto in 1885. The first electric car-heating system was invented by Thomas Ahearn in Ottawa, Ontario in 1891. The first film processing tank was invented by Arthur McCurdy in 1899. The panoramic picture camera was invented by John Connon in Elora, Ontario in 1887.

The first commercial motion picture was developed by Sir Clifford Sifton in 1903. The first snowblower was invented by Arthur Sicard in St. Leonard de Port Maurice, Quebec in 1925. The snowmobile was invented by J. Armand Bombardier in Valcourt, Quebec in 1937. Five-pin bowling was invented by Tommy Ryan in Toronto in 1904. The electronic wave organ was invented by Morse.

Canada has a proud history as a great producer of ideas, but these ideas have resulted in virtually no native technical industries of international importance. According to the Canadian historian, J. J. Brown, the story of Canadian invention can be seen as a melancholy procession of golden opportunities which we have let slip through our fingers. We have let our innovations go abroad to be developed by other nations. On the title pages of this book appear the names of our fallen inventions—epitaphs, that record the lost struggles to become a mature society in a modern world economy.

EXHIBIT 5

COMPARISON OF EXISTING DEPRECIATION WITH SMALL BUSINESS COMMITTEE PROPOSAL

[Purchase of $100,000 in assets]

	Amount	Committee proposal
Existing system:		
Sec. 179 bonus depreciation	$2,000

Hearings on "Small Business Tax Reform," Senate Select Committee on Small Business Sept. 23, 1975, testimony of Roland Bixler, Chairman of NAM Small Business Committee.

ADJOURNMENT SINE DIE

Mr. ROBERT C. BYRD. Mr. President, there being no further business to come before the Senate, I move, in accordance with the provisions of House Concurrent Resolution 442 and House Joint Resolution 674, that the Senate now stand adjourned sine die, to meet again on January 19, 1978, at 12 o'clock meridian.

The motion was agreed to; and at 6:04 p.m., the Senate adjourned sine die.

MESSAGES FROM THE PRESIDENT RECEIVED DURING ADJOURNMENT

Under authority of the order of December 15, 1977, the Secretary of the Senate, on December 29, 1977, received a message from the President of the United States, which stated that he had approved and signed the following acts:

On December 19, 1977:

S. 305. An act to amend the Securities Exchange Act of 1934 to make it unlawful for an issuer of securities registered pursuant to section 12 of such Act or an issuer required to file reports pursuant to section 15(d) of such act to make certain payments to foreign officials and other foreign persons, to require such issuers to maintain accurate records, and for other purposes.

S. 1316. An act to authorize appropriations for fiscal years 1978, 1979, and 1980 to carry out State cooperative programs under the Endangered Species Act of 1973.

S. 2328. An act to amend Private Law 95–21 to make a technical correction therein.

On December 28, 1977:

S. 904. An act to provide for the efficient and regular distribution of current information on Federal domestic assistance programs.

S. 1063. An act to amend the District of Columbia Self-Government and Governmental Reorganization Act with respect to the payment of certain revenue bonds issued by the Council of the District of Columbia.

MESSAGES FROM THE HOUSE RECEIVED DURING ADJOURNMENT

ENROLLED BILLS AND JOINT RESOLUTION SIGNED

Under authority of the order of December 15, 1977, the Secretary of the Senate on December 16, 1977, received a message from the House of Representatives, which announced that the Speaker had signed the following enrolled bills and joint resolution:

S. 904. An act to provide for the efficient and regular distribution of current information on Federal domestic assistance programs.

S. 1063. An act to amend the District of Columbia Self-Government and Governmental Reorganization Act with respect to the payment of certain revenue bonds issued by the Council of the District of Columbia.

H.R. 6666. An act to amend the Legal Services Corporation Act to provide authorization of appropriations for additional fiscal years, and for other purposes.

H.R. 7738. An act with respect to the powers of the President in time of war or national emergency.

H.R. 8212. An act for the relief of Charles P. Bailey.

H.R. 9346. An act to amend the Social Security Act and the Internal Revenue Code of 1954 to strengthen the financing of the social security system, and for other purposes.

H.R. 9794. An act to bring the governing international fishery agreement with Mexico within the purview of the Fishery Conservation Zone Transition Act.

H.J. Res. 674. A joint resolution relative to the convening of the second session of the 95th Congress, and for other purposes.

The enrolled bills and joint resolution were subsequently signed by the Acting President pro tempore (Mr. METCALF).

ENROLLED BILLS PRESENTED

The Secretary reported that on December 19, 1977, he presented to the President of the United States the following enrolled bills:

S. 904. An act to provide for the efficient and regular distribution of current information on Federal domestic assistance programs; and

S. 1063. An act to amend the District of Columbia Self-Government and Governmental Reorganization Act with respect to the payment of certain revenue bonds issued by the Council of the District of Columbia.

NOMINATIONS

Executive nomination received by the Senate December 8, 1977, pursuant to the order of the Senate of December 7, 1977:

Department of Justice

Louis G. Villaescusa, Jr., of California, to be U.S. marshal for the central district of California for the term of 4 years, vice Gaylord L. Campbell, term expired.

Executive nominations received by the Senate December 9, 1977, pursuant to the order of the Senate of December 7, 1977:

Department of Justice

Benjamin R. Civiletti, of Maryland, to be Deputy Attorney General, vice Peter F. Flaherty, resigned.

Baltz, Haword W., xxx-xx-xxxx.
Beattie, Sheridan B., xxx-xx-xxxx.
Begue, William J., xxx-xx-xxxx.
Benigno, Caesar J., xxx-xx-xxxx.
Berry, Jack K., xxx-xx-xxxx.
Boiko, George A., xxx-xx-xxxx.
Booth, Billy C., xxx-xx-xxxx.
Boughton, Charles J., xxx-xx-xxxx.
Boyd, Charles A., xxx-xx-xxxx.
Brianin, Howard L., xxx-xx-xxxx.
Braun, Hugh R., xxx-xx-xxxx.
Brenner, Stanley J., xxx-xx-xxxx.
Brown, Gail E., xxx-xx-xxxx.
Buchanan, David L., xxx-xx-xxxx.
Buehler, John R., xxx-xx-xxxx.
Buescher, Norman E., Jr., xxx-xx-xxxx.
Buller, Gerald E., xxx-xx-xxxx.
Burkhalter, Alvie C., Jr., xxx-xx-xxxx.
Cafiso, Matthew M., xxx-xx-xxxx.
Campbell, William J., Jr., xxx-xx-xxxx.
Cargill, Charles R., xxx-xx-xxxx.
Carson, Charles E., xxx-xx-xxxx.
Carter, Thomas M., Jr., xxx-xx-xxxx.
Cate, Joe N., Jr., xxx-xx-xxxx.
Chasteen, Doyle W., Jr., xxx-xx-xxxx.
Childress, Robert D., xxx-xx-xxxx.
Coleman, Charles B., III, xxx-xx-xxxx.
Collisson, David K., xxx-xx-xxxx.
Cook, Carter C., xxx-xx-xxxx.
Corzine, Donald J., xxx-xx-xxxx.
Cox, Robert C., xxx-xx-xxxx.
Craig, Walter P., xxx-xx-xxxx.
Crakes, Patrick J., xxx-xx-xxxx.
Danaher, Jere J., xxx-xx-xxxx.
Dang, Eugene L., xxx-xx-xxxx.
Davenport, George R., xxx-xx-xxxx.
Davis, William F., Jr., xxx-xx-xxxx.
Dayton, Alfred B., xxx-xx-xxxx.
Degraw, Barton K., xxx-xx-xxxx.
Dement, Ira, III, xxx-xx-xxxx.
Dietrich, Joseph N., xxx-xx-xxxx.
Diller, John C., Jr., xxx-xx-xxxx.
Diuguid, John P., xxx-xx-xxxx.
Ehrenhaft, Peter D., xxx-xx-xxxx.
Eiser, Carl H., xxx-xx-xxxx.
Ellis, Ben F., II, xxx-xx-xxxx.
Emery, James L., xxx-xx-xxxx.
Erwin, Ralph D., xxx-xx-xxxx.
Fail, Woodrow T., Jr., xxx-xx-xxxx.
Farha, Henry S., Jr., xxx-xx-xxxx.
Feldman, Alfred A., xxx-xx-xxxx.
Feltel, Gilbert L., xxx-xx-xxxx.
Fitch, Dewey C., xxx-xx-xxxx.
Foley, Charles W., xxx-xx-xxxx.
Folloni, John R., Jr., xxx-xx-xxxx.
Forbes, Forrest S., xxx-xx-xxxx.
Forschler, George P. A., xxx-xx-xxxx.
Fortner, Richard W., xxx-xx-xxxx.
Fox, Harry D., xxx-xx-xxxx.
French, Donald B., xxx-xx-xxxx.
Fried, Meyer Z., xxx-xx-xxxx.
Fritz, Bernard J., xxx-xx-xxxx.
Frye, James H., xxx-xx-xxxx.
Gagliano, Charles J., xxx-xx-xxxx.
Gates, Jackie L., xxx-xx-xxxx.
George, Richard S., xxx-xx-xxxx.
Glahn, Harry R., xxx-xx-xxxx.
Glass, Franklin E., Jr., xxx-xx-xxxx.
Haldeman, Norman J., Jr., xxx-xx-xxxx.
Hand, Donald J., xxx-xx-xxxx.
Harper, William L., xxx-xx-xxxx.
Harris, Martin H., xxx-xx-xxxx.
Hart, Donald C., xxx-xx-xxxx.
Hartman, Roger L., xxx-xx-xxxx.
Haugen, Kenneth R., xxx-xx-xxxx.
Hegland, Leonard W., xxx-xx-xxxx.
Hennessy, John R., xxx-xx-xxxx.
Henry, Eugene W., xxx-xx-xxxx.
Heyner, Franklin R., xxx-xx-xxxx.
Hillman, Richard D., xxx-xx-xxxx.
Hipp, Augustus J., xxx-xx-xxxx.
Hirschi, Harvey C., xxx-xx-xxxx.
Hoback, Harold N., xxx-xx-xxxx.
Horne, Stanley H., xxx-xx-xxxx.
Huber, Johannes H., xxx-xx-xxxx.
Hull, Benjamin C., xxx-xx-xxxx.
Hyland, Patrick F., xxx-xx-xxxx.
Hyman, Julius, xxx-xx-xxxx.
Ingraham, Hubert H., Jr., xxx-xx-xxxx.
Ingram, Bobby F., xxx-xx-xxxx.
Jacobsen, Richard L., xxx-xx-xxxx.
Janover, Lee R., Jr., xxx-xx-xxxx.
Jervey, Annie A., xxx-xx-xxxx.
Johnson, Heinz H., xxx-xx-xxxx.
Johnson, Lester M., xxx-xx-xxxx.
Johnson, Severd V., xxx-xx-xxxx.
Johnston, Thomas D., xxx-xx-xxxx.
Johnstone, Stowell R., xxx-xx-xxxx.
Keefer, James F., xxx-xx-xxxx.
Kegg, Earl C., xxx-xx-xxxx.
Kehaya, Donald E., xxx-xx-xxxx.
Kendall, Andrew W., xxx-xx-xxxx.
Kerschner, Lee R., xxx-xx-xxxx.
Kintigh, Jerry L., xxx-xx-xxxx.
Kirschner, Burton H., xxx-xx-xxxx.
Kliemann, Richard H., xxx-xx-xxxx.
Knazik, Carl W., xxx-xx-xxxx.
Knight, Haven A., xxx-xx-xxxx.

Adams, Bruce C.
Adams, James L.
Adams, William F.
Adamson, John C.
Addison Christopher L.
Adler, Gary A.
Ahlstrand, Donald C.
Akin, Michael A.
Albertolli, William R.
Alexander, George E., Jr.
Alexander, Michael W.
Alee, Robert G.
Allen, Dannie H.
Allen, John W.
Allen, Mark E.
Allison, Harry K.
Almgren, Malcolm
Alpeter, William C.
Ammerman, Larry R.
Amos, Barry M.
Amtower, James F., Jr.
Amundson, Robert J.
Anderson, Christopher C.
Anderson, David W.
Anderson, Dennis J.
Anderson, George E.
Anderson, John F., Jr.
Anderson, Jonathan L.
Anderson, Leroy
Anderton, James D.
Antoine, Eddie P., II
App, Kenneth G.
Arbiter, Jerome L.
Arends, Stephen R.
Arlett, Stephen M.
Arnott, Ralph E.
Ashford, James H.
Atchison, Donald L.
Athow, Lewis K.
Auriemma, John C.
Avery, Klurge C., Jr.
Axtell, Robert D.
Ayres, Ronald R.
Babington, David C.
Bacon, William B.
Bagaglio, Mario J., Jr.
Bailey, Robert C.
Baird, W. Dean, Jr.
Baker, Norman E.
Baker, Robert L.
Balhorn, Carl D.
Ballard, David L.
Banks, Richard A.
Bankston, Victor J.
Bannat, Edward G.
Baratko, Robert E.
Barber, Christopher T.
Barber, James W.
Barber, Robert J.
Barker, Frank E., Jr.
Barnes, George W., III
Barnes, John R.
Barrett, Michael D.
Barry, Brian J.
Barton, James D.
Baskerville, James E.
Bass, George L.
Batdorf, Richard E.
Bates, Charles K.
Bathgate, John C.
Battell, James J., Jr.
Bauer, Carl T.
Bauman, Ronald B.
Baxla, Robert E.
Beakley, James E.
Beam, Alan R.
Beason, Nathan H.
Beauchesne, Charles L.
Beaugureau, Denis F.
Beck, Arthur T., Jr.
Becker, John J., Jr.
Beckwith, Donald C.
Beduhn, Jerry R.
Bell, James M.
Bell, John F.
Bell, Stuart W.
Bell, William A.
Bellemer, Gordon A.
Benner, Stuart C.
Bennett, Albert E., Jr.
Bennett, Richard W.
Bentz, John R.
Bergner, Jon C.
Bergo, Dennis M.
Bethea, William D., III
Bever, Jerry D.
Bevers, Richard E.
Beyer, Carl W.
Bianco, Bernard M.
Bicknell, Robert S.
Biddles, Henry N.
Bieda, George E.
Bielik, John P.
Bierbower, William B.
Bilski, Anthony
Bishop, Grover C.
Bishop, Kenneth R.
Bishop, Peter B.
Bixler, Kenneth G.
Blackburn, William R.
Blackwell, William A.
Blake, Frank J.
Blanchard, James J.
Blatt, Norman W.
Blaue, John W.
Bleecker, James M.
Blessing, Peter E.
Blomquist, James H.
Bloyer, Stanley F.
Bluethman, John D.
Board, George R.
Bogle, William T. R.
Bohannon, Edward L.
Bohn, Michael K.
Boland, James A.
Bolt, Billy F.
Bolton, Peter K.
Bonnett, David E.
Booker, Royston T.
Boorom, Robert F.
Booth, David H.
Boroweic, Richard R.
Bosley, Dale E.
Bostic, Larry W.
Boswell, Charles M.
Bouchoux, Donald R.
Bower, Duane B.
Bower, Phillip W.
Boykin, William S., Jr.
Boylan, Harold G., Jr.
Boyle, David W.
Boynton, Robert W.
Braden, Richard F.
Bradley, John E., Jr.
Brady, Donald R.
Brady, Mark L.
Brady, Michael F.
Branan, Phillip H.
Branch, Malcolm P.
Brandon, William R.
Brasher, Stephen J.
Bratsch, Roger D. J.
Braun, Gerald P.
Braunstein, Wayne J.
Breeden, George L., II
Bremhorst, Joseph H.
Brennon, Roy L., Jr.
Brewer, Roger D.
Briggs, Steven E.
Bright, David L.
Brigman, Charles E.
Brink, Gale D.
Brodie, Glenn T.
Brooks, Randolph M.
Brophy, James M., III
Brotherton, James D.
Brown, Fred D.
Brown, Gregory C.
Brown, James M.
Brown, Paul R.
Brown, Richard M., III
Brown, Robert E.
Brown, Robert E.
Brown, Ronald F.
Brown, Thomas J., Jr.
Broyles, Ned A.
Bruce, Robert G.
Brunet, Gerard J.
Bryant, Stanley W.

Zuniga, Fred J.
Zweerink, James E.

The following named women lieutenants of the U.S. Navy for permanent promotion to the grade of lieutenant commander in the line, pursuant to title 10, United States Code, section 5771, subject to qualification therefor as provided by law:

Abruzzo, Dianne M.
Anderson, Mary F.
Brown, Cecelia M.
Butler, Shannon R.
Cook, Kathleen C.
Cowan, Patricia A.
Donnelly, Rachelle A.
Engelhardt, Sandra L.
Ford, Carolyn S.
Funkhouser, Lenore M.
Gauthier, Elaine A.
Hatch, Marilyn J.
Herbst, Michael A.
Holloway, Kathleen G.
Katschke, Mary L.
Krohne, Kathleen A.
Lloyd, Connie L.
Manning, Lorraine F.
Matheson, Eleanor S.
Matthews, Victoria S.
McCauley, Janet M.
McCastland, Mary A.
McGalin, Janice G.
Morrison, Elizabeth L.
Perry, Janet M.
Pinkney, Sandra L.
Pope, Diane J.
Rosenthal, Nikki L.
Stevens, Marjory M.
Stewart, Jane L.
Tate, Betty J.
Winters, Margaret L.
Youngstrom, Judith J.

IN THE NAVY

The following-named lieutenant commanders of the U.S. Navy for temporary promotion to the grade of commander in the staff corps, pursuant to title 10, United States Code, section 5793, subject to qualification therefor as provided by law:

DENTAL CORPS

Anderson, Joseph H.
Arnold, James D.
Burkey, Richard W.
Butler, Lee M.
Campbell, Larry G.
Cochran, Michael A.
Davis, Melvin L.
Eckstein, Robert E.
Ferguson, Charles D.
Fleming, James G.
Funk, Edward A.
Gartner, Richard R., Jr.
Gear, Robert D.
Glass, Ernest G.
Grantham, Gary B.
Harring, Ronald F.
House, Ronald C.
Hwang, William S.
Johnson, Jerry K.

Executive nominations received by the Senate December 12, 1977, pursuant to the order of the Senate of December 7, 1977:

DEPARTMENT OF JUSTICE

Donald J. Kindt, of Ohio, to be U.S. marshal for the northern district of Ohio for the term of 4 years, vice Robert G. Wagner, term expired.

HARRY S TRUMAN SCHOLARSHIP FOUNDATION

John W. Snyder, of the District of Columbia, to be a member of the board of trustees of the Harry S Truman Scholarship Foundation for a term expiring December 10, 1983 (reappointment).

LEGAL SERVICES CORPORATION

The following-named persons to be members of the Board of Directors of the Legal Services Corporation for terms expiring July 13, 1980:

Cecilia Denogen Esquer, of Arizona, vice Rodolfo Montejano, term expired.

Steven L. Engelberg, of Maryland, vice Samuel D. Thurman, term expired.

Hillary Diane Rodham, of Arkansas, vice William J. Janklow, resigned.

Richard Allan Trudell, of California, vice Marshall Jordan Breger, term expired.

Josephine Marie Worthy, of Massachusetts, vice Marlow W. Cook, term expired.

IN THE NAVY

Vice Adm. Edward W. Cooke, U.S. Navy (age 56), for appointment to the grade of vice admiral on the retired list pursuant to the provisions of title 10, United States Code, section 5233.

Executive nomination received by the Senate December 15, 1977:

POSTAL RATE COMMISSION

Alvin Harry Gandal, of Maryland, to be a Commissioner of the Postal Rate Commission for the term expiring October 14, 1982, vice Frank P. Saponaro, term expired.

WITHDRAWAL

Withdrawal sent to the Senate on December 9, 1977:

Frank M. Johnson, Jr., of Alabama, to be Director of the Federal Bureau of Investigation for the term of 10 years, vice Clarence Marion Kelley, resigning, which was sent to the Senate on September 30, 1977.

CONFIRMATIONS

Executive nominations confirmed by the Senate December 15, 1977:

DEPARTMENT OF JUSTICE

Julian K. Fite, of Oklahoma, to be U.S. attorney for the eastern district of Oklahoma for the term of 4 years.

Edward G. Warin, of Nebraska, to be U.S. attorney for the district of Nebraska for the term of 4 years.

Alexander O. Bryner, of Alaska, to be U.S. attorney for the district of Alaska for the term of 4 years.

Michael H. Walsh, of California, to be U.S. attorney for the southern district of California for the term of 4 years.

Larry R. McCord, of Arkansas, to be U.S. attorney for the western district of Arkansas for the term of 4 years.

John H. Cary, of Tennessee, to be U.S. attorney for the eastern district of Tennessee for the term of 4 years.

Rex O. Presley, of Oklahoma, to be U.S. attorney for the eastern district of Oklahoma for the term of 4 years.

John A. Roe, of Iowa, to be U.S. marshal for the northern district of Iowa for the term of 4 years.

Harry D. Mansfield, of Tennessee, to be U.S. marshal for the eastern district of Tennessee for the term of 4 years.

Thomas Arny Rhoden, of Mississippi, to be U.S. marshal for the southern district of Mississippi for the term of 4 years.

Andrew E. Gardner, of North Carolina, to be U.S. marshal for the western district of North Carolina for the term of 4 years.

Edward P. Gribben, of South Dakota, to be U.S. marshal for the district of South Dakota for the term of 4 years.

DEPARTMENT OF COMMERCE

Andrew E. Manatos, of Maryland, to be an Assistant Secretary of Commerce.

DEPARTMENT OF ENERGY

Lincoln E. Moses, of California, to be Administrator of the Energy Information Administration.

OFFICE OF RAIL PUBLIC COUNSEL

Howard A. Heffron, of Maryland, to be Director of the Office of Rail Public Counsel for a term of 4 years.

INSTITUTE OF MUSEUM SERVICES

Leila I. Kimche, of Maryland, to the Director of the Institute of Museum Services.

DEPARTMENT OF JUSTICE

Mack Burton, of Arkansas, to be U.S. marshal for the western district of Arkansas for the term of 4 years.

Louis G. Villaescusa, Jr., of California, to be U.S. marshal for the central district of California for the term of 4 years.

Donald J. Kindt, of Ohio, to be U.S. marshal for the northern district of Ohio for the term of 4 years.

Robert M. Thompson, of Wisconsin, to be U.S. marshal for the western district of Wisconsin for the term of 4 years.

POSTAL RATE COMMISSION

Simeon Miller Bright, of West Virginia, to be a Commissioner of the Postal Rate Commission for the term expiring November 22, 1982.

NATIONAL SCIENCE BOARD

Joseph Mayo Pettit, of Georgia, to be a member of the National Science Board, National Science Foundation, for a term expiring May 10, 1982.

EXPORT-IMPORT BANK OF THE UNITED STATES

Thibaut de Saint Phalle, of New Jersey, to be a member of the Board of Directors of the Export-Import Bank of the United States.

The above nominations were approved subject to the nominees' commitments to respond to requests to appear and testify before any duly constituted committee of the Senate.

THE JUDICIARY

James K. Logan, of Kansas, to be U.S. circuit judge for the 10th Circuit.

Robert S. Vance, of Alabama, to be U.S. circuit judge for the Fifth Circuit.

John L. Kane, Jr., of Colorado, to be U.S. district judge for the District of Colorado.

George C. Carr, of Florida, to be U.S. district judge for the middle district of Florida.

SUPERIOR COURT OF THE DISTRICT OF COLUMBIA

Carlisle Edward Pratt, of the District of Columbia, to be an associate judge of the Superior Court of the District of Columbia for a term of 15 years.

Frederick Howard Weisberg, of the District of Columbia, to be an associate judge of the Superior Court of the District of Columbia for a term of 15 years.

IN THE COAST GUARD

Coast Guard nominations beginning Leonard K. Ramsbusch, to be captain, and ending Joseph F. Lavelle, to be captain, which nominations were received by the Senate on December 5, 1977, and appeared in the CONGRESSIONAL RECORD on December 6, 1977.

IN THE PUBLIC HEALTH SERVICE

Public Health Service nominations beginning Manuel Bustos, to be senior surgeon, and ending Donald E. Simpson, to be an assistant health services officer, which nominations were received by the Senate on November 23, 1977, and appeared in the CONGRESSIONAL RECORD on November 29, 1977.

IN THE PUBLIC HEALTH SERVICE

Public Health Service nominations beginning N. Burton Attico, to be Medical Director, and ending Gordon H. Wilcox, to be a senior assistant health services officer, which nominations were received by the Senate on November 23, 1977, and appeared in the CONGRESSIONAL RECORD on November 29, 1977.

EXTENSIONS OF REMARKS

IRS ABUSES—A CHILLING EFFECT

HON. GEORGE HANSEN

OF IDAHO

IN THE HOUSE OF REPRESENTATIVES

Thursday, December 15, 1977

Mr. HANSEN. Mr. Speaker, the tax collector can be a worthy servant of the people who provides the funds for operation of the necessary services of government or he can be a feared and despised creature of costly and burdensome bureaucracy and tyranny.

This is particularly so at the Federal level in the case of the Internal Revenue Service. Reprisal and intimidation by this agency can have a chilling effect on our first amendment guarantee of "freedom of speech" and "the right * * * peaceably to assemble, and to petition the Government for a redress of grievances."

My letter of December 13, 1977, to Mr. Jerome Kurtz, Commissioner of Internal Revenue, spells out a very real problem in this regard which no Member of Congress or any American citizen can afford to ignore.

The letter follows:

DEAR MR. KURTZ: As a Member of Congress representing Southern and Eastern Idaho, I am deeply concerned for the welfare of the citizens of my district who were victims of the 1976 collapse of the Teton Dam.

Thousands of people in the Upper Snake River Valley were violently thrown out of their homes causing death and injury to many and hundreds of millions of dollars worth of damage to homes, farms, businesses, and other property. Total communities were destroyed.

These people were driven from their homes, farms, and businesses by government irresponsibility, the failure of the Bureau of Reclamation to perform to its usual high standards. The Congress and the President rose to the occasion by assuming necessary responsibility and quickly allocating federal resources and a four hundred million dollar fund to help rehabilitate and fully reimburse the victims.

The victims themselves assisted by an amazing display of effectively organized volunteers drawing heavily from surrounding counties and states, and even coming from distant areas, created a miracle in terms of recovery time and reduced losses for government reimbursement. Millions of hours of volunteer assistance organized by churches and other private sources coupled with local, state and federal government resources have in some eighteen months restored the area to near normalcy.

But it isn't the same. People died. Family treasures, priceless and irreplaceable, are gone forever. Lives and living patterns were disrupted and can never really be restored. Glittering new stores, homes and equipment often replaced the old which seems more than fair on the surface, but does it really compensate for months of despair and disruption and for loss of income and the efficiency of normal conditions? Many people cannot even return to pre-flood businesses and circumstances because the shortages of housing and labor cause disproportionate rent, salaries and other cost factors.

The point I make is that the communities affected by the Teton flood and all the surrounding area are unique, especially so for tax purposes. It will take special handling to assure fairness and prevent the subversion of the will of Congress in fully restoring the people to pre-flood circumstances.

Since I was given early reason to believe by Internal Revenue Service action that the flood victims were going to have difficulty with IRS tax policies, I introduced legislation to provide necessary relief. This was done in the year of the flood, 1976, and again at the beginning of this term of Congress in January, 1977. The Bill, HR 382, has been referred to the House Ways and Means Committee and is looked on as a probable necessity depending on ongoing practices by IRS in handling the returns of those economically affected directly and indirectly by the flood.

To establish whether the IRS can accommodate by attitude and by regulation to the circumstances of the people in the Upper Snake River Valley of Idaho without additional or special legislation, I have conducted a year-long investigation and study which I feel have established rather conclusive results pending only your input which I now invite.

To be perfectly candid, I am shocked at my findings and believe you could not react much differently based on the evidence. I realize you are relatively new to your position so I present the following for your information as well as in hopes that corrective action will be taken where necessary to end abuses and give assurances that IRS will confine itself to its role as a tax collecting agency.

I am deeply concerned that we have no sooner gotten people back on the farm and in their homes and businesses after the failure of a Bureau of Reclamation project only to face having many of them pushed out again by the Internal Revenue Service. Only this time it may be intentional and a subversion of Congressional intent if there is wholesale assessment of such things as capital gains taxes against reimbursements paid by the Bureau of Reclamation.

What makes me believe this will happen? First, the IRS attitude about household furnishings reimbursements which was only resolved after considerable pressure; second, the latitude of IRS auditors to allow and disallow particularly in such unusual circumstances; and third, the recent history of IRS activity in the Western Region of the United States and Eastern Idaho in particular.

It is the third area I especially view with alarm, an area which also profoundly affects points one and two.

I find the IRS has an abominable record over the past four or five years of assault against the people living in the Teton Dam Flood area and seething turmoil within its own ranks over policies, procedures, and personnel.

Provable policies of gross discrimination against IRS employees are rampant and ongoing, and a scandalous violation of taxpayers' civil rights continues on broad scale.

1. Why is the IRS making such a strong effort to purge Mormon agents from key Eastern Idaho audit positions particularly in the Idaho Falls area?

2. Why is the IRS so concerned about getting tough with Mormon Church officials that they would send in a roving office auditor from another state for special target audits in contravention of general IRS procedures.

3. Why would an IRS "violence list" be periodically circulated containing the names of Idaho citizens having no record of violence?

4. Why would IRS agents go to conservative meetings to make lists of license plate numbers which were then expanded to watch lists of names, addresses, business addresses and positions in the Mormon Church—and why were no liberal groups similarly monitored, if extremists were the target?

5. Why would IRS agents anonymously contact individuals who politically complained of high taxes in letters to the Editor and place them under automatic investigation? The right of free speech seems to have its liabilities.

6. Why would IRS agents maintain a full-scale clipping file from the newspapers on taxpayers regarding vacation trips and other activities? I'm not sure the taxpayers realize the extent to which individual privacy has been invaded by big government.

7. Why should IRS prosecute waitresses so diligently in Eastern Idaho with allegations of big income from tips when it is well-known that the payscale in the area is much below the national norm?

8. Why should IRS have planned an armed door-to-door search by some 30–40 agents in communities north of Idaho Falls to demand the showing of tax returns, an operation finally halted at the Washington level when collection officers complained that someone might be hurt or killed?

The story, as I understand it, is partially one of near paranoia and over-reaction to a handful of so-called tax protestors in the Upper Snake River Valley which coincidentally has a large percentage of Mormons. IRS management at the local, State, and Regional levels have given continual indication that they don't trust Mormon agents to audit Mormon Church officials despite frequent pronouncements by the Church that people should be law abiding and pay their taxes.

This suspicion by IRS officials has apparently prompted a policy of obvious discrimination in promotion and assignment of agents in numerous places throughout the West and especially in East Idaho. This can be readily documented in a number of cases where complaints of discrimination were filed and IRS was forced to clean up its act.

Since this employee juggling program ran into difficulty and IRS couldn't get locally oriented agents out of East Idaho and the Upper Snake River area fast enough, they resorted to compensating measures such as the roving auditor program, the pavlovian reactions to political gatherings and letters to the editor, and the planned armed search.

There was hope that a recent change of State IRS Directors might alter the situation, but the harassment and shuffling of employees goes on with indications of reprisal action and unusually high numbers of transfers. The only change appears to be in the objective, but this is very significant. The tax protestors, who were never more than small potatoes, are now taking a back seat to the fertile possibilities of auditing for Capital gains among thousands of flood victims with a four-hundred million dollar reimbursement. For this, it appears IRS is still trying to move out those agents who know the most about the people and their situations and who could and would do the fairest job, and bring in non-local auditors. The continued instances of discrimination, harassment and reprisal against employees would suggest that the taxpayers are in for a rough time.

This I hope is not the case and nothing could please me more than to receive your assurance of this. The flood victims are being paid very carefully for their losses, and for IRS to collect taxes from these reimbursements subverts the intent of the relief legislation and could work a real hardship on many people.

I will not stand by and allow the Teton area people to be further victimized. If IRS plans any kind of tax auditing action to reduce the reimbursements granted by the Bureau of Reclamation, I will seek immediate passage of my bill and any other appropriate legislation to obtain the necessary relief and fair treatment.

Certainly there can be no more social and political monitoring of news releases on citizens, no more discriminations against employees to get at certain taxpayers, no more unusual procedures such as roving office auditors to target certain taxpayers, no more license plate games and religious watch lists, no more "violence lists" containing non-violent people whose greatest sin might be an unkind word for IRS, no more possibilities of a random armed search of taxpayers' homes.

Such projects and programs do not enhance people's confidence in government and can only be harmful to the effectiveness of IRS. In fact, the special harassment of some 40 waitresses in the Idaho Falls area has put you in a position where there is no faith in IRS and citizens are being forced into tax protest roles. I'd hate to think that IRS would deliberately set out to create problems to frustrate taxpayers to harsh action so that some bureaucrat can ride to glory by putting down an uprising.

If this indeed can happen, then a massive mishandling of thousands of cases in the Teton flood reimbursement situation by IRS could result in a terrible confrontation.

I don't want a confrontation, and neither do the people in Eastern Idaho, but their independent nature will not tolerate oppressive government and this must be understood right now as we go into the first full tax year after the flood occurred.

It is important for IRS to assure the people of Idaho and the nation that there will be an immediate end to employee discrimination and civil rights abuses against the taxpayer. It is important also that a declaration of IRS intent be had regarding the unique situation involving the Teton Disaster reimbursements.

The power of the arbitrary audit, the possibilities of intimidation over filing details and judgment factors, and the required waiver of Fifth Amendment Rights make IRS, if used wrongfully, the most dangerous threat of destructive cancer to our system of self-government and our individual rights and freedom. IRS must be totally objective, color-blind, non-political, and religiously and philosophically neutral. The virtual impossibility of your task makes your challenge great and the consequences of your failure a "hell" for the victims.

I am alarmed that too many have already been irreparably harmed by IRS abuses, both employees and taxpayers. I am concerned that confidence in government has eroded to such dangerous proportions. I am hopeful that you can give assurances that strong corrective steps are being taken and that you will make proper recommendations to me and my colleagues in Congress as to what legislation is necessary to get the nation's tax collection system out of the gutter and on to the high road.

Sincerely,

George Hansen,
Member of Congress.

CONSTRUCTION OF A NEW 261-ACRE STEAM TURBINE ELECTRIC GENERATOR MANUFACTURING SITE

HON. ANDY IRELAND

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Thursday, December 15, 1977

Mr. IRELAND. Mr. Speaker, last week, the Allis-Chalmers Corp. and two West German companies, Siemens A.G. and Kraftwerk Union A.G., announced that they had selected Palmetto, Fla. as the location for the construction of a new 261-acre steam turbine electric generator manufacturing site.

The facility, which is scheduled for completion in the early 1980's, is expected to create more than 1,000 new jobs and involves an initial capital investment of more than $100 million.

I want to take this opportunity, Mr. Speaker, to say how delighted all of us in Florida are that Allis-Chalmers and their German partners decided to locate in our State, and specifically, how happy we in the Eighth Congressional District are that they have chosen the Palmetto-Bradenton-Sarasota area.

We welcome them enthusiastically, and look forward to a long and mutually beneficial relationship.

Finally, Mr. Speaker, I want to offer my congratulations to the many civic, business, and political leaders in the area who worked so hard to bring Allis-Chalmers and Siemens to our community. It was a pleasure for me to be associated with these men and women. Their achievement is a fine example of how a community working in concert can become a partner with industry for the benefit of both.

Thank you Mr. Speaker.

STANLEY CARTER PACE, NEPHEW OF TIM LEE CARTER

HON. SAMUEL L. DEVINE

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Thursday, December 15, 1977

Mr. DEVINE. Mr. Speaker, it was very pleasing to note that the nephew of our colleague Tim Lee Carter has been promoted to president and chief operating officer of TRW, Inc. (The Ramo-Wooldridge Corp.).

Stanley Carter Pace's election to that post was effective December 1.

TRW is a corporation which has many plants throughout the United States and foreign countries and manufactures automotive and aeronautical parts. It also does much work for the Defense Department.

Mr. Pace graduated from West Point Military Academy in 1941 and was commissioned in the Army Air Corps.

In August of 1944, while piloting a B-24, he was shot down over Friederichshaven and was taken a prisoner of war until released by the Russian forces.

He was a full colonel in the Air Force by age 31, but chose to leave the service and join TRW at that age.

I include for the Record an article from the Wall street Journal:

Who's News—TRW Names Mettler, Pace to Top Posts, and They Outline New Areas of Emphasis

(By Bernard Wysocki, Jr.)

Cleveland.—TRW Inc. realigned its top management along the lines proposed in mid-1976.

Ruben F. Mettler, 53-year-old president and chief operating officer, was elected chairman and chief executive officer of this automotive, electronics and aerospace concern, effective Dec. 1. Mr. Mettler will succeed Horace A. Shepard, 64, who will remain a director and a member of the four-man executive committee.

Directors elected Stanley C. Pace, 56, currently executive vice president and assistant president, to succeed Mr. Mettler as president and chief operating officer.

Officials said Simon Ramo, 64, will continue as vice chairman until his retirement in May, when he will be succeeded by J. Sidney Webb, 57, currently executive vice president in charge of electronics operations.

In addition, Alastair F. Down, chairman and chief executive officer of Burmah Oil Co., was elected a director, filling the vacancy created by the retirement of John D. Wright, retired chairman.

CHANGE IN STYLE, EMPHASIS

In a wide-ranging interview, Messrs. Mettler and Pace said their succession to the top posts at TRW will usher in some changes of style and emphasis. Some changes will reflect their personalities, while others will stem from altered economic and business conditions.

For example, Mr. Mettler is a cordial man who likes to talk, and he expects to spend more time than his predecessor speaking before governmental committees, financial analyst groups, fellow businessmen and community gatherings. "I have given a lot of speeches in my lifetime," Mr. Mettler says, "I like to speak and do a lot of it."

Mr. Mettler also plans to lay heavier emphasis on TRW's overseas operations. "I plan to spend more time on international than has been (Mr. Shepard's) practice," he says.

One reason is that TRW's overseas business has grown very quickly in the past few years. International sales in 1976 were about $1 billion, or 34 percent of overall sales, up from $453 million, or 27 percent, in 1972. Moreover, Mr. Mettler says, the international business "has gotten greatly more complicated. . . . That's where I think my time is needed."

DIFFERING NEEDS BY AREA

In Europe, the executive says, the company has the "machinery" in place for gathering information on currencies, trade policies, political trends and economic forecasts. In South America and Asia, however, that isn't really the case. "The machinery will be gradually augmented," Mr. Mettler says, "and we want to spend more time on the information that is going to become more available to us."

Mr. Pace is inheriting the chief operating officer's job at a time when it, too, calls for a change in emphasis. During the past few years, the company has concentrated on reducing its debt-equity ratio and on boosting its return on assets employed. But as those measures are taking hold and the company's earnings statement, and balance sheets are in better shape, Mr. Pace sees his job as keeping these things in shape while increasing TRWs emphasis on growth.

Indeed, the executives say, the purpose of improving the "quality of earnings" and the balance sheet was to generate the money to spend on high-growth, high-return parts of the business.

"We aren't going from A to Z," Mr. Pace says, meaning the company isn't about to embark on a dizzy growth spree. "We're talking about going from M to O." Still, in the future, "we will have available additional funds that we can allocate to sales programs, research and development, plant start-ups, product start-ups, even perhaps joint ventures or acquisitions."

When Mr. Webb becomes vice chairman of TRW next year, he will continue to concentrate on electronics operations and also focus on the "entrepreneurial program related to the electronics and high-technology business on the West Coast," Mr. Mettler said.

DIFFERENT ROLES

Although Mr. Webb will be based on the West Coast and carry the title of vice chairman, just as Mr. Ramo does, their roles in the corporation will be very different. Unlike Mr. Ramo. "Sid Webb isn't highly technical," Mr. Mettler said. His focus is on marketing, which the company wants to emphasize in the electronics and high-technology areas. "We have found that technology push isn't so effective as market pull" in increasing sales, Mr. Mettler said.

Mr. Ramo, the current vice chairman, is responsible for long-range planning and the technical side of governmental relations, among other things. He is also chairman of the executive committee. Mr. Mettler says he plans to chair the executive committee after Mr. Ramo retires, and he will take much of the long-range planning and technical governmental detail under his wing, too. Unlike Mr. Webb and like Mr. Ramo, the new chief executive officer has a highly technical background.

Mr. Ramo earned a Ph.D. from the California Institute of Technology at 23, and gained prominence as an expert in microwaves and guided missiles before he founded Ramo-Wooldridge Corp. in 1953. It merged into Thompson Products Inc. in 1958, and the combined operation was renamed TRW.

Mr. Mettler earned a Ph.D. at Cal. Tech in electrical and aeronautical engineering, and joined Ramo-Wooldridge in 1955. He had responsibility for several ballistic-missile and scientific-satellite programs before taking a series of executive posts with the merged company.

Mr. Pace graduated from the U.S. Military Academy and earned an M.S. in aeronautical engineering from Cal Tech. A combat pilot during World War II, he worked for the Air Force Air Materiel Command before joining TRW in 1954. He managed the jet division, later headed the equipment group and in 1971 was named head of the automotive world-wide operation.

THE HONORABLE WILLIAM S. GAUD, JR.

HON. CLEMENT J. ZABLOCKI

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Thursday, December 15, 1977

Mr. ZABLOCKI. Mr. Speaker, it was with great sadness that I learned of the recent death of the Honorable William S. Gaud, Jr.

Before coming to Washington, Bill Gaud distinguished himself in municipal government as a counsel to former New York Mayor La Guardia and as an officer in the U.S. Army during World War II when he was responsible for directing the military lend-lease assistance program.

First, as Assistant Administrator for the Agency for International Development's Bureau for the Near East and South Asia and then, as the Administrator of the entire Agency from 1966 to 1969, Bill Gaud was primarily responsible for marshaling U.S. support for the "green revolution," a program which, by making miracle grains and efficient agricultural techniques available to poor farmers around the world, has been a significant factor in the battle against hunger and malnutrition in the developing countries.

Those of us who served on the Committee on International Relations during Bill Gaud's tenure at AID fondly remember him for his high intelligence, dedication, candor, and good humor.

In losing Bill Gaud, America has lost an outstanding citizen and a great public servant.

I extend my deepest sympathy and condolences to his wife, Eleanor, and his family.

PROF. ARTHUR LAFFER ON THE INTERNATIONAL MONETARY OUTLOOK

HON. JACK F. KEMP

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, December 15, 1977

Mr. KEMP. Mr. Speaker, in recent weeks there has been much talk about the growing balance of trade deficit of the United States and the resulting decline in the value of the dollar. Unfortunately, the administration's policy of ignoring the problem in hopes that it will go away has done little to alleviate the fundamental problem, which is the loose monetary and spending policies of the U.S. Government, combined with restrictive taxation and regulatory policies which reduce economic growth.

Prof. Arthur Laffer of the University of Southern California has analyzed this situation very carefully and concluded that the inflationary policies being followed in the United States, both domestically and internationally, cannot be continued to be followed without risking a monetary collapse and an international recession.

The article follows:

THE INTERNATIONAL MONETARY OUTLOOK

(By Prof. Arthur Laffer)

The immediate prospects for the international monetary system are far from encouraging. Nevertheless, while the policy thrust of the past decade is still continuing, a number of signs point to radical change. This change, to the extent it can be forecast, is in the direction of sound money and exchange-rate certainty. The dimly perceived realities of international economics are again being absorbed into the body politic and are beginning to influence policy decisions.

Prior to about 1968, the smooth operation of the Bretton Woods system did not provide as many examples as were needed to remind the current generation of international experts of the deleterious effects of volatile rates. Save for a few, only a number of elderly economists and those experienced in Latin American inflationary economies were keenly aware of these effects. By the end of the 1960s, this paucity of experience was manifest in a virtual unanimity of economic opinion supporting floating exchange rates and the demonetization of gold.

NEW EVIDENCE

Starting with the March 1968 agreement to demonetize gold, and on through 1977's collapse of the dollar vis-a-vis the mark, yen, Swiss franc, and pound sterling, a fresh body of evidence has emerged. Although these same lessons have repeatedly been learned in the past, recent events have provided first-hand experience to motivate this generation's move to a more rational international monetary system.

The historic tradition of weighing the international implications of domestic economic policies has been virtually non-existent in the United States. The massive size of the United States economic base, as well as the unique U.S. financial role in the world economy up until the late 1960s, could justify this tradition. With the breakup of the Bretton Woods agreement, elimination of the gold convertibility and special reserve currency status of the United States dollar, U.S. policies have played a leading role. These policies, combined with a lack of tradition and experience, have contributed to a sharp deterioration of the international economic environment.

Perhaps the single most important lesson of the past decade is that an unhinged monetary system results in global inflation. The failure to maintain the convertibility of currencies generates a rapid expansion of private monies such as eurodollars and weakens the discipline on individual countries' monetary authorities. The result is a marked increase in inflation everywhere. Those countries that demonstrate the least discipline tend to experience the greatest inflation. Devaluations *ipso facto* reflect a relative lack of discipline on the part of the devaluing country's monetary authority. Devaluation, of one currency, vis-a-vis others produces inflation vis-a-vis those other currencies' inflation rates. The table below provides rough documentation of this phenomenon for average trends during the twentieth century:

	1900 to 1972 (percent)		
	Average annual currency change[1]	Average annual price level change[2]	
		Actual	Relative to United States
German mark	+0.4	1.7	−0.3
Canadian dollar	+0	2.1	+.1
British pound	−.9	2.8	+.8
French franc	−6.6	8.6	+6.5
Italian lira	−6.8	8.7	+6.6
Japanese yen	−7.2	9.8	+7.6

[1] Relative to the U.S. dollar.

[2] Wholesale price indexes.

Source of data: Moon H. Lee, "Purchasing Power Parity," Ph. D. disseration, University of Chicago, July 1975, pp. 104–113.

Recent currency and price index trends continue to track this same relationship.

Interacting with modern progressive tax structures, high rates of inflation result in subnormal real growth. As price levels rise, the disincentive effects of higher marginal tax rates at each level of real income cause labor and capital to move into non-market activities or leisure. Unemployment rates rise, capital accumulation diminishes, and real income growth is retarded. Such policies as wage and price controls, legislated minimum wages and excess profits taxes exacerbate the deterioration, because they all induce still greater production disincentives. Virtually every country in the free world has felt the effects of inflation interacting with a progressive tax structure. Particularly virulent cases are to be found in Mexico, the United Kingdom, and recently, the United States. Governments wise enough to mollify these effects by partially indexing their tax structures include France, Canada and Australia.

The old nostrums have been unable to rectify the malaise. Traditional monetary policy, fiscal policy, and exchange rate policy measures have failed.

MONETARY POLICY

As often as not, what had been deemed a stimulative policy actually resulted in slower growth and more inflation. For example, the loose money policies of the United Kingdom and Italy led, if anything, to currency crises and higher inflation, and thereby to higher tax rates and slower growth. In contrast, the relatively tight monetary policies of Germany and Switzerland spared those countries from the more extreme consequences of inflation. Swiss tax rates have been relatively less progressive than most countries and, up until the last few years, Germany was reducing the progressivity of its highly progressive tax structure. In general, rapid expansion of domestic monetary aggregates has generally been shown to lead to slower than faster economic growth.

FISCAL POLICY

The results of fiscal stimulative measures in the United States, United Kingdom and France have also fallen far short of expectations. If a government could spend its way out of a recession, the United Kingdom and the United States would have far outpaced Japan. In fact, nothing could be further from the truth. The rapidly expanding government redistribution policies of the last decade have substantially weakened the link between economic effort and reward, and have diminished production and investment incentives. The principal exception to the broad acceptance of ill-conceived fiscal policy actions has been Japan. Since 1950, Japan has cut tax rates almost every single year, and has maintained a tight control over government spending.[1] Continual reductions in disincentives to work and accumulate productive capital through tax rate cuts have contributed to the extraordinary growth of Japan's economy. Germany, too, has cut effective tax rates frequently from 1948 on, largely by raising the income brackets at which the highest rates applied.[2] Germany's postwar performance likewise attests to the efficacy of incentive-oriented policies.

EXCHANGE RATE POLICY

"Stimulative" policies involving exchange rates have, if it is possible, been even less successful than monetary and fiscal policies. The effects of a devaluation were widely believed to include increased domestic output. Devaluation was supposed to improve the devaluing country's competitive position in the world's goods markets. As a consequence, the devaluing country's exports would increase, and imports would decrease. The trade balance should improve, leading to increased output. Over the past decade, exchange rate policies for domestic objectives have gained an emphasis unparalleled in history.

On logical grounds, devaluations would not be expected to result in either improved trade accounts or in expanded domestic production. The efficiency of world markets dictates that the single predictable consequence of devaluation is a rise in the level of prices in the devaluing country relative to those devalued against. With the proclivity of modern governments to avoid deflation, most of the adjustment appears in the form of sharp price level increases in the devaluing countries. Any conceivable improvement in the devaluing country's competitive position is dissipated by the resultant inflation. The preponderance of the available evidence documents the suggestion that trade balances, measured in real terms, are unaffected by devaluation.[3]

A mere casual look at the actual events of the postwar period, and notably in the past decade, attests to the facts. If devaluations improved trade balances, the United States, United Kingdom, and Italian trade accounts should be in substantial surplus, while those of Japan and Germany should be in deficit. In fact, the reverse is closer to the truth.[4] If, however, one compares rates of inflation with exchange rate changes, distinct patterns emerge. As indicated in the table above, there is a close correspondence between a currency's rate of depreciation and its relative rate of inflation. Those countries whose currencies depreciate the most have the highest inflation rates, and *vice versa*. When combined with progressive tax structures, devaluation and the resultant inflation means sharply marginal tax rates and therefore lower output growth. If anything, devaluation leads to lower, not higher, domestic output.

THE CURRENT OUTLOOK

Over the past year, U.S. international economic policy has pressured countries to expand their monetary aggregates, increase government spending, and allow their currencies to appreciate against the dollar. Internally, the Federal Government has so far pursued an expansive monetary policy, as well as increased taxes and spending. The dollar has been deliberately allowed to depreciate. Actual or *de facto* devaluations have occurred in Mexico, Portugal, Spain, Canada, Israel and elsewhere. The weak U.S. recovery and the depressed world economy are predictable consequences of these policies.

Other effects of increased volatility in the foreign exchange markets include:

Higher costs of foreign currency transactions;

Transaction costs rise due to wider bid-ask spreads in the foreign exchange market, as dealers require compensation for the increased risk.

Greater exposure to FASB 8 problems;

Business firms experience larger gains and losses from foreign currency transactions, and suffer greater instability in reported earnings.

Unstable and rising inflation rates;

Weaker than average currencies are associated with higher than average inflation rates. At the same time, exchange rate instabilities produce a general diminution of confidence in currencies, and hence higher inflation, across the board.

Volatile interest rates, and greater divergence in interest rates among countries;

Fluctuating inflationary expectations show up in yields on fixed instruments that vary over time and across currencies.

Lowest growth prospects in those countries with progressive tax structures and weak currencies;

Negative effects on real economic performance are greater the more severe the inflation and the more rapidly tax rates rise with increasing nominal income.

An increased role for gold as a hedge against exchange risk.

Few assets offer a haven against inflation, but a flight from currencies in general implies greater demand for currency substitutes such as gold. To a degree, fluctuations in the price of gold reflect changing perceptions of the future value of paper currencies.

As these effects intensify, and weak currency countries join the futile race to depreciate their currencies further than others, the floating-rates regime may approach what is likely to be its final crisis.

THE LONGER TERM OUTLOOK

Out of all of this, clear signs of fundamental change are becoming visible. Over the past few years, the intensity of political pressure for rapid monetary growth and new government spending programs seems to be waning. In Congress, especially, a new effort to control spending has emerged, and throughout the United States voters have been turning down issue after issue of new borrowing and tax programs.

Attitudes toward exchange rate depreciation are also changing. In the late 60s and early 70s, the U.S. government sought to depreciate the dollar by whatever means possible. This policy led to the devaluations of May 1970, May 1971, August 1971, December 1971 and February 1973, and a number of less direct measures. Over the past year, these pressures, while still present, have encountered increasing criticism and resistance.[5] In addition, private holdings of gold, long feared and opposed by the monetary authorities, have been legalized for the first time in over forty years. On October 28, President Carter signed a bill that legalized contracts and securities denominated in gold or foreign exchange.

While by no means a panacea, gold convertibility with limited international reserves historically had provided a discipline on individual countries' monetary authorities. Economic logic and political evidence suggest that the aftermath of a general monetary crisis would be a move toward greater fixity and discipline in exchange rate policies. An EEC monetary union, if successfully accomplished, would contribute enormously to this end by reducing the number of currencies in use. If and when a new world monetary system is explicitly built, it will be one in which those major countries with the strongest currencies and the healthiest economies play a leading role. While the mantle of leadership always fell to the American government in the postwar era, its unsound economic policies during the past decade have largely disqualified the United States for sole leadership in the foreseeable future. The U.S. economy has shrunk relatively as a share of world output, and its growth has been slower than most major countries. The dollar has become a relatively weak currency, and business confidence in the United States has reached a postwar low. It would take many years of confidence-building economic policies and supernormal growth to restore to the United States the world economic position it enjoyed during the era of Bretton Woods.

OSHA—1,100 REGULATIONS DOWN, 9,900 TO GO

HON. GEORGE HANSEN

OF IDAHO

IN THE HOUSE OF REPRESENTATIVES

Thursday, December 15, 1977

Mr. HANSEN. Mr. Speaker, OSHA's announced crash diet to drop 1,100 regulations still leaves a bloated bureaucratic monstrosity loaded with 9,900 regulations.

The 11,000 arbitrary rules the Occupational Safety and Health Administration has imposed on the workplaces of America clearly indicate the near impossibility for employers to conform and for any inspector to have a comprehensive grasp of his job.

This is why it is so necessary to win the fourth amendment case now before the Supreme Court which would prevent OSHA from making inspections without a warrant properly obtained from a magistrate and based on probable cause.

When an inspection is conducted by authority of such a warrant then very likely there is good reason to investigate, otherwise, why should a person doing a good job of providing safe conditions be harassed merely because he happens to be in business?

The arbitrariness of OSHA is glaringly evident in their pronouncement that they can just not enforce a tenth of their rules pending their official repeal.

The 1,100 regulations being dropped, which deal with such items as split toilet seats, coat hooks, and the specific height to hang a fire extinguisher, only serve to dramatize the extent of stupidity and waste in OSHA and other agencies which constitute an assault and battery on the rights and pocketbooks of citizens both as taxpayers and consumers.

OSHA has not even cut through the first layer of fat with this 10-percent reduction of regulations. They have a long way to go even to be tolerated let alone to be respected and effective.

To keep everything in perspective, just remember that the 10-percent cut will take over 250 pages of a special edition of the Federal Register to explain, and that leaves 2,250 such pages of regulations that the employers and workmen still have to live with.

OSHA Administrator, Eula Bingham, merits a rose for a helpful start, but I will reserve the bouquet for a time when this cut is actually made and the rest of OSHA is reduced in like manner.

ON SOCIAL SECURITY FINANCING

HON. NEWTON I. STEERS, JR.

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Thursday, December 15, 1977

Mr. STEERS. Mr. Speaker, I voted today in favor of the conference report to accompany the social security financing amendments. I also supported the bill when it was debated in the House on October 27. I have done so with grave misgivings however, for I feel that the approach which this legislation takes is only piecemeal and does not address the basic fiscal problems of the social security system. The system needs a complete review and much of the underlying philosophy of the social security system, and the methods of financing the system, need to be reassessed and, in my mind, drastically changed. This is not being done.

Because this is not being done, and because I do not want to see the system continue to be on the brink of bankruptcy, I am voting in favor of the bill. However, I am today introducing legislation which will require Members of Congress to contribute fully to the social security system. It is true that Members of Congress presently contribute 8 percent of their entire income to our own pension fund—which is more than we would contribute now if we were covered by social security. However, I do not think that it is fair for Members of Congress to enact any sort of tax increase—especially one which is as monumental as the one in this bill—without themselves being subject to that tax. I will push for consideration of this bill until it is either enacted into law or a complete, fundamental review of the social security system is undertaken.

AGRICULTURAL TRADE EXPANSION ACT OF 1977 INTRODUCED

HON. PAUL FINDLEY

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Thursday, December 15, 1977

Mr. FINDLEY. Mr. Speaker, in the past few years we have learned how important agricultural exports are to American farmers. To keep our exports strong, we need to build new markets while maintaining the customers that have provided our strong export performance of the past few years. Without food exports, our already bleak balance of payments situation will grow worse.

In recognition of our commitment to a forward-looking and effective export policy, Senator Humphrey and I have decided to offer in our respective Houses of Congress a new bill, the Agricultural Trade Expansion Act of 1977. In view of the current depressed state of affairs for American farmers, we believe that Congress should move expeditiously in considering this important legislation.

The bill that I am introducing is not a concessional or giveaway program. It is a bill designed solely to maximize our farm exports on a commercial basis. As such, this bill will not cost the American taxpayer one cent.

This bill would accomplish two important objectives. The first would be to establish an intermediate credit program under the Commodity Credit Corporation. The second objective would be to nullify existing restrictions on the ability of the Commodity Credit Corporation to extend participation of its programs to non-market-economy countries.

The purpose of the intermediate credit program is to provide the CCC the capacity and flexibility to compete with our principal competitors in the world marketplace. Canada, Australia, and Argentina are able to provide longer term credit than is currently available through the CCC. The CCC is able, as you may know, only to provide credit for up to 3 years. This bill would provide the CCC authority to offer terms of up to 10 years.

By writing this provision into law, we will be bridging the gap that currently exists between the current CCC program and title I of Public Law 480 (food for peace). The Public Law 480 program authorizes concessional credit for 20 to 40 years as opposed to the CCC program of up to 3 years at commercial rates of interest.

The second portion of our bill will establish the eligibility of non-market-economy countries to participate in CCC credit programs. Senator Humphrey and I decided to take this approach because we believe that these countries will be where our significant market advances will be made in coming years. We must begin to export to these countries or we will lose these important markets to competing nations, thereby continuing our historic position as no more than a residual supplier.

None of these nonmarket economies will be getting a free ride. And all of them will be required to meet stringent CCC tests for credit worthiness. If these rigid standards cannot be met, then credit simply will not be offered. In no case will it be offered on concessional terms.

While this bill will not immediately reverse the discouraging conditions facing our farmers, Mr. Speaker, it will be a promising and significant step in the right direction.

List of cosponsors follows:

Mr. Findley, Mr. Rostenkowski, Mr. Derwinski.

Mr. Guyer, Mr. Bedell, Mr. Sebelius, Mr. Baldus, Mr. Nolan.

Mr. Glickman, Mr. Quie, Mr. Andrews of North Dakota, Mr. Baucus.

Mr. Blouin, Mr. Leach and Mr. Ottinger.

Text of bill follows:

H.R. —

A bill to authorize the Commodity Credit Corporation to finance export credit sales of agricultural commodities and to authorize non-market economy countries to participate in certain programs of the Commodity Credit Corporation

Be it enacted by the Senate and House of Representatives of the United States of States of America in Congress assembled, That this Act may be cited as the "Agricultural Trade Expansion Act of 1977."

Sec. 2. Section 4 of the Food for Peace Act of 1966 (80 Stat. 1538; 7 U.S.C. 1707a) is amended to read as follows:

"Sec. 4. (a) Commercial sales of agricultural commodities out of private stocks on credit terms of not to exceed three years may be financed by the Commodity Credit Corporation under its Export Credit Sales Program.

"(b) Export sales of agricultural commodities out of Commodity Credit Corporation and private stocks on credit terms in excess of three years, but not more than ten years, may be financed by the Commodity Credit Corporation. The provisions of Public Law 664, 83rd Congress, as amended (68 Stat. 832, 46 U.S.C. 1241(b)), shall not apply to sales financed pursuant to this subsection.

"(c) There are hereby authorized to be appropriated such sums as may be necessary to reimburse the Commodity Credit Corporation annually for its actual costs incurred or to be incurred under programs undertaken under this section.

Sec. 3. Notwithstanding any other provision of law denying non-market economy countries eligibility to participate in programs of the Government of the United States, such countries shall be eligible to participate in any program carried out by the Commodity Credit Corporation (other than under the Agricultural Trade Develop-

ment and Assistance Act of 1954) under which credit or credit guarantees or investment guarantees are extended, directly or indirectly.

A TRIBUTE TO ADOLPH RUPP—BARON OF BASKETBALL

HON. JOHN BRECKINRIDGE

OF KENTUCKY

IN THE HOUSE OF REPRESENTATIVES

Thursday, December 15, 1977

Mr. BRECKINRIDGE. Mr. Speaker, it is with great sadness that I report to the House today that the "Baron of Basketball," "The Man in the Brown Suit," Adolph Rupp is dead of cancer at the age of 76.

As head basketball coach at the University of Kentucky in Lexington—my district—Coach Rupp won more college basketball games than any other coach in history. His lifetime record was 879 victories against 190 defeats—an admirable record in any field of endeavor.

His career can only be called an epic. The impact, record and achievements of Adolph Rupp are almost difficult to overstate. He was a great man, a great leader, and a great Kentuckian. He may be the most famous Kentuckian since Abraham Lincoln.

No one who loves basketball in America will ever be able to forget Coach Rupp and his fighting U.K. Wildcats—"The Fabulous Five"—Alex Groza, Ralph Beard, Kenny Rollins, Wah Wah Jones, and Cliff Barker. And who will ever forget Cliff Hagan, Frank Ramsey, the "Fiddlin' Five" and—yes—even "Rupp's Runts?" Forty-three years of colorful, exciting, and winning basketball—that was Adolph Rupp's gift to the Commonwealth of Kentucky.

The Rupp "style" was also unforgettable. His fast-break play totally revolutionized the game of basketball forever. And he cared about winning. Rupp had no patience with those who thought winning was not important—only the way you played. "Why in the Hell do they keep score, then?" he was fond of saying.

Coach Rupp's illustrious career was ample testimony of his attitude about the importance of winning. It included four NCAA national titles, 20 NCAA appearances, 27 Southeastern Conference titles, one NIT crown, and a lifetime winning percentage of 83 percent. Only one adjective can summarize this man—he was a winner.

A day of mourning was ordered by our Governor, Julian Carroll, for December 13—the day Coach Rupp was to be buried in his familiar trademark—his brown suit.

So Coach Rupp is gone but not forgotten. One year ago, a 23,500 seat arena—the Rupp Arena—was dedicated in Lexington as a lasting tribute to the Baron of Basketball.

ANTI-INFLATION TAX REDUCTION AND REFORM ACT OF 1977

HON. WILLIS D. GRADISON, JR.

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Thursday, December 15, 1977

Mr. GRADISON. Mr. Speaker, today I introduced a bill entitled the Anti-Inflation Tax Reduction and Reform Act of 1977. This bill, quite simply, provides tax justice for the American taxpayer. The general approach of this bill will be to adjust the income tax tables on a yearly basis to take into account the rate of inflation. In other words, this "indexing" will adjust the tax tables annually for the benefit of the taxpayer by offsetting inflation that has already occurred.

This type of tax reduction is long overdue. Because the personal income tax tables are progressive in nature, any increase in income leads to a greater tax burden on every American wage-earner. This kind of progressive tax liability, or escalating feature, hits hardest in the lower-income brackets. What really happens is that the American taxpayer never "catches up" with the inflation that the Federal Government helps to create in the first place. Indeed, after the Federal Government takes its share right off the top, the amount of money that a family actually gets to spend decreases. So, despite rising personal income, a family's purchasing power is continually chipped away by these automatically imposed tax liabilities.

In my opinion, the Congress plays a cruel hoax on every working American when it expects a pat on the back for giving periodic tax cuts. The fact is, those cuts are nothing more than an economic flimflam. Those cuts do not begin to make up for the yearly inflation we all are faced with. It is high time that the taxpayer gets the break instead of the Federal Treasury. After all, it is the taxpayer's money, not the Government's. I do not believe that the working men and women of this country should have to wait for a "generous Congress" to give them back something that they have already earned.

My indexing plan would allow for an automatic yearly "catch up" for the American taxpayer instead of the present system in which they are indeed fighting a losing battle. This system is not new. The Congress is well aware of the benefits of "indexing." In fact, when those indexing benefits work to the Government's advantage, the Congress always manages to use it. We index social security, we index supplemental security income, we index Federal and congressional salaries and there is now talk of indexing welfare benefits. Surely if these forms of indexing make sense we should apply the same principle to the taxpayers who foot the bill for Government spending programs and quite frankly force the U.S. Government and its elected Representatives to face the realities of inflation head on.

Let me quickly explain how this system would work for the benefit of American taxpayers. Every year, the withholding rates and tax tables will be recalculated so that if your income is increased to make up for inflation, your taxes will be in the same proportion to your income as they were before the inflation occurred. This is the only reform which successfully counters future inflation as well as past. It will provide that American taxpayers pay no more than their fair share for the services their Government provides, while also ending a deceptively hidden tax increase. In the future, if my proposal were law, tax cuts passed by the Congress would be real, permanent reductions in taxes and, conversely, any future tax increases would be voted on by Congress and signed by the President, instead of being automatically imposed through inflation.

This proposal does not fully complete the job of adjustment, but it does establish the principle that the American taxpayer comes first.

Mr. Speaker, by introducing this bill on the final day of this session of Congress, I am asking that any tax reductions which may be proposed in the months ahead—including those of the President—be measured against this simple test: Do such tax cuts produce lasting, permanent protection for income taxpayers in an environment of continued inflation. Only a tax cut which meets this test—as mine would do—will be considered true tax reform and tax reduction by the American people.

RECENT ADMINISTRATION ARMS CONTROL INITIATIVES THREATEN

HON. JACK F. KEMP

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, December 15, 1977

Mr. KEMP. Mr. Speaker, in recent weeks, the Carter administration has taken several initiatives in the arms control arena, most of which will, if agreed to, have adverse implications for the security interests of the United States and particularly our primary alliance, NATO.

For instance, cruise missiles. The European members of NATO perceive the cruise missile as their future principal means of offsetting the drastic increase in the threat posed to their security by the Soviet Backfire bomber and SS–20 mobile intermediate range ballistic missile. Nevertheless, the Carter administration has adopted a SALT posture, particularly with respect to qualitative limitations placed on American cruise missiles, and limitations on the transfer of cruise missile technology to allied nations. Our European allies now understand that there are no circumstances in which the United States will transfer cruise missile technology to them if it has been denied to the United States by treaty. The limitations on cruise missiles are so onerous on the United States as to deny the full potential of this new technology to Europe. The implications of this could be disastrous of our own and allied security.

Comprehensive test ban. The administration's zeal to reach an agreement to ban all nuclear tests has pushed us into a national posture of proposing an agreement which will permit the Soviet Union to conduct tests which exceed American verification capabilities. By failing to make proper allowance for permitted activities within the scope of the proposed agreement will result in an asymmetric accord favoring the Soviet Union. Unless some major suitable definition of permitted and prohibited activities can be reached within the context of the CTB, I believe that the Congress should reject such a treaty in the ratification process.

The administration's proposals in the arms control arena have taken a particularly ill-advised course, and the difficulties the administration's SALT proposals have faced have been compounded rather than alleviated by its recent arms control initiatives. Unless policies are swiftly reversed, our arms control posture will become an instrument for increasing the risk of war and the manipulation of the threat of force in a crisis by the Soviet Union rather than a vehicle for inducing a reduction in the risk of war.

The Wall Street Journal in its editorial for December 15, 1977, provides an incisive critique of the American SALT posture as it affects our most crucial alliance, the NATO alliance. I insert the text of the Journal editorial in the Record at this point:

UNDERMINING THE ALLIANCE

While the formal meeting of the North Atlantic Treaty Organization last week issued a communique backing U.S. efforts to reach a new strategic arms agreement with the Soviet Union, the meeting was dominated by Europeans' fears that they are being sold out. In fact a treaty along the lines now being negotiated is almost certain to undercut efforts to reinvigorate the alliance.

Consider the view from Europe. The Soviet Union's military build-up continues across the board, and items that are marginal in the strategic arms negotiations are of huge moment to the European theater. One can argue, for example, about the threat to the U.S. from the new Soviet Backfire bomber, which can fly from Russia over the U.S. and land in Cuba. But clearly this advanced airplane greatly increases the threat to Europe.

Similarly, the Soviets are already deploying. This modern missile has a range of about 4,000 kilometers, not that much less than the 5,500 kilometers defined as intercontinental. The SS–20 is in fact the top two stages of a mobile intercontinental missile, missing stage could quickly convert these missiles to an intercontinental threat. In fact, the Soviets are known to be producing the extra stages for "storage." But even without the third stage, the SS–20 holds hostage every city in Europe.

NATO's big hope for offsetting these new Soviet deployments is the cruise missile, various versions of which are still in the development stage. The cruise misile is essentially a drone aircraft that flies at subsonic speeds but hopes to penetrate air defenses through its small size and ground-hugging altitudes. It can be equipped with astoundingly accurate guidance, meaning it is valuable not only as a strategic weapon with nuclear warheads, but as a theater weapon with conventional warheads. Its relatively low cost makes it an especially attractive choice for our European allies, who do not have superpower budgets.

As tentatively agreed between the U.S. and the Soviet Union, the next strategic arms pact would limit the SS–20 not at all. It would limit the Backfire scarcely at all; the Soviets agreed not to build the new bomber faster than they already are, though at last word were refusing to say how fast that is. By contrast, the new pact seems likely to eviscerate the cruise missile.

Land- and sea-based cruise missiles would not be permitted ranges of over 600 kilometers, whether armed with nuclear or conventional warheads. Air launched cruise missiles can have ranges up to 2,500 kilometers, but may be installed only on heavy bombers. The number of these bombers is sharply curtailed, and if we can deploy only a few cruise missiles the development program may become vulnerable to cancellation on cost/effectiveness grounds. These treaty limits formally apply only to the U.S. and Soviet Union, of course, but a more-or-less-vague clause would prohibit "circumventing" its provisions, meaning transferring weapons or technology to allies to escape treaty limits.

So when any clear-eyed European looks at this package, he will see this: The Soviets can have unlimited numbers of a 4,000-kilometer, supersonic, multiple-warhead, mobile ballistic missile with which to threaten Europe. But if the Europeans want a subsonic, single-warhead, conventionally armed cruise missile, it cannot have a range of more than 600 kilometers. While agreeing to this kind of treaty, the U.S. tells its NATO allies that to meet the growing Soviet threat they must boost their defense spending and take the political heat for the decision to deploy the neutron bomb.

At the NATO meeting last week, Secretary of State Vance and Defense Secretary Brown tried to reassure the allies with a number of different arguments: That arms negotiations are good irrespective of the provisions of the treaty that results. That the circumvention provisions do not really ban American help for European cruise missiles. That the treaty limitations on cruise missiles are in a part of the treaty that only lasts three years, and cruise missiles will not be available for that long anyway.

This is reassuring only if you believe the U.S. will in fact circumvent the strategic arms treaty by providing the Europeans with cruise missile technology, and only if you believe the three-year limits will in fact not be extended. The last arms treaty to expire, the SALT–I interim agreement on offensive arms, was extended by a gimmick that precluded ratification by the U.S. Senate, let alone the allies. The Europeans did not ask for these promises in writing, as we would have, so perhaps they are persuaded. But they will not stay persuaded for long, and if the treaty is signed the alliance will have been dealt a severe and perhaps irreparable blow.

QUOTAS CRITICIZED AS UNDEMOCRATIC

HON. ROBERT S. WALKER

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, December 15, 1977

Mr. WALKER. Mr. Speaker, as a college student during the early 1960's, I participated in activities which helped bring about an end to legal segregation in this country. Like millions of other Americans, I saw in the ideals of the civil rights movement, the promise of a society where a person's race, religion, or sex would no longer be a basis for discrimination, and where Americans would come to view each other as individuals.

In recent years, however, it has become increasingly clear that this dream has largely remained that—a dream. Sadly, the Federal Government which has been advocating special treatment for some, rather than equal treatment for all, through the implementation of quotas, must shoulder much of the responsibility for the continuing divisions in our society.

Unfortunately, much of this special treatment is being advocated in the name of the civil rights movement by people who seem to believe that the aim of that struggle was not equal opportunity for all individuals, but rather proportionate representation for some groups. To this end, they favor racial quotas and ethnic labeling, to insure that everyone is assigned membership in an "ethnic group" and that these groups get their designated "share" of opportunity.

I am convinced that these quotas, by making those personal qualities over which an individual has no control—race, nationality, or sex—the base for deciding who should be hired for a job or admitted to college, subvert the very meaning of the civil rights struggle. Just as I fought for the end of "Jim Crow" laws while in college, I am now fighting to end this new racial discrimination by sponsoring H.R. 9286 which would make Federal enforcement of such quotas by the Federal Government illegal.

Many individuals who were involved in the civil rights movement have also recognized that racial quotas are a step in the wrong direction. Prominent among these people is Bayard Rustin, former special assistant to Dr. Martin Luther King, and a man who was arrested 24 times for his role in the struggle for civil rights. In a recent speech at the University of Delaware, Mr. Rustin indicated that he felt such quotas were "a violation of democracy" and declared he was "unalterably opposed" to their use.

I am inserting into the Record an account of Mr. Rustin's speech which appeared in the November 29, 1977, issue of the Wilmington, Del. Evening Journal. The article follows:

QUOTAS CRITICIZED AS UNDEMOCRATIC

Bayard Rustin, active in the civil rights movement since the early 1940s, told a University of Delaware audience last night he is "unalterably opposed" to quota systems for minorities.

The 67-year-old native of West Chester, Pa., said quota systems are undemocratic. He said he wants blacks to feel they can do things on their own merits, "not because of what somebody may have done to somebody's grandfather. . . . You cannot pass on the other generations anything but the responsibility for their own."

Rustin, a former special assistant to the late Dr. Martin Luther King Jr., was speaking at part of the university's Concept of Power lecture series.

"Power for religious and ethnic groups . . . relies on their ability to convince the majority that their cause is just and what they are asking for is sane," Rustin said.

He told the mostly white audience that a democracy is the only place blacks will get their rights. He said, "At the point where there is a violation of the principles of democracy, a minority group is impaired."

Saying that race is no longer the dominant issue in the black struggle, Rustin pointed out that the problem "is more profoundly class than race." Using integration in Boston as an example, he said the working class whites are expected to achieve integration in South Boston while the wealthier classes are left comfortably out of it. "Unless there is a fantastic adjustment in the tax structure of this country, there is no way the blacks will have the ability to appeal to the white people." He said President Carter is making certain "that the wealthy are satisfied" and rates poorly in the black struggle.

Rustin, arrested 24 times in his struggle for human rights, emphasized that people are basically the same, and that blacks should fight not only against injustices to them, but to all people.

GRAND JURIES: A LAWYER'S REBUTTAL

HON. MARTY RUSSO

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Thursday, December 15, 1977

Mr. RUSSO. Mr. Speaker, grand jury reform is the subject of continuing debate in legal circles, as well as the press.

With such a complicated issue, I think we are wise to listen closely to those whom we know to be skilled in the law and perceptive in their judgments. Such a man is Melvin Lewis, professor of law at John Marshall School of Law in Chicago. Professor Lewis has been involved in many congressional hearings on the criminal justice system, including hearings on the rules of criminal procedure and the entire criminal code.

Today I would like to share with my colleagues Professor Lewis' rebuttal to a Chicago Tribune editorial on grand juries:

[From the Chicago Tribune, Sept. 9, 1977]

GRAND JURIES: A LAWYER'S REBUTTAL

CHICAGO.—As a member of the American Bar Association Committee on the Grand Jury, I was deeply disturbed by the argument made in your Aug. 15 editorial "Reforming the grand jury."

You concede that the grand jury is normally only a rubber stamp for the prosecutor, and that its procedures lend themselves to an abuse of witnesses. Yet you object to permitting witnesses to be accompanied by their lawyers—the only reform which could meaningfully palliate the worst of these abuses.

Your first argument is that a grand jury witness doesn't need protection, since he is not on trial. Very much the contrary, the involuntary grand jury witness is the least favored person known to the Constitution and is subject to practices which would not be tolerated if performed by a policeman against a suspect at a station house.

As only one minor example, the Supreme Court recently upheld the prosecutor's right to call a suspect before a grand jury without letting him know that he is a suspect. Indeed, such a person is not even entitled to Miranda warnings. By the time the prosecutor finishes questioning his target, he has frequently obtained a transcript which renders the ensuing trial an empty formality. Any reasonably competent lawyer, questioning a friendless witness in oppressive circumstances, will have little trouble producing such a transcript.

You also state that such a witness has "the right to take the 5th Amendment." Alas, that is no longer true. He has the right only to a specious protection called "use immunity." He talks, or he goes to jail; and if a witness, however honest, can be forced to talk enough, it is no great trick to extract a statement which can arguably be called perjury. The resulting perjury indictment reflects a "crime" deliberately produced by the grand jury, supposed protector of the innocent. That is exactly what happens on almost a daily basis.

Your characterization of the grand jury as "the citizen's ultimate legal recourse against tyranny" will evoke rueful shudders from all experienced lawyers who know the grand jury to be the most significant source of tyranny in our legal system. And your suggestion that "one of the first moves of a would-be dictator . . . is to try to abolish it" has no historical basis. The grand jury is exclusively a feature of Anglo-Saxon law and has now been abolished in England, where it was invented—a recognition that the grand jury concept may be practical as applied to a bucolic, medieval society, but that it has no rational place in a modern legal system serving a densely compacted urban population.

You state that protection is unnecessary because a grand jury is theoretically independent of the prosecutor. The "runaway" grand jury to which you refer is so infrequent a phenomenon as to be meaningless. The grand jurors, unaided, do not even know how to issue a subpena to bring a witness before them. The "runaway" grand jury is not even a theoretical factor in federal law, since an indictment has no validity unless the prosecutor signs it. The true state of affairs is reflected by the Watergate grand juries. There were two of them. The first was in the hands of a prosecutor who apparently wanted criminal charges limited to the direct burglary participants. The second was in the hands of a prosecutor who apparently wanted criminal charges against high public officials. Each prosecutor got what he wanted.

Next, you say that it is "natural that prosecutors should denounce the plan." But in fact, the chairman of our committee is a professional prosecutor of more than 25 years' experience; and the dozen or so members of the committee include at least three other present and many former prosecutors. The recommendation of the committee was unanimous, because its members felt a stronger commitment to individual liberties than to a narrow professional advantage.

Finally, you suggest that the ABA voted for this plan because it would "give them more work." That suggestion lacks all factual base. The knowledgeable witnesses who can afford such service are represented already, and public defenders have no time to devote to the recruitment of clients. However, under present practice the lawyer must sit outside the grand jury room, and the witness must excuse himself to consult with the lawyer when he wishes to do nothing more than to permit the lawyer to join his client. It hardly merits the apocalyptic vision which your editorial calls forth.

FARMERS' WATER RIGHTS INCLUDE KEEPING PANAMA CANAL

HON. GEORGE HANSEN

OF IDAHO

IN THE HOUSE OF REPRESENTATIVES

Thursday, December 15, 1977

Mr. HANSEN. Mr. Speaker, the mainstay of America's economic well-being lies in its farms. To date much attention has been given to various aspects of the proposed Panama Canal Treaties, however little has been said about the potential harm which would befall the American farmer. Recently, I happened upon an article entitled "The Panama Canal and U.S. Farm Trade" which was published by the Department of Agriculture. The article is exceptionally good and I highly recommend it to all my colleagues, especially those who have large farming interests within their districts.

Additionally, Mr. Speaker, at my request the Congressional Research Service prepared an analysis of this article which I also include for the RECORD:

THE PANAMA CANAL AND U.S. FARM TRADE

While its role in total U.S. trade has declined in recent years, the 51-mile-long Panama Canal continues to be a key east-west link for U.S. farm trade. Grain, soybeans, and cotton headed to the Far East from U.S. Great Lakes, east coast, and gulf ports are especially dependent on the Canal, whose opening in 1914 gave U.S. shippers a welcome alternative to the hazardous Cape Horn route and helped foster east-west trade.

During 1976, about one in every 5 tons of U.S. farm product exports moved through the Canal. This amounted to some 20 million metric tons, or two-thirds of all farm product traffic through the Canal last year and about 17 percent of total Canal shipping.

Far the most important farm commodities shipped via the Canal are grains, soybeans, and other bulk products, whose lifelines to foreign markets are still the ocean-going tankers and freighters.

During fiscal 1976 grains and soybeans accounted for 16.3 percent of all traffic through the Canal—their share being exceeded only by the 18.7 percent for petroleum and petroleum products.

In calendar 1976, roughly 18 percent of the 44.3-million ton U.S. corn export, 26 percent of the 15.3 million-ton soybean export, and 45 percent of the 5.7-million ton grain sorghum export moved through the Canal. These three products, combined, earned $9.1 billion in foreign exchange for the United States during 1976 out of the $23 billion in total U.S. farm exports.

Adding in other bulk products dependent on Canal transit—including wheat and cotton—would push the figure much higher still.

By penetrating the land barrier to transportation posed by Central and South America, construction of the Canal through the Isthmus of Panama represented one of the early breakthroughs for U.S. trade, paving the way for export gains in the Far East and other distant markets. For many U.S. farm products, this advantage continues, despite hikes in Canal tolls since 1974 and the advent of air transportation and innovative land-sea connections.

Last year, for instance, the Canal handled 70 percent of all U.S. farm commodity exports to 15 markets in East, Southeast and South Asia and Oceania. The Asian market as a whole now means $8.5 billion to U.S. farmers and ranks alongside Western Europe as the leading outlet for U.S. agricultural products.

Japan—the largest single-country market, with imports of U.S. farm products approaching $4 billion—took over 12 million tons of U.S. agricultural shipments through the Canal last year. That adds up to around 60 percent of all U.S. farm product exports through the Canal and an even larger percentage of U.S. farm trade with Japan.

South Korea and Taiwan each took more than 1.5 million tons of U.S. products via the Canal last year, while Hong Kong, Indonesia, and Chile also received large quantities of westward bound shipments.

[1] Including bananas, dairy products, fish, meat and other.

[2] Fish oil, vegetable oil, coconut oil and whale oil.

Note: Atlantic/Pacific lumber and products in 1976 were 216,000 metric tons and Pacific/Atlantic shipments were 5,432,000 tons.

Trade between the U.S. east coast and Asia was 47,900,000 tons or 48 percent of the total canal cargo volume through the canal. Japan was the origin or destination of 44,700,000 tons of cargo transiting the canal or 77.1 percent of the total cargo moving to and from the Far East.

Source: Panama Canal Company, "Annual Report, Fiscal Year—June 30, 1976."

Such products originate throughout the eastern half of the United States, ranging from the granary States of the Midwest and Great Plains to the cotton fields of Arkansas and Louisiana.

U.S. corn and soybeans bound for the Far East travel to Great Lakes ports or down the Missouri, Ohio, and Mississippi River to the gulf for westward shipment through the Canal.

Short-staple cottons used by Asian markets are produced in Texas and the western Old South and shipped out of the gulf.

While White wheat and Hard Spring wheats produced in the Pacific Northwest tend to go to west coast ports, Hard Red Winter wheats and almost all grain sorghum move out of the gulf and—again—through the Canal.

Also of significance are shipments from the U.S. west coast to Europe, as well as to the

U.S. east coast. Last year, 60,802 bales of California and Arizona cotton moved eastbound into export through the Canal. In addition, much canned fruits and vegetables moving from the west coast to east coast, as well as some citrus and dried fruits, go through the Canal.

Total shipping through the Canal during fiscal 1976 included 13,201 ship transits and cargo movements of 119.3 million metric tons. (However, this was the lowest level since 1965, reflecting the worldwide recession and reopening of the Suez Canal.)

Of all the foreign trade going in and out of U.S. seaports, 7 percent passed through the Canal in fiscal 1976, compared with 13 percent in 1949. More than two-thirds of this trade either originated in the United States or was destined for U.S. ports.

Tolls on the Panama Canal have been increased three times since 1974—once as a result of a technical change and twice to make up for deficits incurred by the Panama Canal Company, which is required by law to be self-sustaining. So far, these increases have carried charges some 50 percent above those prevailing before 1974, to $1.29 per ton currently.

Still, the Canal is a much more economic means of shippinig bulk products than any other alternative now available.

Rerouting grain shipments around South America might almost double transportation costs, according to USDA analyses. And transit time would be increased considerably; for example, shipping time from New Orleans to Yokohama would rise from an average of 25 to 45 days in vessels that normally carry shipments of bulk grain.

Such factors would lessen the U.S. farmer's ability to compete for Asian markets, thus benefiting Australia and other exporting nations with access to the Pacific or those with closer locations to major markets. Cross-country land-sea transportation—including the minibridge system with surface carriers now used extensively for container shipping—also would be prohibitively expensive for grains and soybeans. Moreover, existing transportation and port facilities could not handle the volume increases that would be required to circumvent the Canal.

U.S. farmers and rural communities thus have much to gain from continued, dependable operation of the Panama Canal.

These benefits radiate throughout the economy. Farmers depend on the export market to take one in every three harvested cropland acres, amounting to a fifth of net farm income. And gross farm income in the first half of 1977 was running at an annual rate of $108 billion—more than that generated by any other U.S. industry—with some $85 billion of the production expense paid to people outside agriculture.

A LOOK BACK

For early U.S. shippers, South America posed a formidable barrier capped by a hellish passage around Cape Horn through the Straits of Magellan. Probably the most vivid picture of shipping in the 1830's comes from Richard Dana's Two Years Before the Mast and his account of life on brigs laden with hides bound from the west coast for Boston. To Dana, the voyage from Santa Barbara, California, to Boston reached its climatic low on the trip around Cape Horn. Describing desolate Staten Land east of Cape Horn, Dana wrote:

"It was a place well suited to stand at the junction of the two oceans, beyond the reach of human habitation, and encounter the blasts and snows of a perpetual winter. Yet dismal as it was, it was a pleasant sight to us; not only as being the first land we had seen, but because it told us that we had passed the Cape—were in the Atlantic—and that, with twenty-four hours of this breeze, we might bid defiance to the Southern Ocean."

The "remote and almost unknown coast of California" described by Dana was eventually to become a bustling commercial and population center, while distant markets in Europe and the Far East were to figure importantly in U.S. trade. Transit time from the U.S. west to east coasts would be shortened from 150 days or more to about 2 weeks. Actual distance would be reduced by more than half with the building of the Panama Canal across the Isthmus of Panama some 80 years later. And costs, both human and monetary, would be cut dramatically.

Because of early shipping problems, however, attention was soon focused on building a canal across the narrow neck of the Ithmus of Panama.

In 1881, a French company began the first unsuccessful, effort to build a sealevel canal across the Isthmus. Some 21 years later—on June 28, 1902—Congress approved the Spooner Act, authorizing President Theodore Roosevelt to buy for $40 million the rights and property of that company, contingent on provision by Colombia of the necessary land to be controlled by the United States.

The Hay-Herran Treaty, signed by the United States and Colombia, January 22, 1903, would have provided these rights for 100 years. The U.S. Senate ratified the Treaty, but the Colombian Senate refused.

On November 3, 1903, a revolt in Panama created the independent nation of Panama, and U.S. naval vessels prevented Colombian troops from landing to put down the revolt. The new nation was recognized by the United States on November 16.

Then, on November 18, 1903, the Hay-Bunau-Varilla Treaty was signed by the United States and Panama's Provisional Government. It granted the United States the exclusive right in perpetuity to build and operate a canal across Panamanian territory and all the rights it would possess as if it were sovereign.

The United States agreed to pay Panama $10 million outright and $250,000 annually beginning in 1913. This treaty has remained the basic authority for U.S. control of the Canal, although modifications were agreed to in 1936 and 1955.

The Canal was opened August 15, 1914, after 10 years of construction at a cost of $387 million. It is 51 miles long, and the Canal Zone is 647 square miles, including tidal water.

Under terms of the 1903 Hay-Bunau-Varilla Treaty, the Canal Zone is within the jurisdiction of the United States and is administered under U.S. law by a governor appointed by the President for a 4-year term. The governor serves as president of the Panama Canal Company, which is a corporate agency of the U.S. Government and operated under a Board of Directors appointed by the Secretary of the Army.

The Canal Company is responsible for all operations involved in the movement of ships through the Canal.

Following Panamanian riots in 1959 and 1964, new draft treaties were announced in 1967. These proved fruitless, and new treaty negotations were begun in 1973, continuing until this year. Since 1964, four Administrations, representing both political parties, have pursued such negotiations.

PANAMA CANAL TREATIES

U.S. negotiations of new treaties have been based on the premise that the national interest lies in assuring that the Canal continues to be efficiently operated, secure, neutral, and open to all nations on a nondiscriminatory basis. The cooperation of Panama is fundamental to these goals.

The new treaties, signed in Washington, September 7, 1977, are contingent on ratification by the U.S. Senate and by national plebiscite in Panama. There are two treaties—one guaranteeing the permanent neutrality of the Canal, and a basic treaty governing the operation and defense of the Canal through December 31, 1999.

Provided the treaties are ratified, the United States will have responsibility for Canal operations, including tolls, during the period of the basic treaty (until 2000). It will continue to have access to and the rights to use all land and water areas and facilities necessary for the operation and maintenance of the Canal during that period.

Panama will receive an annual payment from toll revenues of 30 cents per Panama Canal ton transiting the Canal, this to be adjusted periodically for inflation. The United States also will pay Panama $10 million a year for operating expenses, plus $10 million more, if Canal revenues permit, compared with $2.6 million currently paid each year.

In addition, the United States has pledged its best efforts to assist Panamanian development through loans and credits under existing U.S. authority.

Private business and nonprofit activities in the present Canal Zone will be able to continue on the same terms applicable elsewhere in Panama. A joint authority will coordinate port and railroad activities.

All U.S. civilians currently employed in the Canal Zone can continue in U.S. Government jobs until retirement. Other provisions generally assure the continuation of protections and benefits now available to these employees.

The two countries commit themselves jointly to study the feasibility of a new sea-level canal and, if they agree that such is necessary, to negotiate mutually agreeable terms for its construction. In addition, the United States will have the right throughout the term of the basic treaty to add a third lane of locks to increase the capacity of the existing Canal.

Other provisions of the treaties cover defense and national security considerations. The United States will have primary responsibility for the Canal's defense during the basic treaty's term, after which the U.S. military presence will end in the year 2000. Total U.S. military personnel in the Canal Zone is now 9,300.

U.S. agriculture's interest in the treaties hinges on continuation of dependable trading lanes throughout the world—free of exorbitant new increases in transportation costs. Higher energy costs have not been avoidable, but farmers need to know that the commodities they produce will not stack up in port or on the way to sea—owing to a closing of a major transportation route or a prohibitive rise in shipping costs. It is important that the Panama Canal Treaties perpetuate these conditions.

POSSIBLE EFFECTS OF INCREASED CANAL TOLL FEES AND RESTRICTED ACCESS TO THE PANAMA CANAL ON U.S. AGRICULTURAL TRADE

(By Janice E. Baker)

This report was prepared in response to a Congressional request for analysis of and comments on the general effect of increased Panama Canal tolls on U.S. farm trade, and for comments on the statistical tables appearing in "The Panama Canal and U.S. Farm Trade," Foreign Agriculture, October 17, 1977.

IMPORTANCE OF THE PANAMA CANAL

The Panama Canal has been a major transportation route for U.S. farm exports and imports for many years. In 1976, approximately 20 percent of all U.S. agricultural exports, or about 20 million tons of commodities, travelled through the Canal. This figure included 45 percent of U.S. grain sorghum exports, 26 percent of U.S. soybean exports, and 18 percent of U.S. corn exports. Imports of fruits and other tropical products pass through the Canal on route to U.S. markets. Domestic produce, such as processed fruits and vegetables, moving from the U.S. West Coast to eastern markets also use the Canal.

The Canal is particularly important in U.S.-Asian trade. About 70 percent of U.S. farm products sent to Asian markets in 1976 travelled through the Canal. Corn, soybeans, wheat, and grain sorghum from the Midwest were shipped to Gulf ports and through the Canal to the Far East. Short staple cotton from Texas, Arkansas, and Louisiana followed the same route to Asian markets.

Japan, the largest single market for U.S. farm commodities, receives much of its imports by way of the Canal. In 1976 Japan received 12 million tons of U.S. corn, soybeans, and grain sorghum through the Canal. Korea and Taiwan each received 1.5 million tons of U.S. farm goods by the Canal route.

The second table in the Foreign Agriculture article, found on page 3, shows that the bulk of cargo moving through the Canal in 1975 was on route from the eastern United States to Asia. This shipping represented 39 percent of the total tonnage going through the Canal. The second most significant category in the table was shipping between Europe and the U.S. West Coast (7 percent of the total). Increases in Canal toll fees or loss of access to the Canal route could have had detrimental effects on shipping between those markets.

CANAL TOLL INCREASE

U.S. law requires that the Panama Canal Company be self-supporting through collection of Canal toll fees. The current toll is $1.29 per Panama Canal ton, a measure equal to a volume of 100 cubic feet.

With or without ratification of the recently negotiated treaties, Canal toll rates are expected to rise in the near future, perhaps by as much as 30 percent. Using that figure, the new rate could be $1.68 per Panama Canal ton.

Department of Agriculture officials have estimated that a 30 percent increase in the toll could add 5 percent to overall transportation costs for farm exports using the Canal. Although this increase could reduce the current price advantage of U.S. wheat over Canadian wheat, the U.S. soybeans over Brazilian soybeans, in Asian markets, the impact on the total volume of U.S. export sales should be minimal.

The third table in the Foreign Agriculture article, found on page 4, shows the major agricultural commodities moving through the Canal in 1976. In the Atlantic/Pacific direction, the most important items in terms of tonnage were corn (42 percent of the total) and soybeans (23 percent). An increase in transportation costs for these commodities could make them somewhat less competitive with similar products from other nations. Because export sales of these products are major contributors to the positive side of the balance of trade, the United States has good reason to try to maintain the volume of feedgrain and soybean exports.

The table indicates that in the Pacific/Atlantic direction the most significant commodities shipped in 1976 were canned and refrigerated foods (33 percent) and sugar (25 percent). An increase in transportation costs for these commodities could be reflected in retail costs for these products in grocery stores in the eastern United States.

The fourth table in the Foreign Agriculture article, found on page 4, indicates actual and projected Canal traffic for selected products, 1975–1979. For fiscal year 1978 the largest projected users are coarse grains and soybeans, followed by lumber, sugar, and wheat. Most of the projected traffic in coarse grains, soybeans, and wheat reflects exports from Atlantic and Gulf ports to Asian markets. Increases in transportation costs could reduce the comparative advantage of these U.S. commodities.

RESTRICTED ACCESS TO THE CANAL

U.S. officials and traders are more concerned over restricted access to the Canal than over a toll increase. Certainly the effect of restricted access to the shorter shipping route would be more harmful to farm trade than a higher charge for use of the Canal.

The first table in the Foreign Agriculture article, found on page 2, indicates the comparative distances between selected ports by way of the Panama Canal and by way of Cape Horn at the southern tip of South America. The shipping distance between New Orleans and Yokohama, Japan, would increase by 7,456 nautical miles, an increase of 82 percent. Although the shipping time and cost might not increase by the same percentage, it is clear that the longer route would have an adverse effect on the price of U.S. products in Asian markets.

Secretary Bergland has indicated that closure of the Canal could add 20 days to the delivery time for U.S. grains and soybeans in Asian markets, and the route around Cape Horn could double transportation costs. Australia and Canada would probably take Asian wheat markets away from the United States, and Brazil could undersell U.S. soybeans. In the Far East the United States currently has a price advantage over Brazil in soybeans, but the Cape Horn route would put the U.S. commodity at a price disadvantage.

Restricted access to the Canal could also have an adverse impact in terms of domestic marketing. The shipping distance between San Francisco and New York, for example, would increase by 150 percent. The relative costs of ocean and overland transportation and the importance of time in transit would have to be considered by West Coast shippers supplying the eastern United States.

Development of an overland transportation network to move grains and processed foods between East and West in the United States would require substantial financial investment. Railroad, truck, storage and handling facilities are currently insufficient to absorb the bulk of farm commodities that now travel by ship through the Canal.

RHODESIAN ARMS EMBARGO

HON. DON BONKER

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Thursday, December 15, 1977

Mr. BONKER. Mr. Speaker, I would like to call attention to a report written recently by two researchers who have been analyzing U.S. arms sales. The report describes continuing efforts to circumvent a United Nations embargo, supported by the United States, on arms sales to Rhodesia. Their analysis does not bode well for strict adherence to the recent U.N. embargo on arms sales to South Africa. If more is not done to prevent U.S. designed equipment, produced through licensing arrangements in other countries, from being transferred to South Africa or Rhodesia through overseas subsidiaries of U.S. multinational corporations, arms embargoes will have little chance of realizing their intended purposes.

Therefore, I commend the report to my colleagues and insert the following in the RECORD:

[From the Baltimore Sun, Nov. 22, 1977]

CIRCUMVENTING THE RHODESIA ARMS EMBARGO

(By Michael T. Klare and Eric Prokosch)

WASHINGTON.—In flagrant violation of a United Nations arms embargo officially supported by the United States, U.S.-designed Cessna 337 military aircraft have reportedly been sold to the breakaway Smith regime in Rhodesia.

Several of the planes have been used as spotters in raids on neighboring Mozambique, according to Tony Avirgan, a freelance correspondent based in Dar es Salaam. One plane has reportedly been shot down over Mozambique.

According to Milavnews, a private British intelligence newsletter, the Rhodesian Air Force has received 20 Cessna F337 "Milirole" aircraft. The newsletter states that the aircraft were produced in France under Cessna license and "arrived in Rhodesia by circuitous routes in mid-1976 when they were ostensibly ordered by a 'Spanish fishing company' in the Canary Islands."

The Canary Islands were named in the press last year as a conduit for shipments of Winchester handguns to South Africa in violation of U.S. law and the U.N. embargo against that country.

The 337s, light, twin-engine planes, were fitted with underwing armament racks and are known in Rhodesia as the "Lynx," according to Milavnews. The French version is specially modified for short takeoff and landing, making it ideal for counter-guerrilla operations in rugged country. Another military version of the 337, the O–2, was used in Vietnam for aerial observation and light bombing of ground targets.

The story of the 337s is a classic example of the way in which international sanctions can be circumvented.

In 1960, Cessna acquired a 49-percent holding in Reims Aviation of Reims, France. Reims Aviation was given a license to produce Cessna aircraft for sale to Europe, Africa, and Asia. However, the "primary structures" of the 337 planes are actually made in the United States and shipped to France, according to "Jane's All the World's Aircraft"; only certain smaller components and equipment are French-produced. The Continental engines are also American-designed and are produced by Rolls Royce in England under license from Teledyne, another American company.

The State Department, which is required by law to monitor exports of aircraft and other items on the United States Munitions List, has refused to disclose U.S. government licenses for Cessna exports to Rhodesia on the ground that the manufacturer has requested that such information be kept confidential.

An official in the State Department's Office of Munitions Control told us, however, that Cessna had never requested permission to export military aircraft to Rhodesia from France or the United States. And if such a request were received, it would be turned down, he said.

"We just can't do a thing like that," the official said, citing the United Nations arms embargo. "Most assuredly, if anything like that happens, it would be clandestine."

An official in Cessna's International Department in Wichita, Kansas said he could not comment without further investigation.

The United Nations sanctions against Rhodesia were imposed in 1966 as a result of the outcry in the world community when the minority colonial government illegally broke away from Great Britain. Since then the regime has used harsh measures to preserve white ascendancy over the black majority who constitute 96 percent of the population.

A recent report by the Rhodesia-based Catholic Commission for Justice and Peace charged that more than half a million black villagers have been forcibly removed from their homes and placed in "protected villages" lacking sanitary facilities, clean water, and sufficient food. There is a dusk-to-dawn curfew and Rhodesian security forces have orders to shoot without challenge anyone found outside the compound during those hours.

"The open season on curfew breakers in Rhodesia seems akin to the 'free fire zones' of Vietnam," Los Angeles Times reporter Jack Foisie wrote last February, "(In Vietnam) bombs and gunfire could be rained down at will on such areas, and helicopter pilots could shoot at 'anything that moved' wearing black pajamas. Unhappily, uninvolved peasant farmers wore the same style clothing as the Viet Cong guerrillas."

Any further supply of arms to the Smith regime in Rhodesia will only prolong the agony of the population. As the situation worsens, our country must act responsibly to see that American firms do not participate in the bloodshed while in search of a profit.

The story of the Cessna 337s in Rhodesia bodes ill for the arms embargo on neighboring South Africa which the United Nations Security Council, with U.S. backing, has just adopted. Congress must act to investigate all illegal shipments to Rhodesia and South Africa and plug any legal loopholes which allow U.S.-designed equipment and "primary structures," through licensing of foreign production by overseas subsidiaries, to reach the battlefront.

Michael T. Klare is a fellow of the Institute for Policy Studies—Transnational Institute of Washington, and author of "War Without End: American Planning for the Next Vietnams." Eric Prokosch is a staff member of NARMIC (National Action/Research on the Military Industrial Complex), project of the American Friends Service Committee.

FARM PRICES ARE MADE IN WASHINGTON

HON. RICHARD NOLAN

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Thursday, December 15, 1977

Mr. NOLAN. Mr. Speaker, yesterday, the American agriculture movement formally called a farm strike, urging farmers to sit tight, neither planting, buying nor selling, until Congress and the administration establish 100 percent of parity price supports for farm commodities.

Six months ago, nobody had heard of the American agriculture movement, the grave was being filled on the parity concept, and, outside of rural America, few people recognized how rapidly the farm financial situation was deteriorating. President Carter himself had little inkling of what was in store. When he signed the Food and Agriculture Act of 1977, he called it a great bill, one that would establish price supports at cost of production for most farmers. Unfortunately, the President and his advisers failed to understand the gravity of the situation and they seriously misjudged the mood of farmers.

Between August and December, a series of dramatic tractor demonstrations and vocal protest by farmers who joined in the American agriculture movement focused attention on the farmers' plight, making their story front page news throughout the country. Members of Congress from rural districts could not ignore the unrest seething among the farmers back home. Numerous bills and resolutions calling for full parity were quickly introduced in Congress, although the Agriculture Committees in the House and Senate will not consider the measures until early next year.

In the meantime, the American agriculture movement will be confronted by a serious question: will the organization continue to be effective or will the strike sound its death knell? Even now, many farmers are not committed to the strike and maintaining widespread support will indeed be difficult. When spring arrives, the amount of activity in the fields will quickly reveal whether the strikers' winter resolve will last beyond the planting season.

Before spring arrives, however, American agriculture and other farm organizations will have an opportunity to make their voices heard in Congress. The campaign for parity prices will be waged in Washington during the next 4 months. Farmers must continue to direct public attention toward the need for a better farm bill and they must gain a great deal more support in Congress if any results are to be achieved. In reality, the battle is just beginning.

If a 100 percent of parity bill is to have any chance at all, American agriculture and other farm groups will have to give their friends in Congress a tremendous amount of organizational support. The farm bloc needs to be unified and majority support must be organized in the Agriculture Committee and in the House and Senate—which means garnering support from urban constituencies as well. If Congress passes an 80 percent, 90 percent, or 100 percent of parity bill, or recommends any farm bill improvements at all, depends upon whether the parity campaign can continue to grow and sustain itself.

The Carter administration also must be convinced that the 1977 farm bill needs improving. Administration officials tend to dismiss the American agriculture movement because many of its leaders, according to several reports, represent the largest, well-capitalized farmers. Obviously, the largest farmers with their huge capital investments, are also feeling the squeeze caused by low farm prices. The Carter administration, however, has ignored the hard reality that family farmers are in worse financial shape because they have fewer assets and less access to credit.

Since Government farm policy has not been adequately directed toward strengthening family farming, many farmers have come to doubt that a political solution to the farm problem exists. This attitude does not alter the fact that a host of Government policies relating to agriculture including foreign trade—and with whom we trade—grain reserves, international commodity agreements, set-aside, marketing, credit and taxes, as well as price support programs, influence the price of farm products.

Other segments of the economy realized long ago that politics and Government can be made to work for them. The Federal Government guarantees a profit for bankers by setting interest rates. Defense contractors have renegotiation clauses in their Government contracts guaranteeing them a profit. Big oil companies and utilities are guaranteed a profit margin by Government policy. Multinational firms demand and receive tax exemptions on overseas investment, thus guaranteeing their profits. The steel industry seeks to guarantee its profits by influencing import and export policy. These powerful, private economic interests have their profits guaranteed by public policy. Family farmers have a right to expect equal treatment.

If American agriculture and other farm groups do not play an active political role in the upcoming congressional debate over farm policy, their supporters in Congress will find it difficult to muster the votes for a better farm bill, let alone a measure establishing 100 percent of parity for family farmers. I believe we will have a better chance to obtain 100 percent of parity if we reorient our price policy toward family farm size units of production. By preventing the big land barons from obtaining windfalls from a 100 percent of parity price support program, we will be able to strengthen family farming without causing the production of agricultural commodities to be concentrated among fewer and fewer producers.

During a previous era of low farm prices and farmer unrest, one of Minnesota's leading farm spokesmen continually reminded farmers that "farm prices are made in Washington." The statement remains as true today as it was four decades ago.

CONGRESSMAN LEDERER'S SPEECH BEFORE THE PATRIOTIC ORDER

HON. MICHAEL O. MYERS

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, December 15, 1977

Mr. MICHAEL O. MYERS. Mr. Speaker, I appreciate the opportunity today to bring to the attention of my colleagues the very timely remarks by our distinguished Member RAYMOND F. LEDERER of my hometown of Philadelphia, Pa. Congressman LEDERER's remarks were made before the Patriotic Order, Sons of America, Washington Camp No. 488, on the occasion of the 76th anniversary dinner on December 1, 1977. These remarks exemplify the true patriotic spirit which has been the basis of our country and is carried on by such noble associations as the Patriotic Order, Sons of America.

CONGRESSMAN LEDERER'S SPEECH BEFORE THE PATRIOTIC ORDER, SONS OF AMERICA

Reverend Clergy, Harvey Stoehr, George Baker, and friends. Thank you for giving me this opportunity tonight to be with you for the 76th anniversary dinner celebration of the Patriotic Order, Sons of America, Washington Camp No. 488.

On the way up from Washington, this afternoon, I had the chance to review your booklet entitled " 'The Genesis of the American Flag': the Symbol of Liberty". It's a pretty interesting little publication and, you may not know this, but I am somewhat of a history buff myself. I read anything I can get my hands on, and I really enjoy reading books about history.

I guess I didn't realize that American history had produced so many flags. If anyone here has not read the booklet, you ought to put it on your "things to do" list. It's fascinating.

I did notice however, that the author left out one very important and historic flag. The "Lederer family flag". It has an Eagle carrying a white rose and the motto, "We take no prisoners and no lame excuses".

I really do not intend to take a great deal of your time tonight with a long speech. I know that you may believe that all politicians talk for great periods of time whenever they get the chance, but I'm different. I want to get around and get a chance to meet each and every one of you before the evening is over, so, with that in mind, I'll try to wrap up my few remarks in an hour, or an hour and a half, at the outside.

As you shall soon discover, I am only kidding.

You know every public speaker would like to be remembered for his words of wisdom, and sparkling wit, mostly, his wit, well, I am reminded that William Shakespeare once wrote that "brevity is the soil of wit," and I can certainly take a hint from the old master.

I do have something to say, however, and it involves this fraternity and, more importantly, the things this organization stands for.

I mentioned your fine booklet about the evolution of the American flag. Throughout the booklet there were little references to the history, and the philosophy of the patriotic order, sons of America, in many ways, I found those asides the most interesting portions of the book.

There was mention of the historic first meeting, back in January of 1848, when the declaration of principles of this organization was adopted. There was a description of the political climate of the period during the McKinley Presidency, frankly, it seemed more like the tumult of the demonstrations of the late 1960's at the height of the war in Vietnam. At any rate, a demonstration in Scranton, Pennsylvania, and an act of desecration of the flag led to a bill outlawing the destruction of our Nation's flag. That bill was drafted by the State president of this order.

There was a page dedicated to the efforts of this organization which led to the preservation of some of our most hallowed national shrines, such as Washington's headquarters at Valley Forge; a monument at Washington's crossing, and the preservation of Betsy Ross's home here in Philadelphia.

But, I was most intrigued by the statements of principle scattered throughout your booklet.

One particular, sums up the message I want to leave with you tonight.

I found this quote on page 28, in case anyone is trying to check up on my facts.

"A creed of the lips, denied and dishonored by the life, merits . . . contempt; and the creed of the true patriot, like that of a man of true piety, will control his every act as a citizen, and direct all of his energy to the promotion of the highest welfare of his country and fellowman."

"A creed of the lips . . . dishonored by the life . . . merits . . . contempt." Think about that, every other tenet: Every other principle of this—and any organization—shall stand or fall on that simple statement.

What good does it do, for example, if one says he honors our flag, or our institutions, or the Constitution, if he fails to understand what those symbols mean?

What does it mean if someone is willing to stake his life on a "Declaration of Independence" that has become mere rhetoric to some?

"We believe that we have the best form of government for the masses on the face of the earth." That quote can be found on page 18.

I believe that, but I am afraid that, at times, people recite passages similar to that quotation without ever understanding what it means.

Does that mean that our Government can do no wrong? No, it does not. It means, I believe, that our Government is supposed to represent the will of our people—as diverse as we are. It means that our people, unlike citizens around the world, are free to express opinions; to debate and disagree with Government policy; they are free, in short, to dissent, not to destroy; but to dissent, throughout our history, men—and women—have shed their life's blood for that right: That sacred freedom.

I am concerned about America. I am concerned about our spirit. I am also optimistic about our future.

We have come through a terrible period in our Nation's history. We are now at a turning point. We have squandered much of our public confidence in the rice patties of Vietnam and in the oval office of the Nixon administration. It is time, I believe, to re-evaluate our principles, as a country, a time to trace our common roots and dedicate ourselves anew to the spirit of the American Revolution.

Not far from this historic church stand Penn Treaty Park. It is time to remember the peaceful Quaker who led his people to this area to escape the tryanny of an oppressive country. William Penn came to this land to pursue the goal of basic "human rights".

From my office window I can see the Liberty Bell and Independence Hall and I am reminded daily of the brave men who swore to sever these United States from the tyranny of "taxation without representation."

We have been through many wars and "rivers of blood" and each time we have seen America defend the freedoms we take so casually during times of peace.

No war symbolized more of this country's values than the Civil War. No President expressed our national purpose better than Abraham Lincoln when he said: "It is for us, the living, rather to be dedicated here to the unfinished work which they who fought here have thus far so nobly advanced. It is rather for us to be here dedicated to the great task remaining before us—that from these honored dead we take increased devotion to that cause for which they gave the last full measure of devotion: That we here highly resolve that these dead shall not have died in vain: That this Nation, under God, shall have a new birth of freedom: And that Government of the people, by the people, and for the people, shall not perish from earth."

Take those words, and savor them. Try to understand again the full meaning and value of each phrase—each word. For they sum up what we stand for.

That's what the word "patriotism" stands for. It is not an empty word. Not a motto to be mouthed.

We must ask ourselves, what does America mean to us? What does it mean to men and women around the world?

We are noted for our technology, for building the better mouse trap, we take pride in our accomplishments. Is that what sets us apart from other nations? We hear a lot of talk about the stock market, about the foreign trade deficit: About the gross national product. We take these indicators of economic health, far too often, as indicators of national health.

Just what is the GNP? It does measure many important things about our people. It measures our output, our productivity, but for too long, we have seemed to surrender personal excellence and community value to the mere accumulation of material things.

The gross national product—if we judge the United States of America by that standard—that gross national product counts air pollution, and cigarette advertising, and ambulances to clear our highways of carnage.

It counts special locks for our doors, and jails for the people who break them.

It counts napalm and nuclear warheads and special assistance to foreign countries that even now plan subversion of our own government.

It counts Son of Sam's .44 caliber weapon, and the television shows which glorify violence in order to sell toys to our children.

Yet the gross national product does not allow for the health of our children, the quality of their education, or the joy of their play.

It does not include the beauty of our poetry, or the strength of our marriages, the intelligence of public debate, or the integrity of our public officials.

It measures neither our wit, nor our courage, neither our wisdom, nor our learning. Neither our compassion, nor our devotion to our country.

It measures everything, in short, except that which makes life worthwhile, and it can tell us everything about America, except why we are proud that we are Americans.

For the historians here tonight, if you were listening carefully you may have discovered that I took you from Lincoln to a paraphrasing of a speech Robert Kennedy gave shortly before his assassination.

I think it's important to remember the sacrifices made by our people—not just by Presidents and Presidential candidates—but by ordinary citizens as well, and it's important to understand, and re-dedicate ourselves to the true meaning behind our sacred symbols. In that way, we can surely recapture the spirit of 1776 and stand as a beacon to the oppressed throughout the world, once again. And surely, we "can make it impossible" as your principle states, "for anyone to live under the protection of the flag of the United States who does not honor and revere it . . ."

Thank you.

U.S. LEADERSHIP IN NUCLEAR FUEL REPROCESSING IMPORTANT FOR CONTROL OF NONPROLIFERATION

HON. FLOYD SPENCE

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Thursday, December 15, 1977

Mr. SPENCE. Mr. Speaker, on December 7, the Washington Post printed a front page story titled "Brazil Adamant on Nuclear Policy." The story provides an interesting account of Secretary of State Vance's recent visit to Brazil and the continuing failure of administration policy with regard to forcing other nations to forego nuclear fuel reprocessing.

The fact that foreign nations like Brazil clearly intend to move ahead expeditiously on nuclear fuel reprocessing development is the best example I can think of for an active U.S. program in reprocessing. U.S. leadership is important to develop an international framework of safeguards for reprocessing as well as to develop those proliferation-resistant variations of reprocessing that will prevent diversion of plutonium for weapons purposes. For the United States to maintain such a position of leadership, it will be absolutely essential to continue to use the Barnwell Nuclear Fuel Plant in my district in South Carolina. Congress has authorized and appropriated a fiscal year 1978 program at Barnwell which is a start in the right direction. To maintain our world leadership position will require continued use of the Barnwell facility and staff.

I include in the RECORD the text of Post article, following my remarks:

BRAZIL ADAMANT ON NUCLEAR POLICY

(By Karen DeYoung)

BRASILIA.—Should Brazil persist in its plans to build a nuclear reprocessing plant, Secretary of State Cyrus Vance warned during a visit here two weeks ago, it runs the grave risk of triggering a nuclear arms race with neighboring Argentina, which already has stockpiled enough uranium waste to produce several hundred pounds of bomb-building plutonium once it develops the reprocessing technology.

The message he brought from Buenos Aires, Vance said, was that if Brazil would renounce reprocessing, Argentina would likely do the same.

"How childish," a senior official in the Brazilian Foreign Ministry said after Vance had gone. "He probably said the same thing to Argentina." Brazil, the official said, can handle its relations with Argentina without U.S. help, thank you.

In any case, Vance added during the discussions, if Brazil defers developing its own reprocessing technology the United States could then offer all manner of substitutes—perhaps including the secrets of thorium, a uranium-like fuel found in natural abundance in Brazil.

Nothing but vague promises, the Brazilian, who was present during the discussions, said later. "How do you say it?" his aide asked. "A bird in the hand is worth two in the sky?"

Besides, the official said, West Germany, a country that has been much more generous with its nuclear technology, has its own thorium research program. "The Americans think we don't know anything," he added.

The end of round three in Brazil's nuclear "disagreement" with the United States has left Brazil, by its own account, feeling quite self-satisfied. While the United States has not given up its struggle to keep reprocessing technology from Brazil, it has, a Foreign Ministry spokesman said, "learned the error" of what Brazil considers U.S. heavy-handedness.

Brazil now seems almost taken aback at what it regards as the overwhelming success of its audacity. The Brazilians feel they have proven, for the first time, that a developing country, highly dependent on U.S. trade and support, can strongly disagree and live to tell about it.

Round one was a visit to West Germany early this year by Vice President Mondale to persuade the Germans to cancel the reprocessing part of $10 billion, eight-reactor sale to Brazil on the ground that the Carter administration considers reprocessing technology too dangerous to spread around the world. Brazil, which was not consulted during the talks was furious. West Germany refused to cancel.

Round two, a visit here last March by Deputy Secretary of State Warren Christopher, was by all accounts "disastrous." After seven hours of rancorous talks, the Brazilians said, Christopher presented a pre-written joint communique outlining a curtailed Brazilian nuclear energy program. Brazil refused to sign. Christopher abruptly got on a plane back to Washington, and bilateral relations went into a deep freeze.

Then came Vance, calm and businesslike. The idea, U.S. negotiators said, was to convince Brazil, on a purely technical level, that reprocessing—the procedure whereby plutonium is separated from the uranium wastes of nuclear reactors—is inefficient and unnecessary. More importantly, the U.S. argument continues, highly volatile plutonium is so dangerous to have around that even the United States has banned construction of reprocessing facilities.

In response, Brazil tried a new tactic. The Brazilians smiled, nodded sagely, said they would take it all into consideration and cordially sent Vance on his way with a brass band, an airport red carpet and a promise to talk again.

"Their objective was to get him back on the plane as soon as possible without opening their mouths," a Latin American diplomat here said. "They were very satisfied that Vance didn't get anything out of them."

Discussions will doubtless continue this spring, when President Carter picks up the southern hemisphere leg of the 11-country tour he postponed last month. "We hope we can convince him," the Foreign Ministry official said.

Carter does not want Brazil, or any other country, to have reprocessing technology. While reprocessed plutonium can be used as a reactor fuel, thus theoretically providing a virtually limitless fuel supply, it can also be converted into nuclear weapons fuel much faster than ordinary enriched uranium. Carter believes it is virtually impossible to safeguard large plutonium stockpiles.

Current international nuclear safeguards amount to regular international inventory checks of nuclear fuels and wastes. Plutonium could quickly be diverted or stolen, Carter and others believe, and made into a bomb before anyone would discover it was missing.

U.S. officials say privately that they are less worried about countries like West Germany and Japan developing their own reprocessing technology than they are about a Third World country, with no substantive nuclear research program of its own, getting reprocessing "cheap and easy" through technology transfer.

Brazil finds that attitude unfathomable. "We have always been a friend. They had a war with Japan in this century, and they say they're not worried about Japan," the ministry official marveled.

Besides, he said, "We are currently negotiating with the Dutch" on a plan that will prove plutonium can be safe-guarded. "We are going to show the world . . . The U.S. believes very much in the information it has. Because they are very developed, they are sometimes inclined to think they have discovered the truth."

He pointed to the fact that while the United States originally objected to both reprocessing and enrichment technology being transferred to Brazil, it has since decided that enrichment is safe after all.

While reprocessing is only a minor part of Brazil's energy scheme for the next 10 years, the resulting conflicts have made it the symbol of what Brazil considers a life-and-death struggle to continue a monumental development program begun more than a decade ago.

That program, which brought phenomenal yearly growth rates of 10 per cent, took a sudden dive with the 1974 quadrupling of oil prices.

Brazil now imports more than 80 per cent of the oil it uses, at a cost of more than $300 million a month. To lessen oil dependency, Brazilian experts have developed an energy plan they predict will reduce oil's share of energy consumption from nearly 44 per cent in 1974 to little more than a third by 1986.

The slack will be taken up by hydroelectric capability, through a monumental series of dams now operating, under construction, or planned.

A large-scale switchover to nuclear power is to come much later. Brazil's first power reactor, called Angra I, a 600 megawatt facility now under construction outside a small village on the South Atlantic, will not go into operation until 1978. Three more are scheduled to be on line by 1985, when nuclear energy will still only provide 4 per cent of Brazil's power requirements.

While Brazil is to start enriching its own uranium fuel for those reactors in 1979, thanks to German blueprints for an enrichment facility, explorations for domestic uranium resources have proved nearly as disappointing as the search for oil. To reach the goal of 85 per cent nuclear fuel self-sufficiency within 10 years, the Brazilians say they need reprocessing.

DID HOUSTON SEAL ERA DOOM?

HON. GEORGE HANSEN

OF IDAHO

IN THE HOUSE OF REPRESENTATIVES

Thursday, December 15, 1977

Mr. HANSEN. Mr. Speaker, I submit for the RECORD an article by Associated Press writer Quane Kenyon apearing in the Idaho State Journal December 2, 1977, reporting an interview with an Idaho delegate to the Houston International Women's Year Conference who supports ERA but fears the excesses exhibited at the gathering may have doomed the amendment:

KADING SAYS WOMEN'S MEET DOMINATED BY THE CITIES

BOISE, IDAHO.—The International Women's Year conference in Houston came out strongly in support of the proposed Equal Rights Amendment, but actions at that gathering actually may make it impossible for the amendment to win ratification, says delegate Hope Kading of Boise.

Mrs. Kading, who was described as "a political activist", was a member of the Idaho delegation to Houston and chairwoman of the Idaho state conference last May. She appeared before the Idaho Press Club Thursday.

She said delegates from rural states such as Idaho found the convention dominated by the large, urban areas. As a result, she said, delegates were forced to accept many proposals and programs they didn't especially like.

"Some political issues were forced upon us, not women's issues, which will be very unpopular in those states which still haven't ratified the ERA," Mrs. Kading said. "In the remaining states those issues will be political albatrosses around the necks of those trying to win ratification."

She described the Houston convention as a "traumatic, emotional event" which will have ramifications for years.

Overlooked in squabbles over spending by the national commission is the fact that some of the $5 million went for research such as a survey of laws on women in all 50 states, she said.

Mrs. Kading said the Idaho delegation was dismayed to find that the final "national plan of action" was nearly one-third full of proposals and ideas that didn't come before the state conventions.

"The fact that there was no time to study them, and there was little time during the convention to debate them, made us a little miffed," she said.

Opening-day exercises and speeches were "an enormously positive experience," Mrs. Kading said, but after that the convention wasn't run well.

She said a coalition of minority groups "almost blackmailed" convention officials into choking off debate. Also, there was no chance to separate questions, so the Idahoans could vote against parts of proposals.

"We had to swallow voting for 10 parts that were palatable along with one part that was objectionable," she said. "It's not the first time I've seen people get drunk with power."

"I'm terribly proud of the Idaho delegation. We set an example for the rest of them. There were very few people who had the right to stand up and vote their personal choice. We did," she said.

Mrs. Kading said after the convention, she felt the women's movement had been politicized in a few emotional areas could definitely damage the movement and affect its input in more important areas," she said.

She said the convention also got into a lot of discussion about social issues, which were not particularly women's issues.

TRIBUTE TO THE REVEREND EDWARD A. SHAMON

HON. WILLIAM F. WALSH

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, December 15, 1977

Mr. WALSH. Mr. Speaker, today, I would like to pay tribute to a much-respected and well-loved pastor, who was recently honored by more than 1,000 parishioners, family, and friends on the occasion of his 35th anniversary of his ordination to the priesthood.

The man of whom I speak is the Reverend Edward A. Shamon, a life resident of Auburn and pastor of St. Aloysius Church. There are so many reasons he is well loved by all who come in contact with him—his rich sense of humor, his down-to-Earth manner, his spiritual leadership, to name a few. He is that rare combination of man, skilled in the financial aspects of running a parish and in serving as friend and confessor to his parishioners.

Father Shamon, who began his studies for the priesthood at St. Andrew's Preparatory Seminary and St. Bernard's Theological Seminary where he obtained a bachelor's degree in philosophy and theology, was ordained to the priesthood on June 6, 1942. He celebrated his first solemn Mass at St. Aloysius, the parish of his birth, the following day, assisted by his twin brother, Father Albert Shamon.

His abilities are not only in the spiritual and financial realm, however. Father Shamon played semiprofessional football with the Nemolites prior to entering the seminary. And his leadership skills were evident in high school where he was president of the senior class.

Perhaps one of his proudest accomplishments is his successful endeavor to financially rebuild St. Lawrence Church in Greece, N.Y. Given some swampland, Father Shamon not only built a new church, but paid off a $25,000 debt the parish had in only 2 years.

It is no wonder, therefore, that people from all over New York State attended the reception in his honor earlier this month, and I think it is only fitting to acknowledge his contributions to the central New York community today.

TRIBUTE TO SENATOR JOHN McCLELLAN

HON. GEORGE H. MAHON

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, December 1, 1977

Mr. MAHON. Mr. Speaker, on December 1, I had an opportunity to pay brief tribute to the late JOHN L. McCLELLAN of Arkansas. I now want to expand my efforts to pay tribute to the memory of this great American.

JOHN McCLELLAN and I had been friends since the convening of the 74th Congress in January 1935, both of us having been elected in the November election of 1934. We were part of a group of 100 new House Members.

JOHN McCLELLAN left the House in 1938, but he returned to Congress as a Member of the Senate in 1943. His career in the Senate was outstanding. When issues of good government, law and order, and fiscal responsibility were in the balance, no one ever had to ask where JOHN McCLELLAN stood. He was a tower of strength through the years as a U.S. Senator.

When Mr. McCLELLAN became chairman of the Senate Appropriations Committee in August 1972, we were closely associated on many matters, both routine and matters of great moment. We were not only chairmen of the Appropriations Committees of our respective Houses, but chairmen of the Defense Appropriations Subcommittees of those two committees. It was a pleasure and a privilege to deal with a man who was so perceptive, so cooperative, and so effective, in seeking to promote the interests of the United States.

Others have spoken at length and in more detail about the life and career of JOHN McCLELLAN, but I wanted to add these further words of tribute to the memory of a great American.

SOME NEGLECTED MONETARY CONTRIBUTIONS OF CONGRESSMAN WRIGHT PATMAN

HON. HENRY S. REUSS

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Thursday, December 15, 1977

Mr. REUSS. Mr. Speaker, Robert E. Weintraub, a valued member of the House Committee on Banking, Finance, and Urban Affairs, has written a fine article about the late and beloved Wright Patman in the November 1977 Journal of Money, Credit, and Banking, published by the Ohio State University Press. I am pleased to include the Weintraub essay:

SOME NEGLECTED MONETARY CONTRIBUTIONS OF CONGRESSMAN WRIGHT PATMAN, 1893–1976

(By Robert E. Weintraub)
(Abridged by the Author)

Wright Patman's legislative causes often were lost causes. As Congressman Henry Reuss, who succeeded him as chairman of the Banking Committee, put it, "There were many battles he fought and could not win; the never-ceasing war against high interest rates, which he saw as the mortal enemy of the farmer and the small businessman and the consumer; the fight to make the Federal Reserve more accountable to the public." Nonetheless, he sponsored a substantial body of legislation that was enacted into law; often in opposition to the administration in power, regardless of party. The list of his legislative successes include: In 1934, the Federal Credit Union Act, creating the system of Federal Credit Unions; in 1936, the bill authorizing payment of the World War I veterans' "bonus;" also in 1936, the Robinson-Patman Act, which, though intended to protect small business from "unfair" pricing by larger rivals, probably has served to prevent vigorous competition; in 1946, the Veteran's Emergency Housing Act, and the Employment Act; and finally the Bank Holding Company Acts of 1966 and 1970. In addition, as Senator Proxmire said, "many of his achievements were things that did not happen, special interest initiatives that failed because the Congress had a watchdog like Wright Patman."

Congress has oversight, as well as legislative, responsibilities. Overseeing the activities of the executive and regulatory agencies was what Wright Patman loved best. In 1932, he introduced a resolution to impeach Treasury Secretary Andrew W. Mellon for "high crimes and misdemeanors." As described by Eileen Shanahan in the New York Times obituary on Mr. Patman, "President Hoover named Mr. Mellon Ambassador to Britain before the House Judiciary Committee could complete its investigation of the charges." Forty years later, "He was," as Speaker Albert pointed out, "the first Member of the House of Representatives to undertake the impeachment of Richard Nixon."

Wright Patman's oversight activities centered on the Federal Reserve and banks. He was known primarily for his unrelenting (some would say "indiscriminate") opposition to "high" interest rates; his repeated investigations of (some said "carping about") Fed spending; his frequent charges that banks exercised undue and improper influence over the Fed; and his complaints about banks deserting the nation's small towns, and failing to allocate credit to small farmers, small business, and consumers, being unwilling to take the risks obligatory in their charters.

Many considered him a crank and crackpot because of these opinions. But these are the wrong words. Mr. Patman was neither ill-tempered nor eccentric. He was serious and persistent in his views. To fault him, it can be said that he was often a nag and nitpicker. His nagging and nit-picking, however, were not without purpose. He wanted to rivet public attention on banking trends, and on monetary policy and those who make it. He wanted people to know that their economic well-being hinged on their access to banks and on the wisdom of monetary policy. He wanted them to know that monetary policy was decided in secret by persons who, by virtue of the Fed's freedom from normal governmental appropriations and audit process, and their long tenures, were de jure unaccountable for their decisions, and often erred grievously. Nagging and nit-picking were his spotlights, his ways of overcoming the public's natural resistance to statistics and technical questions.

Wright Patman's views on monetary policy are difficult to summarize. His congressional career covered nearly half a century, from the Depression until 1976. His views both on the importance of monetary policy versus fiscal policy and the importance of money supply versus interest rates changed with the times. In the early and middle 1930s, Federal Reserve structure and conduct of monetary policy were widely and hotly debated Wright Patman was a forceful and skillful advocate of legislation to provide for controlled money growth. He believed that the Depression persisted because of underconsumption and was rooted in deficient money supply. He advocated controlled expansion of the currency component, tied to fiscal spending, to increase consumption and get us out of the depression. By the end of World War II, however, he had become a Keynesian. He still feared the return of underconsumption but now stressed purely fiscal measures to avoid it and keep the economy fully employed.

In the early 1950s, when the policy of pegging yields on government bonds occupied center stage, Mr. Patman switched his attention to interest rates and what he perceived to be avoidable, if not conspiratorial, increases. By the 1960s money supply changes were again being widely and hotly debated; and, though he never abandoned his quest for lower interest rates, Wright Patman frequently made common cause with monetarists during the remaining years of his career. He provided an important political forum for monetarist views on several occasions. He recognized that their criticisms of Fed policies lent force to his charge of mismanagement. In addition, he knew that sometimes (before peaks in business activity) when he criticized the Fed for pursuing "tight money" policies that raised interest rates, monetarists were critical, too. More than once the Fed has pursued policies that unnecessarily caused destructively large (if short-lived) increases in interest rates in association with sudden sharp decreases in money growth. Such policies were pursued, for example, in 1920, 1931, 1953, 1957, 1959, and most recently in 1974.

To more fully capture the scope and roots of Wright Patman's positions on monetary policy, the remainder of this paper discusses four distinct episodes in his career: the Bonus bill of 1936, the Employment Act of 1946, the Accord of 1951, and his oversight of the Fed as chairman of the Banking Committee in the 1960s and 1970s.

In 1924, Congress passed the World War Adjusted Compensation Act providing compensation to war veterans for wartime dislocations at rates of $125 a day for service overseas and $1 a day for stateside service. Veterans were not paid in cash. They were given nontransferable, nonnegotiable IOUs, called "Adjusted Service Certificates," payable in 1945, including 4 percent compound interest dating from 1925. The average maturity value was $1,000. A sinking fund was established to cash the certificates in 1945. In 1931, Congress passed over President Hoover's veto a bill sponsored by Mr. Hawley of Oregon to permit veterans to borrow up to 50 percent of the maturity value of the certificates at 4.5 percent interest, which was reduced to 3.5 percent in the next Congress. Wright Patman voted for the Hawley bill. But as soon as it was passed, he announced he would fight for immediate payment of the maturity value of the certificates (after deducting loans) and cancellation of all accrued loan interest. The fight was won in 1936 when Congress passed the Vinson-Patman-McCormick bill over President Roosevelt's veto. Veterans (or their heirs) were given new nine-year bonds that were convertible into cash at any time. Cash distributions were financed in the usual manner, i.e., by selling securities to cover incremental deficits. As enacted into law, the economics of the so-called Bonus bill is similar to that of transfer payments and tax rebates. A year earlier, however, the problem came close to being resolved with major monetarist-like provisions included in what was known in both House and Senate as the Patman (Bonus) bill. It marked the high tide of the "stable money" movement.

During the early 1930s, Congress worked its will on a number of bills providing for the issue of additional currency by open market and other operations in such amount as was necessary to increase the index of wholesale prices back to the 1921–29 (or, alternatively the 1926) average, and thereafter to control the issue of currency (sometimes the reference was to currency plus check deposits) so as to stabilize the index at that level.

The Patman (Bonus) bill was an end run that almost succeeded in incorporating variants of the two main principles of the stable monetary movement of the 1930s into law. First, it provided for reflation. The Treasury would be required (not merely authorized as in the case of the Thomas Amendment to the Agricultural Adjustment Act) to pay for the Adjusted Service Certificets, by having engraved and printed new non-interest-bearing, tax-exempt, legal tender Treasury notes; i.e., greenbacks. Second, the Patman (Bonus) bill provided for contracting Federal Reserve notes upon a finding by the Secretary of the Treasury that it was necessary to do so to maintain the index of wholesale prices at the 1921–29 level. His bill did not, however, provide for any subsequent currency expansion (beyond implementing the bonus). It was focused on current problems and fears.

The bill passed the House on March 22, 1935, and the Senate on May 7. President Roosevelt vetoed it on May 22. The House overrode the veto the same day by a vote of 324 to 98 against. However, the president's veto was sustained by the Senate the next day, 54 voting for overriding but a ⅔ vote being necessary to override. Excerpts from the floor debates and FDR's veto are revealing:

Mr. PATMAN. We propose under H.R. 1 to permit a veteran to deposit his Government obligations and receive "new money" in United States notes in return for the remainder due (Congressional Record, March 19, 1935, p. 3991) . . . The next move toward prosperity will have to be made by the consumers. The farmers and wage earners are the principal consumers. The additional money we propose to place in circulation will cause commodity prices to rise, which will enable farmers to purchase what they need, thereby creating an incentive for manufacturing industries to employ labor and produce more (p. 4000) . . . There is estimated to be a remainder due to the 3,531,800 veterans the sum of $2,015,162,456.76, which includes the amount due the ones who have not negotiated loans on their certificates. (p. 4002).

Mr. PIERCE (California).—Under the Patman bill the Secretary may retire reserve notes if he believes there is too much inflation, but I do not believe he will find it necessary to exercise any such power. The two thousand million dollars of currency that will be necessary to liquidate this debt will be less than 20 percent of the shrinkage of bank deposits since October 1929. (p. 4222).

The Veto Message:

President ROOSEVELT.—The Treasury notes issued under the term of this bill we know from past experience would return quickly to the banks. We know, too, that the banks have at this moment more than ample credit with which to expand the activities of business and industry generally. (Congressional Record, May 22, 1935, p. 7994.)

As was earlier noted, the bonus issue was resolved in January 1936 when Congress passed over FDR's veto the Vinson-Patman-McCormick bill, which, however, did not contain the monetarist-like provisions of the Patman (Bonus) bill.

With 3 events—the failure of the Senate to override FDR's veto of the Patman (Bonus) bill, enactment into law of the 1935 Banking Act restructuring the Fed, and publication of Keynes's General Theory, the money issue once again became dormant politically in the U.S., as it had so many times in the past, for example, after the election of McKinley. Fiscal policy soon dominated center stage in economic policy debates. Wright Patman adjusted his economics to the new times. In February, 1945, he introduced H.R. 2202, the Full Employment Act of 1945, forerunner of the 1946 Employment Act.

The Patman employment bill provided that the president shall annually transmit to the Congress a "National Production and Employment Budget." This budget would estimate the volume of dollar demand (C+I+G) required to provide the full employment volume of production at the expected level of prices, and also the expected volume of dollar or aggregate demand. Shortfalls between expected and require demand would be regarded as deficiencies in the budget, and the president would be required to recommend to the Congress a program including Federal Reserve actions for encouraging increased private investment and expenditure "which will promote increased employment opportunities by private enterprise." To the extent that private spending was deemed insufficient, "The President shall transmit a general program for such Federal investment and spending as will be sufficient to bring the aggregate volume of investment and expenditure . . . up to the level required to assure a full employment volume of production."

The Employment Act of 1946, as passed, differs in several details from the Patman Full Employment Act of 1945. In regard to goals, the 1946 Act declared it national policy "to promote maximum employment," versus the Patman bill's provisions "to assure continuing full employment." However, the difference in language is not substantial. The major difference in the two bills, rather, centered on procedure. The Patman bill provided that the president transmit a budget, i.e., a specific fiscal program to achieve full employment. The Employment Act as passed provided only that there be transmitted an economic report.

The Federal Reserve is, of course, bound by the goals of the Employment Act. In this tie, it may well be that Wright Patman has had extraordinary influence on monetary policy since 1945. Though monetary policy has been worse than it needed to have been since 1945, none can deny that since the Employment Act was passed, we have had no great monetary contraction as we did in the 1930s, and perhaps as a result the specter of underconsumption has not been a problem and we have avoided the mass unemployment of the 1930s.

During World War II and continuing through 1950, monetary policy was constrained by the Federal Reserve's commitment to peg yields on government securities. The Korean War set off consumer buying and defense-related investment booms that spilled over into credit markets and made it impossible to continue the peg without massive open-market purchases. In the second half of 1950, the problem was manageable because of a gold outflow to finance imports. But as the year turned, the problem became a crisis.

On March 4, 1951, the Fed and Treasury announced that they had reached "full accord with respect to debt-management and monetary policy to be pursued in furthering their common purpose to assure the successful financing of the government's requirements and, at the same time, to minimize monetization of the public debt." Mr. Patman maintained that the accord merely lifted the peg on long-term governments to 2.75 percent, and that the Fed was not freed from this commitment until the Eisenhower administration freed it. Judging by what happened from the accord until spring 1953, Mr. Patman's view appears correct. First, Federal Reserve Board Chairman Thomas B. McCade, who with Governor and ex-Chairman Mariner Eccles and New York Fed President Alan Sproul had vigorously opposed the support policy resigned and was replaced by William McChesney Martin. Mr. Martin had represented the Treasury during the dialogues leading up to the accord. Second, the yield on long-term government bonds did not rise above 2.75 percent until 1953, and in 1951 and 1952, the Fed increased its portfolio of government securities by $4.4 billion. It is difficult to explain these purchases except in terms of pegging the bond market, especially since M_1 growth was faster in 1952 than in 1951 and faster in 1951 than in 1950.

But the accord marked the beginning of the end. In spring 1953, the Open Market Committee finally formally ruled out using open market purchases to peg yields. In

December 1952, the yield on long-terms averaged 2.75. In June, it reached 3.13. To Wright Patman, these changes in policy and yields were anathema.

Wright Patman opposed letting yields on government debt rise, even though he recognized that pegging them had awesome inflationary potential. His solution was to impound this potential by compeling banks to pay interest on demand deposits to induce people to hold higher money balances.

Mr. Patman later sponsored legislation to permit the payment of interest on demand deposits as a pre-Nader consumerist measure. But his unwillingness in 1952 to accept any rise in yields on government debt caused him to miss what in retrospect was a great opportunity to fight for establishment of a stable money growth policy focused on the long run. Such a policy surely would have made our economy more stable and less inflationary than it has been, if it had been adopted in the early 1950s and pursued thereafter. Ironically, this would have promoted lower interest rates than the policies that were pursued produced.

Wright Patman became chairman of the House Banking Committee in 1963. From January to April, 1964, he held extensive hearings on the structure of the Federal Reserve and the conduct of monetary policy under the auspices of the Subcommittee on Domestic Finance. Compelling testimony was heard in support of the monetarist contention that the economy's past recession cycles were due in large part to the Fed's causing or allowing money supply (M_1) to grow below the economy's estimated minimum growth potential; for example, in 1956, 1957, and early 1958, between the third quarter of 1959 and the second quarter of 1960, and in the second half of 1962. The testimony also provided strong support for the view that structural reforms of the Federal Reserve were needed to purge the conduct of monetary policy of money market myopia, and to reduce the risk of perpetuating error.

When the hearings were over, the subcommittee's majority released proposals to restructure the Fed and the conduct of monetary policy. Briefly, the proposals provided for the following:

1. Retirement of Federal Reserve stock; covering into the Treasury income received by Federal Reserve banks; authorizing their expenditures by normal appropriations process and requiring GAO audits.

2. Elimination of the "fair presentation" provision in selecting governors; reducing the number of governors to five and their terms to five years (but allowing for reappointment); making the term of the chairman of the board of governors coterminous with that of the president and vesting all open market powers in the board.

3. Requiring the President to set forth annually guidelines concerning monetary policy "including the growth of the money supply, as defined by him, necessary to achieving the goals of maximum employment, production, and purchasing power of the Employment Act of 1946," and expressing the sense of Congress that the Federal Reserve operate to facilitate the achievement of the president's monetary policy.

4. Transferring the Fed's bank supervisory functions to the comptroller of the currency, the FDIC, or a newly created federal banking authority.

Mr. Patman incorporated these proposals in H.R. 11, which he introduced in the first session of the 89th Congress. In the remainder of his career, he attempted without success to achieve these reforms, sometimes one by one, sometimes as a package. I believe it can be said with some degree of accuracy that the work that he did very definitely paved the way for passage of House Concurrent Resolution 133 in March of 1975. The resolution (incorporated in the Federal Reserve Act by P.L. 95–188) expresses the sense of the Congress that the Federal Reserve set monetary growth targets "commensurate with the economy's long-run potential to increase production, so as to promote effectively the goals of maximum employment, stable prices, and moderate long-term interest rates." Pursuant thereto, the Fed sets and discloses monetary growth targets for the year immediately ahead on a quarterly basis. Milton Friedman said, "Though superficially innocuous, the resolution represents the first time since the Fed began operation in 1914 that Congress has (1) specified monetary and credit aggregates as the Fed's immediate target, (2) enjoined it to produce steady monetary growth in line with output growth, (3) required it to state its objectives publicly in advance, and (4) required it to justify publicly any departure from them. All four elements are major changes".

Since March 1975, the Fed has provided for relatively steady monetary growth in line with the economy's potential to increase production. Undeniably, the Fed still pays too much attention to money market variables. But now, it looks a year ahead four times a year and determines a course of action in regard to money supply, which because it is publicly disclosed, it must take seriously.

COMMENTS ON TEXAS A. & M. UNIVERSITY'S CENTER FOR EDUCATION AND RESEARCH IN FREE ENTERPRISE

HON. RAY ROBERTS

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, December 15, 1977

Mr. ROBERTS. Mr. Speaker, we in Texas have always been justifiably proud of our system of higher education. In diverse areas such as research associated with the sea, energy, mineral resources, and water and food production, I would particularly like to draw my colleagues' attention to my alma mater, Texas A. & M. University.

Texas A. & M. has again set national precedent by establishing a center dedicated to raising economic literacy and increasing citizen awareness of the importance of individual freedom to the strength and vitality of our economy. I am doubly proud to announce that the center, the Center for Education and Research in Free Enterprise, earned for Texas A. & M. this year the coveted American Eagle Award of the Invest-In-America National Council, Inc.

This distinguished center had somewhat humble beginning. The initial effort was the 1974 American Economy Institute at Texas A. & M., a small summer training program of 15 high school teachers. That small institute has now grown into a major new educational effort providing new leadership from the academic world and mounting a comprehensive campaign in the interest of preserving and protecting our national economic free enterprise system.

The combined thinking of experienced and knowledgeable individuals from business, foundations, Government, and academia went into the formation of the center. A board of consultants has been established to oversee the operations of the center. The board includes five academic deans at Texas A. & M. University and five alumni who are also outstanding leaders from the business community.

In keeping with its purpose of promoting free enterprise, the center is not supported by State-appropriated funds. It depends exclusively on the private sector of our economy—businesses, foundations, and individuals—for its funding. Initial funding for the center was provided by some 60,000 former students of Texas A. & M. University, men and women dedicated to the preservation of our free enterprise system.

It is the philosophy of the center, and one I deeply share, that America is the world's last, best hope for freedom and prosperity among nations. Whether we continue as a free prosperous society, whether we remain a symbol of hope for others and a leader among nations, depends largely upon whether we are successful in achieving economic enlightenment.

I commend Texas A. & M. University for accepting this challenge and turning its energies and resources to the development of economic education and research programs of the highest quality that will help young people to develop and maintain a sense of pride in their heritage and to value their political and economic freedom.

HOUSTON AND THE IWY PEP RALLY

HON. GEORGE HANSEN

OF IDAHO

IN THE HOUSE OF REPRESENTATIVES

Thursday, December 15, 1977

Mr. HANSEN. Mr. Speaker, for anyone who needs a review of IWY activities and how they relate to reality, I commend the following article by columnist Patrick Buchanan which appeared in the Washington Weekly on December 8, 1977:

Where Jimmy Should File the Houston Agenda

WASHINGTON.—One day soon Ms. Bella Abzug and other grizzled, battle-weary veterans of the National Women's Conference will be arriving at the White House to present Jimmy Carter with their "National Plan of Action."

If Mr. Carter is thinking of a second term, he will thank them for their work, promise to study the agenda, give the girls some milk and cookies, and send them on their way. Then, he will call in Hamilton Jordan and tell him to file that 25-point "Womandate" on the same shelf where the Scranton Commission Report and the Kerner Commission Report are gathering dust.

Why? Because the National Plan of Action, adopted in Houston, points Mr. Carter in precisely the opposite direction from where the national majority is headed.

Some weeks ago, Newsweek Magazine ran a cover story on the "New Conservatism" that appears to be sweeping the country. Yet, what the Houston confab produced was a warmed-over hash of the radical liberalism that generally stunk up the '60s.

Item: The Houston delegates voted almost four-to-one for the Equal Rights Amendment. Yet, when put to the vote in New York

State, ERA was crushed by a margin of 400,000 votes.

Item: The Houston Convention endorsed abortion-on-demand. Not only does this contradict the president's commitment and convictions, it runs against the trend of court and congressional opinion.

Item: The Houston conclave approved the same sort of gay rights provision that Dade County rejected two-to-one only weeks ago.

Here is how one Florida delegate, Virginia Harlan, described the "sickening . . . nauseous" scene at the Sam Houston Coliseum when the "sexual preference" plank was adopted:

"The demonstration after the vote was disgusting. Most of the pro-family delegation got up and walked out. Other delegations stood with their back to the chair in protest. The lesbian element here was unbelievable—they were hugging and kissing each other, running through the aisles with their fists raised in a sign of militance."

And The New York Times would have us believe those 2,000 delegates to Houson "fairly accurately reflect the general female population" in the United States.

Some of the proposals adopted, such as enforcement of the Federal Equal Credit Opportunity Act of 1974, were non-controversial. On balance. however, the National Plan of Action reads like a political script written by Ms. Bella Abzug, ring mistress who cracked the whip at the Houston circus.

Yet we know from the returns in the New York mayoralty contest that the politics of Bella Abzug are on the wane in even the most retarded of political precincts. Though she started the race with almost 40 per cent of the vote, Bella ended out of the money in the Democratic Primary, running a poor fourth. The winner: An apostate liberal named Ed Koch who captured the fancy of the Big Apple with the enthusiasm with which he discussed the societal benefits of rewiring the electric chair.

On the final day of the Houston Conference, the conservatives walked. The breaking point: the convention's demand that the American taxpayer fund yet another of these feminist pep rallies in the future.

Well, on this one, once is more than enough. The National Women's Conference came about through the good offices, if you will, of Gerald R. Ford in 1975 who asked $5 million to underwrite last month's nonsense. Next time ignorance and inexperience will be no excuse. Any Congressperson who votes another dollop of tax dollars to further this kookery should be retired—without regard to race, creed, color, sex or national origin.

THE CONFERENCE COMMITTEE ON ENERGY SHOULD PROVIDE FOR INCENTIVES FOR HIGH-COST AND HIGH-RISK NATURAL GAS PRODUCTION

HON. JACK F. KEMP

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, December 15, 1977

Mr. KEMP. Mr. Speaker, I was encouraged to learn this week that the joint House-Senate conference committee on the energy legislation will remain in session during much of the Christmas-New Year's recess. I think it shows the commitment of Congress to resolving this issue.

Among the issues which the conferees must resolve is the question of incentives for high-cost and high-risk natural gas and oil production, especially the production of natural gas from the Devonian shale deposits of Appalachia and parts of the Midwest.

NOT A NEW ISSUE
